Certainly there is nothing in the annals of civilization to compare with what has been accomplished of late years in Japan. Immeasurably more has been done there in a single decade of active intercourse with Western nations than a century and a half of such intercourse has brought about in China. Turning over the pages of the Consular Reports, we find a hundred evidences of material activity of the European type. Not only do the Japanese possess gas-works, telegraphs, and railroads, but there is a regular postal system, with postage stamps of different values. Lines of steamers, owned and run by natives, have been established between the different ports. There are colleges and primary schools, under the superintendence of English teachers; and hospitals which are "walked" by medical students, who attend lectures and demonstrations given by European Professors. There is an Imperial Mint, which during the year 1873 struck off gold, silver, and copper coin of the aggregate value of over 23,000,000 dollars, or upwards of £4,600,000 sterling. Foundries, shipbuilding yards, factories where cotton and other textile fabrics are produced by steam machinery, oil-pressing mills, tailoring establishments where the Japanese exquisites are clad in European style, not many months behind the Parisian fashions, and—tell it not to the Good Templars—breweries, where beer of excellent quality is made with hops imported from America, are to be found in the principal towns. Yet all this bustling material activity is to a great extent spasmodic, and, so far as it is regarded as an evidence of civilization, merely superficial. Japan is not in reality a rich or prosperous country, and a considerable time must elapse before she can become so. Her rulers are sufficiently enlighted to see the superiority of European over Japanese means of locomotion, machinery, and weapons, and to make use of them accordingly: they are not wise enough to perceive that they cannot give their subjects the agencies of Western progress, and still keep them in the old leading strings. It is, in fact, the Japanese Government and not popular prejudice which stands in the path of true national prosperity and advancement. The Ministers of the Mikado employ foreigners in his service, but they restrict foreign settlements to the treaty ports, and they will not allow the natives to bring foreign skill or capital to bear in the development of the rich natural resources in the country. There are extensive coal-beds in several of the islands of the archipelago; gold is known to exist in various places, and it is probable that a geological survey would reveal the whereabouts of other mineral treasures. But the Japanese do not know how to work these and the Government has refused to allow foreigners to do so. During 1873, both the import and the export trade of Japan exhibited a very serious falling off, instead of the increase that might naturally have been looked for in view of the great improvement in the means of communication and the appliances of commerce that was effected during the year. The decrease in the import trade was 1,400,000 dollars, but should actually be rated at a much higher figure because great quantities of goods which were imported were left on the importers' hands. The falling off in the export trade was still greater; it amounted to 1,710,000 dollars, or nearly a million sterling. It is probable that when the returns for 1874 are ascertained, they will exhibit an equal declension, because there was for some months the disturbing influence of doubtful relations with China, while, in addition, the same causes which were operative during 1873 still remained active in dwarfing the trade. These causes are not far to seek. The principal branches of production for export, in which native industry is at present engaged, are those in which there is active competition from China and other countries. The people are poor, and so long as they are subjected to the restraints and shackles which the Government at present imposes on them, they have but little chance of improving their condition. They have not capital or engineering skill to develop the mineral wealth of the country, and the Government will not allow them to call to their aid those of the foreigners. Under these circumstances as Sir Harry Parkes points out in his summary of the Consular Reports, "the cultivation of rice is the most promising field of industry that the country possesses. Every peasant in Japan has a perfect knowledge of its culture, and would need no foreign aid in bringing under cultivation the large tracts of rich land which are now left untilled." But here again the Government steps in, and by prohibiting the exportation of rice by the grower—a prohibition which was removed in 1872 with very beneficial effect, but re-imposed in 1873—discourages the raising of more of the grain than is required for home consumption. Another serious hindrance to trade is that Japanese merchants often fail to carry out contracts into which they may have entered with foreigners, and the Government will do little or nothing towards giving redress. Concealed though it may be behind a veil of ceremonious courtesy the attitude of the Japanese Government towards all foreigners is not greatly different from what it was ten or fifteen years ago. The Consul at Hiogo speaks of "the characteristic and patient perseverance with which the Japanese study and insist upon all possible means which they think will eventually free them from carrying into effect obligations originally contracted."

Free trade and free intercourse with the rest of the world—these are the agencies which will do most for the renovation of Japan, and fit her ultimately for the destiny which her insular position and the genius of her people seem to assign to her—that of the Britain of the Far East. There is nothing in her present condition to justify doubt as to her progress. She is, as we have said, in a state of transition. It is not yet six years since the daimios gave up their feudal rights, and the people began to be emancipated from a condition of serfdom. As education spreads, and as the familiarity of the population with Western civilization increases, the attitude of exclusiveness on the part of the Government will become less and less tenable; the trade and industry of the nation will have further opportunities of development; and Japan will step forward, fresh, free, and vigorous to take her place among the communities of the civilised world.—*Scotsman.*

A CHAT ABOUT DINING.

(Spectator.))

"It's a frightful bore, Sir, a frightful bore!" said a new-made Peer to a friend, who had hinted that dislike to a coronet was only another form of the *Nolo episcopari*. "Why, in half the houses I dine at I shall have to take my hostess down to dinner." A correspondent of the *Pall Mall Gazette* seems to share the new Peer's opinion for he grows furious over his obligation to dine seated between two women who can never talk, and asks either for their exclusion, or such an alteration in the shape of dinner-tables as shall enable him to talk all around, and, presumably, pay no attention to his neighbours. The writer has probably been provoked by an accidental wedging between dowagers, which, particularly if you do not know them, is, no doubt, a trying position; for in our day women, on the whole, talk in society quite as well as men. They are not quite so epigrammatic, and sometimes lack condensation; but they are decidedly more sprightly, and tell any story which requires quiet dramatic expression, a good deal better. Their grand defect in conversation is obligingness. If the subject started is a bore to him, or one he knows nothing about the man will change it or be silent; but a woman will often go on out of mere obligingness, with a show of interest which is visibly pretence, and a series of replies which are rapid as white of egg. No man talks as badly as most women on subjects they care nothing about, for no man who, under those circumstances, talks at all, hesitates to be a little bitter,—and vanille, be it nice or not, has at worst more flavour than cream-cheese. But the serene, equable flow of women's talk helps mightily to prevent conversation from degenerating into intellectual duelling—which, though amusing for two minutes, is a weariness after five, and to be perfect, should be arrested after two shots each—and they wake up talkativeness in the men, an attribute of the sex which "X." has completely overlooked. Even he wanted to talk when the dowagers were on each side of him, and resented his inability, whereas, sandwiched between two men, he would have wanted to eat, and have settled his temper for the evening, not according to the pleasantness of his neighbours, but according to the flavour of the soup,—nine times out of ten the weak point of the entertainment. (We wonder why, even in very fair houses, the soup so often falls a trifle short of perfection. Is it because it is the only dish to which perfection is essential, or because it is the only one never seen in the servants' hall?) With "X.'s" second complaint we have more sympathy, and rather wonder that the upholsterer, poet, and artist, who is lining everybody's walls, and beginning to cover every body's floors, and who, if he were a little less afraid of brightness, might be said to have an Oriental's instinct for colour, does not evolve out of himself a table which shall receive universal acceptance. The way in which the idea of the grim, old dining-table of our grandfathers had stood its ground is the best proof we know of the inherent conservatism of the British mind. It was, of course, originally useful, being intended to hold a whole dinner, big dishes, little dishes, and all manner of implements and addenda, besides as much plate as it could be made to carry. That was convenient while it was conceived hospitable to display your food and regale your guests, as the ancients regaled their gods, with the reek of heated flesh, hot soup, and rapidly-cooling vegetables; but all that has passed away. The Russian dinner has won, and ought from the very first to have led to a better form of table; but somehow, innovation in that matter has been very slow, almost as slow as in dining-room chairs, improvement in which was arrested by a mediæval mania. The table does not lose flesh rapidly enough. With the Russian dinner, breadth in a table is not required, but length. A strip of a table, broad enough to hold two plates opposite each other and leave six inches between them, is ample for mere utility, and we may question if the demands of the eyes require more than six inches more. That gives room for candelabra, which may widen in the air, not on the table; and for as much colour, preferentially in the shape of flowers, as the eye can bear without either weariness or sense of special attraction; and what more is required? It is a horrible heresy, no doubt, but we hold still that the white damask table-cloth, though an excellent ground-colour, throwing everything else up, is not the only colour which would be pleasing; it refracts light a little too much, even if you like brilliance, and as any dealer will tell you, it almost annuls the effect of that most beautiful of modern creation, English table-glass. Nobody ever says enough about that. Venetian glass is beautiful in its place, but the perfect modern English wine-glass might have been made by fairies from the dew, and been struck into crystal by the volition of a Peri. Our forefathers, with their thick glass and chased gold and silver cups, were as brutal in their conception of drinking-vessels as they were in their taste in drinks. People who know these things say they could drink *hot* sherry, and mulled claret, and brown beer, and cider, and an abomination called perry, and though we confess we do not believe this, slush denominated "mead," stuff worse by degrees than *kouniss* or treacle and and water. Will somebody just try damask the colour of rich cream, or of that *teint degradé*, the soft grey green which Mr. Morris is so fond of for his walls. Seated by what is virtually a mahogany trestle with nothing to obstruct the view, the guests can talk each of them to at least five persons, and no admissible arrangement will give them more; while on each side they may, if the chairs are sensibly made, have an assured consciousness of room. Alas! chairs are not sensible. The old chair was an instrument of torture, and the new chair, the mediæval chair, the chair upholsterers delight in, well as it sometimes looks, allows of too close packing, and tires the back. Nobody wants to sit so upright as all that, and everybody away from dinner likes an easy chair. Why should he not have one—not, indeed, an old easy chair, like an improved watch-box, and big enough for a Sovereign opening Parliament—but an easy chair of to-day, with the seat the right height for the table—tables are a trifle too high still, and make the women worry for foot-stools—with the back not too tall for the servants, and the sides carefully kept down, till you can lounge without interposing a barrier between you and your next-door neighbour. Improvement is coming in those chairs, but it spreads slowly, and the subject requires study just as much as that of light does. Light is not right yet, and will not be put right in a minute. "X." protests rightly against blaze, but still, light is required, equable light, light without too many shadows, and light, above all, which does not cross the line of sight too directly. Gas does not do, except as a succedaneum; candles take room, and throw shadows; and we suspect that oil, with which we can produce the needful quality, viz., softened intensity, till we can manage electricity, and dine by an intense, yet soft and all pervading moonlight, will be the medium ultimately adopted.

There is one point connected with dinner on which opinion seems still to be a little chaotic, and that is the arrangement of the guests. The tendency is to let them arrange themselves, and as this is in accordance with modern manners, the object of which is unrestraint and the note of which is temporary intimacy, this tendency will probably prevail. It diminishes the trouble of entertaining, and abolishes the responsibility of the entertainer, but we have a doubt about it, nevertheless. Where everybody is really *en famille*, *laissez-faire* ought to succeed; but even then it is slightly selfish, marks partialities too much, leads to that neglect of disagreeable persons which it is the last lesson of high-breeding to avoid, and where the family character is a momentary assumption it produces confusion. In a company where precedence is self-evident, an inexorable precedence would do as a substitute for order; but it would be a wearisome substitute, and is very seldom completely applicable. Relatives would sit frequently together. Sitting next the exact person you do not want to meet is a trial to one's *savoir vivre*, which though morally most beneficial—for after all, to be agreeable to one's enemy presupposes one to forgive him—does not always tend to the enjoyment of a dinner, and a dinner in the sense in which we are using the word just now is primarily intended to be enjoyable. It is not to be an edifying social exercise, but an enjoyment. We doubt whether in a large dinner the host is not the best person to decide where his guests shall sit. He is often the only man who knows them all, he can judge pretty accurately of their predilections, and his decision terminates all chance of marked avoidances. The institution of cards, which is dying, being too severe a tax on modern laziness, is a very useful one, and helps to avoid the necessity of introductions. We should not recommend, what we once heard suggested, a short biography on each card, with a few psychological criticisms, as they might have the unpleasant effect of a looking-glass under one's plate, but the name was useful; and though always admitting that little dinners are best, and that the happiest life is life in a coterie, we regret the disappearance of the cards.

REUTER'S TELEGRAMS.

(*Supplied to N.-C. Daily News.*)

LONDON, 12th March, 1875.

The following is the arrangement of the new French Ministry :—

Interior—Buffet.
Justice—Dufaure.
Finance—Say.
Instruction—Wallon.
Commerce—Meaux.
Others unchanged.

The Emperor of Germany is ill.

Governor Jervois leaves early in April.

LONDON, 10th March 1875.

The cargo of the *Ulysses* has been landed damaged.

LONDON, 8th March, 1875.

Archbishop Manning has been summoned to Rome to receive the Cardinal's hat.

The exportation of horses to Germany has been prohibited.

London, 4th March.—The Expedition to Achin is contradicted.

The Senate has voted the American Revenue Bill.

The Prussian Government has resolved to require all the Bishops to recognize the supremacy of the State over Papal authority, the penalty for non-conforming will be disendowment. Intends to re-establish place Ecclesiastical documents ?

London, 22nd Feb.—The House of Commons has passed the second reading of Mr. Hardy's Regimental Exchange Bill by 282 against 185.

Mr. Mitchell again stands for Tipperary.

Prince Leopold is reported convalescent.

London, 23rd February.—Mr. Huddleston, Q. C., has been appointed Judge of the Court of Common Pleas in succession to Sir Henry Keating who retires.

The Virginius affair has been finally settled.

Obituary.—Sir Charles Lyell.

Madrid, 23rd Feb.—The Royalist troops in Navarre are inactive, and General Moriones has resigned his command.

London, 24th Feb.—Sir Garnet Wolsely has started for Natal. Severe cold prevails throughout Europe.

London, 26th Feb.—A diplomatic difficulty has arisen between Turkey and Spain, owing to the latter having notified to Roumania the accession of Alfonso to the Spanish throne.

Bombay, 24th Feb., 10-15 p.m.—The trial of the Gaikwar commenced yesterday.

Mr. Scoble opened the case and stated briefly the nature of the evidence to be produceed. He promised he would show that negociations were opened by the Gaikwar with the Presidency servants through confidential servants ; the ayah was induced to visit the palace thrice ; the third time she hed an important conversation with the Gaikwar who gave her money ; an important corroboration of her evidence is supplied by letters found in her room.

Serjeant Ballantine announced that he should contend the letters were not evidence.

Mr. Scoble agreed to reserve this point.

He said the Queen's Advocate would show by Damodar Pant's confession that the Gaikwar ordered poison.

The corroborative evidence was supplied by the Maharaja's private account-book.

Further material evidence was that in visiting Colonel Phayre after the poisoning attempt was made, the Gaikwar minutely described Colonel Phayre's actual symptoms and said there was much sickness of that kind about from which he had suffered himself.

The ayah was the first witness. She detailed the circumstances of her three visits to the palace. On the third visit she was asked in the Maharaja's presence what would be the effect if anything were given to the Sahib.

She warned the Maharaja that should anything injurious happen to Colonel Phayre, he would be ruined.

Cross-examined by Sergeant Ballantine, as to why she did not inform her master, she said no mention was made of poison, but from the interview she felt convinced an attempt was intended.

Bombay. 25th Feb.—Reuter's telegrams dated Baroda, February 25th, states that Mulhar Rao was present in Court to-day till two o'clock. Two gharry wallahs were examined and spoke to taking the Ayah on her second and third visits to the Palace. Many contradictions took place on minor points.

The Ayah's husband proved her mentioning visits.

Letters that passed between them were produced, to which Serjeant Ballantine objected, but eventually he agreed to admit them as proof that the Ayah took an interest in Baroda politics.

Bombay, 25th Feb.—The examination of the ayah and three other witnesses is concluded.

It was distinctly denied that the Gaikwar mentioned Colonel Phayre in connection with the poisoning although money was given.

Sergeant Ballantine's cross-examination elicited much contradiction. The defence is elated.

Shipping Intelligence.

ARRIVALS.

Mar. 21, *James Paton*, British barque, Cotter, 397, from Cardiff, General, to Pitman & Co.

Mar. 22, *Nevada*, American steamer, Williams, 2,144, from Shanghai and Ports, Mails and General, to P. M. Co.

Mar. 22, *City of Halifax*, British ship, Bixton, 853, from Newcastle, N. S. W., Coals, to Wilkin & Robison.

Mar. 23, *Orissa*, British steamer, Edwins, 1,119, from Hongkong, Mails and General, to P. & O. Co.

March 24, *Colorado*, American steamer, Dearborn, 3,727, from Hongkong, Mails and General, to P. M. S. S. Co,

March 24, *Tokio Maru*, Japanese steamer, Dunn, 1800, from Shanghai and ports, General, to Mitsu Bishi Co.

March 26, *Vidal*, French barque, Rendeau, 409, from Takao, Sugar, Captain.

DEPARTURES.

Mar. 23, *Malacca* British steamer, Bernard, 1,089, for Hongkong, Mails and General, despatched by P. & O. Co.

March 24, *Evelyn*, British barque, Knowles, 700, for Hiogo, General, despatched by Wilkin & Robison.

March 24, *Golden Age*, American steamer, Coy, 1870, for Shanghai, General, despatched by, P. M. S. S. Co.

March 24, *Takasago Maru*, Japanese steamer, Ekstraud, 1,0 9, for Shanghai, General, despatched by Mitsu Bishi Co.

March 25, *Mosquito*, British gun-boat, Lt. Coman. Paul, 280, for Yokoska.

March 27, *Haidamack*, Russian gun-boat, Captain Tartoff, 800, for Hakodate.

March 27, *St. Thomas*, Swedish barque, Hjorth, 287, for Nagasaki, Ballast, despatched by, Captain.

PASSENGERS.

Per American steamer *Nevada*, from Shanghai.—Miss Clara de Bar; Mr. and Mrs. Page and servant, Dr. Goetz, Dr. Sawtshinke, Messrs. C. J. Andrews, D. Hay and servant, H. B. Joyner, T. R. H. McClatchey, H. MacKenzie, T. Escombe, W. H. Hagart, R. M. Brown, T. J. Walters, J. Taylor, and 11 Japanese ; 66½ in the steerage. For San Francisco.—Mr. and Mrs. Haskell, Mr. and Mrs Martin, and Dr. Adolph ; 2 Europeans and 1 Chinese, in the steerage.

Per British steamer *Malacca*, for Hongkong.—Messrs. Smith, Andrews, Jones, Wilkinson, Black, Bew, and Capt. Jackson.

Per British steamer *Orissa*, from Hongkong.—Messrs. Wilson, Chadwick, Strange, and 5 on deck.

Per American steamer *Colorado*, from Hongkong.—Mr. T. A. Harris and wife, Lieut R M. Lisle, U.S.N, Lieut. T. D. Balles, U.S.N., Mr. John Wilks, Mrs. L. M. Briggs, Mrs. E. Freeman, and Mr. J G. G. Creyk.

Per *Tokio maru* from Shanghai and ports —Mr. and Mrs. Fry, Miss Whitbeck, Mrs. Balagh, Messrs. Nakayama, J. Taylor, J. B. du Maré, Dosan, Miura Nagayi, G. Moritz, Takahayashi, E. H. Hunter, Tashiro, Low. W. Robertson, J. Gorman, Yoshikawa, Nagayama, Shiosm, Shigashi, Ishiwara, Osaki, Kadonosan, Yoshida, Yoshikawa, Simmons, S. C. Pass, and 98 Japanese and six Chinese in the steerage.

Per Japanese steamer *Takasago-maru*, for Shanghai and way ports :—Dr Miller and wife, Mr. P. Okuno and servant, Mr. Tadjka, wife, and drughter, Mr. Kudano and servant, Captains Vieillard, Bousquet, Orcel, and Fercin ; Messrs. G. Schiller, P. Young, Mooney, Noda and servant, and Yoshida ; 3 Chinese, 3 Europeans, and 91 Japanese in the steerage.

Per American steamer *Golden Age*, for Shanghai and way ports:—Mrs. Coy, Mrs. S. Brown, Dr Elliott and two children, Mr. Cargill, Miss Cargill, Miss Smith, Mrs. Freeman, Mr. and Mrs. Mulford, Mrs. Bayne and two children, Mrs. Soper ; Messrs. H. McKenzie, C. Wiggins, Scheffer, Reetz, Cruikshank, Hagart, Kingdon, Ullman, D. McLean, F. M. Smith, Bruner, Gribble, and 260 in the steerage.

Digitized by Google UNIVERSITY OF CALIFORNIA

CARGOES.

Per American steamer *Nevada*, from Shanghai:—
Treasure..... $75,574

Per British steamer *Malacca*, for Hongkong.—
Silk..... 141 bales.

Per Japanese steamer *Takasago-maru*, for Shanghai and way ports: Treasure, $17,450.

Per *Tokio-maru*.—Treasure, $17,000.

REPORTS.

The British barque *James Paton* reports boarded ship *Foundling*, of Liverpool on fire and abandoned in lat. S. 26° 03' long. W. 27° 00'. The vessel had the appearance of a lime-kiln, being laden with bricks. Everything but the iron shell of the vessel was consumed.

The *City of Halifax*, reports: Light head winds before crossing the equator; from thence breezes and squally weather, especially off the Japanese coast.

The British steamer *Orissa* reports thick fogs after leaving Hongkong. Had to anchor for six hours under the Tem-foo on that account. On the China coast experienced fresh monsoon and fine weather. Thence to port moderate to fresh breezes.

American steamer *Colorado*, H. C Dearborn Commander, reports: left Hongkong, March 15th, at 4 p.m., with 6 cabin, 908 Chinese steerage passengers and 1,568 tons freight. Met and exchanged signals with P. M. S. S. Co.'s steamer *City of Peking* March 20th, at 4 p.m. 20 miles northward Cape Clidanko. Arrived in Yokohama March 24th.

The *Tokio-maru* reports: left Shanghai March 17th, Nagasaki March 20th, Shimonoseki March 20th, Kobe March 23rd, at 4 a.m., and anchored at Yokohama March 24th, at 9.10 a.m. Experienced strong E. and N.E. winds and rain to Nagasaki, light easterly winds and fine weather to Kobe, and strong N.W. winds to this port.

The French barque *Vidal*, reports, changeable winds and weather during the passage.

The *Evelyn* reports, put back yesterday, one of the crew having had his leg broken, and the vessel having split some sails in a squall outside of Cape Sigami.

COMMERCIAL INTELLIGENCE.

(The following report was published in the *Japan Mail* of March 25th).

YOKOHAMA, MARCH 27TH, 1875.

Cottons.—Our market has remained more or less inactive, and prices in most cases, in the absence of any demand cannot be tested and are nominally unchanged. Yarns are duller and more difficult of sale, dealers still having large stocks of shipments on hand from prior contracts. Fair transactions in 9lbs. *Shirtings* have been reported, but the inquiry has since subsided. 8¼ lbs. goods meet of late with more attention but 7 lbs. are neglected. Other cottons call for no special comment.

Woollen Fabrics.—Owing to the advanced stage of the season the market for most descriptions of goods is quiet, and the demand has materially lessened. Prices, however, are without quotable alteration and remain on the whole unchanged.

Metals.—The condition of the market continues bad and the settlements reported few in number. The demand has fallen off and we have to record a lower range of rates.

Sugar.—The market for Formosa descriptions has, during the past fortnight, been fairly active and holders are firm in their demands at the undernoted quotations. Stocks are about 80,000 piculs.

Kerosene Oil.—The market is still bare of stock in first hands. Owing to the extensive shipments from New York contracts to deliver can with difficulty be effected, and the rates named are much below the actual quotations which nominally rule.

COMMERCIAL INTELLIGENCE

EXPORTS.

Silk.—Our fortnightly report, dated 25th instant, was as follows :

"Since the 10th instant, business has continued to be checked by that scarcity of good clean silk which is the prominent feature of the present season. However, a further decline of $10 to $15 has induced settlements of Hanks to the extent of about 200 bales. Settlements of Oshiu are 100 bales for which buyers had to pay an advance of fully $10. These 400 bales include a few parcels which were disposed of by public auction and fetched full market rates.

Owing no doubt to the present low range of prices as much as to the usual interruption in silk-reeling during cold weather, supplies from the interior are scarce, and the stock is reduced to 1,100 bales.

The shipments of the fortnight are 272 bales, making the total export since 1st July, 9,109 bales against 12,452 last year for the corresponding period."

Since that date we have no change to report in prices : arrivals are 125 bales and deliveries 235 piculs. Oshius continue the object of active enquiry and command full rates.

Tea.—A marked decline has been established in prices, induced by which purchasers have again entered our market, and settlements, since the departure of the last American mail, amount to the fair total of piculs 4,000 which, considering the late period of the season, is large.

The fall is most perceptible in "Medium" grades in which the bulk of the business has been done. A fair amount of "Good Common" and "Common" has also changed hands, and a few small lots of "Choice" at $52 to $55 per picul.

Prices are on the whole very irregular, and quotations vary more at this moment than they have done at any prior period this season. The undernoted, however, will fairly represent transactions since last mail, though at the present juncture holders, encouraged by the extent of operations, are rather firmer, a step by no means justified by the last telegraphic intelligence from New York.

Our total export from Japan to date is about twenty two-and-a-quarter millions of pounds including the cargo of the bearer.

TO IMPORTERS

—OF—

ENGLISH GOODS.

A WELL-ESTABLISHED LONDON DRAPER, is open to buy Goods in commission for a good Firm; or as Agent for Japanese Goods consigned to London. Highest references given and required. Address

MR. GEORGE INGATE,

DRAPER,

KILBURN, LONDON, W. C.

Yokohama, March 27, 1875. 3ins.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kind. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories—13, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 1872. 12m.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 14.] YOKOHAMA, SATURDAY, APRIL 3, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

BIRTH.

On Thursday, the 25th instant, at No. 172, Bluff, Mrs. F. V. DICKINS, of a daughter.

On the 29th March, at Tôkiô, *(Shiba Sannai, Yama shita dani, Dzui Ka Ji)*, the wife of CHARLES H. DALLAS, Esq., of a daughter.

Notes of the Week.

ARE the Japanese about to endanger and even to ruin their new-made reputation for liberality by persecuting the native Christians again? Is a Government which has undoubtedly been ahead of the people now going to drop behind them? It is only a fortnight ago that we published a translation from the *Nisshin Shinjisshi* which contained the following sentence, —"*Religious belief is a matter which should be left to the free-will of the people, and not even the Government itself has a right to interfere with this free will.*" Now we have to publish the following translation of a paragraph in the *Tôkiô Nichi Nichi Shimbun* of March 31st, 1875.

It is said that a man named Mishiyoshi, father of a samurai of the Miyagi ken (Sendai) named Ikéwatari Shôtarô, being a believer in Christianity, when on his death-bed requested his son to bury him with Christian rites; but as there are not yet any shrines or temples where these rites are known, his desire to obey his father's wishes prompted Ikéwatari to perform the funeral ceremony himself. For this offence, he has been condemned to thirty days imprisonment. It is also said that at Hakodate, in January, a man named Yamanaka made an enquiry from the authorities as to Christian funeral rites, but that no decision has been given.

The Japanese may believe us or not as they like, and they may fail, even if they do believe us, to understand why it is so, but their good name in Europe will be infinitely more compromised by anything approaching to Christian persecution than by the most illiberal edicts as regards trade. With all their faults and all their scepticism the Christian nations are most jealous of any dishonour done to their faith, and they will regard the granting of freedom to the Press as a very poor if not a hypocritical thing by the side of a persecution of the native christian converts.

Elsewhere will be found a translation referring to Loochooan affairs, which are just now much in debate. It may be remembered that in the early part of this year we published a memorial from the Viceroy of Fuhkien, which appeared in the *Peking Gazette*, announcing the arrival and departure of the tribute-junk from Loochoo and the customary remission of the duties on the cargo which she brought. This junk took the tribute for 1873-74, but it now appears that the Loochooans sent a tribute junk to Foochow in the summer of last year, at the very height of the Formosan affair, when Japan had invaded Formosa to punish the aborigines for the murder in 1871 of Loochooans whom she called subjects, but who continued since that date, as they had done before, to send tribute to China. The passage in the *Peking Gazette* above mentioned obviously referred to the tribute-junk of 1873, while the *Nichi nichi Shimbun* speaks of another junk despatched in 1874. It is clear that the Loochooans have not yet realized the fact that they are subjects of Japan alone. A dual connection might please them better, for they would get some advantages from both sides. Thus China, in return for the small tribute they pay, permits them to land, free of duty, everything that the tribute junk brings over, and they will certainly not like to lose this advantage. Whether they will be gainers by the patronage of Japan remains to be seen. They are a simple folk, and send their timid yearly present to China with no particular views of progress, and but little voice in their late change of masters. The *Choya Shimbun* recommends that the islands should be converted from a *Han* to a *Ken* and the King sent up to Tokio, in which case he will be replaced by a military governor and the islands treated as a colony. Tokiô will be a kind of Zoological Gardens to him, or he will pine after his little kingdom as Caractacus did at Rome.

THE following paragraph from the *Pall Mall Budget* of the 5th February last shows the attention which is being given by the French Government in Algeria to the extension there of the cultivation of tobacco. The Japanese would do well to bear in mind that Algeria is comparatively close to England, and that the extension of their own export tobacco trade, which may become of great value to them, depends mainly, if not entirely, upon their power of competing successfully in the English market with other tobacco-growing countries. If the Japanese tobacco is weighted with a heavy duty, it is hopeless to imagine that it will be able to compete with the free Algerian growth.

The culture of tobacco may now be looked upon as one of the principal pursuits of Algeria. The tobacco crops of 1874 have been exceedingly abundant, and the returns are double that of the previous year—namely, 3,530,607 f. Since the year 1847 it has been calculated that the cultivation of tobacco has realized 54,000,000 f. The Government is doing its best to encourage this source of industry, and the planters are zealously striving to improve their fields and methods of cultivation, so as to compete on a larger scale with other countries. Public attention is also being drawn to the mineral wealth of the country. Throughout last year several French, English, and American companies have been exploring various regions of the three provinces with a view to future enterprise; but capital, roads, and means of transport are wanted. In Constantine mining operations are actively carried on. In 1873 the total amount of mineral exports of Algeria reached 420,662 tons, two-thirds of which were supplied by Constantine. Last year this quantity was exceeded; it is expected that the return will be 490,000 tons. The colony demands of the Government an extended survey of the mining districts, with a view to promote a branch of industry so important alike to Algeria and France. At present the number of miners is only 3,500, the greater part of these being employed in Constantine alone.

ROBBERIES, burglaries and attempts at incendiarism have constituted the chief local events of the week. Happy are they who have not missed spoons or valuables of some kind! What must have struck any one who is in the habit of traversing the Bluff roads between ten and twelve at night is the habit the police have of meeting in little knots of twos and threes to wile away time by social intercourse. This is doubtless very agreeable, but it does not conduce to a vigilant discharge of their duties. It would not be a bad plan to send a sergeant on horseback every two or three hours round the various patrols to see that the men are on their beats. No complaint can now be made, we think, of a deficiency of men;

Digitized by Google

but they certainly are sadly lacking in vigilance. Cannot they learn to "comprehend all vagrom men?" Is the whole watch to come together "to thank God they are rid of knaves," when the knaves are unmolested in their work of plunder.

Is there not one of Professor Palmieri's seismographs in this country? We have always understood that one was brought out for the Government, and it seems a great pity that it is not set up, or that, if set up, its records are not given to the public. If we are to have such earthquake shocks as that which visited us yesterday morning, the only satisfaction we can possibly extract from them is that of measuring their direction and comparative intensity. It is useless to trust to the unassisted senses for any sort of comparison between the shocks of earthquakes separated from each other by considerable intervals. When people say that some given shock is greater than that of May or less than that of November, or whatever their case may be, their observations are practically worthless. The condition of the mind varies. The place and time of observation may vary. A shock in the depth of night makes more impression and creates more terror, than one at eleven o'clock in the day. Instruments are necessary to correct the aberrations and varying conditions of the human mind, and phenomena of this nature can only be measured and compared with the aid of such instruments. If the seismograph in question is within the control of the Minister of Public Works, we venture to suggest that its erection and the publication of its records would be of service to science.

A correspondent addresses us a long letter on the subject of the *jinrikisha* question, and states that it demands the serious attention of the Government, both on account of the large number of men withdrawn from productive labour in drawing these vehicles,—a position open to some question—and the injury this employment inflicts on them. On the latter point we fear he is quite right, and some sort of enquiry into the amount of injury produced by this form of labour might very fairly be made. But legislation on the subject is beset with difficulties. There are fifty trades in England open to the same objection, the scissor-grinders', painters', plate-glass silverers' &c., and it would be manifestly absurd to forbid men to engage in them. Our correspondent says that *jinrikishas* may be seen in Yedo loaded with two or even three persons, under whose weight some poor fellow may be seen staggering to his inevitable injury. But are the *bettoes* in this country a short-lived race? They will run by the side of a trotting horse for five or six hours at a stretch without any serious distress, and though not heavily weighted, as is the case with the *jinrikisha* men, their feats make a great demand on their powers of endurance and may possibly entail serious injury on them. We must confess that though much with our correspondent in his view of the evil, we hardly see how the question can be legislated upon with any satisfactory results or on any sound principles. So long as human labour is cheaper than the labour of draught-animals, so long will the evil continue to exist. The only cure is a rise in the value of human labour, and this can only come with an increase in the wealth of the country. We fear it only comes to this, that, do what you will, the mass of mankind are condemned to hard and ceaseless labour for very little return, and that a few extra shillings a month will induce them to do things which impair their health and shorten their lives. But then men drink brandy and gin with the very same results staring them in the face, and with far less excuse.

An article which will be found elsewhere from the *Celestial Empire* discusses the arrest of General Le Gendre during the time of the Formosa trouble, and shows in what light it is regarded by the best authorities in America. Whatever warmth or bitterness of feeling we exhibited against General Le Gendre during that critical time arose from a feeling of something akin to resentment that any foreigner should have encouraged the Japanese in an affair fraught with such grave danger to the interests of this country, and [illegible] now reproach ourselves with this warmth of feeling, though the issue of the expedition belied our apprehensions. Against his arrest we always heartily protested as against a wrong done alike to him and to this country. Nor should we just towards one who, in a despatch from the State Department dated the 2nd Nov. 1874, is said to have rendered "patriotic and valuable services to his Government"—the honourable scars of which he bears—were we to omit the mention of this acknowledgment made in the despatch in question.

The transfer of H. B. M. Legation from Yokohama to Yedo took place to-day, and the buildings on the Bluff were formally handed over to the Japanese Authorities. The departure of Sir Harry and Lady Parkes is a source of deep regret to the foreign residents in Yokohama, and many pleasant memories of hospitalities and kindnesses will long cling to the old and now deserted Legation.

The Yokohama Regatta Club has ceased to exist, not unnaturally, indeed, having regard to the growing indifference which the public exhibits to these aquatic festivals. At a meeting held during the week it was decided to utilize the small balance remaining on hand as a prize for a four-oared outrigger race, to be rowed on H. M. birthday.

The *City of Peking* bound hither is reported to have sailed from Hongkong on the 1st instant. From the rapidity of her downward voyage we may fairly expect her return to this port on or about the 7th instant.

A temporary suspension of communication on the Great Northern Company's land line was reported on Friday evening. At an early hour this morning, however, the line was reported to be again in working order.

The Telegraph between Tokio and Hakodate was opened during the week.

(From the Japan Mail Daily Advertiser.)

The management of the Pacific Mail Company is said to have passed into the hands of Mr. Jay Gould.

A Japanese newspaper says that a number of military officers who retired to Kagoshima some time since have sent in their resignations to the Government simultaneously.

The departure of M. Berthemy Minister, of France, by the mail of Tuesday, has deprived the *corps diplomatique* of a member whose natural ability, enlarged and ripened by an extensive experience in larger fields of action than this, rendered his cooperation of high value to his colleagues, who cannot fail to regret the severance of an association rendered all the more valuable by their union with those social gifts which constitute the high charm of his nation.

Another number of *Punch* was published on Monday in which the recent lengthy litigation, the departure of the Marines and some minor subjects have afforded material for the artist's pencil. As the times are singularly uneventful the range of matter has naturally been small. The illustrations are, however, of average number and merit.

The receipts of the telegraph offices for the year ending December 1874 amounted to 115,402, *Yens*. Although this increase is owing in some respects to the opening of new offices at Shirakawa, Fukushima, Sendai and Ichinaseki the aggregate amount is double that of the receipts of the year before last The following is a list of the thirty-four districts in which telegraph offices are now open in Japan:—

Nihonbashi	Akabane	Tsukiji.
Asakusa	Hongo	Yotsuya.
Riogoku	Yokohama	Odawara.
Numatz	Shidzoka	Toyohashi.
Nagoya	Gifu	Hikone.
Kioto	Kawaguchi	Koraibashi.

Kobe	Himeji	Okayama.
Onomichi	Hiroshima	Yamaguchi.
Shimonoseki	Kokura	Fukuoka.
Saga	Nagasaki	Utsunomiya.
Sendai	Shirakawa	Fukushima.
Ichinoseki.		

YOKOHAMA REGATTA CLUB.

The Annual Meeting of Yokohama Regatta Club was held in the Chamber of Commerce rooms yesterday afternoon at 4 o'clock to enable the committee to resign, to receive the year's accounts, and to determine what should be done with the balance in hand.

Present.—Messrs. Purvis, J. Rickett, Leckie, Tripp, J. J. Dare.

Mr. Rickett was voted to the Chair.

Mr. Tripp, by request, then read the accounts, showing receipts, including balance from that account, of $1.279.60, against which there was an expenditure of $1,201.87, leaving a balance in the hands of the treasurer of $77.73.

Mr. Dare proposed that the accounts as read be passed.

Mr. Leckie seconded this. Carried unanimously.

Mr. Rickett then stated the purposes the meeting was called for. He did not think regattas were popular in Yokohama, and it seemed to him that it was unnecessary to get up one. He had gone round last year getting subscriptions, and people did not seem inclined to contribute. There was only a small balance in hand to be disposed of, and he would suggest that it should be placed in a bank till Yokohama felt again inclined for regattas.

Mr. Dare said it would be better to give a prize with it for a four-oared outrigger race to be held on the Queen's Birthday.

Capt. Purvis suggested that it should be handed over to the Hospital.

The Chairman did not think the Meeting had the power to do this.

Mr. Tripp thought it had. It was a Public Meeting to decide how the balance should be disposed of.

It was ultimately proposed by Mr. Dare, and seconded by Capt. Purvis

"That the balance, $77, be handed over to the Yokohama Amateur Rowing-Club, for a prize for a four-oared outrigger race, to be held on the Queen's Birthday."

A vote of thanks was given to the Chairman and the meeting separated.

No steps were taken in referrence to the Committee.

It is said that H.I.M. the Empress will visit Kamakura and Enoshima in the early part of the coming week.

The *Hochi Shimbun*, states that several officers of the Department of the Interior have been appointed to take charge of articles intended for display at the forthcoming centennary Exhibition at Philadelphia.

A writer in the *Choya Shimban* draws attention to the increasing use of 'beef-flesh which, he says, but a few years since would have been spurned by all but the few Japanese versed in European customs. Not only has its use, we learn, become general in the cities, but the taste for it has penetrated into the far interior where butchers' shops may now be very commonly found. And as "gentle dulness ever loves a joke," the correspondent does not fail to add that even the wolves accomodate themselves to the prevailing custom, making frequent descents upon unprotected beef shops. The extending use of flesh-food opens up the larger question of future supply. This, we are assured, the diminishing herds of Japan are quite inadequate to furnish.

A proclamation by the Daijokuan notifies that the Government reserves to itself the right to employ such steam vessels as have been acquired by the Okurasho (*New York*, *Behar* and others) in the conveyance of its mails to China and the outports.

An earthquake shock of short duration but moderately intense was experienced at half-past six o'clock on Friday morning.

Intending visitors to Enoshima may be interested to learn that owing to the opening of the Temple to the Public for one month an unusual number of native visitors to the little island may be anticipated, the more especially as the third-class fare from Yedo to Yokohama has been reduced to 18 *sen*. We gather this intelligence from a native newspaper.

The P. & O. S.S. *Bombay*, with the English mails of the 19th February, left Hongkong for Yokohama at noon on the 31st ultimo.

According to a native newspaper His Majesty has expressed a desire to see the number of maids-of-honour of the Imperial Court diminished and the ladies permitted to marry. The old custom, the journalist thinks, savours of barbarism and should dissolve before the light of "civilisation."

To-day being the anniversary *fête* of the first of the Emperors will be observed as a holiday by the Japanese. Arrangements, however, have been made which will permit of necessary business being conducted at the Custom House.

The *Chinese Mail* a native journal published at Hongkong asks why Japan does not publish the treaty she must have made with Loochew prior to her assuming the protectorate over the former vassal of China. It says that what Japan ought to have done was to prohibit Loochew from offering tribute to China, and not to demand its restitution thence. It also observes that Annam, although under the protection of France, still pays tribute to China, and France does not ask for its return.

The S. S. *Agamemnon* got ashore in St. Margaret's Bay, Dover, on Feb. 7th, but was towed off apparently without any damage.

The *China Mail* says "We understand that a number of his friends intend to entertain the Postmaster-General at a dinner before his departure from the Colony. A committee has been formed to make the necessary arrangements."

DR. ELDRIDGE,
Surgeon in charge.

NAGASAKI.

General Saigo and staff arrived from Yokohama on the 21st instant by the *Kanagawa-maru*.

The "Ly-ee-moon" arrived here on the 21st inst. from Yokohama, in ballast. We are informed that she will be repainted and have a new propeller before leaving this port.

THE very fine screw steamer *Swatow* arrived at Nagasaki from Kobe in ballast, at 1 a.m. on the 23rd inst. Her present owners are Messrs. Butterfield and Swire, Shanghai, who purchased her last December in London. The *Swatow* was built by Messrs. Scott and Co., Greenock, for Messrs. W. Batters and Co., and was christened the *William Batters*, but upon changing owners her name was altered to that she now bears. The *Swatow* left London on the 22nd of December, with general cargo for Singapore, Hongkong, Yokohama, and Kobe. Fine weather was experienced from London to Singapore, but on leaving the latter place for Hongkong. strong monsoons prevailed. Nothing of importance occurred during the observed between Singapore and Hongkong. Upon arriving at Nagasaki she began immediately to load coal for Shanghai, her ballast being water did not prevent her cargo being taken in while it was discharged. There is a probability that she will have another deck put on and then take coolies to North Australia, though in the mean time she will trade between Japan and China.

Not since the old *Shalimar* left Nagasaki, about this time last year, has such a large sailing vessel entered the port as the iron ship *Blackadder*, which arrived from Shanghai on Tuesday afternoon. She is indeed a fine craft; her length is 215 feet, breadth 35 feet with great depth of hold. About four years since she was built for John Willis and Son, by the well-known ship-builders and engineers, Messrs. Maudslay & Co., London. The *Blackadder* left Shanghai at noon on Sunday last, discharged the pilot at 5 p.m. the same day, and arrived in Nagasaki between 2 and 3 o'clock on the 23rd. She is now loading coal for Shanghai and will take about 1,100 tons. In all probability she will run one or two trips between that port and Nagasaki, then proceed to Swatow and load tea for London.

As an orthodox way of bringing the festivities to a close on Monday last, some Japanese soldiers and Chinese fell foul of one another and had a kind of free fight in which all hands became engaged. The scene of confiict was Kago-machi, and time 10 p.m. What caused the outbreak we are not in a position to say, but imagine the festivities conjured up rival feelings in the breasts of the belligerents which found vent in words, the words brought blows, and blows brought policemen on the scene, and policemen brought the native and celestial warriors to the Police Station.—*Rising Sun.*

Our Tientsin correspondent mentioned, a few days ago, that H. E. the Danish Minister was coming South, with the intention of visiting Amoy and Foochow. We understand that such is not the case. General Rasloff will stay a few weeks in Shanghai, and then return to Peking.—*N.-C. Daily News.*

PATIENT, QUACK AND PHYSICIAN.

THE condition of Japan at this moment is something similar to that of a man who suddenly finds himself in an unsound state of health and somewhat embarrassed circumstances. He had originally a good constitution and a fine estate, but he has somewhat impaired the one and dipped the other. During early youth he was kept too much at home, and imbibed from a tutor a quantity of nonsense which his father and grandfather before him had been accustomed to consider very valuable knowledge. This had sharpened his faculties perhaps, but had given him very unsound views upon physics, morals and economics. Emancipated from this domestic and tutorial thraldom, he has gone abroad, where he has imbibed some expensive tastes and committed some pardonable follies, but from whence he has returned with a wholesome conviction that his own education had been grossly mismanaged, and a laudable determination that his children should not labour under the same disadvantages. He has engaged a foreign tailor to clothe himself and his servants, has improved his diet, and taken to more champagne than is altogether good for him or quite compatible with the many calls on his purse. While abroad, or after his return home, he has laid out huge sums of money on all kinds of new-fangled machines to improve his estate, and what with the new clothes, the champagne, the machinery, the staff of tutors for the boys and governesses for the girls, he has found that a good deal of the ready money he had has run away, nor can he devise means to get it back again. His general health, too, has suffered somewhat from his dissipations abroad, and his doctor's report is but little more satisfactory than his steward's. The one, in his own precious jargon, says he is in an atonic state, and uses all the fine words which one of MOLIERE'S doctors summed up in the plain dictum "*Enfin, monsieur, votre fille est malade.*" The other talks about exports and imports till his master grows purple with rage and falls into a state of the most complete obfuscation, his notions of economics being about on a par with those of Corin on philosophy.

Now this is precisely the condition of mind, body and estate in which a man falls into the hands of bad economical and medical advisers. Alarm and anger lead him astray. He blames others instead of himself, and forgets that he has been constantly plied with advice which anticipated, and would have prevented, half these troubles. At this stage of the business there is always some Jack-pudding who comes in with a specific. If an earthquake has happened, he has a box of earthquake-pills, preventitive or curative, as the present or future may demand. If there is nervous irritation, he brings out his dulcifier and mollifier, and if there has been any over-trading he has a nostrum which will prevent the repetition of it. "Have you read my little book"? (These men always have a little book.) "I understand your complaint per-"fectly. You have been entrapped by a wicked and self-"ish race of islanders into a commercial treaty which "threatens your ruin. They will suck every drop of blood, "your gold, out of you, and then throw you away like a "squeezed orange. There is but one remedy for you, "*Protection to native industry.* Adopt this or you are "a ruined man." As a last insult, our friend finds some of his more precocious sons writing essays in the newspapers advocating the very same doctrine. The alarm which the quack creates is one of his most tremendous weapons, and in a case of this kind he uses it with full effect—though, to do him justice, he entirely believes in the virtue of his remedies.

And now, dropping all analogy and metaphor, what is actually wrong with Japan at this moment? Her trade is in a very pitiable condition. About four millions of dollars in gold have left the country since the beginning of the year. The development of her resources is practically at a standstill; her current expenses, though somewhat decreased of late, are large, and her real poverty is beginning to be not only apparent but felt. When the country was first opened to foreign trade, the foreign and native merchants made money very fast, though the country people did not largely gain by that trade. The foreigners bought their silk and tea very cheaply, and sold their imports at high prices. The adjustment of values which has since been completed, had only then just commenced, and there was a large margin between the prices at which the foreigners on the one side and the Japanese on the other could afford to buy and sell, and the prices at which exports could be sold, or imports bought, in Europe. The adoption of our manufactures as articles of dress disengaged a quantity of silk which had hitherto been consumed in domestic manufactures, the silk was cheaply shipped here and dearly paid for at home, while our manufactures were cheaply bought at home and dearly paid for here. So far as a trade may be said to be profitable to a country which obtains for what it values little that which it values much, the early trade was profitable to this country; but, as a matter of fact, Japan parted, as was quite natural, with her silk and tea at low prices and bought our manufactures at high prices. All this has changed, and she now derives a far larger profit from the trade, for she sells her silk so high, and buys her manufactures so low, that a very bare profit is yielded by either. But between these two periods the civil war occurred, during which there must have been, as there always is during war, a vast deal of waste and a vast deal of expenditure. The waste is, as we know, very soon repaired; but the expenditure, represented here by a floating debt of $96,000,000, a very small part of which, however, bears any interest, is still a charge on the country. But we must not forget the effects it has had, which have been two-fold. *First;*—it disengaged a large quantity of the precious metals, existing in the unproductive form of metallic money, and converted into what is, at least potentially, productive capital. When money, thus disengaged, goes into the hands of bankers, it is almost always wholly turned into productive capital, and it fulfils a similar office when used by a Government in redeeming debts. But, unfortunately, during a war, it becomes, in one way or another, rapidly squandered, and though the supporters of a dynasty it had helped to enthrone would strenously deny that it had been wasted, they could not gainsay many reflections upon the costliness of revolutions. *Second;*—as this inconvertible currency issued by the Government not only superseded much of the coin in circulation, but also exceeded it in amount, it led to a rise in prices which has always at first a very stimulating effect upon trade. Subsequently, however, this inflation subsides, and a stagnation sets in, during which, though the foreign trade of the country is not affected, the exchanges are, and the gold begins to run away; and if we mistake not very much, it is in this condition that we find Japan at this moment.

There seems to be a strong feeling abroad among the Japanese that this condition of affairs could be met now, and prevented in future, by the establishment of a protective system for the encouragement of home manufactures—not we venture to think, because they have reasoned out the effects of such a system, but because it is a kind of patent nostrum, little more efficacious in reality than an earthquake-pill, but believed to possess restorative virtues of a high order. Of course it would take far more time and space than we have at our disposal to attack the general system of protective duties and to show how entirely they defeat their own end. But the great fallacy of the Mercantile System on which this bugbear of Protection was founded is that which makes the bringing of money into a country an object of such supreme endeavour. The establishment of a protective system here and the raising of a revenue by means of it would simply involve this, that the public would be called upon to pay a great deal more in order that the Government might receive a little more. Will this be of ultimate benefit to the country? How can it be to the interest of the public that the consumer should buy a dear article made at home, in preference to a cheap article made abroad? Commerce is really a mode of cheapening production; and if the Japanese would see this, hold to it, and act upon it, we should soon see them in possession of a key which would open nine-tenths of the locks now closed to them. But they are always looking behind them. If they do not take care they will stand, like Lot's wife, a pillar of salt on the plain of history, the monument and example of all who cannot seize the proffered means and tread the clear and open path of safety. They have been told that a foul and cruel deed was committed when the tariff was tacked on to the treaties, and sit and rack their brains how to get rid of it. They ascribe to it every evil which befalls them, from a cabinet minister's tooth-ache to a bad rice-crop, and are cockered up in this by a parcel of foreigners in Yedo who ought to know better, but who are not paid to tell them the truth, but to "prophecy smooth things." They are told that the English want their gold. Stuff and nonsense! We want their silk, their tobacco, their rice, their hemp, anything they like to grow, in fact. If they pay us in gold, how can we make money out of that? A pound is but a pound. But if they pay us a pound's worth of silk, we can work it up and delude some pretty woman into giving us twenty-five shillings for it. If we take a pound's worth of tobacco, we can water it, twist it up into hay-flavoured cigarettes and sell it to some princess as fine Latakia. All this does not proclaim our exalted destiny among the nations, but every coin has a head and tail. And lest it should be said that this is solely the argument from our side, can we desire any thing more than the welfare and prosperity of our customer? The Japanese should give up, now and for ever, all hankering after the delusion of a protective tariff, which is the veriest delusion that can be dangled before the eyes of a nation in their position. The sickness of their trade does not proceed from the absence of this. No evil star hangs over them. They are poor by no "spherical predominance." The independence of nations, so ardently desired by the protectionists, is only another name for their isolation. Even supposing this possible in the future ages of the world, what is Japan's experience of isolation? Has it made her wise, or great or rich? Have her peasantry been comfortable and contented, with forty per cent. of the fruits of their labour taken from them? Has her merchant class been respected, or deserved to be so? If her feelings in regard to honour bade men face death rather than disgrace—a testimony we most gladly bear her—they did not forbid the cowardly act of cutting men down from behind—an act which we are persuaded is now regarded as utterly infamous by men who would have committed it without hesitation or remorse ten years ago. Has isola-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tion raised the religious feelings of her people, made her men truthful and her women virtuous? Why should she then show such solicitude to be independent of the world? Has she so much light and yet refuses to share it? Or is she so much in darkness and yet refuses to dispel it? She has the potentiality of unbounded wealth, and of the power and wisdom which wealth may bring. She can grow wool and silk and corn and wine and oil, and send them over to the damp foggy little island on the other side of the world, and receive in return books containing sound views on Political Economy (unadulterated by the Messrs. LIPPINCOTT), and calico, and double-barelled rifles, and such other things as are good for soul and body and are generally necessary to the healing of the nations. But if she loves her life she will throw physic, protection and the nostrums of quacks to the dogs.

SPIRIT OF THE JAPANESE PRESS.

"ON PROTECTIVE DUTIES."

("Hôchi Shimbun" of March 27, 1875.)

Translation.

In No. 949 of the Tôkiô *Nichi Nichi Shimbun* a writer under the *nom de plume* of "One of our staff" with a flourish of his pen states that the prevailing opinion throughout the country that Protective Duties should be adopted is wrong and that his view of the question is the only correct one. On first looking over this article I was struck by the vigour and force displayed by the writer, but when it came to the question at issue as to whether Protective Duties were good or bad I was surprised to find that this energy and vigour had died away, being replaced by a quibbling manner with which the writer has rendered his meaning obscure. If you talk of Protective Duties call them so, if you speak of them as bad say it out. "One of our staff" really thinks, as far as I can judge, that Protective Duties are bad. Yet he hoists the standard of "Protective Duties" while in his heart he believes them to be bad.

"One of our staff" says that he does not pretend to understand whether the wealth of our country lies in agriculture or in industries, but that his principal reason for not believing in the efficacy of Protective Duties is that they have been found both in North and South America to be injurious to agriculture. It is quite possible that there may be people in America of the same way of thinking as himself, but it is none the less a fact that there are men in that country who maintain that the system of Protective Duties is beneficial to agriculture in a marked degree, and produce statistics of products and prices in support of their assertions. Thus if he comes forward and states that the system of Protective Duties is bad, I on my part can step forward and assert the contrary. This would, however, be a fruitless discussion which would do no good to our country. The grounds therefore, which I will take up are these. If the system of Protective Duties be introduced in the present condition of the country, what will be the consequences? What evil and what good will result? In replying to the "principal reason" given by "one of our staff" (namely protective duties injure agriculture) I will adopt this basis of argument and treat the question in a broad manner.

Although by the imposition of heavy duties upon Imports the price of these rises and people suffer loss and inconvenience thereby, yet the idea in introducing the system of Protective Dues is to pass over the slight loss of the present and look to the material gain of the future. Therefore any slight momentary loss should be disregarded. "One of our staff" argues that this loss would fall entirely upon the agricultural classes, but the fact is that it must fall upon those who buy the imported goods. For instance supposing that a tax of 50 per cent. were levied on muslin, then the price of muslin would be increased; one *tan* which was previously bought for 2 *boos* would cost 3 *boos*, and thus the buyers would suffer a loss of one *boo*. But the agricultural classes are not the only buyers of muslin. Merchants, officials, *Shizoku*, *Kuwazoku*, doctors, priests and the very manufacturers themselves use it. How then could agriculture alone suffer? How can "One of our staff" call "Protective Duties bad for this reason?" He appears not to have studied Political Economy.

There is a matter of pressing urgency. There is a sign of the approaching ruin of the country. If this system of Protective Duties be not introduced and months and years be allowed to slide by—it will be too late to do anything to avert our country's fall.

This pressingly urgent matter, what is it? This sign of the coming dissolution of the country, what is it? It is the unchecked exit of money from the country.

The industries of the nation are dwindling away, and the number of those who eat the bread of idleness increases with every day. If "one of our staff" will direct his intelligent understanding to the contemplation of the state of the country as it is now before our eyes, he will see not only that advantages will be secured by the introduction of this system of Protective Duties, but that evil will thereby be kept away.

ON PROTECTIVE DUTIES CONTINUED.

("Hôchi Shimbun" of March 29, 1875.)

Translation.

I pointed out in my article of the day before yesterday that the introduction of a system of Protective duties would not affect the Agricultural classes only, to the exclusion of the other classes of the nation, as asserted by "One of our staff," a writer in the Tokio *Nichi Nichi Shimbun*, but would affect all classes of the nation generally, and therefore that the protective system could not be denounced on the supposition that its consequences were injurious to the agricultural class. I would like to proceed to the explanation of the "matter which presses "for urgent action and the sign of the country's ruin" to which I alluded in my previous article, but I must first deal with the question of the "promotion of industries" which "One of our staff" treats of in his argument.

The idea of "One of our staff" in the adoption of the system of Protective Duties is not to employ this for the development of industries after they have been fully developed. This I cannot understand. The reason that the industries of our country have not been developed is not that our countrymen are ignorant of the benefits resulting from industries; nor is it that they lack the energy to set about it; the reason is that they have not been able to complete with the perfections of foreign machinery. It is not that they are unaware of the perfections of this machinery or are unwilling to buy it, but that in the first development of an industry our mechanics are not expert in the use of foreign machinery, have difficulty in obtaining it, require considerable capital to start abusiness, and, therefore are not able to supply the articles of manufacture except at a high price whence, they cannot compete successfully with the articles of foreign manufacture.

If our countrymen desire to develope the industries of the country they should begin by adopting the system of Protective Duties, and imposing heavy taxes on all imports, cause those who are engaged in the prosecution of industries to compete successfully with foreign countries and create a way by which those industries which turn out profitable should become developed more and more of themselves without the need of any assistane. I await the time when industries shall have reached perfection.

ON THE NECESSITY OF ENCOURAGING NAVIGATION.

("Hochi Shimbun" of March 4th, 1875.)

Translation.

The writer Nakagawa commences by stating that he has read the article written by Sasanami Heiji which appeared in the *Tokio Nichi Nichi Shimbun* of the 18th February in which he deplores the fact of Japanese navigation being at a stand-still, and points out clearly how with respect to navigation Japan has been proceeding in exactly the opposite direction to that taken by foreign countries,—has in fact been rapidly retrograding whilst foreign nations have been progressing. Heiji's arguments are perfectly correct and proceed from an earnest solicitude for his country's welfare. The writer of this on

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

reading his article could not withhold his admiration as he also must confess to a deep solicitude on behalf of his country.

He has also read thoroughly the Petition on this subject which was communicated to the Mombusho by a learned scholar named Murata Bumpu and has found that the main points of his petition are identical with the arguments brought forward by Heiji although there are some differences in the minor passages. Bumpu has divided his subject into numerous headings, amongst which are the selection of captains, education of sailors, reform in the building of ships, and rules for vessels. The writer has obtained copies from Bumpu of the prefaces to the two volumes of his petition, and forwards them to the office of this paper, begging them to insert them for the information of others solicitous, in like manner, for the welfare of their country.

Enclosure.

The writer Murata Bumpu has devoted himself to investigating the causes of the present wealth, power, and prosperity of England and France and other countries, and has discovered that these are not the results of any extraordinary extent of productions in those countries, nor are they to be attributed to their military strength, but that they are the effects of the skill which has been attained in navigation, and that it is owing to this that England and France are pre-eminent in commerce. He proceeds to say. "The two things which make a country "rich are a prosperous trade, and a healthy circulation "of money, and these again can only be effected by "rapidity of travel, communication, and of transport by "sea and by land. These are the most important con- "siderations as regards commerce. For even if a country "be rich in products, if no trade be conducted its pro- "ducts do not benefit it, and again if trade be conducted, "if facilities for rapid travel, communication and trans- "port are wanting, no profit can be made. It is for this "reason that the Governments of western countries have "paid great attention to the investigation of the most "convenient methods for communication and transport, "and have established Rules for Railways, Telegraphs, "the Postal Service, and for transport by sea, and have "thus developed the trade of their countries and at the same "time commerce with foreign countries, while the people "of those countries again are thus informed of the true "circumstances of other countries, and are at once *au* "*fait* with the state of other countries and of their own, "and thus they ply their various avocations with industry, "and wealth, profit and power accrue to their countries "As an instance of this the English from ancient times "practised navigation and made voyages to distant coun- "tries, and thus gaining experience and skill in naviga- "tion, they excelled in building ships, and visiting strange "lands far removed from their own, civilized them and made "them dependencies of their own. Their trading vessels "are, therefore, many in number, and their sailors brave "and skilful, and the consequence is that they have be- "come the Lords of the Sea. Hence if we look for the "cause of the wealth and power of England, France and "other countries we find it in the fact that they gained "skill in navigation and carried on communication with "foreign countries; it does not lie in any military strength "which those countries possessed. England is but a "small island; she is not particularly rich in exports, and "if her great wealth, power and prosperity do not pro- "ceed from her strength and superiority in navigation, "to what are they to be attributed?"

"Now what troubles me is that Japan stands out of the "Eastern sea, an island surrounded by the ocean on all "sides. Why is it that the path of navigation is thus "obscured—and why is it that there is no form and "steadfast basis, for commerce with foreign countries?"

"At the time that the power of the Emperors was at "its zenith, Corea was subdued and communication was "carried on with China. Navigation was then in a flourish- "ing condition. In the periods of Tensho, and Bunak "the number of ships in the Japanese mercantile marine "was fixed at a certain number and commerce was car- "ried on with foreign countries. It will be seen from "this that it is not the case that the art of Navigation "was never studied in Japan from the earliest times. But "in the period Kaicho and Genna navigation was neglected, "and through being confined within the limit of the "Japan Seas the construction of ships deteriorated and "our sailors lost their skill. Casualties became of com- "mon occurrence, such as shipwecks in storms and ships "being blown out of their courses by adverse winds, and "thus Government business and private business were both "materially injured."

The writer concludes by saying that now that a firm Government is established and that daily progress is being made, while a steady effort is on foot to become on a par with foreign countries, navigation must be studied, for without this all other efforts towards an advance in civilization are of no avail. He advocates the establishment of a separate sub-department or office to have the conduct of all shipping matters and recommends rules similar to those obtaining in foreign countries, such as anchoring regulations, cargo regulations &c., to be passed by selecting the best parts of those possessed by foreign countries, and he urges the necessity of thus establishing so to speak a "Board of Trade" at once, pointing out that Railways, Telegraphs &c., have all been set on foot, but shipping, the most important of all, hitherto neglected.

On the Loochooan Embassy.

"*Tôkiô Nichi Nichi Shimbun*," of *March 30th*, 1875.

[*Translation.*]

In accordance with the commands of the Government of the Empire of Japan three of the principal officials of Loochoo named Ikegusu Oyakata, Yonabara Ogakata, and Kochibai Kin, accompanied by about fifty followers left Loochoo on the 16th of February, in the mail steamer "*Genriômaru*."—They changed steamers at Osaka leaving the latter place on the 15th instant, in the steamer "*Tai-yu-maru*, reached Tôkiô on the 18th instant, and took up their quarters in the *Yashiki* of the Loochoo *Han* in Mochinoki-zaka. On the 28th instant, they had an audience of the Emperor, and yesterday, the 29th instant, they presented the Government with products of Loochoo. These were tables of shell-lacquer and various articles to the number of 14 or more placed on trays of white wood. The friendly* feelings of the Japanese Government towards the people of Loochoo are hereby made manifest.

And now that the friendly and benevolent feelings of our Government are displayed we wish to say a few words to these of our countrymen who are men of understanding and education. What circumstances led to the issuing by the Japanese Government of orders to the people of the Loochoo *Han* to attend at the Capital? Ye men of understanding and education, please to consider this point!

Looking into this question we have discovered three reasons for the issue by the Government of orders to attend at the Capital on account of Government business.

These are: firstly to communicate to them the news of the termination of the affair of the chastisement of Formosa; 2ndly, after informing them of this to distribute among them the indemnity paid by China on account of the trouble brought upon the people of Loochoo; and 3rdly, to take them to task for the visit last year to China of Loochooan tribute ships. These are the most important points at present at issue between Japan and Loochoo.

We met Takara Kin in the *Yashiki*, and questioned him concerning the Tribute Ships to China. He said as follows:—"A ship carrying an envoy was despatched in "the 7th month of last year. The envoy left Foochow "overland for Peking in the 10th month and probably "reached Peking by the first of the 1st month of this "year. It is customary to send these tribute ships every "second year. Consequently this year a ship must be "sent to meet the tribute ship of last year. The tribute "sent is very small not being more than some tin, some "copper and 200 or 300 lbs. of sulphur." I asked him if it really was during last year, that the tribute ship went to China. He replied in the affirmative. On my enquiring if this action on the part of Loochoo had not aroused the suspicion of Japan, he answered that as yet nothing had been heard from Japan on the subject. This

* Friendliness with a sense of patronage—that shewn by a superior to an inferior, by the weak to the strong. There is an idea of patronage and protection implied.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

conversation has helped to throw considerable light upon a point which was previously obscure to us.

In our issue of the 26th of the 1st month of this year under the heading of "Foreign News" we published a translation from a foreign newspaper to this effect:—"In the "Peking Official Gazette" of the 15th of the "12th month of the 7th year of Meiji it is stated that a "tribute ship arrived at Foochow in the 10th month of "the 12th year of Tung-Che—that is between the 11th "and 12th months of the year 1873 of the western "calendar." The 12th year of Tung-Che corresponds to the 6th year of Meiji and is therefore prior to the date of the Formosa Question. Consequently one of the writers on the staff of this paper who writes under the *nom-de-plume* of "One of our staff" criticised unfavourably the action of the Chinese Government in the paper of the 29th of the 1st month demanding why they should have published in the Official Gazette of the year an occurrence which took place a whole year before. Again if I remember right the passage in the Foreign Newspaper —"the 10th month of the 12th year of Tung-Che—that "is between the 11th and 12th month of the year 1873 "was translated in the *Chôya Shimbun* the 10th month "of the 12th year of Tung Che—that is the year 1874." Thus in a contributed article in the *Nisshin Shinjishi* in discussing the fault committed by the Loochoo *Han* (in sending tribute to China)—the date of this is fixed as the winter of last year—the 7th year of Meiji. It is the same in a contributed article which appeared in the *Chôya Shimbun* of yesterday. Since then we were afraid that a mistake had been made in the date and that this mistake would by its appearing in the *Chôya Shimbum* spread everywhere, but after hearing what Mr. Takara said we knew the date 1874 as given in the *Choya Shimbun* might be relied upon as being correct.

From the above it is clear that the Loochooan tributeship did really go last year. We do not doubt this fact in the least. This point we have taken as one of the three important questions previously stated by us as at present affecting both Japan and Loochoo.

However with regard to the first question we have selected, there is a representative of the *Yashiki* of the *Han*. Not to say a word to him on the subject up to that time and then suddenly to let him know of it for the first time by ordering the attendance of an Ambassador—was this absolutely necessary?

And with regard to the 2nd question while the Japanese people themselves do not know what is going to be done with the indemnity, to suddenly give it away is this a fitting thing to do? we will not venture to decide.

And with regard to the 3rd question Loochoo cannot certainly avoid the charge laid against her. But by what right and according to what Treaty is she to be called to account by our Government? Will the Government content themselves with merely reprehending her or will they exact a fine from her. We lack ability to explain this. It is beyond our powers. Ye men of learning and understanding consider this for yourselves.

Note.—In the contributed article appearing in the *Chôya Shimbun* of yesterday it is proposed to abolish the Loochoo *han* and make it a *hen*, to establish a Kenrei and remove the Sovereign of the *han* to Tôkiô.

We have formed our opinion from a consideration of the true state of the case as at present existing and find that it would not answer to adopt this course. As this, however, is a different subject we will not treat of it here.

(Signed) SASANAMI HEIJI.

THE REDUCTION OF OFFICIAL SALARIES.

The above heading is likely to bring upon us some odious sarcasm, and we shall be called fools for our pains. On this account we have long been waiting and meditating, but affairs have really come to such a pass that we must deliver our mind.

Both on the score of morality and economy there is nothing more important than a reduction of the salaries of the officials.

As regards morality: Those placed highest in society, and on whom the eyes of the people are most continually fixed, are the officials. Therefore they ought not to do the smallest evil deed, for the example of the officials will be followed by the people. "The example of aristocracies," says an ancient Chinese proverb, "will be reproduced with greater vigour by the people." One of the ancient Chinese Emperors was desirous of seeing the women with the small waists, and forthwith many of the ladies of his court starved themselves to death in the attempt to attract his attention.

If the officials desire *samisen*-players,* the capital will be crowded with them, and should the aristocrats be dissolute, none of the young women will any longer remain at home.

In comparing the present morality of Japan with that existing some years ago, we certainly find a change for the worse. Morality in the three capitals and the five open ports is of course bad; but the *Kenchos* are also bad, and we have lately heard that the cats (*samisen*) are going there from morning to night. It is the aristocracy which corrupts the morality of Japan, and it is money which corrupts the aristocracy. If they have too much money they use it as bait to fish up sensual gratification, and in this manner they are carried away from morality. This is the reason why they are unable to save their money or employ it profitably. It is not uncommon for people who have too much money to use it in evil or immoral ways, and it is not unreasonable to suppose that people who get money over easily spend it recklessly.

We have above explained the evil effects produced on the morals of the people by the example of the aristocracy, and we will now pass on to consider what effect it has in the matter of economy. At the present moment there is no surer road to making money than a Government office. The value of articles depends usually on the struggle of the labour, and the skill of the workmanship, employed in producing them, and, indeed, it is little like putting a wet hand into a bag of millet. But, observe, that large salaries are not obtained by skill or labour, nor by the thoughtfulness required to make a profitable investment. By opportunity and luck men with a little mark in their names are able to sell themselves with the greatest ease, and all men with common shrewdness have become, and may become, officials. Those who have not this quality remain behind. All this is caused by the excessive salaries paid, which are far larger than can be obtained in trade or business. This is why commercial affairs are so dull among us. And, besides, the high salaries of the officials are the cause why the salaries of school-teachers are so high. No able teacher can now be engaged at a reasonable salary, and much money has to be spent on education; this impedes the progress of the people in a very important particular. Thus both commerce and education decline, and this is due to the excessive salaries paid to the government officials. The interests of morality and economy are therefore greatly concerned in a reduction of these salaries.

We will not state the method by which the salaries can be reduced, and shall leave it to faithful and patriotic administrators. Ye learned men, what is your opinion?

THE DISCHARGE OF UNNECESSARY OFFICIALS.

(*Hochi Shimbun.*)

We are told now-a-days that the present officials are very fortunate, as they have attained their posts by mere flattery, and not by aptitude or study. For my own part I never listened to such rumours, for what we call officials are the representatives of thirty-five millions of people, and we have never supposed it possible that these men should be appointed simply on account of their personal acceptability to their superiors, still less that they are unable to discharge their duties. Such being our view, we thought those who raised this rumour were mere grumblers. But these rumours are so frequent that we have arrived at the conviction that these men are not grumblers and utterers of falsehood, but that important offices may be obtained by flattery, and the consequence is an excessive number of officials. For instance, work which could be discharged by ten men of ordinary ability is done by fifteen or twenty, and the higher official will thus appoint to a high office any man he is acquainted with.

If there are too many officials they are more likely to

* Lit. cats, the membrane used for making the *samisen* being taken from the cat.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

confuse than to aid each other. For example, if work which might be done by one man is given to two, each will wish for the other to perform the task, so that the actual result might have been attained by half a man; while, on the other hand, should one of them labour diligently and do the work which has been allotted to the two, his diligence earns no praise and he thus has no incentive to exertion.

Officials who have obtained their offices by flattery may imagine that they are working earnestly, but of course it is idle to suppose this will amount to much, and, therefore, to speak briefly, there is no actual work given them to do, and when they go to their offices they simply idle away their time. It matters not much indeed whether they go there or not, for there are many besides themselves, and they merely count their fingers and think how many days there are to the next holiday. If it rains they stay at home, and the days they spend at the office and at home are about equal.

From the above it may be seen that the excessive numbers of officials renders the work done unequal to the money paid for doing it, and this is the point an economist most dislikes.

We earnestly entreat that unnecessary officials may be discharged, and the high (of course) and low officials will diligently perform their respective duties, so that the Government may profit by their services. "The master gains or loses according to the diligence of his workmen." For this reason I could no longer keep silence.

Wise and Able Men.

(Meirokuzashi)

The wisdom given by Heaven to men differs widely according to place and time. The former determines the colour of men, but the latter depends much on the administration of Government and the habits of the people, so that a place may retain its old name and yet be in a very fallen condition as regards its stock of wisdom. In ancient times wise and able men were produced abundantly in Asia, afterwards in Europe, then in America. To be more minute, the able men of China during the reigns of the five emperors and three kings, came chiefly from the north-eastern part of the Empire, after which wisdom penetrated towards the south-east. At the time when Tetsubokushin, the founder of the last dynasty, came from Mongolia, conquered the Empire and called it Min, wise and able men were found in Mongolia. When the ancestor of the present dynasty came to the throne of China, wise men came from Mantchuria. When Greece was at the height of her prosperity, all wise and able men sprang out of her dominions, and the same may be said of Rome.

In meditating upon the history of our own country, most of the wise and able men at the time of Jimmu Tennô came from the province of Yamato, and when the capital was removed to Kioto, they came from the province of Yamashiro. After that gradually Kuan hâshu produced them. At the time of Taikôsama they sprang out of Owari, and in the time of Tokugawa Iyeyasu they sprang from Mikawa, while, since the last civil war, they have come chiefly from Satsuma, Chôshiu, Hizen and Tosa.

It is not easy to discover the causes which produce these results. The ancients said it was mere chance. But we think differently, and conclude that this summary explanation is insufficient. Speaking briefly, however, we think it arises from the fact that the minds which men have received from Heaven have greater freedom to expand at certain times, and that their free and independent exercise under these circumstances will produce wisdom and ability. It is for this reason the men are wise in Europe and America. But as the constitution of Asiatic governments is and ever has been, despotic and productive of oppression to the minds of the people, wise men only rise up at a distance from the capital where the hand of the Government is less felt. And one wise man thus produced excites wisdom in others; and should he be a sovereign he produces wisdom in his subjects. It is for this reason that Satsuma, Chôshiu and Tosa have surpassed all the other provinces. But the wisdom we have to-day is little more than what we possessed before the commencement of our intercourse with foreigners—it is the wisdom of Japan, but nothing more. We believe, however, that our countrymen desire the wisdom of the world, and not merely that embraced within the limits of Japan. In order to excite wisdom in an oriental country, so that we should not be ashamed to appear before the whole world, it is essential that a free and independent spirit should be diffused among the people, therefore when legislators and administrators make laws they must pay the greatest attention to this fact.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

The Jau-do-Shiu (Heavenward bound Sect) was founded in A.D. 1211 by Ho-nen-sho-nin at Kioto in Chi-non-in.

The temple at Shiba, Tokio, was founded by Sei-so-sho nin, also a priest of this sect, in 1605.

The priests of this sect are forbidden marriage and wine and all but vegetable articles of food. The name of the Sect is taken from its belief in prayers to Amida Butzu, which are efficacious to ensure the devotee being reborn into paradise. Honen taught that whether the priests and their followers were learned and devout or the contrary mattered little as regards the final result, and that all that was really necessary was the incessant repetition of the prayer to Amida Butzu *Namu Amida Butzu.* (Pray to Amida Butzu) and accompanying this by hammering on a bell called *Fusho* The solution of abstract questions and doctrinal controversies are not needed to promote the work of salvation. On the anniversary of a death, a large rosary of one hundred and eight beads is laid on the mats and the priest sits in the circle thus formed, the friends of the deceased sitting outside facing the priest, and, as they pray, passing the beads from left to right. This ceremony, which is called *Hiakuman ben,* is exclusively practised by this sect.

Two priests of this denomination used to be seen and heard in the streets, handsomely dressed, striking a small gong tied to the front of their girdle and singing, or rather intoning their prayers. Women were in the habit of making them presents, as handsome men with fine voices were invariably chosen, until jealousy placed a check to the custom.

Jau do shin shiu, (the new road to paradise) a branch of the foregoing sect, was founded by a pupil of Honin, called Shin-ran-sho-nin in 1262. He was twenty-first in descent from is ancestor Amatzu-ko-yane-no-mikoto, and great grandson of Tai-sho-kan-kama-tari Nai-dai-jin, and son of Kodai kogu taishin ari-nori.

In 1400, the two large temples *Nishi* (west) and *Higashi* (east) Hongwan ji were founded in Kioto. Besides these there are two large temples similarly named in each of the cities of Ôsaka, Yedo, Nagasaki and Niigata, built on the same model.

The name *Ekko* is derived from Ekko-sen-nen-mu-rin Jibutzu, the name of a book of prayers, the everlasting Hodoke, which enjoins that the mind is to be thoroughly absorbed in the *nenbutsu* or act of prayer. This designation, though not recognised by the Sect itself, has been applied to it on account of the singleness of purpose exhibited by the worshippers at their devotions. The name *Monto* (lity. concentrated within the gates) would seem to be derived from the fact of the Sect being so undivided. The priests are permitted to marry and their diet is not prescribed by rule. To the accusation of uncleaness with which they are charged by other Sects they reply that the bright rays of the sun shine on all things alike, and that as there can be no difference in the eyes of the gods, the maxims and narrow-minded doctrines, with the neglect of which they are reproached, can only have proceeded from the folly or vanity of man. In place of selecting sequestered spots in the hills as sites for their temples, they build them in the centres of population and endeavour, by all means within their power, to attract the people to them.

Kanzewon Kuanon, goddess of mercy, assumes thirty three forms, under which she protects the human race and permits her priests to be as other men. Self-inflicted penalties, penance, fasting, pilgrimages, isolation from society,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

whether as hermits or in the cloister, are not imposed by the pure Buddhist doctrine. Devout prayer and a pure life are alone essential to salvation from punishment in a future state, and in order to secure a place with Buddh.* Unlike the other Sects the priesthood is in this hereditary, the care of each temple being transmitted from father to son. Should the priest have no male heir his daughter's husband, should he have a daughter, succeeds him. The priests and their families are said to possess higher erudition than that of other Sects, and in periods of domestic broils, or war with foreign powers, form (like the monks of Spain during the Peninsular War) a clerical militia available for defence. The *Ofumi*, or writings, are daily read. These were composed by the founder Shinranshonin and are written in *hiragana* so as to be intelligible to all. The altar is named *Omamukisama*, and is invariably gorgeous both in temples and private houses, a circumstance which has given rise to the saying "As handsome as a *Monto* altar. In the morning the men while praying, wear a small silk overall, the women a narrow strip of white cloth or silk round the head. This is named *tsuno-kakushi*, or horn-hider, and is worn in order that should jealousy or evil be present in their minds—a not unlikely circumstance—they should not appear before the *Hodoke* as *Han-ya* or horned demons.

In the year 1222 A.D. at Tojo, county of Nagasa in the province of Awa there was born on the second day of the second month (exactly 2174 years after the death and cremation of Shakka) one who subsequently became Nichiren sho nin, the most exalted Nichiren, who sixty years later succeeded in establishing a new Sect at Hon koku ji, Kiôto. His name originated in the story that his mother during her pregnancy dreamed that she had swallowed the sun *Nichi*. The original *ha* (sect) called *Ichi* (single-minded) afterwards the *Sho-retzu-ha* (superior doctrine) was formed and was instituted at Shorenji in Kiôto by Nichi zo sho nin. Its principles are contained in the Hokke kio,—the blossom of (Buddhist) doctrine—a work in eight volumes, and are the truest of all. They prescribe self-examination and reflection upon the blessings vouchsafed to them as a chosen sect. This denomination is fond of controversy, reviling other creeds with sectarian bitterness. One of their common sayings is worth giving: They who mumble prayers fall into *Gigoku* (Hades). The *Zen shiu* are furies, the *Shingon* unpatriotic, and the *Ritzu* thieves and malefactors:—all other sects but ours are without end or aim. Bigots offend continually by employing opprobrious language in their reflections upon other sects. They resort more than other sects to superstitions such as charms, spells and amulets. Their prayer-books are very numerous and the commonly heard *Namu-mio-ho-renge-kio*, with its noisy accompaniment of drum-beating, is used by them exclusively. The priests should be strict vegetarians, abstainers from wine, and observers of a celibate life. A revival meeting of this sect is a scene of nose and indescribable confusion and the state of excitement some work themselves into, often ends seriously and sometimes fatally: they are great pilgrims. Hori no ouche is the chief meeting place in the vicinity of Yedo—on the 13th of the 9th month.

Of the preceding Tendai, Sanron, Ritzu, Shingon, Zen, Jaudo, Ekko, and Nichiren are the eight existing sects. There are however, other sects which are not recognised as being of minor importance.

In the year 1278 A. D. Ugio-ha-itzuhen-sho-nin founded the Jishiu, or time sect, at Fujisawa in Sagami near Yokohama and a temple there is named after him. The priests connected with the temple may be numbered by scores. They wander throughout the empire. There are offshoots, small temples in other localities: that at Fujisawa, however, is the parent church. It is said that when a priest of this sect dies the *renge* or *hasu no han* (lotus flower) in the temple gardens blossoms, and this indicates that a vacancy exists, which the novice next in turn is called upon to supply. These wandering priests give to those they meet on their journeyings, a piece of paper on which the words *Roku jiu man nin ketzujo-o-jo* are written. Their founder, it is related, once made a pilgrimage to Gongen in Kumano in Kishiu and prayed for some favourable augury. His prayer was answered in a reply, which is condensed into the foregoing Chinese. These words are printed, or stamped, at Fujisawa by a priest, who lies concealed beneath a musquito net, the labels being passed in to him beneath this cover, tied up in ten packets, each consisting of one hundred. It is currently believed that but one impression is needed to penetrate through the entire package of one thousand, while the outside wrapping-paper remains unsullied by the process. Women who are obviously with child receive two of these labels, and the perspicacity of the *Hokode* is such that it is said that females who are unsuspicious of the fact that they are enceinte first learn their condition from the unerring discrimination of the holy man's followers who can recognize the *Tamashi* (spirit) of one of their sect, returned to earth. These travelling "colporteurs" of Japan are restricted in their diet to buckwheat flour, sweet-potato and a few other articles of food. Millet, rice, wheat, beans, sorghum, fish, &c., are prohibited to the chief priests, and strict celibacy is enjoined.

Hatchi tatake is the name of an offshoot from the Shingon Sect, established in the year 932 by Fudaraku san at Rokuharamitzugi in Kioto. Kuyashonin made a wooden effigy of himself at a branch temple named Gokuraku In and placed it here. There is a group of eight smaller temples within the boundaries of the *ji chiu*, or temple grounds. No other temples of this sect exist. The priests allow their hair to grow and do not tie it up. They are permitted to marry and are unrestricted in respect to diet. They divide their time between prayer and the manufacture of the little *cha sen* (lity., tea-stirrer, better known to the bibulous foreigner as "swizzle-stic.") These, during the twelfth month, they dispose of in their wanderings throughout the country, their wares being stuck in a bundle of straw which is tied on a long bamboo and borne on the shoulder of one of the party, while the air resounds with the noise of a small gourd and the inevitable *namam-namam-da-butsu*. On festivals or at prayer meetings the *nembutsu* are invariably accompanied by dancing and capers.

The *Yamabushi* is a Sect of wandering priests who, though not absolutely mendicant, do not decline payment for any services within the scope of their profession which they may be called upon to render. Many of them have their defined walks, and pay periodical visits to certain districts. They are most frequently called in to pray to Kojin—the god presiding over culinary affairs—monthly, and to offer up prayers for the sick, absent relatives and good fortune. They look upon Fudô as their patron and pray to him continually. They blow the *hora no kai*, a conch, before prayer. There are two classes, one originating in the *Tendai* sect who are under the protection of the *miya* Shogoin (a relative of the Mikado). Their head-quarters are at Hagurosan, Hosan and Miidera. The other is an offshoot of the Shingon, are under Samboin no miya and frequent Hagurosan. In spring and autumn they retire to the hills of Oomine and Kadzura ki, and observing certain minute regulations as to costume, side arms, *tatchi*, &c., ascend the mountain. Sick men are left to perish on the way if unable to keep up with the procession.

The Gannin-boz (*v de* article Beggars, Strollers &c.,) are said to be an offshoot from the Yamabushi. There is a Sect founded by Fukezenji, styled Kiomuso, whose tenets resemble those of the Zen shiu which is remarkable only from their having until recently (when its use was prohibited) worn the *tengai*, a basket-shaped hat which conceals the features. Its members passed from door to door, playing a *Shak hatchi* and receiving a few cash as their guerdon, for which their fans are held out. They do not speak, but after playing a few notes pass on in silence to the next house. The chief temple of this Sect is in Kiôto and is named *Mio an ji*, or temple of light and darkness. That in Yedo is known as *Ichi-getz-ji*, or one-moon temple. The temples of the sect became sanctuaries to the *bushi* (*samurai*) who had committed crimes, or feared the resentment of an enemy. The unusual head covering which concealed their features and the priestly garb protected them from harm, when they went abroad. About fifty years ago this costume became the

* The Sect is without doubt the Protestantism of Buddhism in Japan, and from the high position of its founders and [illegible] has taken a prominent rank in the religious [illegible] that is now agitating for Asiatic [illegible] perfect liberty, and free of Shintô influence.

vogue, and some of the Daimios, gorgeously apparelled, did not disdain to appear publicly in the disguise. Money, if placed on the face of a mirror and handed to the Kiomuso was not accepted, as this was held to indicate a desire on the part of the donor to discover his features by their reflexion. The new *régime* has wisely discountenanced the wearing of the hats and has declined to recognise the sanctuary of the temples.

Nunneries and Convents.

The chief of these in Kioto is a temple named Hon Ko In; that of Aoyama, Yedo is styled Zen Ko Ji. There is also one at Kamakura, and numbers of them exist throughout these islands. The convents are not devoted to any particular sect, being common to all. Celibacy is enjoined. The *bikuni*, or nuns, are drawn from all classes of the people, though some of the nunneries admit the wealthy only. There are no "Sisters of Mercy" and the nuns who are permitted to wander beyond the boundaries of the convent are usually beggars. Those of the Zen shiu Sect used formerly to wander about the country in crowds, but this is now prohibited. It is not uncommon for women who desire to separate from their husbands, but who fail to obtain their concurrence *(ri yen)*, to retire to one of these *onna dera* (females' temples) and, after three or four years residence to return to the world absolved from their former ties and ready, perhaps, to form a new alliance.

ON SOME JAPANESE LEGENDS.

By C. W. Goodwin, Esq.

Read before the Asiatic Society of Japan, on the 17th March, 1875.

It is more than sixty years ago since the publication by the brothers Grimm of a collection of popular and nursery tales which they they had gathered from the lips of the German peasantry, laid the foundation of a new study which has even since been pursued with interest and ardour. The legends of nearly every country and province in the world have been assiduously sought for and recorded, and a comparison of them has led to many curious results. Some of these old wives tales now only related for the amusement of children are found to be disguised forms of old mythologies, others are the remains of poems or romances or perhaps even of veritable historical narratives. Stories which can be traced to Central Asia are found localized in remote corners of Europe, as though they had grown there spontaneously, Such an one is the story of the faithful hound Gelert, whose tomb is shown in Wales to the present day, at the village named Bedd-Gelert, although precisely the same legend is found in the ancient collection of Persian tales, known under the name of Syntipas, of which we possess a Greek translation. The question how and when these tales were spread over the world is one of much interest. Some of them may have been carried by the Aryan tribes at their first emigration from their Asian homes. Others may have been imported by wandering minstrels at later periods. The process of communication must have gone on from a very remote antiquity. Quite recently Egyptian romances have been discovered in manuscripts of the 13th or 14th centuries before Christ, which have all the childish naiveté and the stock incidents of the modern fairy tale. The intercourse which early existed between Egypt, the Western part of the Asian Continent and Europe explains sufficiently the diffusion of this ancient literature over that portion of the earth's surface which we are accustomed to call the West. But we should be less prepared *à priori* to find European legends making their appearance in a country like Japan so isolated and remote and which so far as it has borrowed, has done so chiefly from China, itself a country of which the literature is indigenous, and whose legends have not much affinity with those of Western Asia.

Some instances, however, of Japanese legends bearing affinity to those of the far west do occur, and one at least so remarkable that it has appeared to me worth making the subject of enquiry. The object of the present paper is simply to open the matter and to invite to it the attention of Japanese scholars, who are more qualified than myself, to institute a comparison between the whole cycle of Japanese legends and those current in different countries of the West.

"A short story included among those given in Mitford's Tales of old Japan," struck me when I first read it, as having a remarkable resemblance to one with which I had been familiar from my childhood—an Irish story first published by Crofton Croker about the year 1824 or 1825—and called the Legend of Knockgrafton. As I have unfortunately no copy of Crofton Croker's work by me, I must tell this tale as well as I can from memory.

The Legend of Knockgrafton.

In some remote district in Ireland, but whereabouts I forget, is a village called Knockgrafton near which are the ruins of an ancient castle surrounded by a moat, known in ancient times as the haunt of fairies or elves.

In the village of Knockgrafton lived a good natured little humpbacked man named Lusmore. He was a general favorite from his cheerful and pleasant humour and nature had endowed him with a good pair of lungs and a taste for music.

One sunny day Lusmore lay down on the bank of the moat, and had a nap from which he was awakened by the sweet sound of voices apparently proceeding from beneath the water. He knew at once that it must be the fairies singing. Their song was of a very simple character, for it was nothing, when translated into English (the fairies of Knockgrafton of course sang in the Irish or Erse language)—but—Monday, Tuesday, Monday, Tuesday, and so on *ad infinitum*. Lusmore listened for some time and at length got rather tired of this perpetual repetition and seizing a moment when there was a slight pause he sung at the top of his voice but in a musical tone—'and Wednesday too'—Scarcely had he done this, when he found himself caught up and whirled down to the bottom of the moat, where was a spacious hall full of elves dancing and singing. They took up Lusmore's words and went on singing lustily "Monday, Tuesday and Wednesday too." After this had continued for some time Lusmore was conducted to a place of honour and two of the strongest elves came and with a saw made of butter they cut off his hump—and then they all sang

> Lusmore, Lusmore,
> Weep not nor deplore
> The hump that you bore
> On your back is no more
> Look down on the floor
> And view it Lusmore.

Little Lusmore now found to his astonishment that he was no longer bent double as he used to be, but that he could lift himself upright and was a tall man, and in doing this he nearly knocked his head against the ceiling. After much rejoicing and feasting it became time for the elves to give up their festivities. Lusmore fell asleep and when he awoke he found himself again on the bank outside the moat. He got up rubbed his eyes, and felt his back, and found that true enough he was rid of his hump. He went back rejoicing and told all the neighbours how he had danced and sung with the elves, and how they had taken off his hump. The story soon got wind and all the neighbourhood came to see Lusmore and congratulate him upon his good fortune. Now there was another humpback at Knockgrafton known by the name of Jack Madden, an ill-conditioned young scamp whom nobody liked. His mother was an envious old crone who did nothing but murmur at Lusmore's back and wondered why the same did not happen to her son Jack. By her advice Jack Madden went and laid himself one day down by the moat, and there sure enough he heard the fairies singing their song with Lusmore's elegant addition—"Monday, Tuesday and Wednesday too." Now Jack Madden who was as deficient in taste as he was in voice, thought to himself if Lusmore pleased the fairies by adding another day to their song, why should not I do better still by adding all the rest of the week—so without waiting for a pause, or paying any regard to time or measure, he began in a harsh loud voice shouting out Thursday, Friday, Saturday, Sunday. Now the fairies have not only an exquisite ear for rhythm and time, but they have also a peculiar aversion to hear the Lord's day named. No sooner therefore had Jack Madden commenced this tasteless uproar than he found himself whirled into the moat and surrounded by fierce-looking fairies. Two of

Original from UNIVERSITY OF CALIFORNIA

the strongest of these, by orders from the chief, took up Lusmore's hump which was still lying about, and clapped it on Jack Madden's back, where it instantly stuck as tight as wax. Then they all sang

Jack Madden, Jack Madden
Your words came so bad in
The tune we feel glad in.—
This castle you'r had in
That your life we may sadden
Here's two humps for Jack Madden—

Immediately after this they kicked him out of the moat, and he was found on the ground next morning by the old crone his mother when she came to look after him, with two humps instead of one. Such was the reward of envy and bad taste.

This is the Irish story picked up from the mouths of the peasantry more than fifty years ago. I am not able to say whether it has been found in any form in any other part of Europe, but my impression is that it is not known out of Ireland. The Japanese tale which resembles it is told very briefly by Mr. Mitford, and as he does not give any reference to the source from whence he obtained it, I made enquiries upon the subject, and my friend Mr. J. C. Hall of H. M. Consular Service kindly ascertained for me where it was to be found. It is given in the second volume of the Japanese work entitled "Uji Shu-i monogatari"—*i.e.* Stories omitted from the Uji collection. This book was first printed in 1664, but is supposed to have been written in the 13th century, the author being unknown.

Mr. Hall kindly transliterated the Japanese text and has also supplied me with the following translation.

The Story of the Man with the Wen.

The following also happened now a long time ago. There was an old man who had a big wen on the right side of his face. He went to (cut wood on) mount Taiko. It came on to rain and blow without stopping, so that he could not get back, and much against his will stopped the night on the hills. There was not even a wood-cutter's (cabin) near. He was in a dreadful plight and did not know what to do. So he crept into the hollow of a tree that was there and whilst he was crouching inside, unable to close his eyes, there came from the distance a sound as of men hurrying along and talking loudly the while. Sure enough as he was all alone there in the midst of the hills, he felt his spirits somewhat revive within him at the indication of people approaching, and he looked out and beheld beings of all sorts of shapes and appearances, some of them of a red colour wearing blue clothes and others of a black colour wearing red clothes. Running well in front of the rest were some with only one eye and some without a mouth, and such like, and altogether, indeed, a quite indescribable kind of beings. The whole throng, to the number of about a hundred, came together with a whizzing sort of sound, and after lighting a great fire as bright as the eye of heaven they spread themselves about it in front of the hollow tree in which the old man was, who thereupon lost the power of his senses more and more. One elf who seemed to be their chief sat on a seat set thwart-wise, while the elves ranged themselves on each side of him in two rows. I don't know how many there were of them, and time would fail me if I were to attempt to describe the appearance of them one by one. They enjoyed themselves drinking *sake* just like people of this world, and after passing the bowl round repeatedly the chief elf seemed to get uncommonly drunk. Then one young elf rose at the further end, and clapping a dish-tray on his head begged for something or other. Uttering witty sayings he marched up slowly to the front of the elf on the thwart seat and seemed to be importuning him: the latter remained seated holding the drinking cup in his left hand and smiling good humouredly, just like a person of this world. Then he led off into a dance and the rest joined in order all down the line: some danced well, others badly. When at length they seemed to have had enough of it the elf of the thwart seat spoke and said: "We have prolonged "the fun to-night much beyond our usual time; no "wonder, however; the jig was a sight to see." Hereupon the old man, whether it was that something had bewitched him, or that some god or saint put it into his mind to do so—at any rate he felt a desire to start out and dance. Then all at once he changed his mind, but the elves hereupon without more ado struck up a tune of so pleasing a sound that he made up his mind. "So be it," said he, "I will run out and have my dance; I must, even if "I die for it," and with his cap cocked over his nose and his woodman's hatchet stuck in his girdle, forth he came dancing up in front of where the elf on the thwart seat was. Up sprang the elves, bounding and buzzing about him, to know what this meant. The old man, now stretching himself out, now drawing himself together, with quips and cranks and every gesture he was master of, went circling round the entire area, singing in a drunken voice the while. All the elves there assembled, and he on the thwart-seat amongst the foremost, looked on applauding and amused. Then the elf of the thwart-seat said, "For many years we have indulged in this amuse-"ment, but never yet have we come across anything like "this. Henceforth this old man must positively come and "join in the amusement with us." The old man replied: "No need to order me; come I will. This being an "impromptu effort I forgot to keep time to the music, "but if you are so good as to be pleased with it I will "endeavour to perform more cleverly next time." The elf of the thwart seat affably rejoined "You must really "come, you know." Then an elf who was sitting three seats back said; "Although this old man speaks in this "way, it is possible he may not come at all; we had better "take some likely pledge or other from him." "Just so, "just so" said the elf on the thwart seat, "what ought "we to take?" Then some suggested one thing, some another, but the elf on the thwart seat said: "We "should take the wen which the old man has on his face: "a wen is a lucky thing and he will hardly be willing to "part with it." Then the old man said: "You may take "my nose or my eye if you like, but please do allow me "to keep this wen: it would be unfair of you to take "away from me without cause a thing that I have had "for so many years." "Oh! you are so unwilling to part "with it as all that, then?" said the elf of the thwart seat; "that's just the thing to take." Whereupon up came an elf, and "off it goes," says he, and twisted it off, causing hardly any pain. "So you must come and play next time, now" said they, and as it was now dawn and the birds were beginning to sing, the elves went away. The old man felt his face and lo! the wen he had had for years was clean gone, not even a trace of it being perceptible on the smooth even surface. He went back to his home forgetting even to cut the wood he had come for. When the old woman his wife asked him what wonderful thing had happened him he told her it was so and so. "What a vexatious affair" said the.

Next door lived a certain old man who had a big wen on the left side of his face. This old man observing that the other had lost his wen, thought it very queer and asked him about it saying:—"How did you come to get "rid of your wen? What doctor took it off for you? "Kindly tell me, for I want to have this wen of mine "taken off." "It was n't taken off by a doctor at "all," said the other, "it happened on this wise," and he told him how it had been taken away by the elves. "I'll have mine taken off in the same way" thought he and he questioned the first old man closely, who told him the whole circumstances. Following out what he had heard he went and waited inside the hollow tree, and true enough, just as he had been told, the elves came, and spreading themselves all about began to amuse themselves drinking *sake*. Then they said "Has the old man come who was here? The other old man swung himself out, though very much afraid he was. Then the elves said "Yes, the old man has come; here he is. "Come here, dance, quick," said the elf on the thwart seat. Now this old man was not fit to be compared to the former one, and after making an awkward attempt at a dance the elf on the thwart seat said to him "you dance very badly this time; ever "so many times worse than you danced before. Let him "have back the wen we took from him as pledge." Here upon an elf from the far end came forward saying "Here you may have your pledge, the wen, back again" and with that he threw it at him and it stuck on his other cheek, so that he now had a wen on both sides of his face.

Moral. People ought not to feel envious.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

These stories are unmistakeably identical. Can it be supposed that the same leading idea, that of the taking off the hump or wen of one man, by the agency of elves, and the clapping it on another in reward for his envy and want of skill came into the heads of two different story-tellers one a Celt and the other a Japanese, independently? Is it credible that one of these stories is not borrowed from the other? But if so then at what age of the world did the loan take place, and which country was the borrower and which the lender?

As we know of no recent epoch at which the communication from one country to the other is likely to have taken place, we are led to think that this story may be one of the most ancient traditions of the human race, and that it may date from a time far anterior to history, when a Turanian tribe have occupied Iceland, preceding the Celtic tribes who are now the oldest stratum of humanity remaining in the far west.

In the remarkable Dutch novel, entitled Max Havelaar, of which an English translation by Baron Alphonse Nahuijs, appeared in 1868, a Japanese legend is introduced professedly taken from a periodical paper called "Dutch India," and attributed to a writer named Jerome. This story entitled "The Japanese Stone-cutter" is told nearly as follows.

There was a man who cut stones out of a rock. His labour was heavy and he laboured much, but his wages were small, and he was not content. He sighed because his labour was heavy and he cried 'O that I were rich, in order to rest on a couch, with curtains,'

And there came an angel out of heaven, who said 'Be it as you have said.'—And he was rich. And he rested on a couch, and the curtain was of red silk. And the king of the country passed with horsemen before his carriage, and likewise behind the carriage there were horsemen, and the golden umbrella was held over the head of the king.

And as soon as the rich man heard this he was sad because they held no golden umbrella on *his* head, and he was not content. He sighed and cried 'I should like to be a king.'

And there came an angel out of heaven and said 'Be it as you have said.'

And he became a king. And before his carriage were many horsemen, and behind were also horsemen, and over his head they held the golden umbrella.

And the sun shone with hot beams, and burned the earth in such a manner that the grass was dried up.

And the king complained that the sun burned his face, and had more power than he; and he was not satisfied. He sighed and cried 'I should like to be the sun.'

And there came an angel out of heaven who said 'Be it as you have said.' And he became the sun. And he sent up his beams on high, and down to the earth; to the right and to the left—every where.

And he burned up the grass on the earth and the faces of the princes who were on the earth.

And a cloud came between him and the earth and the beams of the sun were turned back.

And he was angry that his power was resisted; and he complained that this cloud had more power than he; and he was dissatisfied.

He desired to be the cloud that was so mighty.

And there came an angel from heaven who said 'Be this as you have said.'

And he became a cloud, and placed himself between the sun and the earth, and intercepted the beams, so that the grass became green. And the cloud rained in large drops on the earth and made the rivers swell, and the floods carried away the herds.

And the cloud devastated the field with much water.

And it fell on a rock which did not move and rattled in large streams, but the rock did not yield.

And the cloud was angry because the rock would not yield, and because the strength of its streams was vain, and it was not contented.

It cried 'This rock has more power than I have. I wish to be this rock.'

And there came an angel out of heaven who said 'Be this as you have said and it became a rock, and moved neither when the sun shone nor when it rained, and there came a man with pick-axe and sharp chisel and heavy hammer, who cut stones out of the rock.

And the rock said 'What is this, that the man has power over me and cuts stones out of my bosom? And it was discontented. It cried 'I am weaker than he, I should like to be that man.'

And there came an angel out of heaven who said 'Be this as you have said' and he became a stone cutter. And he cut stones out of the rock with heavy labour, and he laboured hard for small wages, and *was* contented.

When I first came across this story, it reminded me of one which is to be found in Grimm's Popular tales, that entitled "The Fisherman and his wife," the moral of which is "Be content with your station."

The book which contains "the Japanese stone-cutter" being a Dutch one, and the tale evidently containing many touches of colouring which are not Japanese, it was necessary before drawing any inference from its resemblance to the well-known German tale, to make some enquiry as to its authenticity and its real origin.

The result of the enquiry has been that no such tale is to be found at present in any Japanese book, but that one in the main similar is current in the mouths of the people, and that in a great variety of forms. One version has been obtained for me by Mr. J. C. Hall from a Japanese teacher, who wrote it down from recollection. Mr. Hall has kindly transcribed the Japanese text into English characters, and has furnished me with a translation, which is as follows.

The Story of the Ambitious Mice.

In a certain place there lived a pair of mice, and a daughter was born unto them. The parent mice were uncommonly fond of her, and wished to marry their daughter to whatever was most powerful in the whole world, so they set about choosing a son-in-law. A neighbour mouse said—"The most powerful thing in the world, is, beyond "comparison, the sun. If you marry your daughter to "the sun there will be nobody in all the world to equal "you." When the parent mice heard this they were greatly delighted and went straightway to the sun and told him of their desire that he should take their daughter to wife. The sun replied—"I am extremely obliged to "you for coming such a long journey and for your kind "intention of allowing me to wed your dearly beloved "daughter. But what, pray, was your idea in choosing "me for a son-in law?" The mice said, "We wish to "marry our daughter to whatever is most powerful in the "world, and as you are, beyond rivalry, the most power-"ful personage in the world that is why we desire to give "you our daughter in marriage." The Sun rejoined:—"You are certainly not without reason in considering me "the most powerful thing in the world;" but there is one still more powerful than I am, for whose strength I am in no way a match. It is to that you ought to marry your daughter." "Can there be aught more powerful than you?" said the mice. The Sun rejoined:—"Oft-times when I want to illumine the world a floating cloud comes out and covers me so that I am rendered powerless. My power is no match for that of the cloud. If it is a powerful thing you want there is nought like the cloud. The mice answered "What you say is certainly the truth." After that they went to the cloud, and expressed to it their wish to have it for their son-in-law. The cloud said, "True, I have the strength to cover over the "Sun, but as soon as the wind begins to blow I am at once "scattered to pieces and can do nothing. I am no match "for the power of the wind." Then the mice went their way and coming to the wind, made their proposal of marriage. "The wind said.—"True, I have the strength "to blow the cloud to pieces, but when a wall is put up "to keep me off, I cannot blow through that wall. I am "no match for the power of the wall." Then the mice went their way and coming to the wall told their story as before. The wall said. "True, I have the strength "to keep off the wind, but there is the mouse who some-"times gnaws my body, opens a hole through me and "hurts me. I cannot withstand the power of the mouse. Far better for you to make the mouse your son-in-law than me." The mice were convinced by this reasoning and returned home, and after all, it is said, they married their daughter to one of their own kind.

Although the stories of the stonecutter and the ambitious mice, have evidently a common basis, there are it

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

will be seen many important points of dissimilarity, and it is possible that these may be principally due to the Dutch author who may have had the German tale in his mind. This is a point which I am unable now to determine. I should be much obliged to any Japanese scholar who would supply other genuine Japanese varieties of the tale.

(To be continued.)

Law & Police.

IN THE AUSTRO-HUNGARIAN CONSULAR COURT.

Before Russell Robertson, Esq, Acting-Consul.

Tuesday, March 30th, 1875.

Louis Lichtenstein vs. Jacob Moritz.

This was a claim for $175.50, being the taxed costs in the case of Moritz vs. Lichtenstein, which was dismissed for want of prosecution; Mr. Judge Goodwin having certified to costs.

Mr. A. Gibson, who appeared for plaintiff, stated that the defendant had sued his client, but the case was dismissed, for the abovementioned reason and he now claimed the amount of costs.

Defendant said he employed Mr Marks to conduct the previous case for him, but that gentleman, after receiving $250, refused to go on with it unless more money were paid; that, in addition, he had to give a bond of $500, to be deposited in Court as security for costs, but the bond being considered insufficient security, he was called upon for further or better security. Being unable to procure this, he had been obliged to withdraw the prosecution.

His Honour declined to make an order on defendant for the amount of the costs, $173 50 because, in the original action, in which defendant was plaintiff, and Lichenstein, a British subject, defendant, the latter, by his counsel, Mr Dickins, moved the Court to call upon the plaintiff to deposit security for costs, and subsequently for additional or better security. That order the then plaintiff and present defendant was unable to comply with, and the case was dismissed for want of prosecution. The Rules of Procedure attached to the Order in Council were availed of for the very purpose of obtaining what it was now sought to obtain through him—payment of costs should Moritz have lost his case. Moritz not only found himself unable to proceed with his case, after payment of no inconsiderable sum for expenses, but was called upon to pay Lichtenstein's costs in addition. Under all the circumstances, His Honour would decline to enforce the order made in the English Court as to costs against Moritz.

IN H. B. M's PROVINCIAL COURT.

Friday, April 2nd, 1875.

Lucy Young & Capt. G. T. M. Purvis.

This was a claim for the recovery of the sum of $160, said to have been deposited by plaintiff with defendant whilst he was manager of the Occidental (late International) Hotel; also to recover the sum of £100 damages, owing to the non-return of the money (deposited by plaintiff), on demand, which had prevented her from leaving for America some time since, and for expenses incurred in hotel charges, &c., through being obliged to remain in Yokohama.

Defendant pleaded non liability for the amount

Mr. F. V. Dickins appeared for the plaintiff; Mr. M. Kirkwood for the defendant.

Mr. Kirkwood said no security for costs had been deposited in Court by plaintiff, who was an American citizen.

Mr Dickins thought that a bond would be sufficient. His client was without means She could find security for a reasonable sum.

Mr. Kirkwood demanded that $150 be deposited.

Mr. Dickins thought that $100 was quite sufficient.

His Honor said that he considered $100 was enough.

Mr. Kirwood said that over $500 was claimed in the petition, and that by the Order in Council $100 were insufficient.

His Honour said it would be oppressive to order more than $100 to be deposited. It was in the discretion of the Court. The expenses ought not to exceed that sum.

Mr Dickins, in opening his case, said it was an action brought to recover certain money deposited with defendant by plaintiff The arrangement between the parties was, that defendant was to place the money in the bank here in his own name on behalf of plaintiff. He desired to amend the petition slightly. The amount claimed ought to be $565 instead of $560.

His Honour allowed the amendment to be made.

Mr Dickins then continued:—His client had always believed that the money was deposited in the Bank, and could be withdrawn at any time. When, however, plaintiff had demanded the return of the money, defendant refused saying he had used it for the Hotel and it had been passed into the assets of the Hotel. His client owing to the non-return of the money had been obliged to stay in Yokohama never since at an expense of $3 *per diem*, and this item made up the claim for $100 damages. He would first call the plaintiff.

Lucy Young, sworn:—She was out of employment at present. She had been employed as housekeeper in the Occidental Hotel, up to the 1st March last. She had served in that capacity at the Hotel for three months, and five days. She first entered the Hotel about the end of November last year. On the 5th of January, 1875, she was discharged. After her service finished she remained in the Hotel, waiting to go in the Alaska to America (witness here told a long rambling tale which was not taken down as evidence). On the 14th January, 1875, she was again engaged by the Hotel at a salary of $40 per month this service was to last for two months. At this time she had in her possession $205 U.S. gold coin, and $260 in Bank Notes. She counted it out to defendant in the presence of a Mrs Jenkins. Defendant took the money and said, he would put it in the Hongkong Bank. He said he did not want it, but he would put it in the Bank if she wished It was to be put in the Bank on her account in his name. She asked him what interest the Bank would allow? He said 5 or 6 per cent per annum She asked him how quickly she could withdraw it at any time? He said at a week's notice. This took place on the 13th February last. Defendant gave her a receipt (read, $260 notes, 200 American gold, dated January 13th 1875. signed G. T. M. Purvis and stamped Occidental Hotel); she did not see defendant write it he sent it to her room from his office. She remained in the Hotel up to the 1st March last. She first demanded the money back on the 24th February 1875; she asked for it because she wanted to go back to America in the first steamer, the *Vasco de Gama*. He said it would be all right. She asked again for it on the 1st March last. He said "don't bother me I have nothing to do with it; go to Mr Ness." She went to Mr Ness and he told her that he paid all the servants' wages. Showed him the receipt defendant had given for her money and he (Mr Ness) said that he knew nothing about it, that it was an outside affair and that defendant would pay it. She then went and asked defendant again and he talked rough and said "I wish to goodness that you would not bother me." He then said it could not be got without a month's notice. He said he would make her wait as long as he could, as she had gone to Mr Ness about it. She told him she would go to the Consul if he did not pay it and he replied that she "might go to the devil." Did not talk to him any further as he was so "rough." She again told the defendant she wanted the money to pay her passage with. She stopped at the Occidental Hotel for three days and paid $3 a day.

Cross examined by Mr. Kirkwood:—Gen. Von Buren drew up her petition in this case; (witness here gave a number of answers about the time she was in service at the Hotel); when she gave the money to defendant she was a guest at the Hotel. Mrs Jenkins knew that she had this money. Mrs Jenkins told her that if defendant knew she had this money he would re-engage her.

Mr Kirkwood protested against witness giving such an answer; it was an imputation on his client's character.

Mr Dickins said Counsel had put the question and he had got his answer.

Witness continued:—She did not know how long Mr Jenkins knew that she had this money. She knew that at this time defendant was manager of the hotel. She never made inquiries as to what rate of interest the Banks allowed on deposits. She did not know that defendant could not pay American gold into the Bank here. She did not know if defendant had a private account. He received the money and gave her a receipt for it. Of course she required a receipt. She could not read writing She knew that the receipt had not been tampered with, or been in anybody's else's hands. It had never been out of her possession. Defendant had asked her two or three times for it, but she had refused to give it to him. She had never given it to a Mr. Davis or any body else.

Mr Dickins objected to Mr Kirkwood putting such questions. No fraud was alleged in the answer of defendant and thus no evidence to prove it could be brought.

Mr Kirkwood said defendant was prepared to swear that the word 'manager" had been clipped off from the bottom of the receipt.

Mr Dickins denied this *in toto*.

Witness continued:—She asked for the money on the 14th as defendant had told her she must look for another situation. She

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

said she was going back to America. She had often been to Mr Ness about the affair and he said he could find no entry of it on the books of the Hotel. Mr Da Roza also told her that it was not in the books Mr Ness never said he would settle it, but he (Ness) said no doubt Mr Da Roza would put the entry were found in the books but it could not be found. Mr Da Roza had told her twice that it was not entered.

Re-examined by Mr Dickins:—After she was re-employed she stayed in the situation about 6 weeks. She paid Mr Whitney 3½ dollars per day for three days' board. After her first dismissal and before her second reengagement she paid no board at the Hotel; no bill was rendered her.

Court adjourned till half past one o'clock.

Mr Whitney was called as a witness but demanded that his expences be paid and $3 was allowed by the Court after some discussion.

Henry A. Messenger, sworn:—He is an American citizen He was acquainted with the circumstances of the plaintiff's case He had applied to Mr Ness on behalf of plaintiff; he was authorised by her to do so. He presented the receipts and asked Mr Ness to settle it, Mr. Ness told him that defendant claimed that the money had been used for the benefit of the hotel; if it could be found on the books he (Ness) would pay it; but the books did not show this,

His Honour thought it would have been better to have called Mr. Ness about this.

Witness, continued:—He had not been present at any interview between the plaintiff and defendant, On the 1st day of March, 1875 he heard plaintiff ask defendant for the money. Defendant told her to go to Mr Ness and she replied that she had seen him and that he refused to pay it: she said she would go the Consul and defendant said "you can go to the devil."

Cross-examined by Mr Kirkwood:—He was outside defendant's office when he heard all this. He heard that Mr Ness was settling the hotel's affairs so he went there. He had known plaintiff for two or three years. He had been in the Hotel for sometime.

Mr Dickins asked that the case be adjourned as one of his witnesses had failed to attend, through illness. His Honour said the case must proceed. It was unusual to adjourn for such a reason

Mr Dickins said that this was his case.

Mr Kirkwood applied before proceeding that the case be dismissed.

His Honour decided to hear the case through. It was evident the money had been received as trust. Objection noted.

G. T. M. Purvis, sworn:—He had been manager of the Occidental Hotel. He was engaged by Mr Da Roza. He paid himself. He had a fixed salary. About two days after plaintiff was discharged for the first time he became aware that plaintiff had this money. A Mrs Jenkins told him that she had same money and wanted it taken care of. He told Mrs Jenkins that plaintiff had better bring it She brought the money and after counting it over he took it from her and told her that he should pay it into the Hongkong Bank at which Bank the hotel account was kept. He had his private account at the French Bank: she appeared quite satisfied and asked if she could get any interest. He replied that he did not know. He made no agreement at the time. He told her that she would have to give notice before drawing the money out. The compradores at the Bank offered such a low rate of exchange for the American gold of plaintiff's that he refused to part with it and carried it back to the Hotel and put it in his safe; he sold it a few days afterwards for a better price. (Account Book produced). He entered the money received in the Hotel books. Plaintiff first asked him for the money on the 21st February. He received notice verbally the day before about the hotel changing hands. Da Roza told him that he had let the hotel and that he (defendant) was to hand over everything to Mr Ness. He received a letter from Mr Da Roza to this effect soon afterwards (read and handed in). He handed over the books &c. to Mr Ness. He told Mr Ness about the present claim. He (Da Roza) had never denied any of the entries in the books. He (Da Roza) said everything would be paid as soon as the books were balanced. He told plaintiff Mr Ness would settle all claims, and that he was no longer liable. All papers connected with the Hotel were stamped. On the receipt he signed the word "manager" and stamped it with the Hotel seal. Da Roza had not denied the Hotel's liability.

Cross-examined by Mr Dickins.—He would swear that the word "manager" was on the receipt. He paid the money into the Bank. It is entered in the pass-book. It is an entry of $295,—$260 of plaintiff's and $35 of the Hotel. He sold the $200 (gold) for $195 25. It was entered in the cash book. It was passed to her credit. She never authorised him to lend money to the hotel. He would swear that he saw in the Hotel's ledger at Mr. Ness' an entry of the $260 to her credit. He received the money from plaintiff as manager of the Hotel. He told plaintiff that she would have to give notice before drawing the money out of the Bank. He had pointed out to Mr. Ness that the money had been deposited by plaintiff. He was given to understand that on a certain date the money would be refunded. Mr. Ness never admitted to him that the Hotel was liable. Mr Ness is the legal adviser of Mr Da Roza. Plaintiff might have told him that she wanted the money to return to America with.

Re-examined by Mr Kirkwood:—Mr Da Roza withdrew from him the power of paying more money on the 24th Feb. plaintiff applied for repayment on the following day but he could not by the instructions he had received from Mr Da Roza. He paid all monies belonging to the Hotel in his own name into the Hongkong Bank. He kept his private account at the Comptoir d'Escompte. Mr Ness always told him that plaintiff must wait till the books were balanced. His salary had not yet been paid. Mr Ness had not told him that the books were balanced, He gave instructions to the book-keeper to charge plaintiff for board during the time she was not employed at the Hotel.

Re-examined by Mr Dickins:—He did not know if a charge had been made for her board during time she was unemployed.

John Whitney, sworn:—He was book-keeper and part proprietor of the Occidental Hotel. The former proprietors took away all books and papers except the visitors' register, (produced and examined, showing that plaintiff was entered in it from the 8th January, till the 14th January as a guest)

Mr Dickins: that is another Mrs Young.—a Mrs C. Young.

Defendant:—It was mistake of my book-keeper. It is this Mrs Young.

G. T. M. Purvis, recalled, to Mr Kirkwood:—He was in the habit of looking at the entries daily; he thought the other Mrs. Young and child left before this date; she had room 10 and the plaintiff had room 16 in the Hotel whilst she was a guest.

To His Honour:—She always occupied the same room. She was to have gone by the *Ala ka*, but he again engaged her on the 15th January. He took her money over before he re-engaged her.

To Mr. Dickins:—When he took the money he made up his mind to re-engage her. Between the time of the first dismissal and her re-engagement plaintiff did not perform the duties of house-keeper.

Mr Kirkwood then summed up contending that defendant was a servant of the proprietors and as such was not liable; but the hotel was.

Mr F. V. Dickins replied. He argued that defendant was liable He had received the money and paid it into the Bank with the hotel's, and if the case was given against the defendant he could recoup himself from the proprietors The damages ought to be allowed because plaintiff had incurred them through being prevented from going to America.

His Honour thought that defendant was liable; he had taken the money and mixed it up with other property and was answerable to plaintiff for it.

Damages, however, could not be allowed. He would give a verdict for plaintiff for $260.00 and costs.

His Honour then certified to $70 costs including court fees amounting to $19.

THE TRIAL OF THE GUICOWAR.

Spectator.

There must be more imagination in Lord Northbrook then people in England had given him credit for. His latest action in the Baroda affair, as reported by a correspondent who can hardly be mistaken, impresses us in its originality and courage as a positive stroke of genius. Our readers will remember that the Guicowar of Baroda, the potentate whose country, and Court, and pomp may partly be understood from the pictures in the most original book about India that has appeared for years, L'Inde des Rajahs," by Louis Rousselet, had been warned to mend his alleged misgovernment — misgovernment, it was said, more resembling that of Heliogabalus than anything known in the modern history of the West—or he would be deposed. Immediately after the warning an attempt was made to poison the Resident, Colonel Phayre, and as he was evidently a marked man, Sir Lewis Pelly, the Resident of Ajmere, and Agent for Rajpootana, was nominated to succeed him, Baroda affairs at the same time passing under the immediate control of the Viceroy. A rigid investigation by Sir Lewis and Mr Souter, the head of the Bombay Police, followed, and a mass of evidence was collected which induced

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Lord Northbrook to believe that the Guicower might have been an accessory to the crime, and to put forth one of those extraordinary powers with which he is invested as representative of the successor of the Emperors of Delhi, powers of which no lawyer in the world could accurately define either the origin or the limits. They certainly exist, for they have been used; and they as certainly rest neither on Acts of Parliament, nor on treaties nor on local statutes. He ordered the arrest of the Guicowar, in the midst of his own Court and surrounded by his own troops, on a charge of being accessory to an attempt on the life of a British Envoy. The arrest was effected by Sir Lewis Pelly, with the daring adroitness characteristic of the man, and the people of Baroda, after a gasp of surprise, submitted to the inevitable. For twelve hours the danger must have been extreme. The Guicowar, bad as his character may seem to Europeans, was not unpopular with his soldiery, or the upper classes, or the populace of the capital; he was immensely rich in tangible treasure, and he was protected in many ways by that suspicion of latent insanity which of late years has attached to every ruler of Baroda. There were few British troops at hand, and no army on its road, though forces might rapidly have been converged on Guzerat, and had a signal been given, the transaction might, nay, must have ended in a massacre and a war. All went quietly, however, and the Viceroy resolved to give the Indian world a grand proof at once of British power and British justice, by trying the Sovereign of Guzerat on a capital charge, before a public Court within his own dominions.

There was, however, another danger to be faced first. Since the issue and acceptance of Lord Canning's Golden Bull, no Indian Prince has ever, we believe, attempted to deny the "suzerainty" of the Empress, or to limit the rights and powers implied in that very vague term, borrowed from feudalism, but applied to an empire in which feudalism has no legitimate place. They certainly extend to all forms of political action—to rebuke, arrest, sequestration, deposition, and perpetual imprisonment—for the Supreme Courts have virtually admitted that much in their repeated refusals to interfere with "political orders" of the kind, and there is one precedent at least for extending them much farther. In 1858 Lord Canning tried the Emperor of Delhi, the heir of Timour himself, who certainly was neither rebel nor subject in any just interpretation of either term for the murder of English ladies, and but for the unauthorised guarantee given to the Emperor by Captain Hodson, sentence of death would, it is well known, have been carried out. As it was, the Emperor was condemned as an ordinary criminal to imprisonment for life in Rangoon, where he died and where we believe the Empress of India still lives, indistinguishable from any other native woman under guard. No exercise of authority could be conceived more supreme than that, and from that day to this it has been held that the rights of the Suzerain in India are limited only by her policy and her conscience. Nevertheless it was necessary to make it perfectly clear that the British Government was intent on simple justice, was not seeking occasion for annexations, and nor of any caprice or spite. The Princes generally were not likely to approve the trial of so prominent a member of their order for any offence whatever, holding themselves above all law save those imposed by treaties; and the MahrattaPrinces were sure to feel strongly the possible consequences of a leading member of the old Confederacy, a Mahratta Sovereign not like the Nana a titular dignitary, but actually reigning, and possessed on the day before his arrest of the power of life and death, being held personally responsible for alleged crime. They might dread a similar fate for themselves or their descendants, and at all events would feel an increased sense of insecurity. Lord Northbrook, therefore, by a stroke of high political daring, contrived not only to make them assent to the trial, but to take such a part in the proceedings that, whatever their result, they could never again object to the authority which had instituted them. Drawing consciously or unconsciously, on a mediæval precedent, the trial of King John by Phillip Augustus of France and his great feudatories for the murder of Prince Arthur, the Viceroy invited the nearest feudatories to the Guicowar,—Holkar, the first Mahratta; Sindiah the Mahratta who surrendered the Nana; and the Rajah of Jeypore, a ruler distinguished at once by birth—his House has reigned in Jeypore since 964—and by administrative ability, to sit on the Commission. Holkar who never grants what he can refuse, and regards all British proceedings with a haughty aversion, declined on pretext of domestic affairs; but Scindiah accepted, and in accepting acknowledged to the world that the rights of the Suzerain extend to the trial of the reigning Princes of the Empire. If he convicts he cannot murmur at the acquits, he has acknowledged and used the authority of the Tribunal. The Court is to be open, and the scene ought to be one of unparalleled picturesqueness, as it certainly will be one of absorbing interest for all natives of India. A native Prince still in theory, a sovereign ruler, and but lately claiming precedence of the Viceroy, will be tried for his life by an absolute Sovereign—for except as representing an absolute Sovereign, Lord Northbrook has no authority to order trial—through a tribunal in which sit ranged an English Chief Justice, Sir R. Couch; a civilian Judge, Mr. West; a great political, Colonel Meade; a Mahratta sovereign of the highest class; a Rajpoot Rajah whose ancestors were reigning a century before the Norman Conquest, and Dinkur Rao, formerly Dewan of Gwalior, perhaps the ablest native politician within the entire peninsula, and certainly the best representative man in the long list of Indian Premiers. Before a Court like this, unknown to the law, yet legal in fact and irresistible in authority, he will be accused in a foreign tongue by a Government agent of a crime which scarcely belongs to our civilisation, and defended also in a foreign tongue by an advocate summoned from a Court seven thousand miles off, for his ability in persuading juries of English tradesmen. Nothing so bizarre, so utterly confusing to modern notions, has ever occurred even in a land where only the other day an English Judge, Sir J. Arnould, had to decide whether a native noble, known chiefly on the Turf, was or was not possessed of revenues as lineal heir to the position and prerogatives of the Prince of the Assassins who attempted the life of Richard Cœur de Lion; yet no man can say there is a failure of substantial justice. The Suzerain must either be able to punish Princes who do wrong, or must withdraw the guarantee against rebellion which enables them to do it with impunity. The Court is the Court a wise Prince unjustly accused would have chosen for himself. The defence will be as unfettered by external authority as if Serjeant Ballantine were pleading in Westminster, and much less fettered, we suspect, by ordinary rules of evidence. The accused is as sure, if blameless, of acquittal as if he were an Englishman tried in England. But that this should happen at all to a Guicowar; that she should be tried by Englishmen; that one of his Judges should be Scindiah: that Scindiah should be sitting as Commissioner of a Queen who never saw Hindostan, where by deputy she is exercising the supreme right of life and death over Sovereigns; that the Court of lawyers, Princes, and Premiers should be so irregular that no full precedent exists for its creation, yet so just that it is worth while to pay thousands for the pleading of an English barrister before it,—these things make up an event of which it is is an intellectual loss not to perceive the full wonder and picturesqueness. It is as if a Chinese conqueror who had mastered Germany had summoned the late Duke of Brunswick to answer for himself before a Court composed of Chinese lawyers, the King of Hanover, the Prince of Reuss, and Count Beust, with ultimate reference to the supreme justice of the Brother of the Sun and Moon. The light in which Germans would regard such an incident is precisely the light in which Indians regard this one, with this single difference—that they do not doubt that in public trial justice, according to English ideas, will be done. It is most important to keep up that belief, and Lord Northbrook's open trial, though an innovation on the political etiquette of India, may therefore prove as wise an arrangement as it is certainly a strange one. There is no danger that it will ultimately limit the Viceroy's power to deal with India Princes—will prevent, for example, action on confidential information—for the Government of India is responsible only to its own conscience, and in the hour of danger, in Asia, precedents do not bind. Necessity has no law, and that crisis in India must be very singular in which its Government cannot plead that, for the safety of the Empire, there was but one course of action left.

THE ARREST OF GENERAL LE GENDRE.

The diplomatic correspondence between the United States representatives in China and the Secretary of State at Washington, with respect to the arrest of General Le Gendre for implication in the Formosan difficulty, is chiefly interesting on account of the very explicit declaration laid down by Mr. Hamilton Fish regarding the legal status of American citizens who take service under a foreign power. The question is one which has been on several occasions discussed in our columns, not only in relation to the particular case in point, but also as embracing the position of all foreigners who accept office under the Chinese Government; it is therefore gratifying to find our views supported in all their issues, not only from the line of argument taken by ourselves, but also by the very

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

remarkable exposition of treaty-stipulations given by Mr. Fish in his Despatches to the American minister at Peking. We shall therefore summarise, as briefly as we can, the points which appear to us most worthy of attention.

The story of the General's arrest is too well-known to need recapitulation. It was effected, apparently, in virtue of two Consular Notifications issued by Mr. Henderson, the United States Consul at Amoy, the first of which (June 6) commands American citizens to at once withdraw and abstain from all enterprise unfriendly to the Chinese Government, and to avoid all acts which are inconsistent with laws and treaty obligations, in view of certain representations made to him by the Chinese authorities of the Fohkien province to the effect that a Japanese armed force had invaded Formosa, which was claimed as a part of the Chinese Empire, and that he had been requested by the said authorities to prevent American citizens from taking part in the enterprise. This requirement was enforced by the threat that all American citizens who refused to comply with its demands would forfeit the protection of their Government. On the 16th of the same month another Notification seems to have been issued, threatening "arrest and trial for violation of the laws of neutrality and on the 6th of August the General was arrested in pursuance to telegraphic instruction sent by Mr. Seward to his colleague in Amoy. His request to be forwarded to Shanghai, no legal advice being obtainable at the former port, was complied with, and he arrived here in course. Mr. Seward had received a confidential despatch from Dr. Williams, the United States *chargé d' affairs* at Peking, the tenor of which betrays much vacillation and uncertainty as to the safest method of procedure. His policy is one of caution. "The officers of the Tsung-li Yamen," writes Dr. Williams, were much startled to learn that the Japanese were assisted and "guided by the United States naval and military officers; and it is "not strange that they complained that this was in direct violation "of Article I. of the Treaty between China and America . . . These "officials have been fully told that, until there has been a declara-"tion of war, it is difficult for foreign nations to take any decided "action in respect to this quarrel; and until something has been done "by them, or the opposing forces of the two nations come to actual "blows, our countrymen may plead that in aiding Japan e they "are not violating the Neutrality Act, nor any provision in the "Treaty of 1858, or the Act of June 22nd, 1860." On these grounds the Minister defers instructing Mr. Henderson to issue writs of arrest against the Americans engaged in the expedition, notwithstanding the opinion of the Consul-General that such a step would be permissible. The consequence of this was that the moment General Le Gendre arrived in Shanghai he was set at liberty; and the entire correspondence which had passed between the Consuls and the Minister in China forwarded to the Department of State in Washington. Then, on the 3rd of September, we find a despatch from Dr. Williams to Mr Hamilton Fish, which plays an important part in the discussion. The Minister enters into an elaborate examination of General Le Gendre's Protest against his arrest, which, he thinks shows throughout a singular misconception of application of the laws he quotes "In my view," writes Dr. Williams, "there is no difference between "being engaged [by the Japanese] while Japan is at war with "any power in amity with the United States, and afterwards engaged "in active hostilities after entering her service because she ordered "it. The plain intent of the proviso is to restrain American citizens "from aiding Japan in any military or naval capacity at any time "or place out of her own territory; and a subsequent state of war "must work the same disability that an actual state would "have done at the time of engagement." He then proceeds to comment with apparent timidity upon the favorable view taken of General Le Gendre's protest by the foreign newspapers in China, the counteraction of which, in the mind of Mr Fish, seems to be his object in thus going into details. In this connection he quotes part of an article that appeared in the *Celestial Empire* of August 22nd, 1874, where, speaking of the engagement of Americans before the war, and their retention subsequently, we said, "That in such a case it would no more be per-"mitted to the United States to deny the right to Japan to retain in "her service, while war is going on the American citizens engaged "before the war commenced than it would be to demand of Japan "the return of the arms, ammunition, and vessels of war, bought "before the expedition to Formosa was fitted out, but used after "its departure;" a proposition which Dr. Williams thinks would doubtless be true enough if there were no treaty with China involving obligations to prevent American citizens from doing this very thing.

The foregoing is, we think, a very fair representation of the attitude assumed by the American authorities in China. We have now to see how their policy was viewed by the Department of State at Washington; and we will begin with a Despatch from the Secretary of State to Mr. Henderson, the Consul at Amoy, bearing date 5th September, with reference to the Notifications issued by him, as mentioned above. While the Department fully appreciated the zeal and the earnestness displayed by this officer, a somewhat cooling snub was administered to him for assuming a prerogative far beyond his powers as Consul; secondly, the Department being unadvised of the outbreak of any war between the two nations, the use of the word 'neutrality' was inappropriate and premature; and thirdly, even supposing the existence of hostile relations, such Notifications should have warned citizens against unlawful aid to *either party belligerent*, and not threatened penalties only against those who might transgress on one side. Then comes a communication from the Acting-Secretary to Mr. Seward, in which great stress is laid upon the facts that neither had any particular offence been charged or brought home to the General,—although the Consular officers appeared to have acted (perhaps necessarily) as both prosecutors and judges—nor had any offence been charged against him as having been committed within the consular jurisdictions of Shanghai or Amoy, or of the Empire of China, but precisely the reverse. On these grounds the Department "is forced to the conclusion that "the arrest of General Le Gendre was without warrant of law, and "cannot receive its approval. Had the arrest been the act of a "foreign power," adds Mr. Cadwalader, "it is apprehended that "it would have been the ground for energetic action on the part "of the United States." Lastly we come to the Despatch of Mr. Hamilton Fish to Mr. Seward, crossing with Dr. Williams's communication of the 3rd September, and in which he fully bears out the position we took at the time in the article quoted to him by the latter gentleman. The following extract will prove sufficient to establish upon a firm basis the true meaning of the Neutrality Act, and to show the curious manner in which it was misunderstood by both Ministers and Consuls in Japan and China.

Under the provisions of the act of 1869, authority is given to the ministers of the United States in China and Japan "to issue all manner of writs to prevent the citizens of the United States from enlisting in the military or naval service of the said countries, to make war upon any foreign power with whom the United States are at peace, or in the service of one people against any other portion of the same people; and he [the minister] may carry out this power by a resort to such force as may at the time be within his reach belonging to the United States."

This is an extraordinary power, conferred upon the minister alone, in a certain emergency and within fixed limits. It is conferred upon him in consequence of the extra territorial rights reserved in the countries named in the act to the citizens of the United States. The power is given to the minister alone, and is not shared by the Consul. . . . . .

Apart from the question of the power of the Consul to issue such a notification in any case, it is apprehended that the notification in question, being addressed to all citizens of the United States, and commanding all to withdraw and abstain from all enterprises unfriendly to the Chinese Government, might affect citizens of the United States lawfully employed by the Japanese. This Department is not advised as to the precise facts concerning the employment of each of the American citizens said to be engaged in Japanese service. Many citizens of the United States are understood to be employed in various capacities in the civil service of Japan, and it may be difficult to establish a standard to determine how far, or whether any, or which of the acts, which they may be called upon to perform in the appropriate discharge of their several engagements, may or may not be deemed friendly or unfriendly by another power. Acts and enterprises of a government may be deemed by another power to be unfriendly, and yet fall short, very far short, of acts of war, or of compromitting the neutrality of the state by which they are done. The erection by a state of a fortification, or the construction of a road, may be (in fact each has been) regarded as an unfriendly act by another power. But this will scarcely justify, certainly it will not require, a third power to enjoin its citizens under severe penalties from taking employment, much less from completing engagements into which they have already entered and lawful at the time when entered into, in such erection or construction.

This Government does not feel called upon to admit that an engagement by one of its citizens to enter into the military service of Japan, or of another foreign power, made in time of peace, when no war or hostile demonstration is in process or in contemplation, is not a valid contract or that it is repugnant to law. Where the engagement is made in time of peace and hostilities are not in contemplation, there seems to be no distinction in the lawfulness of a contract for civil or for military service.

Should a war afterwards be declared, or an insurrection break out, there seems to be no good reason why such contract, valid at its inception, should not be performed, even though a new contract of the same nature could not at the time legally be made. . . . . .

It is apprehended therefore that no citizen of the United States, regularly enlisted in the service of Japan in time of peace, without

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

reference to any intended act of war, and without anticipating any hostilities, could be punished according to the laws of the United States, and that he could not by any laws of the United States upon the commencement of hostilities, be compelled to abandon the service to which he had entered, or be punished for a refusal to do so.

Foreigners enlist in the military service of nearly every power. During the late rebellion in this country very many foreigner of very many different nationalities took service, not only in the Union Army, but in that of the rebellion, and no remonstrance was made to the governments of which they were subjects, nor was their service in the insurgent army deemed a cause of complaint by this Government.

China herself has employed the services of Americans in her army, and whether against a foreign enemy or an insurrection seems to make no distinction in principle or in law, saving that our own act of 8 0 alike forbids our citizens enlisting in the military or naval service of either of the powers named in the act, to make war upon any foreign power with whom the United States are at peace, or in the service of one portion of the people against any other portion of the same people . . .

It is believed, although of this I have no certain information, that the military service of China at this time embraces a number of Europeans, and possibly some Americans.

With this we conclude, having we fear taxed the patience of our readers already much too far; but the importance of the principles involved is our excuse for reverting to the subject. General Le Gendre's position was misunderstood from the first. He was in the employ of the Japanese Government some time before the difficulty arose; he was then sent over on an important mission from the Mikado to the Emperor of China, and was afterwards engaged in negociating between the two Governments on behalf of the Japanese. In a word, he was an accredited diplomatic agent; and had he even been compelled *subsequently* to accept military command in the Mikado's army, he would in no wise have committed a breach of International law in so doing. Besides this, it is patent that a very great difficulty exists in drawing a line of demarcation where hostile acts may be supposed to commence: for a man in the civil service of either country may be employed in work which is as subservient to a state of warfare as that of a military commander. So that in any case the arrest of General Le Gendre was, as we then affirmed it to be "one of those strange diplomatic blunders "which under any circumstances can only be committed from "either a misconception of International Law, or a misconstruction, "on the part of the duties in which the person so arrested was "engaged at the time the warrant was issued." – (*Celestial Empire*).

JAPANESE WRECKS IN THE PACIFIC AND THEIR INFERENCES.

The following is the substance of an interesting address by Mr. Charles Wolcott Brooks, formerly Japanese Consul at San Francisco, to the local Academy of Sciences on the subject of Japanese wrecks picked up adrift in the North Pacific Ocean, and stranded upon the various outlying islands and shores of the Northwest coast of America and the chain of islands extending from Hawaii towards Nippon. The sources of Mr. Brooks' information have been exceptionally good, since during seventeen years in which he has represented the Japanese Government in San Francisco, he has devoted much attention to this subject and kept a record of all wrecks reported.

"Every junk" said Mr. Brooks," found adrift or stranded "on the coast of North America or the Hawaiian Islands, "has on examination proved to be Japanese, and no single "instance of any Chinese vessel has ever been reported. "This may be explained by the existence of the Kiro Siwo, "literally "black stream," a gulf stream of warm water, "which sweeps past Japan towards the north and then "curving around and passing south along the coast of "California, a branch or eddy of which strikes off towards "the Hawaiian Islands. This stream, it is found, has "swept these junks towards America at an average rate of "about ten miles a day. There also exists an ocean stream "of cold water, emerging from the Arctic Ocean, which "sets south close in along the eastern coast of Asia. This "fully accounts for the absence of disabled Chinese junks "on the Pacific, as vessels off their coast would naturally "drift southward. A noticeable feature is the large number "of disasters on the coast of Japan in the month of January, "during which season the northeast monsoons blow the "wrecks directly on shore into the Kiro Siwo."

Mr. Brooks then proceeded to read the following paper:—

1.—In 1782 a Japanese junk was wrecked upon the Aleutian Islands, from which the survivors were taken in one of the Russian-American Company's vessels to the town of Ochotsk, and thence to the inland city of Irkutsk. In 1792 the Governor General of Siberia ordered the transport *Catherine*, then at Ochotsk, to return these men to their native country. The Russian vessel, after wintering in a harbor at the north end of Yesso, proceeded to the port of Hakodate, where the Japanese officials politely but firmly refused to allow their countrymen to land. They were subsequently returned to Siberia.

2.—In 1805 a Japanese junk was wrecked on the coast of Alaska near Sitka; the seamen were quartered on Japonski Island, whence they were taken by the Russians, and landed on the coast of Japan.

3.—In 1820, a junk was cast up on Point Adams, the southern shore of the mouth of Columbia river. The vessel which was laden with wax, went to pieces, and the crew, many in number, landed safely.

4.—In 1813, the brig *Forrester*, Captain John Jennings, when in lat. 45° N. long. 128° W. rescued the captain and two seamen from a dismasted junk, timber laden, when 18 months from Yesso, bound to Niphon. They were delivered to the Russians, who under took to return them to Japan.

5.—Captain Alexander Adams, formerly pilot at Honolulu, relates that March 24, 1815, in lat. 3.° 45' N. long, 126° 57' W. when sailing master of brig *Forrester*, Captain Pickett, and cruising off Santa Barbara, California, he sighted at sunrise a Japanese junk drifting at the mercy of the winds and waves. Her rudder and masts were gone. Although blowing a gale, he boarded the junk, and found fourteen dead bodies in the hold, the captain, carpenter and one seaman alone surviving; took them on board, where by careful nursing they were well in a few days. They were on a voyage from Osaka to Yedo, and were 17 months out, having been dismasted in consequence of losing their rudder.

6.—December 23, 1832, at mid day, a junk in distress cast anchor near the harbor of Waialua, on the shores of Oahu. She was from a southern port of Japan, bound to Yedo with a cargo of fish; lost her rudder and was dismasted in a gale, since which had drifted for eleven months. Five out of her crew of nine had died. December 30th she started for Honolulu, but was stranded on the reef off Barber's Point on the evening of January 1, 1833. The four survivors were taken to Honolulu, where, after remaining eighteen months, they were forwarded to Kamschatka, whence they hoped to work their way south through the northern islands of the group into their own country. This junk was about 80 tons burden.

7.—In 1833 a Japanese junk was wrecked on the coast of Washington Territory, between Point Grenville and Cape Flattery. More of her crew had perished, and several dead bodies were found headed up in firkins, in the customary Japanese style, ready for burial. The only survivors, two men and a boy, were rescued from the Indians by the Hudson' Bay Company's vessel *Lama*, Captain McNeal, who took them to England touching at Honolulu on their way. Thence they proceeded to Canton, where they arrived in 1836, and stopped with Mr. Gutslaff, who learned their language and intended accompanying them to Japan. In 1837 they left Macao in the American ship *Morrison* dispatched by Clarence A. King for Yedo bay, to bear them home. Being fired upon, and prevented from landing, she sailed for Kagoshima, where being equally unsuccessful, she finally returned with the men to Macao.

8.—In 1859 a wrecked junk was boarded by Captain Cathcart of the American whale ship *James Loper*, drifting in lat. 30° N., long. 174° W., or about half-way between Japan and the Hawaiian Islands.

9.—In the *Polynesian*, October 17, 1840, published at Honolulu, I find: "The Japanese who took passage in the *Hartford* remained at Kamschatka under the protection of the Governor awaiting an opportunity of returning to their native country."

[NOTE.—In 1834 the brig *Harlequin* conveyed to Petropaulaski from Honolulu 18 Japanese taken from wrecks who had remained 18 months at Honolulu. They were finally returned to Japan by Russian officials.]

10.—In 1841 a fishing junk from the southeast part of Niphon was wrecked on an uninhabited island, where the three survivors remained six months, until taken off by Captain Whitefield, master of the American whale ship *John Howland* and brought to Honolulu, where Denza and Germon remained, while Nakahama Mungoro went to the United States, and was educated by Captain Whitefield. After living there several years he returned to Honolulu where he found his former companions and embarked January, 1851, on the *Sarah Bent*, Captain Whitmore, bound for Shanghai, taking with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

them a whale-boat called the *Adventure*, with a full rig and outfit. When off the Grand Loochoo, the three Japanese effected a landing and the ship proceeded without stopping. Hence they finally reached Kiushiu and Nagasaki, in the junk which bears the annual tribute money from Loochoo to Japan. Mungoro afterwards translated Bowditch's Navigator into Japanese, and visited San Francisco as sailing-master of the Japanese steam corvette Candinarah, which arrived here March 17, 1860.

11.—In 1845, April 1st., Captain Mercator Copper, of Sag Harbor, then in the American whale ship *Manhattan*, rescued eleven shipwrecked Japanese mariers from St. Peters, a small island lying a few degrees southeast of Nippon and took them to Yedo Bay.

[See Dr. C. F. Winlsow's account in *Friend* of Fbruary 2nd, 1854.]

12.—In 1847, April 21st, the Bremen ship *Otahei'e*, Captain Weitung, when in lat 35° N, long. 156° E, fell in with a Japanese junk in distress, which had lost her rudder and had been driven off the coast of Japan in a gale November, 1846, and had drifted five months. Took off the crew, consisting of nine men, also six tons wax. She was about 80 tons burden and chiefly laden with paper belonging to Osaka, and bound north. Captain Weitung kept them on board four weeks and May 19, 1847, put them on board a junk in the Straits of Matsumai. [See *Polynesian*, Oct. 17. 1847, and *Friend*, Dec. 2, 1847.]

13.—In 1848, Captain Cox of New London, Conn., picked up fifteen or twenty Japanese seamen from a disabled junk in lat. 40° N., long. 170° W., and kept them on board six months during a cruise in the Ockotsk sea, and finally landed them at Lahaina, where they remained six or eight months.

14.—In 1850, during the autumn, S. Sentharo, Thoro and J. Heco—the latter then aged 13 years—left Osaka in a junk for Yedo. After discharging and reloading they started to return via Woragawa. After leaving the latter place their rudder was disabled and they lost their mast and drifted out to sea. Fifty days later the wreck was fallen in with by the American bark *Auckland*, Capt. Jennings, who took off and brought the crew of 17 persons to San Francisco in February 1853. They were quartered on board the U. S., revenue cutter and cared for by order of the Collector of the Port. Our citizens generally took much interest in them. The Japanese were subsequently embarked on the U. S. sloop *St Mary's* and conveyed to Hongkong, where 15 were transferred to the U. S. steamer *Susquehanna* to await the arrival of Commodore Perry and his expedition. Heco and the second mate, Toro, returned to San Francisco on the bark *Sarah Hooper*, reaching there in the autumn of 1852. Sentharo returned with Rev. Mr. Goble, from San Francisco to Japan, and Toro also returned in the American bark *Melita* to Hakodate from San Francisco, via Honolulu, April 19, 1859.

Toro was for a while clerk with Wells, Fargo & Co, and Joseph Heco, clerk with Macondray & Co. Heco was subsequently appointed for duty on the United States surveying schooner *Fenimore Cooper*, about 1858-59 and left her at Honolulu, on account of sickness, but finally returned to Yedo, on the United States steamer *Mississippi*.

15.—In 1850—April 22d, in lat. 45° N. long. 155° E. the American whale ship *Henry Kneeland*, Clark, master, fell in with a Japanese junk having thirteen persons on board. The vessel left Yedo for Kuno, but lost her rudder and was dismasted; then drifted to sea, and had been at the mercy of the winds and currents for sixty-six days, during forty of which they had subsisted on fish and snow water. The Captain and two seamen came to Honolulu on the *H. K.*; two of the crew were transferred to the *Marengo;* six were taken to Petropaulauski and taken charge of by the Russian authorities, and two came to Honolulu by the *Nimrod* (See *Friend*, October 15, 1850; also *Friend*, November 1, 1850.)

Note.—In 1851, by Japanese records I find that five Japanese seamen from Honolulu via China arrived at Nagasaki—probably the above.

16.—In 1851 a Japanese junk was cast away upon Atha Island, and only three of the crew survived.

17.—In 1852, April 15th, in lat. 31° N, lon. 150° E, about 300 miles N. NE of Guam, Captain West, in the American whale ship *Isaac Howland*, fell in with a small Japanese junk in ballast. The four men on board had but a little oil to sustain life, and were much emaciated. Their tiller was lashed, and the vessel having been forty-nine days out of their reckoning, the crew had given themselves up to die. Two of these men Captain West took to the Atlantic States and two were transferred to an American whaler about to cruise in the vicinity of the Japanese Islands.

18.—In 1854, August 14th, just after Commodore Perry's departure, the American ship *Lady Pierce*, Captain Burrows, arrived at Simoda from San Francisco via Honolulu June 2, 1874. She returned Diyonoskò to Japan, who was the sole survivor of a crew of fifteen men, and was picked off from a drifting junk near the Hawaiian Islands, after being seven months helpless at sea.

19.—In 1855 Captain Brooks, in the American brig *Leveret*, which arrived here from Ayan, Siberia, November 29th, picked up an abandoned junk in lat. 42° N., long. 176° W., about 900 miles from the American coast.

20.—In 1855 American bark *Messenger Bird*, Captain Homere reported a disabled junk at Guam, Ladrone Islands.

21.—In 1859, the bark *Gambia*, Captain Brooks, found the remains of a Japanese junk on Ocean Island, lat. 28 24' N., long. 178° 21' W.

22, 23.—In 1859, July 4th, the remains of two stranded junks, with lower masts high on the beach, were found on the east or lagoon side of Brooks Island, lat. 28° 11' N long. 177° 18' to 25' W.

24.—In 1862. May 4th, the ship *Victor*, Captain Crowell, arrived at San Francisco, with the captain, officers and crew, eleven in number, of the Japanese junk *Io-maru*, from Kanagawa, December 21, 1861, for Owau and Hiogo. On January 5th 1862, disabled and drifted from land. Was about three months at the mercy of winds and currents, until picked up April 13, 1862, in lat. 33° N., long. 161° 26' E., by the *Victor*. They were cared for by Mr. Brooks, Japanese Consul, and by him returned to Japan, in the American schooner *Caroline E. Foote*, for Hakodate.

25.—In 1853, Captain C. M. Scammon discovered the wreck of a Japanese junk, on the southwest or largest of the San Benito group of islands, off Lower California, in lat. 28° N., long. 116° W., and near Cerros Island.

26.—In 1886, Captain Jno. C. Lawton, in the brig *Prince de Joinville*, while getting guano at Cerros and adjacent islands, reported a Japanese wreck, seen near Magdalena Bay.

27.—In 1862 a Japanese junk was stranded near Attow; they had drifted in distress for 90 days and out of a crew of 12 only 3 survived. These were taken in 1863 to Nicolaefsky, Amoor river, and then returned to Hakodate by a Russian war vessel.

28.—In 1870, in October, the San Salvador ship *Louisa Cenovera*, Captain Demoro, when in lat. 37° 46' N, and long. 158° 10' E, fell in with a dismasted junk, laden with rice, having four dead bodies on board, and no living persons. The papers and effects were taken and delivered to the Japanese Consul at San Francisco, and by him returned to Japan, November, 1870.

29, 30, 31.—In July, 1871, the old chief at Alton Island, aged 70 years, reported that three Japanese junks had been lost upon the surrounding islets, during his recollection, besides one stranded not far from the harbor of that island in 1862.

32.—In 1871, February 2d, in lat 33°45' N. long. 141 31' E., about 150 miles from the coast of Japan, the American ship *Annie M. Small*, Captain Packert fell in with the Japanese junk *Sumi yoshimaru*, of Kinshiu, and rescued the captain and three surviving seamen and landed them at San Francisco. February 24, 1871, they sailed from Shiroko, Province of Ise; January 17, 1871, for Dai Osaki, with a cargo of wood. Two days later they were disabled, and drifted to sea, and were picked up seventeen days later.

33.—In 1871, May 23d, in lat. 34° 54' N long. 143° 32' E, Pacific Mail steamship *China*, Captain Cobb, rescued five Japanese seamen from the disabled junk *Sumi-ayee-maru*, of Kobe. Eleven out of sixteen originally on board died upon the wreck, and the captain of the junk died on the steamer after being rescued. They were cared for by Mr. Brooks, who returned them to Yokohama, July 1, 1871, and the government presented suitable rewards.

34.—In 1871, the Japanese junk *Jinko-Maru*, of Matssaka, of 180 kokus measurement, encountered a severe gale January 18th, 1871, while going from Ise to Kumana, during which she lost her rudder, and while in danger of foundering cut away her masts. The junk drifted from the Kiro Siwo 2,500 miles in a helpless condition, her crew keeping a fire, and living on rice and fish they speared, until they drifted on the rocks at Atka, July 10th, 1871, where, by means of ropes, the three men on board landed safely. There they remained until September 19th, 1871, when they took passage by schooner *H. M. Hutchinson* for Ounalaska and San Francisco, whence they were returned to Japan by the Consul.

35.—In 1873, Captain W. B. Cobb, in the steamer *China*, rescued the crew from a wrecked junk in lat. — ° — ' W., lon — ° — E., and landed them at Yokohama, in acknowledgment for which the usual present was made him by the Japanese government.

36.—A junk has been reported as stranded on the coast of Alaska.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

37.—A junk was cast upon the windward side of Kauai one of the Hawaiian islands, and the survivors landed at Hanalei harbor.

38.—An old resident of Petropaulau-ski informed me there was a Japanese junk stranded below that harbor, where many years since the wreck still remained

39.—A Japanese wreck was sighted adrift below San Diego.

40.—A junk was wrecked at Nootka Sound.

41.—A junk was wrecked on Queen Charlotte's island.

Doubtless many more might be added, but these suffice to establish many facts valuable to science.

Mr. Brooks, who, as already remarked, has studied the question thoroughly, drew some interesting conclusions from these records showing that among the coast tribes of our northwest coast, a constant but limited infusion of Japanese blood has occurred, coming entirely from male Japanese seamen; no single record of any female existing. These unfortunate men, often illiterate, and separated from their sources of learning, necessarily lost their own language, but in doing so, doubtless contributed many insulated words to the Indian dialects of this coast; as for example, the Japanese word for quick is *hi-co*, and the Chenook word for speed is *hya-k*. In this as in all other words quoted, the Chenook word was always an abbreviated word, or shorter word than the Japanese, for which, he argued, that the latter was the original and the former derived. The construction of the two languages is, however, different.

About the year 1630 the Japanese Government ordered all junks to be built with open sterns, and large square rudders unfit for ocean navigation, hoping thereby to keep their people isolated within their own islands. When forced out to sea, these rudders are soon washed away, when the vessels naturally fall off into the trough of the sea, and roll their masts out. The number which have thus suffered of which no record exists, must be very large.

The Japanese people stoutly disclaim any common descent with the Chinese, and firmly believe they have a wholly different origin.

Shipping Intelligence.

ARRIVALS.

March 26, *Vidal*, French barque, Rendeau, 409, from Takao, Sugar, Captain.

March 27, *Alaska*, American steamer, 4010, from San Francisco, Mails and General, to P. M. S. S. Co.

March 29, *Arcona*, German frigate, Baron Reibnitz, 2320, from Nagasaki.

March 30, *Costa Rica*, American steamer, Conner, 1,917, from Shanghai and ports, Mails and General, to P. M. S. S. Co.

March 30, *Pernambuco*, British steamer, W. Hyde, 643, from London via Nagasaki, General, to E. Fischer & Co.

April 1, *Behar*, Japanese steamer, Walker, 1 680, from Shanghai, General, to Mitsu Bishi Co.

April 2, *Iris*, German 3-mast schooner, Schwartz, 213, from Takow, Sugar to M. Knoblauch.

April 2, *Volga*, French steamer, Noudedeu, 960, from Hongkong, Mails and General, to M. M. Co.

April 3, *Arctic*, Hawaiian barque, B. T. Whitney, 330, from Bonin Islands Whaling Gear, to Captain.

April 3, *Tasi*, American schooner, Jordar, 100, from Bonin Island, with native produce, to Captain.

DEPARTURES.

March 25, *Mosquito*, British gun-boat, Lt. Coman. Paul, 280, for Yokoska

March 27, *Haidamak*, Russian gun-boat, Captain Tartoff, 800, for Hakodate.

March 27, *St. Thomas*, Swedish barque, Hjorth, 287, for Nagasaki, Ballast, despatched by, Captain.

Mar. 29, *Arabia*, American steamer, Howard, 4,010, for Hongkong, Mails and General, despatched by P. M. Co.

Mar. 30, *Menzaleh*, French steamer, Pasqualini, 1,098, for Hongkong, Mails and General, despatched by M. M. Co.

Mar. 30, *Lutkin*, British barque, Lessing, 406, for Nagasaki, Ballast, despatched by Watkin & Robison.

March 31, *Nevada*, American steamer, Williams, 2,115, for Shanghai and ports, Mails and General, despatched by P. M. S. S. Co.

March 31 *Tartar* H.M.S., Captain Woollcomb, 2216, for Hiogo.

Mar. 31, *Tokio Maru*, Japanese steamer Dunn, 2,119, for Shanghai, General, despatched by Mitsu Bishi Co

April 1, *Hermina*, German brig, Petersen, 211, for Taiwanfoo, Ballast, despatched by Captain.

April 2 *John McKean*, British schooner, Heseroff, 197, for Niigata, Sugar, despatched by Hudson, Malcolm & Co.

PASSENGERS.

Per American steamer *Alaska* from San Francisco For Yokohama.—Messrs Seymour, Samuis, Morelli, Taw, Carson, H. M Jacoby, U S N, Mr J. Doyle, and 2 children, Professor Forbes and John Cleary. For Shanghai.—Messrs Bulkam and Reebe. For Hongkong.—D. H. Bailey.

Per American steamer *Alaska*, for Hongkong.—Capt. Benary, Mr. C. Campbell, and Mr. D. H. Bailey.

Per French steamer *Menzaleh*, for Marseilles.—H. Ex. Berthemy, French Minister, Mme. Catherine Bernard, Messrs. E. A. Daniels, Hagens O Schinne, Charles Bowles, H. J. Lambley, and L. Bourgeugnon.

Per American steamer *Costa Rica*, from Shanghai and ports.—Mr. and Mrs. Holdsworth, Mr. and Mrs. D'Iffanger, Mrs. A. W. Glennie, F. H. Perard, W. H Davison, R. H. Boyce, N. J. Siles, R. H. Hewlett, A. W. Fernie, E. B. Maitland, E C. Maitland, L. R. Elder, F. C. Buchanan W. Morris, J. Walsh, Miss Erskine, Mrs and Miss Rice, Col. Macbean, J Murrian, S. Isaacs, E C. Kirby, Tanaka, Fokisima, Yamagata, Dario, 8 Japanese. Steerage, J. Manyan, 12 Chinese and 98 Japanese.

Per Am. str. *Nevada*, for Shanghai and way ports.—Mr. and Mrs. Winton, Mrs. C. Freeman, Mrs. Forbes, Messrs. C. J. Andrews H. N. Roberts, A. C. Gibson, Baron Stillfried, Cuffam, C. C. Blakesley, Beebe, Clancy, Mrs. Goddard and seven Japanese; 75 in the steerage.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports.—Mr. P. G. Whittall, Mrs. Smith, infant and servant, Mrs. Brooke, P. Currey, H. Ex. C. de Groote, Belgian Minister, and son; C. Gah, E. Dupuy de Lome and servant, H. Finke, Sugimoto, Mrs. Ekeye and son, Yoshida, Tanaka Yuno, Niichi and servant, Yoguchi, Mr. and Mrs Mimatz and servant, Ikedo and child, Tonda Oyuki, Okita, Oshima, Mr Awaki and servant, Mrs. Awaki and servant, Mr Nishimura, Mrs Nishimura Gote, Kawabara, Mrs Matsu, Mrs. Hatsu, Nitta and servant, Yamaguchi Nakahara, Yamashta, Mrs. Kiwa, Kiyo and servant, Misses Omura (2), the Princesses of Hizen and two servants, Mrs. Oomezaki, son and servant, Magamura, Myamura, Natuse, Yamamoto, Mr. Houseal, Mr. Omade, Yamamoto Seichiro, Hamada, Ginda, Micora, Mr. Emore and servant, Takaguwa, Uye, Mr. P V. Grant, Shibacochi, a Japanese lady and servant, one Chinaman, Karoki and servant, Oyama, Mr. O'Connor, and 287 in the steerage.

Per *Niigata Maru*, from Shanghai.—Rev. T. D. Harris, wife and child, Messrs. R Johnstone, J. J Keswick, J J. Patterson, A. Brandt, H. Glose, Rorrie, D. Batchelder, Capt. Chesterman, C. Moulson, C A. Brown, G. Schiller, A. Ahrens, Ullmann, Mr. and Mrs. Drury, 11 Japanese, and 61 Japanese and four Chinese in the steerage.

Per French steamer *Volga* from Hongkong.—Messrs Herig, and Heineman. From Singapore.—Soeurs St. Mathilde, St. Ariste, Une Soeur Converse.

CARGOES.

Per French steamer *Menzaleh*, for Marseilles, &c :—
Silk..... 311 bales.
Waste Silk ..... 29 „
Cocoons..... 8 „
Per American steamer *Costa Rica*, from Shanghai and ports—
Treasure $49 000.00
Per Japanese steamer *Tokio Maru*, for Shanghai and way ports:—
Treasure..... $13,500

REPORTS.

The French barque *Vidal* reports, changeable winds and weather during the passage.

The *Evelyn* reports, put back yesterday, one of the crew having had his leg broken, and the vessel having split some sails in a squall outside of Cape Sigami.

The *John McKean*, anchored outside the light ship since yesterday, left for Niigata this morning

COMMERCIAL INTELLIGENCE.

YOKOHAMA, APRIL 3RD, 1875.

IMPORTS.

Cottons Fabrics and Yarns.—A slight improvement is perceptible in the market. In *Yarns*, 16/24, a moderate business has been effected and prices are generally steadier. The transactions reported in cotton fabrics are of a limited character. Quotations are, however, very firm.

Grey Shirtings:—		White Shirtings:—	
7 lbs.	38½ yds. 30 in. per pce. .. $1.90 to $2.10	56 to 60 reed 40 yds. 35 in. nom. per pce.	... 2.40 to 2.50

DRAPER,

KILBURN, LONDON, W. C.

Yokohama, March 27, 1875. 3ins.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

At No. 29, Bluff, on the 7th instant, the wife of J. BRAGA, Esq., of twin-daughters.

Notes of the Week.

WE inadvertently omitted to notice last week the announced intention of the Directors of the Deutsche Bank to close their branch here and their various branches in the East. It is no news now, and we only refer to it lest we should seem chargeable with neglect of a fact which is not without a public bearing and importance. Banking business in the East has lately become less and less profitable, and here it has been perhaps more unprofitable than elsewhere. The withdrawal of the branch of the Bank from Yokohama is another evidence of bad trade and failing prosperity, but it is impossible to doubt the prudence and soundness of the determination which has dictated this step.

AMONG other expressions in the Queen's Speech at the opening of the present session of Parliament which the Ministers have had to defend against the attacks of the Opposition, is that used in regard to Spain. Her Majesty spoke of Spain as "a great but unfortunate country," and it was objected that the term 'unfortunate' ought not to have been used. The spokesman for the Ministers replied that the word 'great' had been coupled with it, and in view of the past and present condition of the country, we doubt very much whether the two expressions are not well chosen and appropriate. The importance attaching to criticisms made in the great council-chamber of a nation, and by its Head, does not, of course belong to the casual utterances of subjects, however prominent. Were it otherwise, the Japanese might be asked to explain the following curious passage from the letter addressed to the nobles of Japan by Takashima Kayemon, a translation of which lately appeared in a local paper.

> At the time the daimiates were abolished, the Government said that, to make the country great and prosperous, everyone must work and have some business or other. If they do not, the country will be like Spain; which, though she has a rich soil and a great many inhabitants, still, as the people are lazy, has no trade of any note. Japan has a very good soil and a great many inhabitants, and now that she is getting good doctors and everyone is vaccinated, the population will increase year by year. So the people must move about and go to different parts of the Empire to find employment.

Now, there really is a delightful and refreshing self-complacency about this, which contrasts admirably with the tone of many of the translations we are in the habit of publishing, in which the writers of the original essays may be found deploring very earnestly and very honestly the backward condition of this country. If the sentence we have quoted means anything, it means that if her people do not exert themselves a little more heartily Japan may sink into a condition like that of Spain. It is true that Spain is at this moment in a condition which causes very general regret and excites abundant sympathy. But Mr. Takashima must be told that even in the matter of the respective amount of industry exhibited by the two countries, Japan will have to sink a long way upwards before she can rival Spain. All questions of past history, the long line of statesmen, poets, painters, orators, historians and warriors which Spain has produced, we purposely leave aside. Mr. Takashima takes the simple ground of the national industry, and to this we shall confine ourselves. The figures at our command are somewhat limited, but, such as they are, we give them. In 1873 the trade between Spain and the United Kingdom *alone* amounted to a total of fifteen millions and a-half of pounds sterling, or seventy-seven millions of dollars, thus composed:—

Imports from Great Britain.....	£ 4,527,817
Exports to „ „	10,973,231

The revenue of Spain during the same year was £21,815,788 or, roughly, $109,000,000. Her population in 1868—we have no later returns—was 16,641,984, or about half that of Japan, so that taking the revenue as a little less than double that of Japan, and the population at about one half, it follows that there must be very nearly four times as much industry in Spain as in Japan. We admit that the inference is not quite perfect, as there are certain considerations regarding the internal trades of the two nations, and the relation of taxation to production, which are not taken into account in this estimate. But we cannot be very far wrong, and these figures must be allowed to cut the ground utterly from under the curious self-complaceney which Mr. Takashima exhibits.

But Mr. Takashima is evidently not strong in political arithmetic and might write, with Hamlet,

> O, dear Ophelia, I am ill at these numbers.

He says:—

> In every 100 men, there is an average of 25 children 15 years of age, 10 old men beyond work, 15 farmers and fishermen, 5 labourers, 2 merchants, 2 soldiers, and 1 officer or teacher. This only makes 60, the other 40 are supposed to be strong and healthy men doing nothing. These 40 ought to have something to do.

But where are the women? Does he mean that these also should be among the labourers? His conclusion plainly is that four-tenths of the people are doing nothiug; and yet he says the Spaniards are lazy,

We do not wish to say anything to wound Mr. Takashima's feelings, for he is an active man, and we should be the last to forget the services he has rendered in the cause of education in this country. But he really must mend his calculations, which at present are worthless for the purposes to which he puts them. If the Japanese nobles whom he invites to make a railway to Awomori—the wildest scheme that ever was proposed—put faith in this kind of arithmetic, they will lose all their money, and expend their patriotism in vain. We all remember the big boat which took Robinson Crusoe three years of such incredible labour to make, and which, after all, he never could get into the water, because the tree out of which he formed it stood originally too far from the sea. We should not like to see any more large sums of money wasted in this

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

country, which assuredly would be the case were this railway attempted—achieved it never could be.

A curious movement sprang up a short time ago among the more earnest-minded young men at Oxford, who had been reproached by Ruskin that their worship of athleticism, and that desire for muscular exercise which takes the form of cricket, rowing, rackets &c., and constitutes a kind of physical religion in England, were ill bestowed on these sports. It was alleged that such labour was unproductive, did no good, and might be far more usefully employed in mending roads and benefiting others, especially the poorer classes. Nothing would do but that these benevolent young giants must go out with pickaxes and shovels and mend the country roads. They abandoned their beloved Isis, Nuneham and Henley knew them no more, and the best blood of the country might be seen working like navvies on any bad bit of road within ten miles of Oxford. (It may be stated parenthetically that the movement was a short-lived one.) Now, we do not expect the nobles of Japan to imitate this ardour, or to work on the roads; we must frankly say, too, that we do not think it desirable that they should. But if so many of them are entirely idle, as seems to be the case, they really would do splendid service if they would parcel out the country into sections, get themselves constituted Road Commissioners, and (of course under some proper system of surveys and engineering supervision) throw themselves heart and soul into road-making. Patriotism, provided it be pure, does not consist solely in cutting off the heads of enemies. It is a convertible virtue, and may just as well expend itself on making roads as on foreign expeditions. The Japanese may rely on it that no more useful, and indeed, necessary work can be undertaken in this country. It makes little show, and ministers to no vanity. But it makes wealth, or helps to make it, and that is what both the Japanese and ourselves want to see in the country. There is a strong feeling arising in Europe that the ends the Japanese are proposing to themselves are more visionary than practical, and it is well that they should be informed of this. Intelligent men lately from home speak very seriously of this feeling, which is gaining ground, and to which the events of the past year contributed in a marked degree. It is rare to read any one of the many translations which—as we venture to think—have formed an interesting feature in these columns for some years, but especially so lately, without being struck with phrases which show that the Japanese are greatly stimulated in their desire to benefit this country by the idea of *rivalry with other nations*. This is a vast and most misleading source of error. We do not say that it is not natural to a nation in the condition Japan is at this moment, nor that it is reprehensible in itself. But it is not the less misleading. What the Japanese should say is this:—"What lessons of wisdom can we learn from the wide experience imbedded in the history and the books of the western nations? By what system of moral, intellectual and physical exertion have they built up that wonderful civilization which strikes us so forcibly when we are brought into contact with it? If we merely attempt to imitate this, we copy in cardboard works which, if they are to last, must be constructed of stone, every block of which must be hewn from the quarry, and shaped and adjusted to eternal ends. We have nothing to do with rivalling other nations. Let us, by all means, build up our civilization, little by little, if need be, but build it up, by wisdom, economy, and good sense, without any such thoughts or views as those of competition with the Europeans. This *will* give us the reputation of being solid, sensible men, and this is the reputation which we most require and are most in danger of losing.

School statistics are not very attractive except to those whose professional interests or philanthropic feelings lead them to take notice of the children of a community. But when the attention is once directed to this subject a feeling of surprize almost in[illegible] up in view of the number of children—so [illegible] would be imagined—who require "schoo[illegible]l; and of the number of efforts—most of them short-lived—which are made to meet the want.

To take this place for an example. A careful record, kept for the last three years, shews that during that time there have been 277 children residing in the settlement, of which number 76 have left and 201 still remain here. Within the same period there have been thirteen schools, undertaken or projected, and of these five remain in operation at the present time. Of these last, however, all are of a private character, except that on the Bluff taught by the Roman Catholic Sisters, and the "Parsonage School," so-called, in the settlement, alongside of Christ Church. This latter has been sustained, for the past two years, in connection with the Chaplaincy, and has been considered as a "pay school," though requiring occasional supplementation, in order to secure the teacher in seasons of withdrawal, such as was experienced recently when the small-pox was prevalent.

Such supplementary aid will always be needed in a school of this character, and now that the Ladies' Benevolent Association have, as we understand, consented to take a kindly oversight of the working of the school, it seems right and fitting that they should be sustained in the good work they have thus undertaken, not only by the assurance that the community feels grateful to them for so doing, but by providing a special fund from which to meet the expenses they may think it necessary to incur. We would therefore suggest that some slight machinery should be put together for the purpose of securing specific contributions to the School. These need be but very small, as the object in all such institutions is to make them practically self-supporting. If placed in the hands of the Ladies' Benevolent Association, we should have a guarantee that these funds would be used with discrimination and intelligence.

Can nothing be done to protect European and American manufacturers of articles of high repute from the disgrace into which their products are falling through the unchecked imitations of Japanese tradesmen? There is scarcely a beverage susceptible of imitation, and, from the character it enjoys, worth imitating, that is not now bracketed in name with some factitious composition prepared in Yokohama or Yedo, or owing its external similarity to the higher ingenuity of some foreign bottler, Messrs. Bass & Co. of Burton-on-Trent and Messrs. Martell & Co. of Cognac leading the van of the sufferers. Unlike the potheen which cheers the heart of the wanderer in Connemara, and which he is assured has 'not a headache to the hogshead,' these liquors seem to have a plague to the spoonful, and to reserve for the consumer the punishment which should righteously fall upon the makers, importers and retailers of the sorry stuff. The evil is one to which the Japanese Government alone can, we learn, apply the remedy. The extent to which a foreigner is likely to suffer from cheap and injurious substitutes is limited. An unduly low price proves no bait, and his skilled sense of taste warns him that he is being deceived. With the Japanese it is different. Cheapness is to them a paramount attraction, nor can their untutored palates detect sulphuric acid in the low-priced 'Martell' with which they are pleased to tickle them, nor the milder iniquities of the "doctor" with which the sea-sick 'Burton' has been rectified. There is, according to our information from New York, a fair chance of explosions being incurred if some of the oil which finds its way here gets into consumption; and preserved milk, which may be said to have had only a bowing acquaintance with the 'milky mothers of the herd' is likely to prove quite as deceptive if less injurious. In short, the Japanese must be prepared to take another leaf from the volume of our repressive legislation, and attack at once the dangerous and immoral traffic in spurious wares. Their revenue suffers, their commercial character and *morale* must certainly suffer, and the admirers of cheap European beverages or cheap American oils lay up for themselves a risk of ignition which it might perhaps be wiser to postpone.

The [illegible] notice posted up in the settlement last week referring to the loss of a hat was remarkable for the paucity

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the writer's vocabulary and his failure in the attempted conquest of our grammar. But exuberance and facility have also their dangers, as is proved by the following sentences taken from a recently published notice of the life of Mr. Justice Onoocool Chunder Mookerjee, written by a Hindoo:—

"When a boy," says the biographer, "he was filamentous, but gradually in course of time he become plump as a partridge, and so much so that he weighed himself two maunds and three and a half seers." And in reference to the closing scene of the narrative we are told—"He hermetically sealed his lips not to open them again . . . He remained *sotto voce* for a few hours, and then went to God at about 6 p.m. . . . His wife shrieked bitterly, weltering on the ground, and tearing her hair in frenzy, that she will never be able to exchange a word with him any more . . . His children did *fondre en larmes* . . . The house presented a second Babel, or a pretty kettle of fish."

THE Dramatic Amateurs announce another performance on Wednesday, two excellent farces by Maddison Morton having been selected for their *rentrée*. The long interval which has separated the promised performance from the last and the favourable reputation of the leading performers will, it is to be hoped, secure a "good house."

(From the Japan Mail Daily Advertiser.)

H. I. M. The Mikado took a pleasure excursion upon the Sumida river last Sunday. The Empress paid a visit to the Prince of Hosokawa at his residence on that river. The beauty of the weather tempted large numbers of natives and a sprinkling of foreigners to visit the cherry trees at Mukojima.

Messieurs Sewaki and Morowaka, both officials attached to the Foreign Department, have been appointed to visit China upon a special mission.

THE Arctic whale-fisheries again exhibit signs of exhaustion. Captain Heppingstone of the American whaler *Triton* states that he met with no other vessel on his voyage than the *Arctic*, now in port, and that he deems it improbable that any other whalers will resort to Yokohama during the present season. Neither of the above vessels have oil.

Visitors to the capital of this "paradise of babies," have observed that the freedom enjoyed by the little ones must occasionally involve their straying far from their parents' houses. Of old it was the custom to attach a small label, bearing their address, to their girdles but this practise has, somehow, been abandoned. In view of the large number of cases of lost children it has been recently decided that the *Atzukaijo*, or small offices of a division, shall in future supply the necessary cards.

WE reported in the month of January the suspected murder of Mr. Pease, the master of a small trading-vessel, in the Bonin Islands. The investigations set on foot by the settlers have, we learn by the arrival of the *Tori* thence, failed to fix the crime conclusively upon the suspected persons.

THE virtues of the Tartar *Koumiss*, a curdled preparation of mare's milk have of late attracted considerable notice from the medical profession, its valuable properties in the treatment of pulmonary diseases having been, we believe, first indicated by a Russian physician in Siberia. As illustrative of the increasing power of the native press in disseminting interesting information, we may mention that the *Akebono Shimbun* publishes a letter from a resident in Niigata *ken* who anxiously enquires for the means of obtaining this valuable curative. We believe that Atkinson, in his "Travels through Siberia," has described the mode of its preparation. Should this work be available in Yokohama, we shall hope, on some future occasion, to furnish his notes upon the subject. The remedy, if its reputed qualities be corroborated—and such we believe to be the case—would be of ineffable service to this country.

OWING to the sky being much overclouded during the greater part of the time of the sun's eclipse on Tuesday, the opportunity for observing it was short. But an interval of about ten minutes occurred during which it could be seen extremely well, the figure of the moon obscuring fully half of the sun's surface. That peculiar light, observable during solar eclipses, which seems to change the complexion of nature, was very observable between five and six o'clock. When the sun, still eclipsed, was about fifteen degrees above the horizon, a heavy bank of clouds entirely obscured it, and amid these clouds it set.

The *Hochi Shimbun* writes:

Shioda Samuro attached to the department of Foreign Affairs and Ishii, of the Telegraph Department, are about to leave for Russia on a mission having reference to the latter department.

A telegram from Burmah, dated 5th March, conveys the sad news of the massacre of Mr. Margary at Marwine by the Chinese. Fears are expressed for Mr. Ney Elias' safety.

A serious affray, fortunately, however, without very grave consequences so far as we can learn, occurred at Uyeno, Yedo on Sunday last between a body of police and military. Originating—as these *fracas* most frequently originate—in an unprovoked attack upon a constable by drunken soldiers, the tumult soon waxed warm and some hundreds of either arm promptly rallied to the spot in aid of their fellows and the fight did not end without bloodshed. A writer in the *Hochi Shimbun*, in commenting upon this, very properly reminds his countrymen that such conduct disgraces their new-fledged civilisation and that they would do better to keep their blows for their enemies. Such scenes, he continues, are especially disgraceful when contrasted with the placid beauty of the sweet scenery of Uyeno.

FOREIGNERS who fel an interest in athletic amusements may be glad to know that during the earlier days of next week some excellent wrestling may be seen at Ekoin, at the Riogoku Bridge, Yedo.

THE *Nisshin Shinjishi* says:

It is said that arrangements have been made that the Empress Dowager, will leave the Castle, on an excursion to Enoshima, at 9.30 on the morning of the 7th instant, and will proceed by train from Shinbashi Station to Kanagawa. Going on from there by road, Her Majesty will make a mid-day halt at the post-town of Hodogaya, and lodge at the post-town of Fujisawa that same night. On the following day, the 8th, she will halt at Enoshima, and lodge at Kamakura, on the 9th go over the shrine of Tsurugaöka, Ôto-no-miya, Kenchôji, &c., and lodge at Kanazawa;—and on the 10th proceed by road from that place to Kanagawa, returning from that post-town by rail.

It will be observed that owing to the change of monsoon the day of sailing of the P. & O. Company's steamers has been altered to each alternate Wednesday.

Otori and Kawage who were despatched some months hence on a friendly mission to Siam returned to Japan by the P. & O. steamer *Bombay* on Wednesday.

A Japanese has been at the pains of counting the jinrikishas which passed over the Asakusa bridge on a given day. Between the hours of 6 A.M. and 6 P.M. he found that 29,331 vehicles had crossed the Sumidagawa.

THE following rules have been adopted by the recently formed Canoe Club:—

1.—That the Club be called the Yokohama Canoe Club.

2.—That residents in Yokohama and Yedo, owners of canoes, and able to swim, be eligible for membership, on being proposed and seconded by two members.

3.—That a Commodore and Vice be elected annually, to manage the affairs of the Club.

4.—That the distinguishing flag be white, with a blue ball.

5.—That on all cruises the Club flag be flown at the mast-head, and private flag at the peak, or some other conspicuous position.

6.—That a register be kept of all canoes, viz.:—Length, breadth, name, colours, &c. &c.

Digitized by Google UNIVERSITY OF CALIFORNIA

A Peking correspondent mentions a rumour that Mr. and Mrs. Wade are to leave soon for Shanghai, and that Mrs. Wade is likely to pursue her way to England.—*N.-C. Daily News.*

The *Kanagawa maru* met with an accident during her passage from Nagasaki to this port. Off the Amherst Rocks, the key of her propeller dropped out of its place, of course rendering the engines useless. Sail was made, and the steamer reached port on Saturday, and was towed to Tung-ka-doo Dock yesterday morning, for the necessary repairs.—*N.-C. Daily News.*

THE Exhibition which opened at Nara on the 1st instant, is said to be attracting large numbers of Japanese visitors nor does it seem altogether uninteresting to foreigners. Among its antiquities, now for the first time exposed to public view, are the celebrated duck-feather screens and a silver flower-pot weighing seventy pounds.

WE are glad to learn that precautionary measures have been adopted by the authorities against the the recurrence of such disgraceful *émeutes* as that at Uyeno on Sunday last. An order has been issued to the effect that no soldiers shall in future be permitted to leave their barracks except under the escort of an (we presume non-commissioned) officer.

SOME cases of neglect to register on the part of British subjects will be heard before the Consul on Monday next.

A Notification has been issued by the Council announcing that a scale of rewards and pensions has been decided upon for such officers or men as shall have suffered in the discharge of their duties to their country. We are unable to give at full length the conditions and qualifications or the sums assigned to the wounded and families of the deceased. Briefly stated, however, they are as follows:

In case of death it is provided that the relatives of the deceased shall receive pensions according to scale, which shall be held to date from the month following his death. The State will of course pay for his burial.

The wounded will be recompensed according to the nature of their wounds, an annual pension of 80 *yen* being allotted for total disablement (loss of eyes and arms) and 30 *yen* for wounds of a lighter character to private soldiers. The relatives of deceased soldiers will receive 20 *yen* yearly, and 30 *yen* is assigned as the allowance for their burial, or rather, we presume, since many may be expected to die in battle, a *solatium* to the survivors.

DISCHARGED SAILORS.

IN view of the unsatisfactory records of the Police Courts during the past three weeks or so, it seems well to devote a few moments to the consideration of the effect of those enactments bearing on naval and mercantile shipping, and the position of discharged sailors at this and other eastern ports, which are not without a certain effect on our municipal condition. And if we treat the question perhaps a little more superficially than its importance demands, the defect must be attributed to our want of fuller acquaintance with the subject than it is easy to obtain without practical consular experience.

The number of the class known at these ports as 'loafers' has decreased much of late, owing to the steady pressure which has been kept on it by the Consuls. At one time it was very large and very obnoxious. Under cover of hunger and abject distress, the sale of mock coral trinkets, Hakodate salmon, or anything that would furnish a pretext for entering a front garden and getting near a back door, men would prowl round the Bluffs in the morning and carry off any unconsidered trifles which their own stealth and the carelessness of servants might bring them in contact with. After sunset their depredations were bolder and generally better rewarded, and the long nights and frequent fires of winter often served to recruit an exhausted purse and revive their spirits and exertions. We must not be supposed to confound all discharged sailors with this class, or even to impute to the worst of its members all the misdeeds from which we suffer. But it was formed, recruited and kept alive by men who had shipped as sailors elsewhere, and who drifted about from port to port, without any other object than supplying their present needs by any means, fair or foul, on shore or at sea, as the humour or exigency of the moment might dictate.

The legislation of the various maritime nations in respect of sailors differs considerably. In England they are encircled with an absolute network of safeguards, which are to be found in the provisions of the Merchant Seamen's Act. The clause of this Act which most effectually guards foreign ports from the evils incidental to the presence of a number of idle men thrown promiscuously upon them, is that which provides that no seaman shall be discharged from a vessel without the consent of the British Consul. This overrides all special agreements in the articles under which the sailor ships, and very much stronger reasons than those usually offered are necessary to induce the Consul to grant a discharge. The effect of this is that the number of discharged British seamen at foreign ports is very small, and while the sailor is guarded against the consequences of his own careless or capricious disposition, the country is not burdened with the expense of maintaining him in idleness, either in confinement or at large, as the case may be, or of providing him with a passage home.

We are not sufficiently conversant with American legislation on this point to say exactly how it deals with the question. But it gives to the seamen of its men-of-war a liberty in regard to leaving their employment which, however desirable from other points of view, has a disadvantageous, we might even say, an unjust, bearing upon other nations. We write liable to authoritative correction, but we believe that before a man can get employment as a sailor on board an American man-of-war, he must affirm or swear—the latter has never been a hardship to the class—that he is a native of one of the American States. But a large proportion of the sailors on board these vessels are Englishmen, attracted thither by a high rate of pay, and they have the power of applying for their

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

discharge at any port they may visit. There are doubtless some restrictions in respect to this, but whatever they may be they still permit of far more freedom than is granted to the British sailor in a British ship. But the certificate of discharge so given to the British sailor expressly says that he is not a citizen of the United States, which thus claim and secure an exemption from any future responsibilities in regard to him. If he falls into crime, he is tried by the British Consul, and if he falls into distress, the British taxpayer has to bear the expense of sending him home. It is clear that American legislation on this entire subject will differ from our own in important particulars. For many obvious reasons we produce sailors in far larger number than America does, and while her legislation must be coloured with the desire to get our men, ours is as naturally animated by the desire to keep them. All this, however, is perfectly well understood on both sides, and is no cause or source of misunderstanding. But it is hardly fair that she should suborn Jack's only too easy conscience, make him swear that he was born in one of the States, and then disclaim all subsequent responsibility in regard to him in a foreign port. Apart from the ethics of the producing, which would seem to be somewhat lax—though it will not be pretended that the rather leathery moral material acted upon is much impaired by the process—it does not seem right that the advantage derived from the sailor's services should not also involve a correlated duty in regard to him. We do not mean to say that the case is all against the States. The sailor has had his high pay and leaves his ship of his own accord. It has suited him to represent himself as a native of the States, he has had his *quid pro quo*, and if he claims his liberty he must take it with such disadvantages as attach to the obtaining of it. But still, it seems to us, that the authorship of his dilemma rather lies with the State which has tempted him, which cannot be wholly absolved from certain responsibilities regarding him. How these could be met is a question to be asked and answered after some acknowledgment has been obtained of the responsibility, and this may not be easy.

Another question which touches the good order of this settlement is the indisposition of the British Government to permit of so free a resort to deportation as formerly. This most convenient form of ridding a place like this of disorderly characters is looked upon with some not unnatural jealousy by the Government of Hongkong, into whose jurisdiction they usually come when thus sentenced. The colony has perhaps some cause for complaint when it is made the recipient of all the incurables of the ports of China and Japan. Yet, what is the alternative? To have these incurables turn 'revolvers,' as the Americans call them, a fortnight in prison and a fortnight out, in the foreign settlements of alien Governments. You can deal with these men in a colony. There are roads to make and public works to construct towards which their conduct fits them to render valuable assistance. But here they are maintained in prison at the public expense, and do but a small amount of work in return for it. Nor does it seem to us quite fair to the Japanese to throw on them the expense of watching and apprehending this class of men. Certainly it is not fair to the foreign community that there should be no means of ridding the settlement of incurably disorderly men. The American have a very curious way of meeting these cases, but it is one to which the British Government would never agree, and, we think, with excellent reason. The U. S. Consul may under these circumstances withdraw his protection from an American citizen, who then becomes amenable to Japanese law. We presume this could only be done after due warning, and whether it has ever been done, or, if so, what were the the consequences of the act, we do not know. Doubtless the power is used very sparingly.

THE NEW SCHEME OF TAXATION.

ON the 20th of February the following Notification was issued by the Government with regard to the abolition of certain "Miscellaneous Taxes."

"No. 23. The so-called "Miscellaneous Taxes" which have existed hitherto not being fixed on an equitable basis, some articles being heavily taxed and others lightly, the taxation having been conducted according to the old system, the Taxes named in the enclosed paper have been abolished from the 1st day of the 1st month of this year.

Later on an uniform rate of taxation will be universally imposed in certain cases, but with respect to those Taxes, the non-collection of which immediately would interfere with business, they will for the present be levied as before.

Note.—With regard, however, to the amount paid in rice, and money as rent of Government ground, this will be paid in the same way as heretofore."

(Signed) SANJÔ SANEYOSHI
Daijô Daijin.

February, 20th, 1875.

These Miscellaneous Taxes number in all 1456, and though the greater number admit of no classification, a large proportion may be classed under the following heads:—

1.—*Taxes for Storing-Sheds.*—For silk, tea, vegetables, fish, cotton, and boats, &c., &c.

2.—*Taxes on Licences.*—For pawnbrokers, livery-stable-keepers, apothecaries, toymakers, fish nets, cutting grass, shell-hunting, watermills, manufacture of vinegar, felling timber, trade in products, storing-sheds, &c., &c.

3.—*Taxes on Trade.*—Trade in fish, grain, miscellaneous articles, sweetmeats, exchange, pens and ink, books, porcelain, lacquer, ironmongery, clogs, woven goods, agricultural implements &c., &c.

4.—*Tax on Markets.*—Such as horse-markets, fish-markets, and clog-markets.

5.—*Tax on Handicrafts.*—Such as clog-makers, lacquerware-makers, joiners and cabinet-makers, wood-cutters and horse-doctors and dyers &c., &c.

6.—*Tax on the Price of Articles.*—Such as beans, rope, charcoal, &c., &c.

7.—*Tax on Manufacture.*—Of tea, *miso*, and *katzuwó-bushi* (dried fish).

Besides these the remissions include river dues, straits' dues, river mouth dues, dues for transport of goods by raft, dues for the loading of cargo, dues on cargo, being a tax of 10 per cent, and the same on Rice; also a tax on shops, a tax on inns, a tax on hawking goods, a tax on brokers, and one on house agents, a tax on tea-booths, and one on sea-fishing.

The following list gives a fair idea of the nature of the taxes which have been remitted.

Watermill licenses, pawnbrokers do., rope, thread, &c., fish shops, dried fish, transport of charcoal and timber by rafts, business in river fish, grain stores, vegetable stores, stores of river fish, paper stores, bathhouses, license on fish nets, Tamagawa gravel, manufacture of vinegar, livery stables, raft transport, transport of fish, boards, salt shops, license to sell turf, nets, vegetables, old furniture, grain business, medicines, firewood, hotels, toys, miscellaneous business, lacquer, grass-cutting license,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shell-picking license, markets, cotton, Tsumugi, lime, rice of *kaki*, hair oil, candles, wax, baskets, tea, Miso shops, hawking goods, sweetmeat shops, yeast shops, old clothes, ashes, ironmongery, lanterns, boat shops, pearls, mud-plaster, cattle-keeping, salt reservoirs, exchange shops, bamboo, coal, incense sticks, cotton thread, horse markets, hunting birds and animals, spade handles, store-licenses, hemp, bird-nests, tea-storing sheds, sugar, ferry-boats, fish-market, charcoal, joiners, manufacture of tea, shops for the sale of animals' and birds' meat, iron stores, cotton stores, fibre, river fisheries, dyes and dyeing shops, cabinet makers, timber, mulberries, barrels, silk, mosquito curtains, raincoats, waterfowls and water-animals, whips, brushes, manure, boat sheds, flour, camphor, moulds, stores, whetstones, license to traffic in products, porcelain, undertakers, tea booths, license to fell timber, mats, umbrellas, tiles, eggs, glass, cue-cord, fruit, agricultural implements, sea-fisheries, horse doctors, Miso manufacture, rice grinding, straw, clogs, sand, woven goods, socks, ice, brokers, loading boats with cargo, tortoise-shell, honey, ink-stones, books, pens, ink, &c., picture shops, gold and silver leaf, paints, gardening, hot springs, calendars, photographs, fees for letting godowns, tobacco-pouches, lacquerware, lacquer tree, wood for making clogs, tailors, old metal, pipes, ore, licenses of all kinds, handicrafts, house agents, exports and imports at the various ports, momban's fees, farmers' taxes, and taxes on ceremonies of the new year.

From the above it will be seen over what a wide range the taxes in question extended, and one is not surprised to learn that they were found very troublesome to collect and comparatively unremunerative. To attempt to classify all of them would be a hopeless task owing to their heterogeneous character, which is due to the fact of the greater number being purely local taxes. Many of these again appear to recur here and there repeatedly as one looks through the list, for though in reality the same tax, the designation varies according to the different localities.

In order to meet the deficit in the revenue caused by the remission of these "Miscellaneous Taxes" the Government have decided to increase the taxation on *saké* and carriages and to impose Tobacco Duties.

With regard to these latter the Taxation Rules have not yet been issued, though they are expected shortly to appear. They will not come into force until the 1st and 2nd day of the 1st month of next year—the 9th of Meiji, (1876).

The following Notification making known the new arrangement with regard to the taxation of carriages also bears on other taxation and is therefore given in full.

No. 27.

"The Rules for the taxation of men-servants, and "women-servants, of carriages, jinrikishas, *kagos*, rid-"ing-horses, and pleasure-boats, which were published by "Notification November 31, of the 10th month of the "6th year of Meiji, (1873) have ceased to operate "from the 31st December of 7th year of Meiji, (1874.) "In the case of pleasure-boats taxes will be levied on "these according to the Rules given effect to by Notifi-"cation No. 21 of 2nd month of the 7th year of Meiji. "With regard to the Taxation of Carriages, the following "carriage-taxation rules have been drawn up and will "take effect from 1st day of 1st month of this year (1875.)"

(Signed) SANJÔ SANEYOSHI
Daijô Daijin

February 20, 1875.

It appears from this notification that the taxes on servants, on *kagos*, and on riding-horses have been remitted.

All carriages and carts to be inspected and receive the Government stamp in proof of having paid the tax. Tax to be collected by *kuchô* and *kochô* twice every year.

Carts used for purposes of agriculture are made free of taxation. A special mark to be put on these.

Any breach of these regulations to be visited with a heavy fine.

The Notification publishing the new rules for the taxation of *saké* runs as follows.

No. 26.

"The rules for the taxation of *saké*, with the subse-"quent alterations and amendments made in them, which "were given effect to by a notification of the 7th month "of the 4th year of Meiji (1871) will cease to operate "after the 30th of 9th month of this year. The follow-"ing rules will come into force from the 1st of 10th "month."

Note.—The taxes on *Dakushin*,* *shôyu*, and yeast will also cease to be levied after the 30th of the 9th month.

"(Signed) SANJÔ SANEYOSHI
Daijo Daijin.

February 20th, 1857.

The chief features of these rules are as follows:—

The taxation is divided primarily into two heads:—

1.—Tax on manufacture.

2.—Tax on sale.

From 1st of 10th month of one year to 30th of 9th month of the next year to be fixed as "one period," for which a license must be obtained.

The tax for one period, for a license to manufacture is *yen* 10.00 for every kind of *saké* manufactured; for a license to sell (*i.e.* by retail) is *yen* 5.00 for every kind of *saké* sold.

But besides this the manufacturers will pay a tax of 10 per cent on the value of all the *saké* which they make and sell during "*one period.*" The value of the *saké* is to be fixed each year by the Administrating Office—the average rate being taken from the 1st of 10th month of the previous year to the 30th of the 6th month of the year in which the assessment is made. Notice of the amount which the manufacturers intend to manufacture during "one period" must be given to the Administrating Office at the beginning of the period.

The Tax will be paid in two instalments—one-half to be paid by the 30th of the 4th month and the other half by the 30th of the 9th month of each year.

Licenses will be inspected every year at the Administrating Office, and the manufacture will be subject to inspection by special officers appointed for the purpose.

Licenses may not be borrowed or lent, but they may be bought and sold, transmitted from father to son, and given by one person to another.

Breaches of these rules will be met with severe penalties.

It should also be mentioned that dyke fees and the tax on oil-pressing have been abolished. The former were of course of an entirely local character, there being none in some districts, while in others like those through which the Shinanogawa runs, they were occasionally very heavy and were consequently a great burthen upon the peasantry.

The Miscellaneous Taxes which have been thus abolished are the relics of the feudal system under which each Daimio governing his province in his own way imposed what taxes he chose upon his subjects.

The total yearly revenue derived from these amounted to *yen* 1,200,000, and this sum the Government hope to double by the increased duties on *saké*, which are twice

* Coarse *saké* drunk by coolies.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

as much as they were previously, and by the introduction of Tobacco Duties.

The carriage tax is of quite recent date, having been introduced in imitation of similar taxes in European countries. The alteration of this tax will have little effect upon the revenue, the modification of the former rules being very slight.

SPIRIT OF THE JAPANESE PRESS.

Is it too soon for a Revision of the Land Tax?

("Hochi Shimbun" of March 17th, 1875.)

The writer prefaces his remarks by stating that the two words "Too Soon" are heard everywhere now with reference to a Deliberative Assembly chosen by the People." These words might, he thinks, be applied with more justice to the Revision of the Land Tax.

"The Government," he says, "are energetically at work "upon this measure, but they have no definite or clear "object in view. The only object they can have must be "merely to shew to the world the "apparent beauty" "which attaches to the carrying out of an important mea- "sure of reform like this peacefully, without creating dis- "turbance or convulsing the country or causing any visible "mischief. If it was guaranteed that this work could be "effected without injurious consequences, then I should "have nothing to say. It would be one of the best things "that was ever done, and I should not condemn it but "confine myself to pointing out that it is too soon yet for "such a measure. But arguing on logical grounds I am "convinced that the consequences that will follow upon "the carrying out of this reform will be disastrous. And "to hurry it on is like opening the sources of evil. I will "proceed to explain my meaning."

"The Government in order to effect this reform will "not curtail their expenses. The expenditure which is "necessary for the government of the country is the same "as it was before, and while this is so, if the land tax is "suddenly decreased, as perforce a remission of taxes in "one direction must be met by a corresponding increase "elsewhere, heavier duties must be imposed on trade. If "the land-tax everywhere throughout the country be "lessened and the universal rate of taxation be made 3 "per cent, the revenue will suffer, and this being the case, "as the government of the country entails an enormous "outlay which is wholly necessary, the amount of revenue "which is taken off agriculture must be obtained from "trade. Therefore, in judging of the fitness of this mea- "sure of reform, it being a matter which concerns the "present condition of agriculture and trade, the relative "state of these two must be compared and the best plan "adopted accordingly.

"In considering the present scheme of reform, even "putting out of sight the *pros* and *cons* referred to, I "find that much good will be lost by hurrying it on. Let "us look into the matter. The wealth of our country lies "in agriculture, not in trade. Do the interests of foreign "countries lie on the side of agriculture or are they on "the side of trade? I will consider this, and proceeding "a step forward in my argument I state as a broad "fact that the wealth of our country lies in agriculture, "but that the interests of foreign countries lie in trade "and are not to be found in agriculture. Europe and "America think trade of more vital importance than war. "Defeat in war can be remedied, reverses in trade can- "not. We need not look far for proofs of this. Prussia "and France, India and Turkey furnish us with these. "Let us examine the present state of commerce in the "country and we see nothing but beggarly poverty every- "where; we are met on all sides by irretrievable bank- "ruptcy. Such is the condition of trade at the present "moment, a state of things which one shrinks from "beholding."

"Therefore the Government ought to direct their most "earnest attention to the fostering of trade. If then it "be borne down by heavy taxes, it cannot be doubted for "an instant that it will be cramped and enshackled there- "by. Such a policy is like beating a sick man. The "consequence is death."

"And now, to pass by the rich, and to cramp and "enshackle the poor, who ought to be assisted and en- "couraged, with heavy imposts—how can this be conson- "ant with preventing the approach of evil and mischief. "Certainly the agriculture of our country should not be "neglected, but equally the two words "The Present" "should be borne in mind."

In his concluding words the writer repeats his conviction that great harm will ensue from any hastening on of this measure of reform. He admits that some such reform as that contemplated is inevitable. It must come; but first let a parliament be established, let the matter be discussed there, and then let the reform be effected.

The fallacies and injustice of a protective system.

(Meiroku Zashi.)

We recently gave a comparison between our exports and imports, and, as we said, the imports in the year 1872 were about eight millions of *yen* in excess of the exports, and in the 1873 about seven millions in excess. Besides this there are the salaries of Europeans in the various departments of the Government and in the *kens*, which amount to about two millions of *yen*, and, further, the interest on the public debt, and if things go on like this we shall at the end of ten years have lost one hundred millions of *yen* and all our money will have disappeared. It is only natural that those who are anxious about the welfare of the country should say 'Gold and silver represent the 'capital of the people and the foundations of the prosperity 'of the country; if they disappear, as we have shewn 'that they are doing, neither our people nor the coun- 'try will be able to stand. This is really a lamentable 'thing and draws from us a deep sigh, and we must contrive 'some means of protecting ourselves from this impending 'destruction. Europeans in olden times used to have 'similiar misgivings about their respective countries, and 'instituted the system of protective duties to defend them 'against so fatal a catastrophe. In America the system 'is still in action, and now in order that our country may 'successfully encounter these difficulties we must also 'adopt a similar system'

Our opinion, however, is, that protective duties can only bring injury upon us. In Europe there have been many political economists who have discussed this subject, and they are all more or less of our opinion, though the Americans approve of protective duties because their manufactures are not in such a flourishing state as those of Europe. Thus it is that everything is much dearer there than in Europe, and the duties on imports are very heavy in order to protect manufacturers. This may cause inconvenience to the people, but it is done in order that the manufactures may ultimately be brought into a flourishing condition.

Now, our manufactures are in a very low state, and if we cannot bring them even as high as those of America even under a protective system, how much less can we ever bring them to the level of those of Europe? It is like a combat between a warrior and a little maiden, and this being the case, the fact that we pay a yearly sum of two millions of *yen* to foreign instructors and advisers cannot be helped. Again, if we observe the present condition of affairs, even a fool would see that it is idle to hope that we can rival the manufactures of the Americans, but as there are many among us who are desirous of advancing the welfare of our country, and argue that to this end a system of protective duties should be established, we will state what we conceive to be the objections to this course.

The first great objection is that a tariff is attached to the treaties with foreign powers. Iron is a heavy material and its transport is costly. But it can be brought many thousands of miles across the ocean from England and still be sold at a lower price than that made at home. This arises from the difference between the skill of the miners and manufacturers here and in Europe. The ancients used to say that the wise and the fools stand at a distance of thirty *ri*, but we may clearly see that the distance between the skilful and the unskilful is at least three thousand *ri*, and it is not only in iron that we see this enormous difference but in all arts and manufactures. It would thus be idle for us to attempt to rival England,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and therefore a system of protective duties is not only out of place but it is actually injurious, and this is the second objection.

In the days now past the main ground of the desire our people had for articles of European manufacture was curiosity. But now the dress, furniture and implements used at meals, &c., made in Europe, have become among the daily necessities of life, and, in the capital, even the system of constructing houses is European. If we were now to place a heavy duty on imports such as cloth &c of which we use so much and which we cannot manufacture, should we try ever so much, it would a grievous injury to us.

Ten years ago the *Joi** party were strong in the country, but this has greatly changed, and our people have begun to appreciate foreign customs and to see the utility of foreign articles, and this is the reason why our imports are so much in excess of our exports. This, however, seems to us but the passing accident of the present time. The high officials, perhaps, have indulged somewhat too freely in these customs. But if we should now lay a heavy duty on imports, and hinder the people from acquiring what they desire to have, it would be like caressing them with the right hand and oppressing them with the left. This surely would be utterly unreasonable, and is a fourth objection to the establishment of protective duties.

In our present state we are like men peeping through gates at civilization, not yet having entered them, or we may be compared to children who have just entered school. We should make but a poor comparison with those who have entered universities, and even these are at great expense until they graduate. But as a knowledge of our own interests must advance, and trade increase with this knowledge, this is not the time to seek to decrease it; yet this would be the fifth wrong inflicted on us by a protective system.

There are perhaps some who are very solicitous about the welfare of our country, and who think that if affairs go on as at present, in ten years time there will not be the shadow of gold or silver to be seen in the country. We doubt the necessity for this anxiety, and will moreover guarantee that the result will be entirely different. The increase or decrease of our exports or imports is not a thing susceptible of regulation. If we look at things in their totality it will be observed that they do not lose their equilibrium. Sometimes the heat or cold is excessive, and winds and tides are unusual, but, in the long run, an average temperature is preserved, and these things go and come in their appointed rounds according to the laws of nature, so that a disturbed equilibrium is always restored. How are we to produce an equilibrium between our exports and imports? It can only be done by greatly decreasing our imports and increasing our exports. When we first began our foreign trade the exports greatly exceeded the imports, but during the last three or four years the imports have greatly exceeded the exports. In future years, however, it is quite possible that our exports may again exceed our imports. Though our imports are now large and our exports small, we are going on our road according to nature, and need have no fear about the restoration of this disturbed equilibrium. Meanwhile, we are advancing in civilization and may safely banish these anxieties.

Morals and Politics not different things.

(Meiroku Zushi.)

We find many lamentations among the ancient sages of China that politics and science were separated and travelled on diverging roads. We do not think that there need be any deep lamentation for this, but we do for the separation of morals and politics. The *Daigaku* * says "By good morals govern, tranquillize and settle your "homes, then govern, tranquillize and settle your country, "and thus the nation will enjoy peace and prosperity." "Môshi † said "The home is the foundation of the order "and peace of a country, and the home is governed by "morals." There are many others among the Chinese sages who made morals the basis of government. It was by this teaching that our people were ruled, and learned men have regarded it with reverence, thinking and therefore behaving in obedience to moral laws. Since the civil war the education of our people has been placed on a different foundation, and the value of the moral teachings of Confucius, Môshi and other sages has been rapidly declining. But moral philosophy has not yet arrived among us from Europe, and therefore the present moment is like the interval between the setting of the sun and the rising of the moon ‡ In this twilight of opinion people desirous of making themselves prominent say that the teachings of Confucius are idle and mere indirect roads, and meanwhile they obey no laws of morality and truthfulness. Though many of these men are of high rank, some of them have characters worse than those of the most degraded classes of society. We think that this is very lamentable! We would willingly point out to them from the sayings of Confucius and others where they are wrong, but this would be a vain attempt, for they detest and despise these teachers, and, were we to make the attempt, they would spit on them and throw them aside.

We desire therefore to bring before them the enlightened opinions of the sages of civilized countries, and to show them that there is no difference of opinion in regard to the effect of morality in tranquillising a country and conducing to its prosperity.

The objects under Heaven are innumerable, but they may be classified into the animal, vegetable and mineral kingdoms. These kingdoms are those produced by the Creator for this earth; they exist and he governs them all, having given them forms, life, and sense. Minerals have only forms. Vegetables have forms and life, but no sense. The animals have all three, and if we observe them we see that God has evinced more of his power in this kingdom than in the others.

The animal kingdom may be divided into two parts, man and the lower animals. It is not, however, a mere difference of form that makes the distinction between the two. The animals have animal life and animal reason. The animal life is common to both man and the animals. Human reason is possessed only by man who evinces the highest power of God. Man is actuated by desire towards his species and by a spirit of acquisitiveness.

If a man can subdue his animal desires and make them subservient to his reason, he may be called a virtuous man or a sage. But if his reason is subdued by his animal nature, he may be called a vulgar herd, little removed from the lower animals. The morals of the people are therefore governing factors in a nation, because both belong to the kingdom of reason. Should the mere animal desires in men be so powerful that they are uncontrollable by their moral nature, it is impossible that they should themselves prosper or benefit their country. Professor Emerson of America says "Moral Philosophy is the foundation of justice in politics." This will prove that I have not written that which is false. The English philosopher Bentham said "What is honourable in politics cannot be called vulgar in morality." This is because morality and politics are both the outcome of the reasoning powers of man; where one is bad the other cannot be good, and where one is good the other cannot be bad. If our private lives were guided alone by our animal desires, and our politics proceeded from our mere animal reasoning, it would produce a mixture like that of half a man and half a horse, or of the body of a man with the head of an ox.

Many of our highest officials and nobles have of late been acting very immorally in secret, and are contemned by our learned men. But if they were reproved they would probably say, "It is not necessary for those who accomplish great deeds to be under the trivial restraints of morality." We regard the matter, however, in a very different light, thinking that their deeds are small, while their violations of the laws of morality are very great. The English Professor Thomas Brown said "It is not "the man who conquers his enemy, but he who conquers

* The party opposed to foreigners.
* Book of Confucius.
† A disciple of Confucius.

‡ We submit that perhaps our essayist would have done more entire justice to the occasion had he said that it was like the interval between the setting of the moon and the rising of the sun.—[Ed. J. W. M.]

"his natural desires who deserves to be called great." § The historians of the dark ages or periods of excitement and war usually chronicle the actions of men which show their courage, but nothing is said of their morality. But looking at these things with the eyes of a sage, such a man, for instance, as Thomas Brown would find many other points on which to comment. How much more is to be said against actions which would disgrace the lowest classes of the people committed by men of the highest rank in a time of peace, when it should be the endeavour of all to reform and elevate our manners and customs? We cannot remain silent. A person's private life may be as it is, good or bad, it is his own affair and does not conflict with the happiness or welfare of others. But the higher ranks, the officials and gentry, should be models for the people, for the ancients said "The doings of the upper classes will be reproduced with greater vigour by the lower orders." If the conduct of the upper classes be bad, that of the lower orders will exhibit a vileness to which neither words nor the pen can do justice. The conduct of the lower orders will be modelled on that of their superiors in rank, and the national character will be estimated by the actions of the mass of the people. At present, our learned men of distinction heartily detest our antiquated dark customs, and appreciate the enlightened views of the civilized nations. This is the reason why many minute regulations have been made having for their purpose the preservation of public decency, the violation of which is now punished by fines. These men regard such violations as degraded and barbarous, but some of the nobles and officials are addicted to habits which are still worse, and thus they destroy the basis of morality and are indifferent to the consequences of such conduct. Though a country may be wealthy, and even conquer other countries, still, if the conduct of the higher classes be impure, it cannot be truly called civilized. How much less can a country which is not wealthy, and which has no warlike power, be called so?

We earnestly entreat the officials and *kadzoku* to awaken their minds to these facts, to remember that morality is the foundation of the government of a country, and so to purify their own conduct that they may become examples and models for those beneath them. On observing this the people will be encouraged, and they will love and respect uprightness, their customs and conduct will be purified and elevated, the laws of a higher morality will guide them, and then the bright light of civilization will irradiate our country, not alone to the honour of the officials and nobles, but to the honour and prosperity of the whole people. This is the best hope our countrymen can entertain.

Interment.

(By a Woman.)

From the "Nisshin Shinjishi," No. 72, of April 5, 1875.

Through diffidence on account of my inexpert penmanship I have too long remained silent up to the present, but as the matter is not one that should be left at rest, I take up my awkward pen and write down my opinions, making them known to the world, and moreover soliciting its instruction. If, without regard to my being a woman, and being pleased to consider that the fact of my troubling your office is in consequence of some unavoidable reason, you are so good as to publish this, I shall have nothing better to ask, and so I make this earnest petition.

I have heard that last year, a prohibition was issued by the Government against burning dead bodies, that places for interment were established outside the *red line*,* and that a certain price per *tsubo* was fixed. Now, if careful consideration be given, do not the festivities of the living and the funeral rites of the dead both come under the sole authority of the head of each single household? If so, I am of opinion, though greatly afraid (to express it), that there is not any real necessity for the various directions from the Government to the effect that bodies are to be burned, or are to be buried, or again, to be sunk in the water. I have heard it stated that the vapours arising from burial grounds cause much ill to human beings, and impair their bodily strength. I am unable to comprehend the fact of the Government, whose duty it is especially to watch over the people, now omitting only to do away with the prohibition against the cremation of bodies. Besides, I have been told that the burial-grounds are far away, beyond the *limits*, and that a price of less than *5 yen* per *tsubo* is uncommon; and thus it cannot be within the power of persons of poor means, like myself, which I consider a matter of great trouble. My sons even tell me that in all enlightened and reformed countries arguments in favour of cremation are very prevalent, and that by degrees those who practise it have become exceedingly numerous, and also festivals to the living and the funeral rites for the dead, &c. have from the very commencement only concerned each single household, then, even though I am but a woman, I consider, albeit foolishly, that as the above rights were bestowed upon us by the Supreme Deity, it is the proper line of conduct to perform what comes within those rights, and not to cause disturbance to others. I also venture to think that if the precedent of the Government prohibition of cremation be extended, that there must also be Government notifications in regard to the sects, too, as to which sect is to be believed in and which sect is not to exist.

From the newspapers I have learned that an Assembly for extending the rights of the people—called, I believe, a "Deliberative Assembly chosen from the "People,"—has probably already been established, and I am therefore desirous that matters relating to funeral rites should be left to the will of the people. Over and above this, too, if there be any matters the right of which should be left free, I desire that an enlightened decision may be given about them.

The person who makes use of these words is a widow called by the refined name of Kôsô, who dwells in the neighbourhood of Kin-riu-zan, hard by the stream of Sumida. What opinion do the public entertain of it? This has been written at the foot of a window through which comes the scent of the scattered plum-blossoms.

§ The quotations from the writers above named have come to us in the translation, and it is impossible to verify them. Whether Emerson, Bentham and Brown would feel flattered at the form in which their views now reappear, may be a question.—[*Ed. J. W. M.*]

* A certain limit in Yedo.

The Reform of Music and Dramatic Representation.

(*Meiroku Zashi.*)

There are now many things which are undergoing change and which must be reformed, and among these are our music, songs and theatrical performances. These may not seem to be pressing necessities at this time, but as they cannot be changed all at once, it is well for us to consider them before the period of change actually arrives.

There is no part of the world where the music is so bad as ours is. In ancient times songs came from China, but only the tunes of them have come down to the present day. Our language being different, and the meaning of the Chinese words being incomprehensible to our people, are undoubtedly the reasons why these words have died out. After this the *Shiraboshi* * and *Sarugaku* † were composed, though these were neither complete nor fine. But as they were composed by our own people, they pleased the hearts of the Japanese much better than the Chinese music. During the last three hundred years a large mass of common music has been produced among the lower orders of the people, musical instruments have greatly increased, and in comparing ancient and modern times music may be said to have advanced a step forward. But even the present style of music is rude and vulgar and is not worthy of the taste of a gentleman or a *samurai*. The Chinese music and the *Sarugaku* being uninteresting and unamusing, and modern compositions being vulgar, are the reasons why music is not studied by gentlemen and *samurai*. Indeed, this is a lamentable loss!

In order to elevate music the first thing for us to do is to learn proper tunes. Tune is a science by itself and is based on Natural Philosoply, and, like all the foreign sciences, it must be kept on its true basis. Tunes are constructed from sounds and music is constructed from tunes. There is more or less of this kind of music in China, but the most and best is in Europe. Our country

* Ancient music connected with the native mythology.

† Song and dance.

Digitized by Google UNIVERSITY OF CALIFORNIA

has none of it, and we would willingly see this deficiency supplied. So long as the music is suitable to our people it may be Chinese, European or American. But both foreign and our present native songs ‡ are unsuited to us, and, at present there is nothing for us to do but to set proper tunes to those of our native songs which exist in the minds of the people. Most of the foreign arts and sciences may be diffused among us with little or no violent change. But our music certainly requires radical change.

Then our theatres must be reformed. Our present performances are too immoral, false, nonsensical and tedious. The injury thus done to the minds of the people is very great, and this is the reason why change is required. Our actors are agile enough, but they do not sing, and it would be much better if they sang and danced as the foreign actors do. Although the *Sarugaku* and the *Chaban* are common they are not extravagently bad, and if their character were elevated somewhat and they were purged of their vulgarity, and still kept in harmony with the minds of the people, they would be both entertaining and beneficial. Famous literary men in foreign countries frequently compose songs and write poetry to be brought upon the stage for theatrical purposes, and the actors sing and dance. This must be a beautiful display! We must make our theatres popular, and in all large towns there should be a public building for theatrical entertainments and musical performances. All the world, from the Mikado to the lowest, will go there for pleasure and entertainment, and this would an excellent thing, for, as the proverb says, "There is nothing that unites highest and lowest so much as community of entertainment." This will stimulate the production and raise the character of music.

I earnestly entreat those who have the power and the desire, to lead in reforming this art. The majority of our people are fond of wrestling matches, but this is not a very enlightened form of entertainment. Human beings should emulate each other in wisdom and talent, and not in strength, which might be left to the beasts to do. Moreover, this is of no service to mankind, and the people's hearts should not be so much set on such things as the mere display of strength. But as by prohibiting wrestling suddenly the wrestlers might suffer, it would be well that it should disappear gradually.

‡ It is presumed that this refers to the [illegible].—[ED. *J. W. M.*]

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

The objects of adoration of Buddhists are numerous, and we give a few of those most generally known. Certain sects devote themselves to some more than others, and even temples of the same sect have special favourite idols of their patron Buddhist divinity or saint. There are no mediators or intercessors, as in the Romish form of Christianity.

Taishak-ten-o (Heavenly Emperor), is prayed to for success and protection in this life only, the future not being within the province of this and the other *kami* of the Buddhist. The principal day of worship is that called Koshin, a moveable festival, chosen when the characters *Kanoye* and *Saru* come together in the cycle, both representing the principle of metals. There was formerly no idol of this *kami*, but it is now represented by a figure holding a *tama* (globe representing the soul) in the left hand. The Nichiren sect are the most numerous devotees of Tai Shak.

Mari-shi-ten is the great patron of all persons, young or old, learning writing, reading, dancing, singing, or a trade. The common form of this idol is a figure standing on the back of a galloping wild boar. It has six arms and three faces. The boar being the last of the twelve zodiacal signs and preceding the first sign *Ne* on repetitions, implies 'before the beginning'—the three faces, the eyes and countenance tend to all directions. The six hands denote dexterity at all work. The day of the Bear, *Inoki*, is the day observed in his honour. The Nichiren sect chiefly affect this deity.

Bishamon-ten, the Heavenly protector of priests. The *bushi* or cavaliers of all sects regard this deity as their special patron, and pray to him to make them dexterous swords-men, good horsemen, learned scholars and so on. The idol is a standing figure holding up in the left hand a pagoda which contains the souls of the devout, and, in the right, a naked sword to protect those souls. The day of the Tiger is his periodical festival.

Kangi-ten, (Heavenly joy of joys) sometimes called *Sho-den* Tora no hi (wisdom). The original idol was two figures embracing, signifying Isanagi and Isanami of the Shintô, but it is now a single figure. All sects petition it alike for wordly success, and it is said that the righteous devotee receives benefit for seven generations to come. The figure if boiled in oil, is supposed to be specially pleased. According to the means of the petitioner the priest continues this while the devotee prays; if for 21 days at a cost of 35 *riyos*; if for 14 days, 25 *riyos*; and for only 7 days, 7½ *riyos*. Should the offerings placed on the altar be eaten by another, the good fortune of the eater deserts him and cleaves to the person who made the offering. The devotees of the divinity do not eat *daiko (ratanus sativus)* in any form.

Ben-zai-ten (Heavenly goddess of capacity and ability). All creeds, and especially women, pray to this goddess for ability, attractiveness and wealth; men pray for wealth, and actors and others who make their living by amusing the public never fail to visit the temples of Bentensama, which are usually found near the water, often on artificial islands in lakes or shoal water. The day of the Snake *(Mi)* is the general occasion for visits to this shrine. *Tsuchi not-mi nohi* is the day on which these characters of the cycle come together; this occurs every sixty days, and is a day specially propitious for paying visits to Benten, the combination being lucky. (Vide *Jik kan* and *Jiu ni shi* in the calendar). From this the snake is associated with Benten as the fox is with Inari, and pictures of snakes are found in numbers at these shrines, worshippers and petitioners being careful not to kill these reptiles, fearing the wrath of Benten. The reptiles are invariably encouraged to frequent these shrines.

Dai koku ten. There are several forms of this deity. The literal translation of the characters is "Great black Heaven." The most commonly known form is called *Makara dai koku*, the meaning of which is 'immensity of earth.' The form of the idol, which is in every house, is a short stout figure, on rice bags, wearing a cap, with a large sack on the shoulders, the mouth tightly grasped with the left hand, while the right holds a mallet. The moral of this form is, that human nature being prone to an excess of ambition, therefore low stature and a humble attitude must befit it. The cap partly covers the eyes to prevent them looking too high, and to keep them bent on the realities of life. The bag represents wealth, like the wind, difficult to attain and requiring its outlet to be firmly controlled. The mallet is an emblem of labour, by which alone the fruits of the earth can be obtained, and the bags of rice on which the figure is mounted denote the wealth to be acquired by adopting these precepts which raise the lowly above the multitude. Traders of all sects incessantly try to propitiate Daikoku, and he has votaries among all classes. Farmers, and even young ladies address their petitions to him for full purses or the means of adornment. *Ki no ye ne nohi* day of the Rat, is the great day at these shrines.

Fudo-son—(Immoveable honored (one).) Some sectarians confound *Sosa no* with this Buddhist god, others believe it to be a purely Indian Deity.* This idol is generally seated, and always surrounded with flames, holding a naked sword in the right hand, with which to punish the wicked and terrify humanity into obedience, in the left a coil of rope, to tie up the guilty.

All sects pay adoration to Fudo, but most especially the Shingon and the Yamabushi regard him as their patron. Pilgrimages to and offerings at his shrine are generally by the friends of sick people. Penances, such as making the pilgrimage without clothing, standing under a spout of

* The propagators of Buddhism endeavoured to amalgamate the Shin to *Kami* with the Buddhist divinities, as in this instance, where the Indian idol is confounded with the Japanese goddess. There are evidently some traces of the Zoroastrian (fireworship) belief of India in this idol. Persons wishing to bewitch their enemies invariably appeal to Fudo to vent his wrath upon such as they wish to injure.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cold water, or abstaining from favourite articles of food, and lengthened total fasts are commonly resorted to in order to propitiate this deity. Miracles are reported to be performed at these shrines, the blind to see, the lame to walk, the deaf to hear and the dumb to speak. The shrine at Narita Shimosa, and at Meguro in the suburbs of Yedo, are two of the principal in the north-east of Japan. Women rarely pray to this deity or visit his shrine, as he has the reputation of being very rough and violent tempered.

Ni-wo-son, (Two honoured kings) the guardians of the right and left. These are always placed under the gateway, as may be seen at Asakusa, and formerly Shiba. The most celebrated are at Shiba-yama-mura in Kadzusa. The idols are erect figures with flowing robes; that on the right, facing the temple, is red, has the mouth open, and represents the *Yo* or male principle of Chinese philosophy. That on the left is green; the mouth is firmly closed, indicative of silence, the female *In* principle. Small prints of these, pasted on the beam over the entrance of houses, protect them from burglars and thieves. Travellers on foot present large straw sandals, and hang them at those places. They also burn *Sen ko* (incense) and pray for pedestrian strength to perform their journey.

Yebisu, is the same as that mentioned as the after-name of Hiruko, the cripple son of Isanagi and Isanami, and therefore the brother of Ten-sho-ko. He is represented seated on a rock by the sea with a fishing rod and a *tai* (*serr. mer.*) in his arms, on his head a *yeboshi*—a black cap worn by persons of rank. Seekers after wealth pray to him, and his idols are in everyhouse on the *Kamidana* on *butzu-dana*. Between Osaka and Kobe the temple at Nishi no miya is the most celebrated of those dedicated to this god. The 20th of the 10th month is the great annual festival in his honour.

Funadama gu. (Ship-jewel-shrine) This is the protectress of voyagers, and to her sailors pray for fair wind, a safe passage, or for help in the hour of danger or storm. Each vessel has its altar where homage is paid to her. The idol stands on a rock with two attendants, surrounded by the waves.

Atago gongen:— So called from a district called Atago near Kioto, and *gongen*, temporarily visible, and is the name of the shrines in which are adored jointly Isanami, Homusubi and Nichira who was the teacher of Sho Toku-taishi, the founder of Buddhism in Japan. These shrines are visited by petitioners for good luck and for protection against fire. Atago yama at Yedo—the hundred steps—is an offshoot of the Kioto shrine.

Akiha gongen. At Akiha yama in Enshiu there is a temple called Hōraiji, founded by San shaku bo, who afterwards became incorporated with Tengu. There are numerous shrines throughout the country, which are constantly visited by petitioners for protection against fire.

Kompira (metallic (like) protector (of the) multitude.) Sosano, the unruly brother of Ten sheku, and, later, Shu-toku in, the 75th Mikado have been included among these deities. The Buddhists join to these the worship of Gu-bera tai-sho a deity of a similar class. The representation of these, as Tengu, is a mask with an enormous nose, and the shrines are generally on the tops of mountains. The tenth day of each month is the usual *matsuri* or festival, and petitioners for good fortune, &c, especially mechanics, are very numerous. *Iwashi* (sardines) and *sake* are abstained from by frequenters of Kompira shrines—a breach of these observances produces direful consequences. Sailors pray devoutly to Kompira for protection from the elements, and stories of ship-wrecked people having been saved by Kompira coming to the rescue are numerous. The Shintō name for Kompira is Kotohira. The principal shrine is that called Dzo-dzu-san in Sanuki, to which numerous pilgrims resort throughout the year, especially in the spring.

Yuga-gongen is another branch of the Tengu family.

Shichimen (Seven-headed serpent) at Minebusan in Koshiu. Nichirea-sho-nin canonized this monster. Sick people or petitioners for good fortune visit the numerous shrines that are erected throughout these islands on the model of the above.

Water and earth from the small artificial lakes always to be seen in the temple grounds are considered certain cures for all ills, the water as internal and the earth as external medicines. Only the Nichiren followers believe in the efficacy of these things.

Kishi mojin. (The mother of child demons) steals young children and devours them. She had a thousand children of her own, one of which Amida Niorai took and hid it from her as a punishment for stealing and devouring other people's children, careful and fond as she was of her own offspring. Upon condition of giving up these cannibal propensities the child was restored and she was told to eat the fruit of the pomegranate whenever she longed for little children to satisfy her depraved appetite. Now small children are taught to pray to her for protection. The 28th day of each month is her periodical festival.

These are the principal *kami* of the Buddhists.

The following are *Hotoke*, or divinities in human form, mostly canonized apostles and disciples.

Amida Niorai, the divinity so well known to us as the Dai Butzu of Kioto and Kamakura, is the premier divinity of the Buddhist faith. Sometimes these idols may be seen standing, but generally they are seated on the lotus-flower. This god is considered to be so far above the common deities that it is of little use for common mortals to attempt to attract attention, or to intrude on the sublime and total unconsciousness to all mundane affairs in which Amida is enveloped. The 15th of each month is the appointed day for visiting this deity's shrine.

There are six places in Yedo and its suburbs where there are idols of Amida which are visited in spring and autumn when the days and nights are of equal length.

Yakshi Niorai, (Divinity of medicinal herbs.) Sick people petition this deity for restoration to health. Diseases of the eye are specially under the care of Yakshi. There are six other similar divinities of lesser importance.

Kan-ze-onbo-satz is one of twenty-five divinities who are supposed to be cognisant of all matters, and able to help petitioners in any manner expressed in their prayers.

Dai-nichi Niorai is the same to the Buddhists as Ten-shoko to the Shintoists, and they are amalgamated under this title (Great Sun divinity.)

Ji zo bosatzu (Divinity of the ground.) Childless parents petition Jizo for assistance to bear offspring. Jizo idols are generally figures of stone standing. Some sitting on a lotus leaf, holding a long rod in the right hand, and globe representing the soul in the left. Salt is the most usual offering and *senko* are burned. Seki no Jizo in Isé is the principal shrine.

Sei-shibo-satz. As the name implies, is a divinity of great power and authority.

Mon-jinbo-satz. This name implies extraordinary ability in teaching.

Fugenbo-satz. The divinity of those who wish to excel.

Koku-soba-satz is credited with the ability to assist all devout people in succeeding in their walk in life.

There are twenty-five *bosatzu* in all, the foregoing seven as well as the *Kanzeon* are included.

Miokenbo-satz, or *Hokushin-mioken*, is the north star and is prayed to for good luck.

Aizen mio-o, or *Ni jiu san ya* (The Moon and a star.) The Chinese character have a meaning that allude to dyeing and dyers. The ceremonies take place on the 23rd of the month at night, and the priests of any sect may officiate. Aizen at Itabashi, north of Yedo, is the principal temple in this part of Japan.

Yemma dai-O (The King of Hades.) There are ten of these, all represented taking notes of the good and evil deeds of mankind. In the common pictures a large mirror is represented in which men's thoughts and actions are reflected.

ON SOME JAPANESE LEGENDS.

By C. W. Goodwin, Esq.

Read before the Asiatic Society of Japan, on the 17th March, 1875.

(Continued.)

The German story in Grimm to which I have alluded is substantially as follows.

The fisherman and his wife.

A fisherman once lived contentedly with his wife in a little hut near a lake, and he went every day to throw his line into the water.

One day after angling for a long time without even a bite, the line suddenly sunk to the bottom, and when he pulled it up again there was a large flounder hanging to the end of it.

'Oh! dear,' exclaimed the fish, 'good fisherman let me go, I pray you; I am not a real fish, but a prince in disguise. I shall be of no use to you, for I am not good to eat; put me back into the water, and let me swim away.'

'Ah,' said the man 'you need not make such a disturbance. I would rather let a flounder who can speak swim away, than keep it.'

With these words, he placed the fish back again in the water and it sunk to the bottom leaving a long streak of blood behind it. Then the fisherman rose up and went home to his wife in the hut.

'Husband,' said the wife, 'have you caught anything to-day?'

'I caught a flounder' he replied, 'who said he was an enchanted prince, and I threw him back into the water, and let him swim away.'

'Did you not wish?' she asked.

'No,' he said, 'what should I wish for?'

'Why, at least for a better hut than this dirty place; how unlucky you did not think of it. He would have promised you whatever you asked for. However, go and call him now, perhaps he will answer you.'

The husband did not like this task at all; he thought it was nonsense. However, to please his wife he went and stood by the sea. When he saw how green and dark it looked he felt much discouraged, but made up a rhyme and said

Flounder, flounder, in the sea
Come I pray and talk to me,
For my wife, dame Isabel,
Sent me here a tale to tell.

Then the fish came swimming up to the surface and said, 'What do you want with me?'

'Ah,' said the man, 'I caught you and let you go again to-day, without wishing, and my wife says I ought to have wished, for she cannot live any longer in such a miserable hut as ours and she wants a better one.'

'Go home, man,' said the fish, 'your wife has all she wants.' So the husband went home and there was his wife no longer in her dirty hovel, but sitting at the door of a neat little cottage, looking very happy. She took her husband by the hand and said, 'come in and see how much better it is than the other old hut.'

So he followed her in and found a beautiful parlour, and a bright stove in it, a soft bed in the bed-room, and a kitchen full of earthenware, and tin and copper vessels for cooking, looking so bright and clean, and all of the very best. Outside was a little farm yard, with hens and chickens running about, and beyond, a garden containing plenty of fruit and vegetables. 'See,' said the wife, 'is it not delightful?' 'Ah yes!' replied her husband, 'as long as it is new you will be quite contented; but after that we shall see.'

'Yes, we shall see,' said the wife.

A fortnight passed and the husband felt quite happy, till one day his wife startled him by saying 'Husband, after all, this is only a cottage, very much too small for us, and the yard and the garden cover very little ground. If the fish is really a prince in disguise, he could very well give us a larger house. I should like above all things to live in a large castle built of stone. Go to the fish, and ask him to build us a castle.'

'Ah, wife,' he said 'this cottage is good enough for us; what do we want with a castle'?

'Go along,' she replied, 'the flounder will be sure to give what you ask.'

'Nay; wife,' said he, 'the fish gave us the cottage at first, but if I go again he may be angry.'

'Never mind,' she replied; 'he can do what I wish easily, and I have no doubt he will; so go and try.'

The husband rose to go with a heavy heart. He said to himself, 'This is not right,' and when he reached the sea he noticed that the water was now a dark blue yet very calm, so he began his old song.

Flounder, flounder in the sea
Come I pray and talk to me—
For my wife, dame Isabel,
Wishes what I fear to tell.

'Now then, what do you want?' said the fish, lifting his head above the water.

'Oh dear,' said the fisherman, in a frightened tone, 'my wife wants to live in a great stone castle.'

'Go home, man, and you will find her there' was the reply.

The husband hastened home, and where the cottage had been there stood a fresh stone castle, and his wife tripped down the steps saying, 'come in to me, and I will show you what a beautiful dwelling we now have.'

The fisherman's wife soon becomes discontented in the the splendid castle, and her next wish is to be queen.

Her husband reluctantly complies with her desires and once more addressed himself to the fish, with their new request, which is granted and he returns to find his wife invested with all the splendours of royalty.

She now desires to be empress and this wish is also granted.

Nor satisfied with being empress she next requires to be the Pope, and even this is conceded, and when the husband comes back he finds her in a large cathedral.

'Well wife,' says the husband, 'and you are Pope? 'Yes,' she said 'I am.'

He stood still for a time watching her, and at length he remarked 'You cannot be higher than the Pope' so I suppose you are now content.

'I am not quite sure,' she said. But when evening came, and they retired to rest, she could not sleep for thinking of what next she should wish for.

Her husband slept soundly, for he had tired himself the day before; but she rose even before the day broke, and stood at the window to watch the sun rise. It was a beautiful sight, and she exclaimed as she watched it 'Oh, if I only had the power to make the sun rise! Husband wake up,' she added, pushing him in the ribs with her elbows; 'wake up and go and tell the enchanted prince that I wish to be equal to the Creator, and make the sun rise.'

The husband was so frightened at this that he tumbled out of bed, and exclaimed, 'Ah wife, what did'st thou say?'

She repeated the words

Her husband fell in his knees before her 'Don't ask me to do this, I cannot' he cried, but she flew into a rage and drove him from the house.

The poor fisherman went down to the shore in terror, for a dreadful storm had arisen, and he could scarcely stand on his feet. Ships were wrecked, boats tossed to and fro, and rocks rolled into the sea.

In his terror and confusion he heard a voice from amidst the storm 'Your wife wishes to be equal to the Creator. Go home, man, and find her again in her dirty hut by the sea.'

He went home, to find the glories, the riches, and the palaces vanished, and his wife sitting in the old hut, an example of the consequences of impious ambition.

Notwithstanding the general resemblance between the German story of the fisherman and the Japanese one of the ambitious mice, the differences in treatment are so great that it may fairly be questioned whether they have a common origin. The story of the Japanese stone-cutter, as told in the Dutch novel, forms a kind of link between the two, but until we are sure that the peculiar features contained in it which bring it nearer to the German legend, have not been added by the author of the novel, we can form no satisfactory conclusion on the subject. The three legends, however, together furnish an instructive example of the manner in which one leading idea may be varied and decorated.

The last story I have to refer to is one which was printed in the *Japan Mail* of November 28th, 1874, and which I am informed is current amongst the old-wives of Japan at the present day.

It is entitled

"A RETORT IN KIND."

'Kisaburo, a man of a careful and saving disposition, abandoned his old lodgings and took a small dwelling next door to a famous eel-house. Now as every one knows that the titillating odour of eels fried in soy may be perceived far and near, Kisaburo found this change of quarters vastly to his advantage, and eat his simple meal of rice to the accompaniment of the delicious smell, dispensing with the usual adjuncts of fish or vegetables.

The eel-man was not slow to discover this, and determining at length to ask his frugal-minded neighbour for payment, took him an account for the "smell" of his eels. Kisaburo eyed him astutely, and drawing from his pocket-book the amount claimed from him, laid the money on the bill and began to converse with his visitor. The latter at length rose to depart, when Kisaburo quietly replaced the money in his pocket-book. "Hey!" quoth the eel-man "I thought that money was for me; why don't you give it to me?" "Not so" was the reply; "You have charged me for the smell of your eels;—I pay you back with the sight of my money.'"—*Japan Mail, Nov.* 28.

It was pointed out by a writer in the *Japan Daily Herald* of the 5th December, 1874, that the counterpart of this story is to be found greatly elaborated in Rabelais in the 37th chapter of the 3rd Book. The Rabelaisian version is as follows.

"At Paris, in the roast-meat cookery of the Petit-Chastelet before the cook shop of one of the roast-meat-sellers of that lane, a certain hungry porter was eating his bread, after he had by parcels kept it a while above the reek and steam of a fat goose on the spit, turning at a great fire, and found it, so besmoked with the vapour, to be savoury; which the cook observing, took notice, till after having ravined his penny loaf, whereof no morsel had been unsmokified, he was about decamping and going away. But, by your leave, as the fellow thought to have departed thence scot-free, the master-cook laid hold upon him by the gorget, and demanded payment for the smoke of his roast-meat. The porter answered, That he had sustained no loss at all,—that by that he had done there was no diminution made of the flesh,—that he had taken nothing of his, and that therefore he was not indebted to him in anything. As for the smoke in question, that, although he had not been there, it would howsoever have been evaporated: besides, that before that time it had never been seen nor heard, that roast-meat-smoke was sold upon the streets of Paris. The cook hereto replied. That he was not obliged nor any way bound to feed and nourish for nought a porter whom he had never seen before, with the smoke of his roast-meat, and thereupon swore, that if he would not forthwith content and satisfy him with present payment for the repast which he had thereby got, that he would take his crooked staves from off his back; which, instead of having loads thereafter laid upon them, should serve for fuel to his kitchen fires. Whilst he was going about so to do, and to have pulled them to him by one of the bottom rungs, which he had caught in his hand, the sturdy porter got out of his grip, drew forth the knotty cudgel, and stood to his own defence. The altercation waxed hot in words, which moved the gaping hoidens of the sottish Parisians to run from all parts thereabouts, to see what the issue would be of that babbling strife and contention. In the interim of this dispute, to very good purpose, Seyny John, the fool and citizen of Paris, happened to be there, whom the cook perceiving, said to the porter. Wilt thou refer and submit unto the noble Seyny John, the decision of the difference and controversy which is betwixt us? Yes, by the blood of a goose, answered the porter, I am content. Seyny John the fool, finding that the cook and porter had compromised the determination of their variance and debate to the discretion of his award and arbitrament, after that the reason on either side, whereupon was grounded the mutual fierceness of their brawling jar, had been to the full displayed and laid open before him, commanded the porter to draw out of money, if he had it. Whereupon the porter immediately without delay, in reverence to the authority of such a judicious umpire, put the tenth part of a silver Philip into his hand. This little Philip Seyny John took, then set it on his left shoulder, to try by feeling if it was of a sufficient weight. After that, laying it on the palm of his hand, the made it ring and tingle, to understand by the ear if it was of a good alloy in the metal whereof it was composed. Thereafter he put it to the ball or apple of his left eye, to explore by the sight, if it was well stamped and marked; all which being done, in a profound silence of the whole doltish people, who were there spectators of the pageantry, to the great hope of the cook's, and despair of the porter's prevalency in the suit that was in agitation, finally caused the porter to make it sound several times upon the stall of the cook's shop. Then with a presidential majesty holding his bawble, sceptre-like, in his hand, muffling his head with hood of marten skins, each side whereof had the resemblance of an ape's face, sprucified up with ears of pasted paper, and having about his neck a bucked ruff, raised, furrowed, and ridged, with pointing sticks of the shape and fashion of small organ pipes, he first with all the force of his lungs coughed two or three times, and then with an audible voice pronounced this following sentence. The Court declareth, that the porter, who ate his bread at the smoke of the roast, hath civilly paid the cook with sound of his money. And the said Court ordaineth, that every one return to his own home, and attend his proper business, without costs and charges, and for a cause. This verdict, award, and arbitrament of the Parisian Fool did appear so equitable, yea, so admirable to the aforesaid Doctors, that they very much doubted if the matter had been brought before the Sessions for Justice of the said place, or that the judges of the Rota at Rome had been umpires therein, or yet that the Areopagites themselves had been the deciders thereof, by any one part, or all of them together, had been so judicially sententiated and awarded. Therefore advise if you will be counselled by a fool."

I have no means at present of tracing this story in its migration. It is one likely enough to have gone all over the world. But the question arises here, as in the case of the story of the man with the wen, have the Japanese received it in comparatively recent times, whether by way of China or from Arabian or Indian merchants, or later from Portuguese or Dutch missionaries or merchants, or does it belong to the most ancient cycle of Turanian legend, which may have existed all over Asia and Europe in times long antecedent to the dawn of history?

Recent discoveries have tended to show that the story of the Deluge and others which had previously passed for Shemitic or Aryan are really of Turanian origin, or at least were in the possession of Turanian tribes before they were current among Shemites or Aryans.

It is possible that further enquiries into the Japanese legends may throw some further light upon this strange but very interesting subject. Would not a complete translation of the Uji stories, and of the supplementary collection from which the "Man with the Wen" is taken, be worth the trouble of making?

SEKISHO.

In a northern outskirt of the mighty city of Yedo is situate a colony of gardeners, whose ancestors from times of great antiquity, tradition tells, pursued the peaceful calling still in vogue amongst the present residents. A gentle people are they, dreamy-eyed and self-contained, contemplative from daily communings with Nature, and wont to carry their heads a little to one side as becometh fashioners of landscapes and trainers of trees, in which arts they have in process of time become curiously proficient. It would be difficult to find a situation more suited to their purpose than the undulating expanse on which these gardens stand, and which, stretching away to the southward, combine the double advantage of sunny and picturesque slopes and exposures, beautiful at all seasons, but most of all in early spring when the iron hand of winter is lifted from off the earth, and the plums and cherries, bursting into flower, proclaim its bonds broken. Small wonder if at such a time the traveller from the north is seen to linger on the dusty high-road as he passes through this dis-

trict and rests his weary eyes upon the fairy scenes which greet him, peeping here and there through hedges or loitering at open gateways. Nor need he hesitate to enter where he lists, for the kindly gardeners are proud to shew their treasures, and though he may not purchase just at present, who knows but that he may hereafter? And, after all, civility costs nothing.

And, yet these rustic gateways do not *all* lie open so invitingly, for, situated in the centre of this flowery region, one may be noticed not only shut but closely barred to boot. A tall and well-kept hedge of *maki*, backed up by spiked mimosa, defies a prying eye and keeps out intruders. A parley at the gate, however, procures admission, and the visitor finds himself inside a dimly-lighted enclosure, beneath a canopy of coarse bamboo matting, between the chinks of which the sun shines down and throws a chequered shadow upon a vast accumulation of quaint and curiously-shaped stones arrranged on rows of wooden shelves, each one standing in a square porcelain dish and garnished, wherever a crevice gives a foothold, with tufts of strong and very green grass. A lean old man—so very old that his wizened cheeks have fallen together into folds and wrinkles for lack of teeth—moves noiselessly about, watering his treasures or picking off here and there a withered blade of grass. An oppressive stillness fills the place, nor is this feeling diminished by observing that in answer to a question the old man speaks in whispers. These stones, although of many colors—red, green, white and grey—have naught to recommend them to the unsympathetic visitor. Their shapes are various; round, oblong, conical, ovate—ugly and mean looking most of them,—but yet of priceless worth to him who guards them. Hark! to him:—"That blunt-topped red one "did the gentleman say? Aye! aye! that's very old; above "two hundred and seventy years. It has no price: I cannot "part with it. I had its fellow"—here he pats it affectionately and changes its position, "but I presented it a short time "since to the late Tycoon. That small-sized, cone-shaped "stone upon the lowest shelf first came from Kaga; it's older "still. I've had my eye upon it any day these seventy years "myself"—here a blade of grass requires to be pinched off—"No, no, I never sell them. I cannot bear to think of it—"they're children to me; but now and then I give one as a "present if I'm satisfied that the rank and character of the "receiver will guarantee it proper treatment. My grand-"father commenced the collection—he was a rich man and "did it for amusement,—my father carried it on, and now it's "mine and I hope to hand it to a son whose tastes are simi-"lar. We're a long-lived race, and think that looking after "the stones has a deal to do with it. It's a healthy occupa-"tion, is'nt it? The grass? Oh, yes, the grass is peculiar "Seven hundred years ago an ancestor of Arisagawa no miya "brought over a little pot of it from India, since when it has "spread and thriven. It grows on stones, but nowhere else." And so he gossips on, growing ever more garrulous; well pleased if his visitor will but listen to him; dealing with centuries as if they were but yesterday, and fully persuaded that every other pursuit than the care of stones is but trifling, and that only such things as are consecrated by their antiquity are worth the possession.

Law & Police.

U. S. CONSULAR COURT.

Before Gen. T. B. VAN BUREN, Consul-General.
Messrs. T. L. BROWER and S. K. LOTHROP,
Assessors.
April 6, 1875.

Edward Russell was charged with burglary on the night of the 1st April, at No. 137, Yokohama.

Police Sergeant Percival, sworn: I am sergeant of police here. Prisoner is charged with breaking into the premises of one Domballe, at No. 137, Yokohama, on the evening of the 1st April.

Felix Dombalie, sworn: I am an engineer, residing at Mr. Pequignot's, No. 137. The door of my room was broken open between 7 and 9 o'clocks of the evening of the 1st April. The door was locked when I left my room. I left it at 6.30 p.m. I took the key with me. I returned [illegible] and discovered that the door had been broken open. I had in my room one English gun marked Davidson, in the corner by the bed, and another one by Lefaucheux, wrapped up in an old shirt in a trunk, and in a drawer of the bureau there as a small box containing a gold ring, a gold watch key, a gold-mounted coral hand, and a gold locket containing a portrait. The French gun cost $80; the English one was a present, worth about $20: the ring was worth $30, and the remainder about $10, amounting altogether to $140. I did not see any one about the room. I have seen the Lefaucheux gun since then in Yedo, at Mr. Chapelle's house. Mr. Chapelle wrote on the 2nd April a letter to M. Pequignot, telling him that he had seen in a newspaper that certain things and been stolen from me, and that two men had come to his (Mr. Chapelle's) house at 6 in the morning to ask for a drink. They said afterwards that they had been on a hunting party and had lost their money, and one of them, a Frenchman offered the gun for sale for $5. I went to Yedo and recognised the gun. I have not seen any of the rest of the property. I have seen prisoner with Mioux.

Police Constable C. A. Rezet, sworn: On the night of the 1st of April I was on duty at the Police Station when Mr. Domballe came there and told the police sergeant about the robbery. I went with Mr. Domballe to his place about 9 o'clock. I found the lock broken, and Mr. Domballe showed me the place where the property had been. The trunk was open, and some clothes on the floor. I went back to the Police Station, and about 11 o'clock Mr. Domballe came back, reported that the jewellery had been stolen. I searched for traces of the thieves, and about 10 in the morning I found L. Mioux standing before No. 103. He was given in charge by Mr. Domballe, and taken to the Police Station, and afterwards before the French Consul.

Sergeant Percival, re-called: prisoner made a confession to me on the evening of the 2nd inst., in the train coming down from Yedo. He was arrested for being drunk in the premises of Mr. Da Roza, at Shiba, by the Japanese police. I received a letter from Mr. Da Roza on the morning of the 2nd, and went up to Yedo, where I found prisoner at the Police Station. I arrested him on this charge of housebreaking. I had no warrant for his arrest. I did not ask him any questions whilst bringing him down. I told him why he was arrested. He told me that he thought it would be best to tell the truth at once, and that he did not want to get into a scrape for a Frenchman or anybody else. I then said that I thought it was the best thing he could do. There was no one else present. He said the things had been stolen. The Lefaucheux gun was sold to Mr. Chapelle for $5; the English gun, he said was lying alongside of him, inside M. Da Roza's premises, when he went to sleep, and was left there when the Japanese police took him away. He said that he knew they were stolen property. He said that he and Mioux went up in jinrikishas to Yedo at 9 o'clock. They did not take the train. On the morning of the 2nd, Mioux left him in Yedo, and told him that he might keep the English gun. At that time Mioux had the ring and other jewellery in his possession.

His Honour, after consulting with the assessors, said that prisoner had been arrested illegally, it being necessary before any American citizen could be arrested that a warrant should be issued by the Consul, unless a prisoner was taken into custody by the police, in the act of committing a crime. The prisoner at the bar was charged with burglary, but of this there was not the slightest proof, the only evidence against him being his own confession, which simply showed that he was in the company of a man who was in possession of the stolen goods. Under these circumstances, although the Court believed that the man was connected with the robbery, yet there was no legal evidence against him, and the charge must be therefore dismissed.

Prisoner was therefore discharged with a warning.

IN THE SHIHOSHO, YOKOHAMA.

Before OZAKI TADEHARU, Judge.
April 7, 1875.

JOSEPH TAYLOR *vs.* THE NATIONAL MAIL S. S. CO. OF NIPON.

This was a claim for $3,567, with interest from the 11th February, 1874, for altering the engines of the S. S. *Undine* to the compound principle.

Defendants repudiated their liability and refused to pay the amount claimed.

Plaintiff stated that he had done the work claimed for, and had often applied for the amount that was due, but defendants always refused to pay. He would have filed the petition before but he had other business with the company at the time. They paid him [illegible]

Digitized by Google UNIVERSITY OF CALIFORNIA

of the money in instalments, but u terly refused to pay the balance he now sought to recover. At the time they paid him the last lo they asked him to sign a receipt in full of all demands, but he refused to doso. The work was done on board the steamer by his men with his tools. It was a claim for extra work and materials.

C. J. Pfoundes stated that the *Unline* was under repairs for a long time. Her original engines were direct acting, and her average consumption of fuel about 28 tons *per diem*. After the engines had been altered to the compound principle her consumption was about nine tons or about a third The work was well done, and the engines ran smoothly and effectively on the trial trip.

Mr Kato, who appeared for the company, said that Iwahashi had to do with the matter: Mr Pfoundes understood the whole affair. The contract had been lost.

His Honour: All accounts due should be paid. Why were not the extras paid for?

Mr Kato: The company contracted for $4,000, and Mr Pfoundes is aware of the whole affair. The receipts are lost.

His Honour: Why have you not paid for the extras to the $4,000? There is no doubt there were extras.

Mr Kato: The contract was $4.0000, the ship to be proved ready for sea. Certainly only $4,000. This has been paid.

His Honour: Why was not the balance evidently due paid?

Mr Kato: Mr Pfoundes was the medium through whom the amount was settled.

His Honour: No doubt extra work has been done, and the contract provides for extras? The altering and compounding the engines only for $4,000?

Mr Kato: No contract is in the hands of the directors to that effect, and Mr Pfoundes says he did not order other work.. Mr Pfoundes handed over the money, that is $1,000 and $3,000.

The Court reserved its decision.

INQUEST.

An inquest was held this afternoon, at No. 114, on the Creek, before Gen. T. B. Van Buren, U S. Consul-General, and Messrs. H. Allen, jun., and S. D. Hepburn, assessors, on the body of William Denis Ryan *alias* Wm. H. Thompson.

D Esphlin, chief officer of the *Mora*, sworn:—I was present at the death of the deceased. He died in his own house, in Main Street, about 20 minutes past 4 o'clock yesterday afternoon. After I had had some refreshment and received the change, deceased took some medicine—about half a wine glass-full. Shortly after this he put his hand on his breast, and asked me to sit before him. I did so, and he fell off into a faint. Got the boy to bring some water, and I bathed his temples with it. I then sent for a doctor and some of his friends. I laid deceased on a couch.

Dr Stuart Eldridge, sworn: I know deceased. I had been treating him for the last three weeks for disease of the skin of the face. I saw him on the 28th March last. He remarked that he was unusually well. On the morning of the 3rd April he came to my office and complained of pain in the region of the liver. I examined him, and found his liver greatly enlarged and tender to the touch. He at that time complained of no other sensation. I did not prescribe for him at that time. I called upon him that evening, a few minutes after 10; found him still suffering great pain; gave him 1-6 of a grain of morphine by hypodermic injection. Left him a powder containing 1-6 grain of morphine, with instructions to take it at 2 o'clock if the pain returned. Prescribed also a mild purgative. I next saw him about 10 o'clock on the morning of the 4th, when he called at my office and said he felt much better. I again examined him, and found that his liver was not quite so much enlarged as on the day before. I applied dry cups over his liver. Did not see him again till this morning, when I made a *post mortem* examination in the presence of Drs. Hepburn, Dickinson, Wheeler and Tripler. On opening the abdomen, found the liver much displaced downwards, and somewhat enlarged. I then opened the thorax, and found it contained a considerable amount of serum, and that in the cavity containing the right lung there was a large fibrinous clot weighing about 4 lbs., as well as nearly a gallon of fresh blood and clots. In fact, nearly the whole space usually occupied by the lung was filled with this blood and clots. On examining the organs of the thorax I found a large aneurism of the great central artery of the body—the aorta—which extended from the arch of that blood vessel to within an inch of the diaphragm. The sac formed by this aneurism would have held nearly a pint. The pressure of the aneurism had caused a portion of the spine to become absorbed. The sac of the aneurism, where it laid upon the spine, was very thin, and rupture of the sac had apparently taken place upon the right side of the spinal column, as the sac was entirely wanting at that point. I then examined the liver. I found that the kidneys were also diseased; the right one was atrophied and soft, the left fatty and enlarged. As I considered that sufficient cause of death was shown by the discovery of the aneurism in the thorax, I dispensed with any further examination of the body.

To the Court: The medicine I gave could not have caused death, even if it had been taken. I have examined the prescription at the chemist's, and find that it is exactly the same as that recorded in my prescription book.

Drs. Dickinson and Tripler then swore that they had heard the evidence of Dr. Eldridge, and quite agreed with it.

Geo. Hendry, sworn: (This witness corroborated the evidence of the first witness.)

The stub of Dr. Eldridge's prescription book was here shown to Dr. Tripler by his Honour, and he was requested to give an opinion on the medicine that had been given to deceased.

Dr. Tripler, after reading it, said it was as a mild stimulant to the liver, and had the whole amount been taken at once it would have acted simply as a purge.

R M. Ford, sworn: I was sent for to the Albion Saloon yesterday, and found deceased very ill. Went for a doctor; returned with Dr. Wheeler to the saloon, and he pronounced deceased as having been dead for 5 minutes.

R F. Livingston, sworn: I know deceased; his parents reside in New Jersey. His true name is William Dennis Ryan.

J. White, sworn: I know deceased; his parents live in Salem New Jersey.

A verdict was returned that deceased came to his death from the rupture of an aneurism of the thoracic artery, and consequent hemorrhage.

JAPANESE LITERATURE AND LANGUAGE.

As bearing upon these subjects we have deemed the following papers read before the Oriental Society of America last year well worthy of reproduction.

On the Modern Japanese Literature, and its Influence in bringing about the Recent Revolutions in Japan, by Mr. William E. Griffis, of New York, lately of the Kai Sei Gakko (Imperial College) of Tokio (Yedo), Japan.

The object of the paper was to explain the recent social and political revolution in Japan, and to show the true causes which operated effectually to overthrow the Shogun's (Tycoon's) government, to reinstate the Mikado in full power, to destroy the feudal system, and then to impel the Japanese nation into the path of modern civilization. The causes of these four distinct results are to be found in the revival of the study of the ancient national literature, the study of the classic historical compositions of Japanese scholars, the movement for the revival of pure Shinto (the indigenous religion of Japan), and the publication and general reading of books written by native authors who had seen or studied western civilization. The three first causes were efficient in overthrowing the hereditary usurpation of the Shogun's government, destroying the feudal system, and establishing the national government on its ancient foundation, and according to its ancient constitution. The last, acting upon the national mind at the instant of intensest momentum produced by the political revolution, impelled the nation into that course of innovation, reform, and systematic attempts at social regeneration which now challenges the attention of the world, and compels the admiration of all who can sympathize with an Asiatic nation that is bravely struggling into the light and knowledge of the nineteenth century.

In Japan, the impulse to enter the comity of nations, and to follow the course of their civilization, came from within, and not from without. It is the general impression among foreigners that the abolition of the dual form of government, and the sweeping away of the feudal system, were the direct result of the presence of foreigners on the soil of Japan. This, however, is a great mistake. From causes already at work before the arrival of Commodore Perry and the foreigners in Japan, the Shogun's government would certainly have fallen. The presence of foreigners in Japan served merely to hasten the slow inevitable. Among the many classes into which Japanese society was formerly divided, there were two that comprised the readers and thinkers. One, the Buddhist priesthood brought into existence that vast mass of Buddhistic literature, and originated and developed those phases of Japanese Buddhism, which have made it a distinct product of thought and life among the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

manifold phases of this, the most widely-professed religion on earth. This ecclesiastical literary activity and growth culminated in the sixteenth century. Since that time Japanese thought has been led by the Samurai, or military literati, the secularly educated and armed classes. The creative era of Japanese literature was between the eighth and twelfth centuries. The scholastic era of Japanese learning and literature embraced the latter half of the last and the first quarter of the present century. The province of Mito was especially the resort of learned men and authors, and the effect of their writings was to point out the historical fact that the Shogun was a usurper, and that the Mikado was the only true source of authority. It was the study of these works, and others of similar purport, that led the Samurai from one end of the country to the other to raise the cry, "Honor the Mikado and expel the barbarian.' Another element that tended to overthrow the usurping Shogun and to restore the Mikado was the revival of the study of pure Shintô, the ancient religion of Japan, according to which the Mikado is the divine representative of the gods on earth, and as such is to be loved and obeyed by all Japanese The study of Shintô created a powerful party, whose constant aim was to overthrow the Shogun's government, and thus end the usurpation of six and a-half centuries. All these currents of thought united to swell the stream of opinion and action which, in 1868, swept the Shogun from his seat of power into poverty and obscurity, and which raised the Mikado to his rightful place as *de facto* sovereign of Japan.

Yet the very men who formed the Mikado's party were the most bitter haters of foreigners. The primary object that united and impelled them was to restore the Mikado; their secondary bond of union and object was to drive out the foreigners, close the ports of foreign commerce, and repudiate the treaties. Mr. Iwakura and his colleagues were the arch-haters of foreigners, their ways and works. Now, they are the leaders of the new ideas and the forward movement in Western civilization. How was this marvelous change wrought? Why did the foreigner-haters become the leaders of progress, the defenders and executors of Western civilization? Why did they preach the faith they once destroyed?

"It was the lessons taught them by the bombardment of Shimonoseki," say some. "It was the benefits arising from foreign commerce," say others. "It was because foreigners in Japan persuaded them," say not a few.

In none of these do we find the true explanation. War, commerce, and contact with foreigners for a half century, did not move China; neither would they have moved Japan. In the latter country the movement was by impulse from within, not by pressure from without. The real cause of the recent "reformation" in Japan was an intellectual one. It was brought about by the reading and study of the recent native literature produced by earnest men who had studied the foreign languages, notably the English and Dutch, years before, or who had visited Europe and America during the times of the Shogun's power, and who returned to Japan shortly before the Mikado was reinstated, and began the composition and publication of those original works and translations which were eagerly read and studied by the new rulers and rising men in Japan. In these books the history of Western nations was faithfully told; their customs and beliefs were explained and defended; their resources, methods of thought, education, morals, laws, systems of government, etc., were described and elucidated. With Western ideas for texts, Fukuzawa, Nakamura, Uchida, Urin, Kato, and a host of scholarly writers, expounded the true principles which a nation that would become great must follow out. They one and all showed how Japan had retrograded in isolation, and the adoption of Western civilization was both a virtue and a necessity.

Professor Griffis said: "It was his firm belief, after nearly four years of life in Japan, mingling with the progressive men of the empire, that the reading and study of books written by Japanese authors, and printed in the Japanese language, did more to transform the minds of Japanese rulers and thinking people than any other cause. During the past decade the production of purely native literature has ceased, and the translation of foreign books, largely scientific, and the composition of works inspired by the reading of Western literature, have busied scholars and writers in Japan."

The speaker then entered into many details of Japanese book-making, the subject matter of the books relating to the United States and other countries, what the Japanese thought of us, etc. He closed by remarking that 'should Western civilization take sure root and flourish in Japan, and the people become occidentalized, it is not too much to hope [illegible] peculiar genius of the Japanese will produce a literary work that will take its place among the imperishable classics of the world."

Of the Distinction of the Noun and Verb in Japanese, Mr. A. Van Name, of New Haven, Conn said:

The Japanese in respect to the separation of noun and verb holds a position intermediate between the Chinese and Indo-European languages. In the Chinese, theoretically and to a great extent actually, any word may be noun, adjective, adverb, or verb, becoming definite only as it enters into construction and its position in the sentence is fixed The full separation of the parts of speech which we find in the Indo European family is reached, according to Schleicher, only through the agency of case and personal endings, both of which are wholly wanting in Japanese. The relations of case are here expressed by prepositions, or rather postpositions, and particles which everywhere preserve their separate character. *Wa*, sometimes regarded as a sign of the nominative case, is in its origin demonstrative, and its primary force is to arrest the attention on the word or phrase which precedes, and to separate it from what follows. It commonly follows, but is by no means a necessary adjunct of, the subject, nor is it confined to this office. It may be added to *wo*, which marks the object (*wo-wa* uniting in the from *woba* or *oba*), or to a noun governed by a preposition. *Wo*, also, though more uniform in position and use, is apparently of the same demonstrative origin. The noun as such has no distinct method of formation; the differentiation so far as it exists is on the side of the adjective and verb. Two or three derivative affixes, the most important of which is *sa*, which forms nouns of quality from adjective roots are the only noticeable exceptions. The plural is formed either by repeating the singular, without other change than that of a surd initial, now brought between two vowels, to a sonant, a change which is both the result and the sign of the close union of the parts: thus, *kuni*, 'country,' plural, *kuni guni*; or by the addition of independent words of collective signification, such as *kata*, 'side,' *tomo*, 'companion,' etc.

Personal pronouns the Japanese is poorly provided with, and uses sparingly. In many cases where we should employ them, the person is simply left to be understood; in others the rules of politeness require the substitution of various humble or honorific epithets, such as 'servant,' 'master,' and the like, or a general designation of the place which the person occupies, as *anata*, 'that side,' for the second person, *kono kò*, 'this side,' for the first person. From the pronominal roots, *a*, *ka*, which point to the more remote, *so* to the less remote, *ko* to the nearer object, and *wa*, reflexive, pointing back to the subject, and not unlikely identical with the *wa* which marks the subject, we have, apparently by composition with the substantive verb *ari*, the forms *are*, *kare*, *sore*, 'that person or thing,' *kore*, 'this person or thing,' and *ware*, 'I.' The primary meaning of *wa* appears in the possessive *waga*, formed by the addition of the genitive suffix *ga*, which may mean, according to the person referred to, 'my own,' 'your own,' 'his own.' The second person is without any simple designation, and of the forms for the third person, the weakest, *are*, is still decidedly demonstrative. The genitive suffix *no* added to the above-mentioned roots, except *wa*, forms the demonstrative adjectives, *ano*, *kono*, *sono* 'that,' *kono*, 'this,' while for the possesives *no* must be added to the full pronominal form, as in *are no*, 'his.' Where the personal pronouns are so little developed, a personal inflection of the verb is hardly to be thought of.

The adjective has an attributive form ending in *ki*, adverbial or indefinite form in *ku*, and a predicative one in *shi*, which last includes the copula. Thus from the root *naga*, 'long,' which appears in the proper name Nagasaki, literally, 'long promontory,' we have the following forms: *nagaki saki*, 'a long promontory,' *saki wa nagashi*, 'the promontory is long,' and *nagaku suru*, 'to make long.' In the spoken language the attributive and predicative forms, by the dropping of the consonant of the ending, are reduced to one, *nagai*. The strict law of position by which the limiting and dependent always precedes the limited and governing word prevents any ambiguity from this source.

If now we pass to the verb we find that while nouns may end in any of the vowels, the verbal roots, or what we must treat as roots, though seldom monosyllabic, are restricted to two finals, *i* and *e*. Not only in compounds does this root appear, but also where a number of verbs in succeeding clauses are in parallel construction, only the last requiring the termination of tense and mood, while the others stand in the naked root-form. This unchanged root is also used as a noun, more often abstract, as *omoi*, 'think' and 'thought,' sometimes concrete, as *kôri* freeze' and 'ice,' and in compounds even denoting the agent; thus, from *ki*, 'wood,' and *kori*, 'cut,' *ki-kori*, 'woodcutter.' To this root also, as to any other noun, are joined prepositions to form certain parts

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the verb; thus, *mi*, 'see;' supine *mi-ui*, 'in order to see;' gerund or participle *mi te*, 'seeing;' *te* having a modal or instrumental force. Among the inflected forms of the verb, the predicative is frequently identical with the substantive and attributive form. Of the two classes into which verbs in *i* are divided, the older and more numerous class, including what we should call the irregular or strong verbs, forms the present indicative and infinitive, the latter used both as noun and adjective, alike. In verbs in *e* the two forms are in the older language distinct, but in modern usage the infinitive has supplanted the indicative, form and is used indifferently for both. In the negative conjugation the present indicative and infinitive are alike. In the preterit, again, of both the affirmative and infinitive conjugations, they are distinct; but in the spoken language, which forms a new preterit from the gerund and the substantive verb *ari* (*mitari*, -*u* for *mite-ari*, -*u*), this advantage is lost, and a shortened ending *ta* replaces both *tari* and *taru*. The conditional and concessive forms of the verb are also, by Hoffman, to whom the analysis of Japanese grammatical forms owes most, reduced to substantives governed by prepositions.

Whether the separation of the noun and verb in Japanese is more or less in idea than it is in form, is a question to be decided only by a wider consideration of the structure of the sentence. The view held by Steinthal and Schleicher respecting languages of the same general type, that they have no proper verb, but only verbal nouns, certainly affords the easiest explanation of some of the phenomena here presented. In the sentence *he ga teru*, 'the sun shines,' it is most natural to regard *ga* as the genitive sign, making the subject the possessor or the attribute of the verbal action; literally 'the sun's shining [is].' This use of *ga*, which is frequent, differs from *wa* in the same position in that the former adds emphasis to the subject, the latter to the predicate, though they are frequently interchangeable without appreciable difference of meaning. In the compound sentence the nominal construction prevails over the verbal. Instead of dependent clauses with conjunctions, we have more often only verbal nouns governed by prepositions. Both *no* and *ga*, the genitive particles, may be used to connect clauses which stand in an adversative relation to each other. A consequence of this looseness of structure is the inordinate length to which the sentence is sometimes drawn out. The sense is kept suspended through a succession of loosely connected dependent clauses, interrupted by long quotations, until sometimes the end is reached only with the end of the volume. The merit of the style, measured by a Japanese standard, is largely in proportion to the length of the sentence.

THE GAIKWAR.

(Pall Mall Gazette.)

There is perhaps no point on which the general ignorance of English people about Indian affairs is so dense as the relation between the Government of India and the native princes though few points are more interesting to those who care for theory of legal and political relations. India may be said very roughly to be as large as Europe without Russia, and perhaps it may be said equally roughly that somewhere about a third of this continent consists of native States. The term native State is itself vague, and includes territories differing from each other in almost every respect. Some of the native States—Nepaul, for instance, and Affghanistan—are as little dependent upon the British Empire as France is dependent upon England; but this cannot be said of any of the vast number of States which are included in and surrounded by the British dominions. Some of them are nominally independent. Treaties with them exist, in which they are recognized as independent States, but in most cases the terms of those very treaties contain conditions altogether inconsistent with any thing like real independence. Apart from and by the side of the treaties relations have grown up between the British Government and the native States which have reduced them to the position of what, by an odd adaption of European terms, it has become common in India to call "suzerain" (which word is supposed to look less arrogant than sovereign) and "feudatory." There are, moreover, almost infinite differences between native States and native States. The Nizam, the Gaikwar, Scindiah and Holkar, make a nearer approach to complete independence than the Rajpoot princes, and there is a long gradation downwards till the series ends in small hill Rajahs like those who live in the neighbourhood of Simla, and own principalities not larger than an extensive English estate, and in territories like Bundelcund, which are completely under the power of the British Government, though the ordinary British system of law and administration has not for various reasons been extended to them.

The relation of these princes and chiefs to the British Government varies as much as their powers in their own territories. Some of them are treated as reigning princes. They are received with salutes of artillery, to which they attach what appears to a European ridiculous importance. They take precedence of the highest officers of the British Government. They have considerable armies, and within certain ill-defined limits their power in their own territories are uncontrolled. Those limits, however, though not expressed in definite words, are well understood. They must do nothing which can disturb the general tranquillity, which is, or is capable of becoming, dangerous to the British power, or which is opposed in any manifest and flagrant degree to the general principles of which the British Government regards itself as the representative. There is not, for instance, a native ruler in all India who would venture to put a criminal to death by torture. A few years ago a prince who executed a man by chaining him to an elephant's foot and driving the elephant through the streets, the animal sometimes trampling on his burden and sometimes missing him, was punished by suspension if not by deposition. The course taken in cases of misgovernment is precisely similar. As the British Government undertakes to keep the peace and prevent insurrections, it considers itself bound to prevent the abuses which provoked and more or less justified insurrection. Not long ago a Hindoo State governed by a Mahommedan was grievously scandalized by their ruler's proceedings. They represented to the Government of India that if left to themselves they would have put him to death, and put some one else in his place and requested the Government to right them, as they were thus prevented from righting themselves by their own methods. The complaint was instantly entertained. The native prince was suspended. His territories were put under the government of a council, at which he had a seat. A British officer was appointed to reside at the capital for a certain time to get matters into order, the grievances complained of were gradually redressed, and the prince, if he reforms and amends his ways, will in due course of time be restored to his former position of authority.

In short, the Governor General and his principal subordinates exercise in case of need an undefined and unlimited control over every native ruler in India. They do so, not in virtue of any express law or treaty, but because it is absolutely essential to the peace and order of the whole country that they should do so. If any one of the Great Powers of Europe were to obtain an undisputed and indisputable superiority in point of force over the whole of Europe, and were to use it to keep the peace and prevent gross abuses, that Power would occupy the position which the Viceroy occupies towards the native rulers of India. Those who think that some sort of quasi-legal title is needed to justify the exercise of such powers are in the habit of saying that the Queen is the representative of the Mogul Emperors, and that as such she is entitled to be regarded as a sort of feudal sovereign or, as many like to call it, "suzerain" of the inferior princes. If this fiction pleases any one, there is no particular harm in it. The real truth is that the British power is in fact paramount over the whole continent, and that the manner in which it is used over the different native princes is, perhaps, the greatest of the many great blessings which it has conferred upon that large section of the human race which inhabits India.

We have made this statement because it is indispensable to a true understanding of the proceedings against the Gaikwar. It appears to be a common opinion that the inquiry which is to take place at Bombay is a criminal trial. In point of fact it is no such thing. The Gaikwar is not subject to the ordinary criminal law of India, and the Commission of which Sir R. Couch is the head is not a court of justice in any sense of the word. The proceedings, to use a phrase well known in India, are essentially "political," and not judicial; that is to say, they are acts done by the Government in its public capacity as acts of State, and not acts done in the ordinary course of the administration of justice. The Commission will be subject to no fixed rules of evidence or procedure. It will be entirely a matter of discretion with it whether it chooses to hear counsel or not. It will be in no sense bound to give the Gaikwar the benefit of a doubt. It need give no reasons and deliver no public judgment. It is, in one word, not a court of law at all, and is subject to no legal rules except those which it chooses to impose on itself. Legally the matter stands thus. By certain laws in force in India the Governor-General in Council and the Governor of Bombay are entitled to order persons in the Gaikwar's position to be detained in custody as long as they think proper. If they choose

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to avail themselves of the advice of such a Commission as the one which is to sit at Bombay is exercising such a discretion, it is open to them to do so, and this is the course which they have in fact taken on the present occasion. Under the very peculiar circumstances of the case it may have been a proper course to take. The Gaikwar is accused of one definite act, complicity in an attempt to poison the British Resident; and such an accusation may perhaps be most properly investigated in a quasi-court of justice and under judicial forms. It is, however, very unlikely that the same procedure would be made use of in other proceedings against native princes, nor is it desirable that it should be. It would be absurd to try a ruler for misgovernment. If Napoleon Bonaparte had tried to poison the captain of the ship which brought him into Plymouth Sound, there might have been some sense in setting Lord Ellenborough and other judges to inquire into the case, but it would have been absurd to erect a judicial or quasi-judicial tribunal in order to decide whether or not upon general grounds he ought to be sent to St. Helena. It is the same with native princes in India. The Gaikwar is much more like a prisoner of war than anything else, and the manner in which prisoners of war are to be disposed of is a question not for the judicial but for the executive department of Government. The participation of Scindiah and and the Rajah of Jeypore in these proceedings is a memorable circumstance. They could not have made a more emphatic admission of the general authority of the British Government over native princes than their presence on such an occasion implies.

Shipping Intelligence.

ARRIVALS.

April 1. *Traviata*, German barque, Breckwalde, 271, from Takow, Sugar, to China.

April 4, *Mosquito*, British gun boat, Commander Paul, from Yokoska.

April 5, *Triton*, American barque, Heppingstone, 264, from Bonin Islands, Whaling Gear, to Captain.

April 7. *Bombay*, British steamer, Davis, 1325, from Hongkong, Mails and General, to P. & O. Co.

April 7, *Oregonian*, American steamer, Harris, 1914, from Shanghai, General, to P. M. S. S. Co.

April 7, *City of Peking*, American steamer, Morse, 5,049, from Hongkong, Mails and General, to P. M. S. S. Co.

April 10, *Takasago Maru*, Japanese steamer, Ekstrand, 1016, from Shanghai, General, to Mitsu Bishi Co.

DEPARTURES.

April 6, *Orissa*, British steamer, Edmonds, 1,119, for Hongkong, Mails and General, despatched by P. & O. Co.

April 6, *Decrès*, French gun-boat, Captain Bose, for Kobe.

April 6, *Pernambuco*, British steamer, Hyde, 643, for Hiogo, General, despatched by E. Fischer & Co.

April 7. *Costa Rica* American steamer, Connor, 1,917, for Hiogo, General, despatched by P. M. Co.

April 7, *Niigata Maru*, Japanese steamer, Walker, 1685, for Hiogo. General, despatched by Mitsu Bishi Co.

April 7, *Arcona*, German Frigate, Baron Reibuitz, 2,320, for Honolulu

April 8 *Thos. Hilyard*, British ship, Campbell, 1,500, for Callao, Ballast despatched by Captain.

April 8, *Mathilde* German barque, Dau, 233, for Hiogo, General, despatched by Simon, Evers & Co.

April 9. *Vidal*, French barque, Rondeau, 469, for Nagasaki and China, Ballast, despatched by Captain.

April 10, *City of Peking*, American steamer, Morse, 5,049, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

PASSENGERS.

Per British steamer *Orissa*, for Hongkong.—1 Manila man, second class

Per *Bombay* from Hongkong.—Dr. Platt, Captain H. Walsh, Mr. Taylor, Messrs. R S Otori and A. Kawago, Commissioners to Siam, Kori Kiosichina, Secretary, and 19 Chinese in the steerage

Per American steamer *Oregonian*, from Shanghai. For Yokohama.—Mr. and Mrs Bovie, Mr and Mrs H. Morse and child, Madame Guiveira, Miss E Fott, Miss Center, Messrs. W. Murray, D. W. Ap Jones, A. Steward, Baron Shokeben Otto Mulier, J. Kanon, J. A. Edward, R S. Edward, J. B. Margerison, J. Fraser, J Logon, A Russel, M. Anoki Capt Haswell, J. A Potter, Capt. Oxer, Alex Kerr, L Keffler, E Sucken J. Schaeffer, J. Hazett, Chas. Madgel, Capt. Douglas, J. W. Hart, M. Brown, F Fiorini, Douglas Wise, C. Matthaw, R K. Benjamin, D. Tata, L. Sceta, H. Rustanjee, and 80 in the steerage. For San Francisco.—Rev. D. M. Dexter, wife and child, Mrs J. C. Phillips, E Cunningiame, Geo. Hughes, Capt. E G. Hallet, John Crandall, August Chuller, Bun Soy Foks, Mr. and Mrs. Mackie and 3 children, Col. E Forester, and Loring Andrews.

Per American steamer *City of Peking*, from Hongkong.—For Yokohama.—Mr and Mrs C. A. Gibon, Mr S. Hill, and child and maid servant. For San Francisco.—Mrs F Patterson, G. Besant, T. W. Cooper, P. R. Smith, J. Witte. E Dilboy, Proff. C. H. F. Peters, Lieut. E. W. Bass, U.S.A., G J. Becker and 137 in the steerage.

Per American steamer *Costa Rica*, for Hiogo, &c.—Mrs. Bryan, Mr. and Mrs. Pope, Bishop Williams, Messrs. E C. Kirby, J. Taylor, Johnson, C Bland, H. Magniac and servant, N. J. Silas, C. Bassett, J. Welsh, Da Roza, E. Gower, C. B. Rickett, and 12 in the steerage.

Per Japanese steamer *Niigata Maru*, for Hiogo, &c.—Mr. and Mrs. Schiller, Mr. and Mrs. McVean, Capt. Hardy, Messrs. Hooper, D. Ross, and 11 Japanese, in the cabin; 113 in the steerage.

Per Japanese steamer *Takasago Maru*, from Shanghai and ports.—Captain Bosquet, Mrs Pruyn, Mrs Stewart, and 2 children, Rev. J. H. Ballagh, Mrs. Takimatsi, Messrs Orcel, Percin, E. Berger, H. Hyzer, 6 Japanese, and 1 Chinese, in the cabin; 108 in the steerage.

Per P. M. S. S. *City of Peking*: For San Francisco.—Messrs. J. Warren Cooper, Hughes, Mrs. Patterson, Mr. and Mrs. Dexter and Child, Keswick, Patterson, Mrs. Rice and Child, Captain Hallett, Mrs. Phillips, L. Andrews, Jr., B. L. Este, J. C. Wilson, H. B. Wilson, Morris, H. Corbett and 3 Children, W. Nicholson, Col. Maclean, R. Isaacs, E. Forrester, Rohde, Stucken, E. Besant, D. R. Elder, Mrs. Hart and Child, Captain Furber, Fontaine, E. C. Morley, Cunninghame, Herwig, Mrs. C. A Gibon, P. R Smith, H. D. Wise, Mr. and Mrs. Haris and child, J. Witte, E. W. Morgan, Captain Cassell.

CARGOES.

Per British steamer *Orissa*, for Hongkong:—
Silk ..... 351 bales.

Per *Oregonian* from Shanghai: Treasure, $42,900.

Per Japanese steamer *Niigata Maru*, for Hiogo, &c:—Treasure $6,000.

REPORTS.

The *City of Peking* reports: Left Hongkong April 1st, at 4 p.m. Fine weather to Van Diemen Straits; since then, thick, rainy weather and strong S.W. to N.E. gales.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that **Betts's Name is on every Capsule he makes for the principal merchants in England and France,** thus enabling vendor purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Yokohama, 6th July, 1872. 12m.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the above-named Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

Aug. 1, 26 ins.

Gaiety Theatre.

THE FOURTH AMATEUR THEATRICAL PERFORMANCE

will take place on

Wednesday Evening Next,

April 14th,

When will be presented Two COMEDIETTAS, by

John Maddison Morton, Esq.,

"A REGULAR FIX,"

AND

"A THUMPING LEGACY."

TICKETS can be procured on and after Monday, at Messrs. Lane Crawford & Co's where also Plan of Seats can be seen.

It is most respectfully represented that if cash were paid for Tickets when secured, it would be a great saving of trouble to Messrs. Lane Crawford & Co., who always so kindly undertake the selling of Tickets, and of much useless expenditure on the part of the Amateurs, who sadly need every available dollar.

Yokohama, April 7, 1875.

NOTICE.

THE UNDERSIGNED is prepared to attend to the **Landing, Clearing, or Shipping of Cargo** at this Port, at Reasonable Rates.

CAPT. D. SCOTT,
Custom House.

Yokohama, August 3, 1872. tf.

ASIATIC SOCIETY OF JAPAN.

THE NEXT REGULAR MEETING of the Society will be held at the

IMPERIAL COLLEGE,

(KAISEI GAKKO,) TOKIO,

On WEDNESDAY Next,

The 14th Instant,

At Five o'clock p.m.

A Paper will be Read by J. H. GUBBINS, Esq.:—

"Notes of a Journey from Awomori to Niigata; and of a Visit to the Mines of Sado."

BY ORDER OF
THE COUNCIL.

Yokohama, April 7, 1875.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, APRIL 10TH, 1875.

We republish the following report which appeared in the *Japan Mail*, of the 9th instant.

Cottons.—A slightly better feeling would seem to actuate dealers as we write. *Yarns*—16/24 in the better qualities have been in good enquiry, while inferior spinnings continue unattractive. For 28/32 a good demand may be reported, prices for these being very firm; in 38/42, however, but little business has taken place and this at unaltered quotations. *Shirtings*: In 7 lbs. goods some business is reported, and prices exhibit an improved tendency; 8¼ lbs. weights are nominally unchanged, while 9 lbs. are firm. *Velvets* continue difficult of sale. Other descriptions of cotton fabrics have been slenderly dealt in and require no comment.

Woollens.—Business in Woollens continues on a very limited scale and the few transactions which have taken place show a further decline in prices. *Mousselines de laine* have exhibited the general tendency although they remain readily moveable in every instance where holders submit to concessions on previous rates. *Cloth* of all kinds and *Blankets* are out of season and entirely nominal in value.

Iron and Metals.—The market continues excessively dull, and little if any business is reported.

Sugar.—Holders are firm at quotations owing to advices from Formosa which report a good demand there for shipment to other than Japanese ports.

Kerosene Oil.—Native merchants are at present the only holders and quotations are nominal.

QUOTATIONS FOR ARTICLES OF IMPORT.

COMMERCIAL INTELLIGENCE

EXPORTS.

Silk.—The public sales which have recently taken place seem, by bringing buyers and sellers in closer contact, to have strongly impressed upon the latter the true position of affairs, and paved the way to a steadier decline in the price of *Hanks*. Since the 25th ulto., 350 bales of *Hanks* have been settled at about $20 under previous quotations. On the other hand the advance reported in our last for good *Oshius* has been fully maintained, and settlements of these sorts are 250 bales. Supplies from the interior are at a low ebb and from 1,600 bales in January, the stock has decreased to 850.

The shipments of the fortnight are 662 bales, making the total export to date 9,771 bales against 12,961 last year for the corresponding period.

Tea.—The slightly better feeling indicated at the close of our last market report (25th March) continued to the close of the month when buyers generally retired and grades from "Good Medium" to "Common" retrograded about $1 per picul.

Settlements in these classes for the period rather exceed piculs 2,000, whilst "Fine" and higher descriptions have received no attention and the prices of these are nominal.

The first garden muster of "New Crop" has made its appearance in this market. It gives, however, no data on which to form an opinion of the probable outturn of this season's growth. We are just now at the critical juncture of the first picking. The plant is well reported of but one or two days frost may seriously damage its prospects.

A considerable further increase may also be looked forward to in the approaching season's results as many young plantations will have arrived at maturity and afford a fuller crop. It seems not improbable that we may realize an increase of 15 per cent to come forward to the Treaty Ports in comparison with the closing season.

ENGLISH GOODS.

A WELL-ESTABLISHED LONDON DRAPER, is open to buy Goods in commission for a good Firm; or as Agent for Japanese Goods consigned to London. Highest references given and required. Address

MR. GEORGE INGATE,

DRAPER,

KILBURN, LONDON, W. C.

Yokohama, March 27, 1875. 3ins.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 16.] YOKOHAMA, SATURDAY, APRIL 17, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

THE Imperial Proclamation issued on the 14th inst, of which two translations will be found elsewhere—one, that which, with a verbal alteration here and there, appeared in our daily issue; the other, a more severely exact rendering of the original with which we have since been favoured—is characterised by much paternal dignity of thought and expression. We have discussed its contents more minutely elsewhere, though not without a strong feeling that its full import and bearing can only be very imperfectly understood by foreigners at present. But the organization of which it proclaims the creation obviously constitutes a fresh development in the political machinery of the Empire, and may be expected to provide for the utilization of much force at present either lost or even mischievously directed. It is impossible to think that the step has been taken merely for the sake of constructing a mere ingenious, but useless, engine of government, and we may thus conclude that it is rendered necessary by the growth of the national life and the expansion of the national mind.

IT is hardly necessary to say that the alarmist article which appeared this week in one of the evening papers is as completely without foundation as any of those of the same nature which have preceded it at intervals during the past few years. The Government has been greatly strengthened by the late accession to the Cabinet of its new members, and the proclamation of Thursday is evidence that an agreement has been arrived at upon points which two years ago were the causes of division and secession. It is rumoured, and not without good authority, that Saigo Kichinosuke will join the Cabinet, in which case it will embrace almost every man in Japan whose assistance is valuable, or whose displeasure might be feared. But it is obvious that great as is the individual power of some three or four men in the Empire, the days of purely personal government, as opposed to party government, are drawing to an end, and when we are told of this man or that man convulsing the Empire by his nod or the motion of his little finger, we only conclude that the metaphors of tragedy may be imported into farce without either frightening or amusing the public.

APART from the indignation which is felt in China towards the Government on account of the murder of Mr. Margary by one of its officials, there seems to be a feeling of profound grief at the loss of one so highly esteemed. His ardent temperament led him to engage eagerly in the manly pursuits so much favoured by the youth of Shanghai, while his irreproachable life and genial nature caused him to be welcome at every fireside. His attainments as a Chinese scholar and his grasp and maturity of judgment pointed him out for early prominence in the Consular Service. He was generous and intrepid. The Royal Humane Society never conferred its gold medal for a more gallant deed than when it awarded that mark of distinction to Mr. Margary for plunging into the sea and rescuing a number of ship-wrecked mariners on the coast of Formosa. In his late journey up the Yangtsze and through Yunnan to British Burmah, he accomplished a feat worthy in itself of the highest honour which the Royal Geographical Society can bestow, and, had he returned, its gold medal would assuredly have been awarded him. His personal friends refer to domestic ties which it is not permitted to us to touch upon, save by saying, that he was the idol of many hearts to whom this calamity will come with crushing force and a terrible bitterness. When time has done something to mitigate their sorrow, they may find some consolation in knowing that to his death the future historian of our relations with China will refer as a turning-point in our intercourse with that country. He was not slain by a mob, but murdered by an official of rank, and his country will be justified in demanding as much reparation for his death as if she had expended treasure and life on a warlike expedition.

THE announcement of the death of the young wife of the late Emperor of China, which is reported from Peking by last mail, shows the curious fatality which has attended the family of the late Emperor. The Emperor's death in January has been followed within the short period of two months by that of his only sister and of his wife. The title of "Good Luck" under which he ascended the throne is, to say the least of it, curiously belied by this remarkable if not suspicious mortality. It is observable that one of the foreign journals in Shanghai appears to think that this premature death affords to the young Empress a happy release from a sea of troubles. But the two Empress Dowagers appear to be sufficiently resigned under a wholly different dispensation, and it must be allowed that the burdens borne by the great are not commonly laid down on account of their weight, from which it may be inferred that they are not unaccompanied by compensating consolation.

LAST week a *hanto* of Kunura Mumpi, the shipping agent of the Kaitakushi Department, committed *hara-kiri* under very distressing circumstances. It would appear that he had been rebuked by his employer, who had failed, for some act which the young man connected in his mind far more closely than was actually the case, with this misfortune. Overwhelmed with regret and confusion at the rebuke administered to him, he destroyed himself in the usual Japanese manner. There is not the slightest reason for supposing that he had committed any act incurring punishment, or that the error for which he was blamed was of such importance as to contribute to his master's misfortunes. Wounded feeling, or a sense of wounded honour alone, would therefore seem to have instigated him to the terrible act. That *hara-kiri* has often been committed to avoid the punishment of death, otherwise inevitable, cannot be doubted. But it is equally certain that the act has often originated in as pure and lofty a sense of honour as any nation in the world can boast of. The ethical code of the Japanese has never

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

been properly analysed; the comparative anatomy of it, so to speak, has never been demonstrated. The rigid truthfulness of the highest English character is manifestly absent from it; but it assuredly embraces a sense of honour which prefers death to disgrace, though this sense is unsustained by the virtue which is, with us, the foundation of all high character.

The poor fellow left a letter behind him of which the following is a translation.

'° and ° and ° could not agree to the contract of °. I met ° to-day and he told me that the Consul had told him it mattered not how many mortgages there are, no one could take the ship of another country. What I gave to ° I was deceived into giving by ° and °. °, on hearing this, got very angry, and ordered me to alter the contract at once and told me to have the bill of sale made out for $13,000. I am very sorry for °. I hope you will settle everything.

To ° ° °.'

A Correspondent of the *Japan Herald* writing upon the subject of the destruction of growing timber reminds us of the stage carpenters in the "Critic" who fire off two sunrise guns and provoke Mr. Puff's commentary that if "you give these "fellows a good thing they never know when to be done "with it." There are excellent grounds for asking for some arrest of judgment on the few clumps of timber that have been permitted to beautify the environs of the settlement, and we should be glad indeed to find that the Japanese could be made sensible of the climatic consequences which are certain to follow their removal. The writer of the letter in question, however, pleads less for violated physical laws than for disturbed wood-nymphs and hamadryads, and it is to be feared that those whom he would impress are unlikely to be susceptible to his sentimental argument even if they should understand it. The adjective 'dendroklastic,' for instance,

—that would have made Quintilian stare and gasp

is odious alike to gods and men. The truth, we take it, is that the poverty of the land is at the root of the movement. The conservative influence of priesthood and nobility protected the forests of the country under the old régime, and the enforced exercise of the rule that he who cut down a tree should plant two, sufficed to ensure a future supply. We have on more than one occasion protested against the governmental neglect of a valuable national resource, and have drawn illustrations from other countries of its consequences. And, as the Japanese appear to be fond of illustrations from the life of the Great Frederick, we may remind them that a line of seaboard 90 miles in length, lying between Pillau and Memel on the Baltic, is to this day valueless for agricultural purposes in consequence of the forests which formerly clothed its outer edge having been sacrificed to the necessities of the State during the reign of that monarch.

THE performance by the Amateur Dramatic Society of two well-known, but somewhat slight, pieces on Wednesday evening, may be held as an interim entertainment pending the production of some play of a more substantial character, and we shall not for this reason speak of it at our usual length in noticing these somewhat eccentric appearances. "A Regular Fix," redeemed very properly from its usual low-comedy treatment, provoked much laughter by the absurdity of its plan, farcical situations and not least by the skill and vivacity of Mr. Spurgeon who represented the ever-perplexed hero. The number and variety of his humorous embarrassments suggesting equally humorous escapes, the confusion of incident and of the hero's mind and the strange jumble of humanity which the writer brings together, form a very burlesque of farce which *Mr. Hugh de Brass* keeps in motion during an amusing half hour. Mr. Spurgeon was seriously taxed by the necessities of the rôle, but sustained it with unflagging fun and *verve* and with his usual discrimination and good taste, being supported, not unskilfully, by Mr. Toodles as the usual impossible stage lawyer and Messrs. Coventry and Newcome as *Quick* and *Charles Surplus*. Mr. Piando as a Bailiff was appropriately taking. Of the ladies there is little to be said since their parts were uniformly slight and unimportant. Miss Ella Herbert played the housekeeper very fairly, and Mrs. Vernon was tempted to indulge in some exceedingly unreal hysterics which as usual were not unrewarded by laughter. Of the two *debutantes* we need only say that they exhibited a natural nervousness through which it would be premature to say we could detect cause for approval or blame.

The ancient favourite, "A Thumping Legacy," while it does not impress the spectator with the serious nature of a Corsican vendetta, proves very amusing by the absurd position of the vulgar Cockney and 'liveryman of the city,' who finds himself drawn away to Ajaccio to smell powder unwillingly. It is to be regretted that Mr. Vernon scarcely illustrated the character of *Jerry Ominous* with the sympathy which he usually displays with low comedy parts and that some palpable hits fell rather flat. It is generally our duty to warn this excellent performer against the vices of exuberance, but he has been using the pruning knife with a vengeance. Mr. Oddson represented *Geronimo* with care, if somewhat stiffly, Messrs. Newcome and Coventry acted their parts meritoriously, and Miss Ella Herbert was impressive as the fiancée of her hereditary enemy.

A small amateur band performed some selections in the intervals of the plays with commendable precision.

FROM the notes of a traveller who has recently passed through the chief part of this Empire we are glad to observe that during the past three years the roads of the interior have been largely widened and improved and, where the traffic seemed to require it, new highways have been cut for its accommodation. This affords a welcome pledge that the money borrowed for the promotion of internal communication by railways and their feeders is being wisely expended in these reproductive works.

On the subject of the general advance of education our informant says that all Japan would seem to have gone to school. In one school he was struck by the large proportion—some 40 pupils out of a total number of 200—of from 30 to 45 years of age. These were *samurai*. The mode of instruction in the native schools is described as admirable, though no pains would seem to be taken to improve the elocution of the pupils. The study of the old Chinese Literature is nearly everywhere abandoned, and class-books, translated from European languages, substituted for them.

We regret to learn that 'nearly everywhere the farmers are cutting down forests and clearing their woods.' In a country so dependent as Japan is upon a large supply of water for irrigating its main crop it is certain that this indiscriminate clearing of the land will be followed at no long interval by disastrous droughts. We should have been pleased to learn that some steps were being taken to introduce breeding stock or sheep, but of this our informant says nothing.

In her Fisheries, he agrees with all who have travelled in the northern island, Japan possesses an unexplored mine of wealth, and advocates a system of bounties for their development. We should, on the other hand, deprecate the introduction of a vicious and now-exploded system introduced in Scotland to stay emigration and to maintain for purposes of naval warfare a hardy coast population. By opening the island of Yesso, under restrictions, to the beneficent operation of foreign capital, the fisheries would be amply developed, immigration promoted, and the exports of the Empire largely increased.

It is pleasant to learn that the foreigner is everywhere well received in the interior—alike by peasant and official—and that polite treatment is accorded to those whose business or amusement takes them from home. Travellers are recommended to make the local Koncho their first place of call. The arrangements made by the Government for their securi'y are said to be admirable.

THE dulness of the closing week has been partially enlivened by a newspaper controversy on the subject of an important change made in the programme of the Spring Races to which we felt it necessary to call attention in our daily issue a few days since. The Race Committee is now specifically charged with having altered a programme, with a view to which owners have been accustomed to arrange their stables for some eight years past at least, without due regard to their

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

responsibilities to the Racing Public whose interests they have been elected to protect; and, worse still, it is alleged that the effect of such changes will be to extend to stables owned or represented by Committeemen advantages by which those outside of their privileged circle are likely to be prejudiced. It is, however, to be presumed that the remedy may be found in the fact that the Committee is elected and not autocratic or irresponsible, and that it may be called to account by its constituents for acts of manifest unfairness or partiality. It were to be desired that these squabbles should be settled if possible in private and not enacted *coram publico*. They throw a dark shade over a national pastime which the outside public is already only too prone to connect with mean and unworthy associations.

INTELLIGENCE has been received of the arrival of the *Adventure* at Singapore, seven days from Hongkong. She will take in coal there, at Anjer and at Mauritius and may be expected to arrive at Natal at the end of this month. How long the Battalion of Marines lately quartered here may be detained there must necessarily depend upon the plans of Sir Garnet Wolseley.

(From the Japan Mail Daily Advertiser.)

THE Empress-Dowager returned to Yedo on Sunday afternoon from her visit to Enoshima and Kamakura.

THE following interrogative memorial by a priest, addressed to the Vice Minister of the Department of Public Worship, with his rejoinder thereto, are taken from the *Nisshin Shinjisshi* of yesterday.

The form of religion of every country must be left to the decision of its people and in our case must further rest upon the three oaths of our Sovereign the Mikado. The teachings of both Shintô and Buddhist priests have already lead many into the paths of our native faith. But foreigners have at length settled among us throughout our country, and many of our people are said to have deserted the faith of their ancestors and to have adopted the tenets of Christianity. Now the foreign religion inculcates neither respect to the Sovereign nor the honour due to parents, and as it involves laxity in the discharge of these civil and domestic duties must prove injurious to our nationality. Being a priest whose duty it clearly is to guide my flock in the ways of the true religion, I am anxious to learn whether it be permitted to me to oppose the spread of the foreign faith. I await an answer.

REPLY.

Memorial approved and permitted. But *excepting religion* nothing must be done to diminish the good understanding which exists between foreigners and the people of this country.

THE re-establishment of telegraphic communication with Hongkong is announced by the Agent of the Great Northern Company.

Mr. Nishimura of the Kaitakushi department is about to proceed to China on official business.

THE *Lyeemoon* arrived from Nagasaki yesterday afternoon, having made the passage, in very light trim and rather rough weather, in fifty-nine hours. Her old propeller, which gave inferior results to this, has been removed, and the change promises to re-establish her reputation as a fast vessel.

THE number of *jinrikishas* plying for hire in Yedo is often stated at random at 250,000, a very liberal allowance having reference to its population. The accuracy of this estimate is, however, best tested by the number actually constructed in any one given period, and we learn that in the month of January 22,860 vehicles were built in the city and its nighbourhood.

AT an audience of H. M. Mikado with which General Capron was honoured last week, H. M. addressed him as follows:—

Since your engagement with the Kaitakushi, intrusted as you have been with the work for the settlement and development of the Island of Hokaido, you have so assiduously and faithfully executed your responsible duties, and advised the Chokuan, that the important work of the Department has been successfully carried out and is daily progressing to our satisfaction.

Indeed your services were valuable and deserve our high appreciation, and it is hardly a matter of doubt that the future progress of that Island, the fruit of your labor, will much advance the happiness of my whole Empire.

Now, on your return to your country, on the termination of your engagement, I have to acknowledge your valuable services, and wish to express my good wishes for your future prosperity and happiness,

General Capron replied:—

I am deeply grateful for the kind words Your Majesty has spoken, and I take great pleasure in the opportunity of personally thanking Your Majesty for them, and for the many other kindnesses extended to me by Your Majesty's Government.

The reception which your Majesty was graciously pleased to extend to me upon my arrival in this Empire, and this additional mark of your Majesty's kindness, will always be a source of profound gratification to me.

I beg especially to express my deep sense of satisfaction at your Majesty's allusion to my services. It is a matter of congratulation to me, that the work in which I have had the privilege of assisting has been deemed worthy of your Majesty's appreciation, and it is my earnest desire, that as time progresses, and all difficulties incident to the beginning of so great an undertaking have been overcome, it may still further merit your Majesty's regard.

I earnestly hope that your Majesty may continue long in health, prosperity and happiness.

THE trade in rabbits appears to have been revived in the Capital. Speculation, however, is restrained within reasonable limits and prices do not exceed 50 or 60 *yen*.

THE unwonted stillness of the British Court for some little time past suggests the possibility of some millenniary period being at hand when the client lamb may safely entrust himself to the company of the professional lion. In the event of such regrettable sterility of business proving a *fait accompli*, we would recommend the law courts of Yedo to the serious attention of practitioners. During the month which has just closed 6,546 plaints and suits have been disposed of in the Saibansho Court, and 38 other cases were taken before a higher tribunal.

THE arrangements for the forthcoming races which have just been issued fail to afford that satisfaction which may legitimately be expected from a comprehensive programme, and, we, conceive, leave much to be desired. Races, it is alleged, have been lowered from a fitting standard, and thus the owners whose skill and judgment have been taxed in their higher ends find that their energy avails them nothing and that their purpose is frustrated. Racing originated in the desire to improve the breed of horses by selection of their higher qualities, not for "sport"—whatever that word may be held to mean—and this test of the strength and endurance of the animal—its most valuable possession—should be jealously preserved. The programme, it may fairly be alleged, affords little encouragement in this respect to breeders and owners, and it may even be questioned whether, in the curtailment of the longer races, the Committee have not done some injustice to those whose aim has been to cultivate the most valued qualities of the horse and who, by their action, are practically excluded from enjoying its advantages. We think the programme should, in this view, be amended.

EIGHT classes of Medals for services of distinction have been determined upon by the Japanese Government. They will be issued in due course.

THE difficulty of reconciling the conflicting views of foreigners as to the "rule of the road" has been settled, so far as the capital is concerned, by the recent proclamation of the Naimukio of Yedo, in which he directs that wheeled carriages and horses are to travel, on meeting, on the left hand side of their road. This has long been found a logical necessity in England and English Colonies—America, we believe, has seen fit

Digitized by Google Original from UNIVERSITY OF MICHIGAN

to change the practise—and is the ancient "rule of the road" in this country. In this respect England and Japan are, so far as we are aware, alone.

THE *Golden Age* arrived last evening from Kobé after an unusually fast run of 29 hours. Up to the hour of her sailing from Shanghai no authentic intelligence respecting the attitude of Mr. Wade with the Tsungli Yamen at Peking in reference to the massacre of Mr. Margary had been received. It was believed, however, that the Chinese Government had shown alarm at the position taken by the British Minister and exhibited a disposition to concede to every demand for the satisfaction he claimed. It is said that the entire *corps diplomatique* accompanied Mr. Wade to the audience, and that Prince Kung rejoined to Mr. Wade's threat that, failing redress, the British flag should be hauled down that this might be done. Further consideration, however, induced him to take another view of the position and he admitted its gravity and agreed to give satisfaction.

The greatest indignation has been elicited by the event in Calcutta. The *Times of India* says that Lord Northbrook had ordered two Regiments to be in readiness to proceed through Burmah to Manwyne in the events of redress being refused to Mr. Wade's demands.

We are informed that Mr. Wade was in possession of the intelligence of Mr. Margary's assassination, some 8 or 10 days before the telegrams from Calcutta reached Shanghai. It is supposed that the news was telegraphed to him from London to Kiachta and brought thence by special courier to Peking.

SOME days since a labouring man attempted to place a petition in the hands of the Mikado. This has been construed into *lèse majesté*, being punished with the not exorbitant mulct of one and a-half *yen*.

THE *Fusing*, a steamer belonging to the Chinese S. N. Company, was run down off Chefoo on the 6th instant, by the *Ocean*. The loss of 55 souls is reported.

It is said an important meeting of the Ministry was held at the Shikiburio in the presence of H. M. The Mikado on the evening of the 15th instant.

WE are indebted to the courtesy of the Agent of the P. & O. Company for the information that owing to an accident to the *Gwalior*, which occurred between Galle and Penang, she did not arrive at the latter port until the 7th instant (or four days late). It is therefore probable that the *Malacca*, which will bring on her Japan mails, will not arrive before the 24th instant.

THERE are, says the Editor of the *Hochi Shimbun*, some queer people in this sublunary world of ours. This is said *àpropos* of a certain Kitahara Daihachi, who having written a Memorandum on the business of the State took it to the Foreign Office and requested that a post in that department should be assigned to him. He did not apparently succeed.

SEEING the empirical condition of medical science in this country, and the disturbing influence at present exercised by the Western School, we hardly know whether His Majesty's lieges should feel reassured by the announcement that "fifty physicians are now sitting at the Nihon Bashi in Yedo," to compare notes on their ailments, or if a dismal list of mortality will not shortly furnish a more suggestive analysis of their professional *séance*. We must confess that we are not hopeful as to the result of the experiments, which, *more Japonico*, are likely to succeed the conference.

ALL the officials of the *Sa In*, with the exception of a few who have been removed to the Daijokuan, have received their *congé*.

SHIPPERS OF SILK.

Per Messageries Maritimes steamer *Tanais*, despatched 13th April.

	Marseilles.	London.
Sundries...	121 bales.	37 bales.

The sad news brought by the mail, of the death of Mr Margary, will be read with the deepest regret. Few men who have lately passed through the Shanghai Consulate have been better known than Mr Margary, and every one who knew him esteemed him. We can say with all sincerity that the Service has sustained a great loss by his death, and that very many people in Shanghai have lost a valued friend. We write without qualification, because there seems hardly room for doubt as to his fate. Mr Margary seems to have been travelling a-head of his party, when the latter was set upon by a Chinese force and compelled to retire. Mr Margary was, therefore cut off, and is believed to have been murdered in the town of Manwyne, which he had entered to reconnoitre. Our information is, however, meagre, and we shall be only too glad if subsequent news should give room for doubt. Apprehension was also entertained about Mr. Ney Elias, who seems also to have separated from the main body of the expedition; but we are glad to hear that private advices have been received, saying he is safe.—The telegram which we subjoin from the *Times of India* gives the fullest information.

Rangoon, March 7th.

When the Expedition was near Manwyne, four marches from Bhamo, a hostile demonstration was made. This was on the 22nd February.

Mr. Margery went ahead, reconnoitring, and entered the town, when he was treacherously murdered.

The remainder of the party were attacked by one hundred Chinese hillmen, when it fell back, and arrived without further loss at Sakkaw, Bhamo,

Mr. Elias started for the southern route, but the Chinese authorities stopped him from going further than Munwyne.

THE IMPERIAL PROCLAMATION.

THE desire which the Japanese have evinced during the past two years for something resembling the free institutions of the Western nations, has produced two very marked effects, both indicative of a growth of the national intelligence and an advance of the popular will. The first is the extraordinary development of the native press; the other is the institution of local assemblies where a comparatively free expression of opinion has been tolerated, and even encouraged, and the resolutions passed in which have been accepted and acted upon by the local authorities. Of course foreigners would err entirely if they imagined the freedom thus indicated is more than a very feeble reflection of that which they themselves enjoy; or if, on the other hand, they imagined that this free expression of opinion is something entirely new. In regard to the first point, it is certain that the mass of the Japanese people regard their officials with a degree of awe of which we, fortunately, have no conception; while, in regard to the second, it is certain that, at least on many subjects, a public opinion of very considerable power has always made itself felt in this country. It is equally certain, however, that it has hitherto had but poor instruments to focalize or give it expression, and that the two we have mentioned, by gathering and concentrating its rays, and projecting them in desired directions, have done much to give it force and effect.

In studying the growth of this nation under the wholly exceptional influences to which, as an Oriental people, it has been submitted, it is curious to note the evolutionary changes which result from the play of surrounding forces on the primitive organization. If it be true, that, in accordance with adaptative provision, the eye is the consequence of light, and the mechanism of the ear of the vibrations of air, we may look for results here something like those which we see in the west, because the western influence is at work on the mind of the nation, and possibly, at this moment, the most important force which is urging forward or guiding it. But as the primitive organism is widely different from that operated upon in the west, we shall witness results at least as remarkable for the points of difference as for those of agreement. For instance, we have had a hard-and-fast line of almost impassable breadth between the officials and the mass of the people—the exact reverse of what we see in China—and the consequence would seem to be an almost insuperable difficulty in entertaining the idea of any thing like popular representation. The first assembly called together subsequently to the Restoration was exclusively composed of men who were either prominent nobles, or the esquires of nobles, and who looked at every question from the aristocratic side. But it was found so absolutely ill suited to the wants of the age that it was dissolved, or dismissed, with marks of something akin to contumely. But neither in the calling nor the dismissal of it was there the faintest whisper of the voice of the people. Subsequently to this another assembly was called, the nature of which has never been accurately understood, but which was most ignorantly called a parliament by people who must have imagined, we presume, that because a parliament is a deliberative assembly, every deliberative assembly is a parliament. The horse-chestnut, however, is not a chestnut horse, and this assembly was only a parliament in the sense that people talk in both. Last of all, was the proposal to hold periodical meetings of the Provincial Governors, a plan devised before the outbreak of the Saga insurrection, but abandoned on account of the disturbed state of the country, and strongly protested against in the Council of State as wholly unsuited to its condition, and to the legitimate hopes and aspirations of the people.

It will not be easy, perhaps not possible, to find any exact analogy in the history of Europe for the body which has just been created. It will probably constitute a deliberative body whose resolutions, based upon such knowledge of the wishes of the people as can be obtained without direct representation, will be submitted to the Council of State, and, if approved of, will then go down to the *Dai-shin-in*, there to be thrown into the forms of law. The latter body, we believe, is either a newly created branch of the Judiciary, or a distinct body of men conversant with its business and versed in its forms. But, so far as we can yet see, neither body derives its existence in any way from the people. They are formed of nominees of the Government, dependent upon it for their salaries and the permanence of their offices; and, as the resolutions of the Upper Chamber must (on our hypothesis) be first submitted to the Cabinet, we are wholly at a loss to see how the institution provides in any way for that desire for representative institutions of which we have lately heard so much. It should, however, be borne in mind that the secession of ITAGAKI from the Cabinet some two years age was due, or said to be due, to his anxiety for a larger measure of popular representation than was afforded by the proposed assembly of the *Chihanji*, which, he thought, rightly as it proves, was wholly inadequate to the exigencies of the time and the growing force of popular opinion. The facts that, after a retirement of two years from the Cabinet he should now have rejoined it, and that this measure has been adopted immediately after his return to power, would go far to prove that it embraces, in some manner at present unknown to us, some of those views of which he was the most prominent advocate, and to which he temporarily sacrificed his position in the Government. It is, of course, extremely difficult for a foreigner in this country to estimate the real importance of the opinions expressed so freely in the native journals on this subject. It is obvious that as some of the writers are men of excellent education, some of them are also men of experience in high office. But whether they are seeking to create opinions, to direct them, or only to reflect and give them form and expression, are questions on which we are ignorant. Little guidance on this subject is to be had from the circulation of the newspapers, because the news they convey may make them acceptable to many either indifferent to their opinions, or, possibly, unable to assess their value. It is also impossible to form any trustworthy estimate of the consistency with which they advocate any given set or line of opinions. In Europe or America all journals of any standing have a political complexion which varies but slightly, or a mission or object of some kind, as with *The Times*, which reflects the general intelligent opinion of the country at any given moment, and has always been held to represent it with extraordinary accuracy and ability. But here we can form no trustworthy opinions on such subjects. There are not five foreigners in the Empire who can read the native journals with any approach to fluency, and the great mass of us are in the dark on the whole subject. "When candles are out all cats are grey", and with the walls of the tower of Babel between us and the native mind, all that we can do is to get such glimpses of it as may be attained by the translations appearing in this or other journals. Our columns devoted to these do not enable us this week to give any comments on the measure announced by the MIKADO, but the better class of them should be full of interest, and we shall hope to supply

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the deficiency—quite unavoidable in view of the date of the Proclamation—in our next issue.

We must be pardoned for this digression on the subject of the native Press, on account of its bearing on the matter of this Proclamation. The MIKADO uses these words, "We likewise call together the local officials, *causing them to state the opinions of the people*," &c. Now, the freedom of the Press has in this country preceded the conferring of any political power on the people, and the inversion is one which is curious, though, of course, easily explainable. In England the burgesses of towns were assembled hundreds of years before there was anything approaching to a liberty of the Press, and so late even as the reign of GEORGE III, the laws enacted and the prosecutions directed against the Press were of the fiercest kind. But our early assemblages of burgesses contained very few men who could write their names; whilst education is universal in this country, and an abundant freedom has been granted to the Press from its very birth. Thus we see that, not by mere tacit consent, but by legislative enactment, the people have now the means of making known their wishes or will, and this may be for some time the only form in which they will hold a political power guaranteed to them by law. All this, however, can only be a matter of speculation at this moment. Of the actual constitution of the two assemblies just created, of their rules of procedure, the mode of election of their members, or the *status* of these in the body politic, we know nothing, and, owing to the extreme difficulty of getting the political machinery of this country into focus, it may be some time before we can pronounce with any thing like accuracy upon these points. We can only hope meanwhile that they are of a thoroughly practical nature, and that they will have a more lasting existence than the bodies which have preceded them. When a series of experiments is made, one after the other, with no result, there must either be great maladroitness on the part of the operators, or the basis of their attempts must be unsound. The experiments in this direction so far have certainly failed, but this fact will hardly have been forgotten in the present organization, of which we hope to give a far more satisfactory account to our readers next week.

THE IMPERIAL PROCLAMATION.

NOTIFICATION No. 58.

An edict having been made in the terms of the annexed Imperial Decree, I hereby make this known.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

April 14th, 1875.

(COPY OF IMPERIAL DECREE.)

At the time of Our ascension of the Throne, when We became the Head of affairs, We summoned together the whole of Our servants, and on five several points took oath before Heaven:—We determined the welfare of the country, and sought after the means whereby to ensure the peace and tranquillity of the people. By the favuor of the spirits of Our ancestors, and also by the exertions of Our servants, We have happily attained the slight degree of tranquillity of the present day. But, upon consideration, We find that Our assumption of power dates from no far distant period, and that, as regards the pacification of the interior of Our country, there are by no means few matters that have to be set on foot, or freshly regulated. Wherefore, We, now extending the spirit of Our oath, do here found the *Gen-rô-in*, and thereby ... the fountain head of the establishment of laws, and do create the *Dai-shin-in*, and thereby render firm the powers of careful judicial procedure:—We likewise call together the local officials, causing them to state the opinions of the people,. plan the public welfare, and, by degrees setting on foot a well founded political fabric for Our country and homes, are desirous that each and every one of you should partake of its benefits.

Do you, then, abstain from becoming habituated to olden customs through adhesion to former ideas; and beware, likewise, of paying little heed to your advancing steps, or of being slow to act. Give, then, due attention to Our words, and use your best endeavours in regard thereto!

No. 59.

The *Sa-in* and *Yu-in* are abolished.

The *Gen-ro-in* and *Dai-shin-in* are founded.

The *Shikibu-riyo* is for the future attached to the Household Department.

The above is notified.

April 14th, 1875.

Signed SANJÔ SANÉYOSHI,
Prime Minister.

(Another translation, from the "Japan Mail Daily Advertiser," 16th April.)

On ascending the Imperial Throne We assembled the nobles and high officials of Our realm, and took oath before the gods to maintain the five principles, to govern in harmony with public opinion and to protect the rights of Our people.

Assisted by the sacred memory of the glorious line of Our holy ancestors and by the union of Our subjects, We have attained a slight measure of peace and tranquillity.

So short a time, however, has elapsed since the late Restoration, that many essential reforms still remain to be effected in the administration of the affairs of the Empire.

It is Our desire not to restrict Ourselves to the maintenance of the five principles which we swore to preserve, but to go still further and enlarge the circle of domestic reforms.

With this view we now establish the *Genro-in* to enact laws for the Empire, and the *Dai-shin-in* to consolidate the judicial authority of the Courts. By also assembling representatives from the various provinces of the Empire, the public mind will best be known and the public interest best consulted, and in this manner the wisest system of administration will be determined.

We hope by these means to secure the happiness of Our subjects and Our own. And while they must necessarily abandon many of their former customs, yet must they not, on the other hand, yield too impulsively to a rash desire for reform.

We desire to make you acquainted with Our wishes, and to obtain your hearty co-operation in giving to effect them.

SPIRIT OF THE JAPANESE PRESS.

Ministerial Changes.

Tôkiô Nichi Nichi Shimbun, March 26th, 1875, *No.* 77.

In the leading article of our issue of the 28th of February last,* we announced our wish to divine the conclusions formed at the meetings of Sangi at Osaka by attentively observing the evidence which would be afforded by their future conduct. Since then we have been repeatedly charged by writers in the public press (Hirata Daji, Nanto Doda, etc) with purposely staying our pen and closing our mouth in silence in so far as regards these statesmen. We were afraid that we had incurred the censure of the public by this article, but to our surprise we now find ourselves in the highly honorable position of having drawn upon us the notice of these able gentlemen and having been charged by them with so grave a responsibility. What objection can we have to responding to their invitations and admonitions? We therefore offer the following slight observations upon what has up till to-day been revealed by actual events, although the time is not yet come when we can draw our auguries from the evidences which we are awaiting.

It was not from any special reason that we refrained from commenting at the time on the return to office as Sangi of Kido and Itagaki, nor has it been any fear of these gentlemen which has restrained us. The reason was that we recognised in their return to office a familiar proceeding of the Government, and it occasioned us no surprise whatever. Resignations and re-appointments of Daijin and Sangi have been frequently made, and this practice has not commenced now for the first time. An irresponsible bystander may describe it as "making friends again," but except we knew the particulars, it is useless to attempt to draw any deep conclusions from it. Consider, for instance, the state of affairs since the revolution. Owing to differences of opinion among the Sangi, some remained shut up in their houses on the pretence of illness, others retired and went on journeys, while others sent in their resignations. All this was accompanied by no small clamour and confusion, and in the worst cases they seemed reckless of the peace of the Empire. Some statesmen took on them the part of mediators and preached concord to right and left. They planned to make both sides agree, and at times succeeded in bringing about an unity of counsel, by inducing them to make mutual concessions. At other times, however, mutual concessions have not been made, and each has persevered in wishing for the accomplishment of his own objects. On the other hand cases have not been wanting where they have mutually shut themselves up in their houses and endeavoured to bring about the submission of their opponents by obstructing public business, and such opposition has only ended with dismissals or appointments among the Sangi. We are of opinion that conditions of affairs such as the present first arose from the frequent differences of policy among the Gorôjiu and other high officers of the Tokugawa Government during the period first before its fall, when changes in the Government were finally decided by one of the members of the Government refraining from attending to his public duties. We observed these things with our own eyes, and grieved over them at the time as a great abuse in the mode of carrying on the Government. We were surprised, however, to find that even after the revolution this same grave abuse passed over along with the Governmental power to the Mikado's Government, and continues to be a common cause of complaint up to the present day. The people of Japan have been so often exposed to the mischief of changes in their high officers of state, that by long usage they have at last come to regard them as an old established custom of the government, and the only notice they take is to say "More changes!" They remain quiet, and do not wonder what will be the results of the changes, and to tell the truth, there are no particular results for them to wonder at.

It is true that Kido and Itagaki are two statesmen on whom the hopes of the nation are fixed, but still we cannot come before the public and say that we are able to divine changes in the Government from the bare fact that they have returned to office. The reason is that as we have just pointed out, our own observation has furnished us with actual instances where it was impossible to predict the future from the changes in the *personnel* of the Government.

In regard to this question, we observed that we had a presentiment that probably some change in the constitution of the Government would result from the return to office of these two statesmen Our expectations have been realized. An opening has been made for such a change. We allude to the statement in the *Chôya Shimbun* and *Hochi Shimbun* that on the 17th of last month Kido, Okubo, Itô and Itagaki were commanded to undertake the duty of making an investigation into the constitution. We are unable to ascertain positively whether this statement is or is not well-founded, but as it has appeared in these two famous newspapers, we have no doubt of its truth. We hope by and by to learn the effects of this step upon the constitution, but as no such effects have yet appeared, the time has not come when we can draw from them any conclusion.

We believe, however, that the constitution which will be the fruit of the investigations of these four statesmen will be a beginning of granting to the people of Japan a favorable opportunity for recovering their rights, and that it will contain a system in accordance with the hopes of the nation. We do not believe that it will be one of those ill-considered reforms of which we have had so many, such as changes of officials, the creation of new departments, and the division of old ones, which were idle strivings after a plausible good name, but in which the reality was disregarded. Some of our readers will ask us from what facts we draw this inference. Our proof is that from the 17th until to-day the Government have taken no steps whatever to abolish or establish any public office. They are waiting for the Report of these four statesmen, before making any change in the existing state of things. Hitherto, alas, experience has shown us our new-fledged statesmen the next day after their appointment initiating changes, framing strict rules and minute regulations, all of which, although beautifully variegated in appearance like the leopard's skin, proved, when their working was examined, to maintain unchanged the old state of things. There have even been cases where by a single ordinance much that was valuable in the old system has been rendered null.

These are what we look upon as ill-considered reforms. At present, we have as yet observed nothing of this character, and we therefore believe that the constitution now to be drawn up by the four statesmen in question will yield results, when it is put into practice, at which the nation will have reason to rejoice. To such a degree do the hopes of the nation rest upon them.

A Thanksgiving.

(Choya Shimbun.)

Rejoice our 30,000,000 of brethren and dance with joy! Give Thanksgiving to the kindness of our Mikado, for having granted to us, in the Imperial Decree of the 14th of April, the means of raising ourselves to the level of enlightenment of European and American peoples.

Japan is situated on the easternmost edge of Asia and is a neighbour of China, therefore all her customs and laws were originally derived from China, and her people are accustomed to an absolute monarchy and to live under a despotic administration. We have been perpetually humbled and have never received freedom of conscience, and such being the case have always proved unequal in power to Europe and America. It seemed, indeed, as if, like China, humiliation was to be our lot. Recently, however, the errors of our administrative system became manifest, and we have introduced such reforms as seemed advisable; but the old forms of despotism still lingered, and Japan was like a convalescent slowly recovering from a tedious illness. There are among us those who alleged that an absolute rule was a good form of Government, and that in seeking to change it our people were unnecessarily anxious. But H. M. the Mikado in his benign wisdom, penetrated with the excellent governmental systems of other peoples, has consulted with his advisers, and by the decree which we now celebrate has conferred happiness and satisfaction upon the people of his Empire.

Henceforth our nation will grow in zealousness, in power and wealth. We shall not be deemed inferior to European peoples and the lineage of our Emperor will be rendered everlasting.

TORTURE.

(Meiroku Zashi.)

There is not a greater evil under the sun than torturing men on examination. The ancient and wicked Emperors of China, such as Ketz or Chu, committed great crimes, but these were not so bad as torture, because they were committed only in person by the Emperors themselves. But torture may be inflicted by a large number of officials and cause continuous suffering to numbers of people. Though criminals are usually very common people and their deeds seem to be bold, they are arrested by the orders of the Mikado, and when so arrested they are tried before magistrates, the persons who are tried and those who try them being of very different ranks. Under these circumstances, even although men remain untortured, they are so terrified that they become beside themselves, and have none of that freedom which lawyers exhibit in talking about money stolen, lent or the like, so that the innocent are often punished. But if the innocent are tortured they will easily admit that they have been guilty of some crime, which is truly horrible.

Assistant-judge Tamano, who coincides with me in this opinion, is also desirous of abolishing torture, and says 'It would not be a task of great difficulty to make officials of the highest rank, or officers of the army and navy to confess to any crimes by means of torture." This shows that the injury done by torture is terrible. Though a person may be innocent he will finally say he is guilty because he thinks it better to die than to undergo torture!

The Himalayas are the highest mountains in the world and are situated in the centre of Asia. South and west of them is India and the Germanic race; and over the ocean westwards to America the same Germanic race. But north and east of these mountains are the Mongols and Chinese, and over the ocean again eastward there is the same race in America. Now, the Germanic race admits no torture, but the Mongolian cannot escape it. O, Himalayas! What manner of mountains are ye! Why do ye make of yourselves symbols of the distinctions of races? Why do ye make the Germanic race happy and pass by the unhappy Mongol race? Hath not God made all mankind of one flesh and blood?

In my middle age I passed through the Indian Ocean, and saw many islands inhabited by Malays, but I think they are only modified Mongolians. But they were under the power of England or Holland, and therefore not subject to torture. The Africans are a black race, but those of them under European rule escape torture. Is the question of torture, then, one of difference of race or difference of knowledge? Neither in ancient nor in modern times is there anything worse than torture. Why cannot it be abolished? It must cease or we never can claim an equal civilization with Europe and America. Nations will not form treaties on a basis of equality with us so long as the custom exists, nor will it be possible for us to acquire jurisdiction over foreigners.

扶桑耳袋

FU SO MIMI BUKURO.

A BUDGET OF JAPANESE NOTES.

On the 16th day of the first and seventh months, great numbers visit temples containing idols of Yemma—friends of the departed, anxious to relieve the souls in limbo have prayers said by the priests, and Yemma is expected to "write off" misdeeds from his ledgers in proportion to the amount of prayers paid for—so say the bonzes.*

Shaka nioraï; the founder of Buddhism who died 457 B. C. The day of his birth according to the Japanese calendar is the 4th day of the 4th month. An idol of the infant Shaka is placed in a small shrine decorated with flowers, and an infusion called *Ama-cha* is poured over the figure, a small bamboo tube being filled with it and carried home.

On the 15th of the second month, the anniversary of Shaka's death, pictures of the reclining figure of the Buddh are hung up and on these the pictures, all the saints and animals, birds and insects are portrayed as in deep grief—the cat only is omitted.† There is a story told of the priest of temple of Han-senji in Kioto, called Cho-den-sa, whose cat asked him why his race was excluded and begged that the priest would put a cat into the picture, which the priest did, his pussy being a pet and very devout. This is the only picture of the sleeping Shaka with a cat among the mourners.

The founders of the various sects are represented by idols, and are principally adored by the followers of the respective sects they founded.

Hotei is the name of a celebrated Chinese priest, who was kind to children. He is the Japanese Santa Claus, and is represented with a capacious sack gathering good things for his little friends. He is said to have eyes in the back of his head and can see round corners whether little boys and girls are good or naughty.

Jiuro jin is a little man with a tall head, also known as *Fukuroku jiu*. This is intended to mean the South Star, or *Nan kioku*.

Of the foregoing, the following seven, Bishamon, Benten, Yebisu, Daikoku, Hotei, Jiuro, Fukuoku Jiu, are the seven gods of prosperity that sail in the Takara bune, or ship of fortune, coming into port on new year's eve.

Shotokutaishi, the first son of Yome tenwo. Nichiri who came from Naka-sai, became his teacher, and he became a learned Buddhist scholar while yet a child. He was the founder of the religion in Japan and died at the age of 49. He has six names significative of his acquirements and ability.

Idols may be seen, well worn by devotees rubbing the figure and then the corresponding portions of their own bodies—this is called *Benzura Sonja*, and represents this servant of the disciples of Shaka, noted for his energy and untiring perseverance in attending to his duties. (This "transfer by friction" is an ancient idea which our professors of animal magnetism might study with profit.)

In all the figures the posture has a certain signification, and the idols are numerous, the same deity being represented in several attitudes and of various ages. The principal names have been noted, the others are divided into some scores of classes, each class containing groups of from five to forty individual idols. For instance, 7 *Kan won*, 6 *Gizo*, 33 *Dai kan won* and so on—not to mention the 500 *Rakkan* and other groups of disciples, *Bosatz*, *Shonin*, &c.

Chiu-jo-hime was the first Japanese nun, and the only woman who is commemorated by an idol. She extracted the fibres from the lotus root, and wove them with silk, to make tapestry for altars.

There are twelve idols that nearly resemble our twelve signs of the zodiac—they are of Indian origin.

There are Buddhist gods, *Bosatz*, one for each of the thirty days in a month, and corresponding Shintô *kami* Daimio jin † have been incorporated with them.

1st	Jogi bosatz ...	...Atsuta Daimio jin.
2nd	Tomio bosatz...	...Suwa Daimio jin
3rd	Toho bosatz ...	...Hiroba Daimio jin.
4th	Ahuku bosatz	...Kehi Daimio jin.
5th	Miroku bosatz	...Keta Daimio jin.
6th	Namanto bosatz	...Kashima Daimio jin.
7th	Saman bosatz	...Kitanotenjin.
8th	Yakshi bosatz	...Yebumi Daimio jin.
9th	Datsasho bosatz	...Kibune Daimio jin.
10th	Nichigetz bosatz	...Ten shoko Daimio jin.
11th	Kangi bosatz...	...Hachimangu.
12th	Nawsho bosatz	...Kamo Daimio jin.
13th	Kukuzo bosatz	...Matzno o. Daimio jin.
14th	Fugen bosatz	...Ohara Daimio jin.
15th	Amida bosatz	...Kasuga Daimio jin.
16th	Dara ni bosatz	...Hirano Daimio jin.
17th	Jijin bosatz ...	...Obiye gongen.

* There is a common saying, *Gigoku no sata kane shi dai*: Judgments of Hades depend on money—alluding to the purchase of the services of the bonzes.

† A common child's tale as to the reason of the cat being excluded from the animals that surrounded the death-bed of Shaka is this. A rat being sent for medicine for Shaka, a cat sprang out and killed the rat; consequently, before the physic could again be sent for Shaka had died, and the death is attributed to the cat's killing the rat and delaying the medicine.

The foregoing *Bosatz* and *Dai mio jin* were the gods of for the day.‡

Sen nin, Spirits that haunted the mountains.

Onie, Demons.—These evil spirits are typical of bad actions.

Ten nin, Beautiful creatures from paradise,—really good actions.

Kariyobinga, Birds of sweet song in paradise making sweet music for the saints.

Temples were by custom the resting places of travellers, especially priests, and guests were entertained, without reference to religious sect or creed.

Intermarriage and adoption frequently bring several sects into families, but this is tolerated; the temples in charge of the family grave only must not be changed, and in all grave yards are numerous tombs of people who have been born into families of different sects from that into which they were married or adopted and died in. Or the persons may of their own free will change their *Tera* to another sect and arrange to be buried in the grave-yard of the temple of the sect adopted. (This shows that there is much toleration and not a little laxity, although some sects quarrel freely.)

Hotoke is the generic term for the spirits of the departed that have become absorbed into the Nirvana which is the highest aim of the Buddhist. The divinities and household altars are usually known by this general term.

Niorai are the divinities who watch over humanity and to whom petitions must be addressed. Shaka is properly the only being that has existed on earth entitled to be called Niorai.

Bosatzu are the apostles of Shaka, and a few eminent priests of olden time, and are the chief patron saints of the various trades, virtues, views and wants of humanity.

Rakkan are the disciples of the Buddhist creed of the days of Shakka. There are the 16, the 500 and other numerous groups, all of India. They are not objects of worship, but only considered as holy men and patterns for priests especially.

The following are the purely Japanese grades of priesthood.

Ho-o is the name by which the Mikado is known if he enters the priesthood, as Uda Ten-O did, and the male children of a Mikado, who, with the exception of the heir apparent, frequently are obliged to take holy orders to prevent family feuds, were named Niudo Shin-O, or Ho Shin-O. The female children Niudo-Nio-O, and those Niudo who represented the Mikado were called Mia; for instance, there was formerly always one residing at Ouyeno in Yedo, the others were always in Kioto.

Monseki are the chief priests of the sects, and are appointed by the Mikado. As the Monto priests marry, the position remains in the family; if no children are born to them, adoption is resorted to. In the other sects marriage being forbidden, the place is filled by adoption. The Nichiren sect have no *monseki*. Common priests cannot attain this rank, members of the royal family being always appointed. The son or adopted successor is called *Shin Monseki*, (*shin* new; *mon*, gate; *seki*, mark), the successor to the royal patent as chief priest. If the *monseki* retires in favour of his successor, he is called *monshiu*, or *inkio* (recluse).

The teachers of the Emperor, if he enters the priesthood, are entitled to call themselves *Dai shi*, *Kokushi* or *Kai-shi* (the great kingdom, or the commandments-instructors.) The founders of *Shin* or sects, are called *Kaisan* (expounder) and also *So shi* (first teacher).

Sonja (reverend persons) is frequently used in speaking of learned and holy men past and present.

Dai-sojo is the highest title of rank held by the priesthood and is equal to the temporal rank *Chiu-ni-gon*. The next three grades in a descending order are *Gon-dai-so-ji*, *Dai-so-dzu* and *Gon-dai-sodzu*.

Shonin, or *hijiri-bito*, (a sage, a learned theologian) to whom the followers of his sect are indebted for much knowledge and extension of their creed.

Sho-nin, or most exalted; generally used when speaking of the founder or leader of a sect, especially when speaking of the *Son* or idol.

O-sho: the general term for superior priests.

Inge is the local chief of a temple (*Tera* or *In*) this grade permits of a special dress being worn. Priests in charge of a temples of inferior grades are called *hojo*, *jiu-jie*, *in-jiu*, *anshin* &c. according to circumstances. The inferior grades will be noticed hereafter.

Temples are generally built with money collected by the priest who afterwards takes possession of it. Some such as *Sen-yu-ji* have been built at the Mikado's expense; by the Tokugawa Shoguns at Nikko, the burial place of the first of the line, Iyeyasu or Gongen; at Kan ye jie of Ouyeno, both held by priests of the Jendai shin; also Dzo-jo-jie of Shiba, the priests of the Jan-do-shin. Daimios erected numerous temples at these three places. Temples attached to grave-yards are supported by the families who have relatives or friends buried there from the prince to the peasant.

Until the last few years the priests drew large revenues from the Government and from high officials;—latterly they have been thrown on their own resources and become beggars.

The "monuments" of our country are here represented by little tablets on shelves in the temple building, before which offerings of food are made yearly, monthly or daily, in a style according to the donations to the priests for this purpose.

The idols on the altar depend upon the sect and fancy of the chief priest, and large temples are frequently surrounded with a cluster of smaller buildings containing special divinities erected by the devout as offsprings, when petitioning special favours in performance of some vow or as thanksgivings.

There are temples to which grave-yards are not attached. Such as for instance *Daishi* at Kawasaki; *Fudo* at Meguro; *Arai no yakie-shi*, *Awashima* and *Kanwon* at Asakusa.

The first visit to a temple is made sometimes after the O-miya Mairie, and before the infants are taken to friends' houses, and on every new year of childhood and on the anniversary of the death of near relatives. Temples are visited in the grave-yard of which relatives have been buried,—if adopted or married into another family the temples and graves of the new relations must be visited as well. A newly married couple go to the husband's temple and graves together, and if the wife's family contains no males able to attend to her family tombs, the husband attends to them as well as to those of his own family. Nobles and high officials did not perform these rites at the same time as their wives.

Setzupo, the sermons of the Nichiren; *Hodan*, those of the Ekoshiu; *Dangi* those of Shingon and the others, are attended by both sexes of all ages and classes, except the aristocracy. Revivals, or *Kai-cho*, are common. They resemble the "*pattern fairs*" of Ireland, where the "patron saint" day gave excuse for a merry time.

Certain celebrated idols are frequently carried from place to place, and the temple chosen as the temporary abode becomes a centre of attraction. Some temples only display their treasures periodically, their *rei-ho*, relics such as *shaeri*, &c. or idols that work miracles. Occasional visitors can see these by money offerings to the priests. Temples and the grounds surrounding them are usually the playgrounds of the children of the neighbourhood, who do not seem to show much reverence to the holy places, nor to be much awed by the grim idols; nor are they troubled by the priests, unless some specially mischievous act is committed. Offerings of stone or metal lanterns, pictures, rice, *saké* and numerous other articles are brought to the temple by visitors and petitioners.

Kuji (nine figures). The charm used by many per-

‡ Of late reforms have abolished the term *Dai mio jin*, or great enlightened spirits, as applied to the Japanese or Sinto Kami.

sons to protect themselves from harm. The fingers of the right hand are held in certain ways, and figures described in the air, then both hands joined, the fingers interlocked; after certain numerous set modes called *In wo musuba*, after which hot iron may be touched without injury, a naked sword edge may be stood upon, or robbers become rigid as if well bound with the thief-catchers' ropes.

OBSERVATIONS ON THE CLIMATE AT NAGASAKI DURING THE YEAR 1872.

By Dr. Geerts,

Read before the Asiatic Society of Japan on the 17th March, 1875.

The climate of Nagasaki is better known than that of any other place in Japan, because we have the most complete meteorological records of it. The observations formerly made at Desima by order of the Dutch Government and the continuation of these observations by ourselves extend over a period of twenty years.

Professor F. J. Stamkart calculated from the journal 1st January, 1845, to September, 1868, a first series of averages. The results of this elaborated report can be found in the Annals of the Royal Academy of the Netherlands (*Verhandelingen van het koninklijk Nederlandsch Institut van Wetenschappen*).

A second series of averages was calculated by the Royal Meteorological Institute of *Utrecht*, out of the journal kept at Desima by different physicians of the factory. These observations run down to September, 1855. The results together with an excellent review are published in the Annals of the said Institute over the years 1855 and 1856.

A third series calculated from the journal, kept at Desima by *Pompe van Meerdervoort*, comprises the years 1857—1862, and was published at Desima in 1862.

Out of these three series a very valuable review was made by *J. von Gogh*, Captain R. N. Navy, and published in the Annals of the Royal Academy of Amsterdam and also in the Annals of the Meteorological Institute of *Utrecht*, for the year 1866, (*Overzicht van de heerschende winden en dearby waargenomen barometerstanden te Nagasaki*).

In 1871 I received the necessary instruments for instituting meteorological observations and of these erected a station at the (Japanese Government) school of Nagasaki, and commenced my journal on the 1st November of that year, a series of observations I have now the honour to present to the Asiatic Society for two months during 1871 and for the whole of the year 1872, and these will be followed in a short time, by the results for 1873. Although my journal has been kept according to the rules of the international congress for meteorology in millimeters and centigrade degrees, I have thought it advisable to send to the Society the results reduced to English inches and Fahrenheit degrees, because it is still a fact, although very much to be regretted, that the scientific metric system and the centigrade thermometer have found up to the present time but few adherents among the public of England and America.

Before speaking of my observations, I may here mention the desirability that other observers in Japan should keep their journals according to the rules of the Congress held last year at Vienna under the presidency of Professor Buys Ballot of Utrecht. At the next Congress of international meteorologists which will be held in Utrecht in the month of September of this year, deliberation on many other points will be held having the object of promoting unity in observing and registering.

I am indebted to my learned friend Professor Buys Ballot for the communication of the process-verbal of the Congress, and will mention here the general rules adopted by the permanent Committee, for the sake of other observers in Japan, who perhaps would like to know them. These rules are: 1st Conformity of instruments and proved accuracy of the same; 2nd Directions of wind to register with English initials N. NNE. NE. etc; 3rd averages of clouds with the numbers 0-10 (0=a perfect bright sky; 10=a thick cloudy heaven); 4th, The year commences with 1st January; the days commence at midnight; the hours are marked 0-12 A.M and 0-12 P.M. 5th, it is recommended to calculate the five days averages of *temperature* adopted by Dove. 6th, after each Lustrum, commencing with the year 5 n + 1 the results of observations of each station are published by the Congress in the same manner. 7th, The centigrade degrees are to be used, at least in mentioning the results of the barometer, (inches of Paris to be wholly abandoned).

I deem it unnecessary to prove the utility of adopting these rules, because it must be evident that only by unity in registering and observing only we can satisfactorily add to our knowledge of the great atmospheric movements which take place over the whole globe.

In June, 1873 the Superintendent of the Danish Telegraph Company made an arrangement with me and other gentlemen in Hongkong, Shanghai and Amoy to transmit daily by cable the following observations, viz.: reading of the barometer and the thermometer attached, direction of wind, force of wind, dry and wet thermometer, state of the weather, hours of rain, quantity of rain. These telegraphic records have been published at the telegraph station at each of the places every day at noon since July, 1873. We have adopted English inches and Fahrenheit degrees in their publication, because they are designed for the use of navigators in these waters, and they are chiefly English and Americans, who are seldom acquainted with the metrical system. It is much to be desired that Yokohama or Yedo should take a part in forming the telegraphic meteorological returns, and that the Meteorological Congress should find some means of financial aid towards the recording and transmission of these observations.

The present observers on the China and Japan coast have all taken up their work without material profit or proper assistance. The latter is absolutely necessary if there is to be a perfect regularity in observing. Great credit is due to the Great Northern Telegraph Company, and its Director M. Dreyer, for the care with which they give their disinterested aid for the advancement of the meteorological knowledge of the China and Japan coast.

As I have already mentioned, these observations are made at the Physical School in Nagasaki, and the point of observation is 650 meters distant E.S.E. from the former place of observation at Desima. The reservoir of the barometer is placed 37 metres above the medium level of the sea, which height was determined by myself by levelling.

The hours of observations are 7 A.M., 9 A.M., 12 M., 3 P.M. and 6 P.M. I was obliged to choose these hours, because I had to bring them into accord with my other daily occupations.

All observations are made with the same instruments, the correctness of which were before exactly determined. The position of the instruments remained unchanged.

The direction of wind is given in true bearings (not magnetic). The magnetic deviation was determined by me on the 25th September 1871 with a magnetometer by Gauss. I found it to be 2 degrees 37 min. W.

The Anemometrical degrees are those of Admiral Beaufort with some slight alterations.

0	= Calm.
1, 2, 3	= Light breezes.
4, 5	= Moderate breeze.
6, 7	= Moderate wind.
8	= Strong wind.
9	= Very strong wind.
10	= Storm.
11	= Typhoon.
12	= All destroying Typhoon.

The Barometer is a standard one of the Meteorological Institute with a vernier to read to tenth parts of millimeters, and the thermometer reads to tenth parts of centigrade degrees.

No fire is ever placed in the room in which the instrument is fixed, and the direct sunlight has no access to it.

All barometical numbers in these tables are *corrected* to the freezing point (32 degrees Fahrenheit) and the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

evel of the sea. Correction for capacity and capillarity has been made by the placing and division of the scale.

The thermometers were all examined in snow on the 13th December 1870. All numbers of temperature are corrected. The psychrometer hangs on the N. N. W. side of the institution in the open air, but perfectly protected against direct sunlight.

Brightness of the sky.—In these tables we have adopted the old style, that is 0 represents a very cloudy dark sky ; and 10 a wholly cloudless atmosphere.

Rainmeter. This instrument stands at 46 meters above the level of the sea on the platform, which is erected on the roof of the School. At the same place the weather-cock with wind-guage attached is measured every 24 hours.

Results.

Direction and force of wind.

The experience and journals of many seamen have long since shewn that, in the China sea, from the island of Formosa, along the China coast up to the Japanese Archipelago, two monsoons of different duration prevail during the year. These are the S.W. monsoon from June till September, and the N.E. monsoon from October till May.

Nagasaki is decidedly situated within the regions of these monsoons, but there is a slight variation in the direction of the north-east monsoon at that place. During June, July and August the S.W. monsoon prevails at Nagasaki perfectly in the same direction as in the China sea; the N.E. monsoon, however, turns more towards the N. and N.N.W., a fact chiefly caused by the geographical situation of the place, which is wholly surrounded by hills of from 400 to 1,400 feet height, except between the points of S.W. and S.S.W.

As is the case in China sea, we find that in Nagasaki the north monsoon (for here it is more correct to speak of it as a north and not a N.E. monsoon) has more than twice as long a duration as the S.W. wind. September and sometimes the first days of October are the periods at which the S.W. changes to the North monsoon, whilst the change from the N. to the S.W. wind takes place much more gradually during the two month's of April and May (and sometimes in the last days of March.) South and south-easterly winds are comparatively rare in Nagasaki, although it must be said that these winds are the true rain-carriers for these place, as well as for a large part of the east coast of the Japan islands. It is nearly always sure that there will be rain, if E. and S.E. winds prevail for one day or longer. This fact is easily explained. The S. E. winds, which have travelled over the warmer parts of the Pacific Ocean must necessarily get saturated and yield their water, when they are cooled by the vegetation on the Japanese coast in the same manner as is the case with the S.E. wind on the west coas', of Europe.

In regard to the prevailing winds and the height of the barometer, the year may be divided into two monsoon periods, and in order to give a simple review of these periods I haveconstructed Tables I 1871 and Tablbes, I. II. III. for 1873. Theese figuresin these show how many times in each hndred observations the wind has been N. E. and S. W. and so on. The length of the triangle outside the circle gives, by com-parison with the scale, the relative number of winds, which have prevailed during each period. If for instance the N wind only should have prevailed in the month of December 1871 (Table I. 1871), the radius N. would have had the length of the whole scale (100). But the N. wind blew only 23. 2 times in each hundred observations, and therefore the length of the radius is 23. 2 parts of the scale. We have placed the numbers expressing the per-centage of wind directions inside the circle of the diagram.

It can immediately be seen from these diagrams that northerly winds have prevailed during the months of November and December, 71.

The wind-rose on Table I. 1872, shew the direction and percentage of winds (a.) over the whole year, 1872, (b.) over the months April, May and September, (c.) over the time of the S.W. monsoon in June, July and August, and (d.) over the period of the N. monsoon, October, November December, January, February and March.

The first diagram shows that N., S.W., N.E., N.W. winds are the most prevailing during the whole year, whilst S., S.S.E., S.E., and E. rare much more rare.

The following diagram shows how the changing months April, May and September, Northerly N.E. and S.W. winds are the most prevalent, and also shews that N. and N.E. winds have during these months a proponderance over the S.W. wind. The wind diagram c. shows clearly how the S.W. monsoon prevails in June, July and August, whilst diagram d. explains the N. monsoon.

Table II. contains diagrams made up from 1,000 observations formerly made at Desima, during a period of 15 years. Although tl ey agree in the main with our diagrams over the same months of the year, 1872, they differ slightly in some subordinate points.

They are however not very important, because the diagrams agree in the main points.

Table III. 1872, contains the diagrams for each month of the year 1872, and can easily be understood after the explanations we have already given.

Table V shows that the highest barometer prevails in the coldest month's January and February when the atmosphere has its maximum density, whilst the lowest barometer occurs in August, during the prevalence of the S.W. monsoon.

It is however a very remarkable fact, not easily to be explained, that during June, July and August and at the time of the S.W. monsoon, the barometer is higher during S.W. winds and the lowest with the northerly and N.E. winds. In the winter, when the N. monsoon prevails, we see the highest barometer, quite as in other countries, with N.N.E. and N.W. winds, and the lowest with S.W. winds, when the monsoon wind is disturbed. Thus we find that in each monsoon period the highest pressure of the atmosphere exists ***when the relative monsoon wind reigns freely without disturbance.***

The greatest difference of barometer in 1872 was 1.29 inch. The fluctuations or differences between lowest and highest barometer are the following:—

January	0.73
February	0.66
March	0.74
April	0.61
May	0.86
June	0.39
July	0.71
August	0.60
September	0.38
October	0.57
November	0.74
December	0.36

It will be seen that the greatest fluctuation took place in May (0.86).

The highest barometer of the year was on the 19th February = 30.52.

The lowest on the 31st July = 29.23.

The temperature of Nagasaki is largely affected by the warm current, *Kuro shiwo* or "black stream,' 'which runs as another gulf stream along the whole east coast of Japan, and causes chiefly the much milder climate of the eastern coast as compared with that on the west coast. The meteorological *data* which have been procured on the west coast of Japan are unfortunately very few. It is, however, certain that a most decided difference of temperature is to be observed between places on the east and west coast of Japan. It would be of great value to have an accurate journal of one or more places on the west coast, to show the very great influence of the Japanese Gulf stream.

Although in regard to direction of wind the year in Nagasaki is divided into two monsoon periods, it is not so in regard to the temperature of that place. The thermometer shews us that the year must be divided into *four* nearly equal seasons.

The lowest temperature in the open air (shade) was in 1872 on the 4th February= 25.9 degrees Fahrenheit, and the highest on the 2nd and 3rd August = 93.0 degrees Fahrenheit.

The coldest month is January with the medium temperature of 41.2 ; the warmest month is August with the medium temperature 82.3. In the two months July and August the heat is quite tropical (81.9 and 82.3.) Inside

Digitized by Google UNIVERSITY OF CALIFORNIA

the house the thermometer in 1872 never fell to the freezing point. The lowest temperature was on the 23rd January = 35.6. The highest on the 2nd August = 89.6.

The number of rainy days in 1872 was 122 or exactly one-third of the 366 days of the year. The quantity of rain over the whole year was 47.71 inches, or about 2.5 times as much as falls in London during one year. This year was characterized by a very short rainy season, which period ordinarily commences in the beginning or middle of June. In 1872 the greatest number of rainy days occurred in April, it having 15 rainy days with a fall of 11.04 inches. Next to April comes June with 13 rainy days and 5.66 inches of fall, then follows August with 12 rainy days and 5.73 inches of fall. October was in 1872 the dryest month, it having only 4 rainy days and 0.95 inch of fall.

December gives the largest number of misty days 19.1, although it must be observed that mist in Nagasaki exists chiefly in the morning and evening. Mist very seldom prevails during a whole day. Snow only fell in 1872 in January and February together on twelve different days.

Thunder and lightning *are rare* in Nagasaki. The year 1872, however, embraced more thunder days than is usual. The number of thunder days during the year was sixteen; April alone had four.

The brighest month of the whole year was October (7.6) and the most cloudy month was April (4.5). In October and November the greatest number of cloudy days was observed (together 10).

Only three earthquakes were felt, and particular care was taken in observing them. None of the earthquakes were very severe, and none of these caused any accident.

The number of storms in, 1872 was 19. April gives the largest number (5), and then March with 4 storms. In September, October, November, January and February storms took place in 1872.

In Nagasaki no typhoon occurred during 1872.

The relative humidity was greatest in April (8), and after that July (79). The least humidity occurred in November (66) October (67) and February (67).

A SARTORIAL SPECULATION.

"My Dear Dick," said Curran to a Dublin Counsellor, celebrated for the duskiness of his linen, "you cannot tell how "puzzled we all are to find out where you buy your dirty shirts." It is somewhat remarkable that the 'intelligent foreigner' in Japan should be exposed to a similarly perplexing phenomenon in his travels in the capital and elsewhere, and that his inherited sense of cleanliness should be somewhat disturbed by its unexplained frequency. 'Where,' we may imagine him to ask, 'does this ingenious and civilisation-loving race procure its 'ruffled and dingy under-linen? From Marco Polo to 'Kämpfer and down to the intelligent Mossman they are des-'cribed as a people who love hot water and who bathe, as 'Gibbon says, with 'oriental scrupulosity.' Their houses are 'models of neatness, their cooking utensils bespeak an almost 'Dutch sense of cleanliness and their meals are prepared with 'appetising delicacy; even their ancient religion accompanied 'the exercise of its chief rites with acts of purification. True, 'a suspicious line of mourning which should not be there 'occasionally decorates their finger tips, but this may be ex-'plained by the omission of an otherwise bounteous Providence 'to associate the blessing of soap with its free-handed gift of 'its partner water. I see many shops in which the despised 'and cast-off appurtenance of the foreigner is exposed to the 'contempt of the scornful—old furniture, old coats and nether 'gear, and an amazing display of old boots—but I have as yet 'met with no depôt for soiled and rumpled shirts. They adore 'our hats and boots, admire our "Norfolks" and pantaloons, 'but they utterly fail to appreciate the advantages of a spotless 'bosom, or, in its absence in the original, hide the deficiency 'beneath the hypocrisy of an apologetic "dickey." I give them 'up,' we think we hear him say, 'they are an enigma and, after 'all, *Darus sum, non Edipus.*

The process of social progress is marked, we are told by Herbert Spencer, by an advance from the complex to the simple, but we must leave it to [illegible] to reconcile with his theory the eccentric march of Japanese civilisation. The spectacle of a people forbearing to avail themselves of their natural resources or national skill is by no means uncommon. The Gileadites thought very meanly of balm, the natives of Ireland do not exercise upon each other the soothing art for which their island is in repute according to English accounts, and the exotic population of Leicester Square—home of every patriot under heaven and of most of the French laundresses—exhibit in their persons the moderation of their desire for soap and water and their contempt for the salutary art which is practised on all sides of them.

G.

ASIATIC SOCIETY OF JAPAN.

The Regular April Meeting of the Society was held on Wednesday, the 14th, at 5 p.m. at the Imperial College, Yedo, in the Reception Room, which had been courteously tendered to the Society for the purpose by the Director, Y. Hatakeyama Esq.

The chair was taken by Prof. Murray Ph. D. who congratulated the members on the fact of holding a meeting of such a Society, for the first time, at the capital of an empire so progressive as that of Japan.

After reading the minutes of the last Meeting, the Society announced, as new members, Mr. Charles H. Dallas; Mons. Conil, and Professors, R. W. Atkinson, R. Smith, and D. Marshall. The donation of a case of Butterflies by H. Pryer Esq., was also announced, as also the receipt of Journals of the Bombay Branch of the Royal Asiatic Society.

A motion was made by Dr. Murray and seconded by Dr. Antisell to the effect.

"That the Council of the Society be requested to make arrangements for giving a reception to the officers, and especially the Scientific Corps, of H.M.S. *Challenger.*"

In the absence of the writer, the Hon. F. R. Plunkett read a paper "Notes of a Journey from Awomori to Niigata, and a Visit to the mines of Sado," by J. H. Gubbins, Esq.

Mr. Dallas spoke of the dialects heard in the region referred to in the paper as being very unlike the language spoken at Tokio; and promised to present an account of the Yonezawa dialect soon.

Dr. Antisell remarked that the description of the mountain ranges given in the paper was interesting. Although not acquainted with the region, yet he recognised in these ranges some similarity to the mountain systems of Yedo and farther north. In the northern part of the Empire there were two distinct ranges of hills; one coming directly from the north, a continuation of the chain in Karafto, which, after passing down south along the west shore of Yeso, is found in Dowa and farther South. The second system of mountains is that entering Yeso from the Aleutian isles and Kamschatka running N. 20—25 E. and S. 20—25 W. and crossing in places the first described system: it is from the existence and crossing of these chains that Yeso derives its quadrangular form. These two systems have very different mineral contents for their axes, the first has essentially a granitic afelspathic axis, produced perhaps by shrinkage, and is slow of decomposition of its minerals forming their soils: the second has an axis plutonic or volcanic yielding basalts, traps, and diorites, decomposing readily, forming deep and rich soils; hence the different kinds of vegetation described by the writer as occurring on the slopes of the two chains. Where the two chains cross also there is found a form of country closed up in the North and East by hills and the valley openings to the South and West. This volcanic chain is secondary in the district described, but in Yeso, and again in Kiusiu island, it attains great prominence.

In reply to a question of Mr. Schenk Dr. Antisell also stated that the method of getting the gold out of the quartz, at the Sado mines was by stamping—as in California—only that wooden stamps were used.

Reference having been made by Prof. Smith to the mode of getting rid of water, the Secretary stated that this, and the other processes, were exhibited in the model of the Sado mine which is in the Society's Museum at Yokohama.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr. Syle questioned whether the low rate of wages mentioned in the paper—from 2½ to 4 sen a day—could include the labourer's food; but Mr. Dallas supposed it might do so, because, in that region, coolies might be hired at 10 sen per diem; and only 5 rios a month were paid for school-teachers. In reply to Mr. Knipping he also stated that the native maps found in those parts, though not drawn to scale, were good and useful.

Dr. Murray remarked on the excellence of maps he had seen in and about Kioto; and on the ingenious method employed of giving the heights of mountains by projecting an elevation of them in their site on the map.

As to the longitude marked on such maps, some gave it from Yedo and some from Kioto.

The thanks of the Society were returned to Mr. Gubbins for his paper, and to Mr. Plunkett for his kindness in reading it; and the Secretary was instructed to convey to the authorities of the College the Society's best acknowledgements for the courteous manner in which the use of the room where the Meeting was held, had been tendered.

The Meeting then separated.

Correspondence.

THE LATE MR. MARGARY.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 16th April, 1875.

SIR,—The death of Mr. Margary is greatly to be deplored, not only for the attendant circumstances, but also for the loss the English consular service has sustained by the untimely removal of one of its most promising members.

It appears to me that this sad occurrence would, in all human probability, have been prevented, if the authorities who organized the Expedition had shown more knowledge of the character of the people with whom its members would be brought into contact. The Expedition was formed for exploring a route from Burmah into the western provinces of China, but as the route to Bhamo as far as the frontier of Yunnan was perfectly well known, it is remarkable that the organization of the Expedition was not entrusted to the English authorities in Peking. Besides Mr. Ney Elias and the late Mr. Margary, who fortunately met the Expedition, I am unaware that there were any persons composing it who possessed experience of the country they were about to explore. We have ample evidence in the history of the past thirty years that the Chinese are essentially and inherently cowardly and treacherous, and as they cannot see, or refuse to acknowledge, the validity of the reason which actuates the Western nations, an exhibition of force is the only argument by which they can be persuaded. Now the obvious cause of the failure of the exploring parties hitherto sent has been that they were not supported by a sufficient force. Lord Elgin in 1858 said that with 300 men he could march through the length and breadth of China. This was no idle boast, and what Lord Elgin said in 1858 is without doubt true to-day. The fact that the late Mr Margary succeeded in reaching Burmah, travelling alone, proves that he possessed courage and determination, and that he was fortunate in not meeting an obstructive mandarin who could instigate the people at any moment to force him to turn back.

The defeat of this exploring party is therefore to be lamented in many ways, and is entirely attributable to lack of prudent organization and the exhibition of sufficient force. With the result of the late American expedition to Corea before us, and the manner in which this was treated by the Chinese, it is evident that the report of the defeat of this party will be magnified all over China. It therefore is incumbent on the English Government to lose no time in organizing an exploring party to complete successfully the work, after the misdeeds to which Mr. Margary has fallen a victim have been punished.

The English representative in Peking, distinguished as he is by such a thorough knowledge of China and her people, is certainly the man who should have organised such an Expedition. It is quite possible that if Mr. Wade had had the arrangement of it, he would have preferred to let the expedition start from the Yang-tze provinces, and it would probably have achieved its object backed by the sanction of the Authorities nearer to the capital, and, with this influence, have overcome the obstructions which have proved fatal to it in moving from the other direction.

I am, Sir,

Your obedient Servant,

J. P.

Law & Police.

H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Tuesday, 13th April, 1875.

ALICE STRANDBERG v. RICHARD JOHNSON.

This was an action to recover the sum of $10.

Defendant pleaded that he knew nothing about it, and did not owe the money, as alleged by plaintiff.

Plaintiff, sworn, stated that about 18 months ago defendant came to her house, and ordered refreshments. He tendered a $10 gold coin in payment, and she gave him $9.72 change. Defendant, however, had picked up the gold coin, and put it in his pocked; he then went on board his ship. He came ashore to her house the next day, and said he had found the gold coin in his pocket, but had left it on board. He promised to send it on shore to her place, but never did so.

Defendant had no questions to ask.

Plaintiff called John Crosby, sworn: About 18 months ago he had gone to the plaintiff's house, and she told him defendant had taken a $10 gold piece from her place. Saw defendant afterwards, and he said he had "done" plaintiff out of $10. About six days ago plaintiff asked defendant for the $10, and he did not deny having taken it. He (witness) was a teacher.

Cross examined by defendant: He (defendant) told him this (about taking the coin) about 18 months ago. He did not see defendant take the coin. He was not present on that occasion.

Defendant sworn. Is an engineer. Had not been employed for the past seven months. He had been Yokohama about 18 or 20 months ago when he worked for Whitfield & Dowson. He came from Kobe about 8 days ago by the Japanese mail. He had never been in a Court before in his life. He did not owe the money. He and a lot of other fellows had been "shaking" for drinks and dollars in plaintiff's house about a year and a half ago. Plaintiff at the time complained that she had lost $10. He offered to pay $5 or half of the loss, to help to make it up. There was gambling going on at the time for dollars.

Plaintiff denied that gambling had taken place.

Defendant: "I am on my solid oath. Do you think I would tell a lie about $10?"

His Honor said plaintiff ought to have communicated the affair to the Consulate at the time, and not take proceedings after a year and a half had elapsed. There was no evidence to show that defendant had taken the $10. Verdict for defendant.

Friday, 16th Aprill, 1875.

W. WATSON & Co *vs.* A. M. SYMON.

Claim for $8 76, for goods sold and delivered to defendant.

Defendant, in answer, admitted his liability, and stated that he was willing to pay the amount, provided plaintiffs would deliver up to him one bedstead he had bought from plaintiffs for $14 36 whilst in their employ. That was the cost price of the article in London with 10 per cent. added. The same bedsteads in the store were marked $30. He was willing, of course, to pay for the bedstead too; but since he had left plaintiffs' employment they refused to give it up to him, though he had offered to pay for it, together with present amount claimed. He could get more than $14·36 for it, so he desired to get possession of it. On plaintiffs refusing to deliver the bedstead, he refused to pay the present claim.

J. A. Stewart, who appeared for Watson & Co., was then sworn. In December last year he gave defendant notice to leave. At that time he asked defendant to pay for the bedstead, but he said he had no money. He then suggested to defendant that the bedstead should be returned into stock; this he agreed to, and he was credited with its return. Defendant had never paid for the bedstead. He had sent his collector to defendant many times to get paid the account now sued for, but defendant always said he had no money.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Defendant, sworn, stated that he could get about $35 for the bedstead. He denied having agreed that it should be taken back into stock. He was willing to take delivery and pay for it, also to pay the present claim.

His Honour took plaintiffs' view of the case, and gave verdict for the full amount claimed—$8.76, and costs.

U. S. CONSULAR COURT.

Before Gen. T. B. Van Buren, Consul-General,
Friday, April 16 1875.

Pacific Mail S. S. Co. *vs.* R. W. Irwin.

This was a claim for $1,500, and interest.

Mr. F. V. Dickins appeared for plaintiffs, and Mr. G P. Ness, for defendant.

It appeared by plaintiff's petition that on the 4th September 1874, the defendant and R. M. Brown gave a bond for $1,500, as security for Richard M. Bevell (now deceased), in an action then pending in the U. S. Court here between the Pacific Mail S. S. Co. and the then defendants, R. M. Bevell. A few days after this had been done R. M. Bevell committed suicide. The company then continued the action against Mr. Sumner Hill, the administrator to deceased's estate, and obtained a judgment in their favour, but the claim was not satisfied by the estate, and the company then asked R. W. Irwin to pay the $1,500 security he had given for deceased, but this he refused to do; hence the present suit.

Mr. Ness, defendant's counsel, filed a demurrer to the petition, stating that no cause of action was shown, as the deceased had not failed to render himself liable to any order the Court might make, and that his death released the present defendant from all liability in the matter.

After very considerable argument on both sides his Honour dismissed the petition, on the grounds that there was not sufficient cause for action contained in it, and also because no action had been, or could have been, filed against deceased. Therefore the defendant was not bound by his bail. The question of costs was reserved.

LORD MACAULAY ON JOHNSON.

(Pall Mall Gazette.)

It is worth while from time to time to take some portion of the work of a great historian, and to examine it with a minute care which could not possibly be extended to all the volumes which he has written. There are few men whose researches may have equalled his in all their extent, though there will be many who, on some one point or other on which he has writen, possess a knowledge certainly not inferior to his, and often, indeed, not a little superior. They can test the accuracy of his workmanship on one point, and can thereby infer how far he is to be trusted where they have not their own previous knowledge by which to judge, but only his statements on which to rely. Few men among historians have described more characters than Lord Macaulay. In the number and variety of the men and women he has drawn, and in the brilliancy of the execution, he with his pen equals the work that Sir Joshua Reynolds did with the brush. It has often been made a reproach to him that he exaggerated both vices and virtues alike, taking care, however, that the "Whig dogs" should this time have the best of it. To follow him in each one of the minute likenesses he draws would task a man who could rival him in the vast stores of knowledge he had ever at hand; and where such a one is to be found we know not. He has, however, described many a man whose life can be readily studied by anybody who is willing to take the trouble. We propose on the present occasion to consider some small portion of his celebrated article on Johnson. The space at our disposal does not permit us to consider his character of Johnson as a whole; we shall only attempt to prove such an inaccuracy in details as should render us cautious of following his guidance when we have only his authority on which to rely.

In writing on that curious though quite intelligible mixture of credulity and incredulity which characterized Johnson, Macaulay says:—

'Johnson was in the habit of sifting with extreme severity the evidence for all stories which were merely old. But when they were not only odd but miraculous his severity relaxed. He began to be credulous precisely at the point where the most credulous people begin to be sceptical. . . . He once said, half jestingly we suppose, that for six months he refused to credit the fact of the earthquake at Lisbon, and that he still believed the extent of the calamity to be greatly exaggerated. . . . [illegible] with a grave face how old Mr. Cave of St. John's-gate saw a ghost, and how this ghost was something of a shadowy being. He went himself on a ghost-hunt to Cock-lane, and was angry with John Wesley for not following up another scent of the same kind with proper spirit and perseverance.'

Now before we consider the misrepresentations contained in the last two paragraphs we will first examine into Johnson's general belief in apparitions. Boswell, in writing about the appearance of departed spirits, states that it is "a doctrine which it is a mistake to suppose that Johnson himself ever positively held." Johnson himself said, in speaking of apparitions, "A total disbelief of them is adverse to the opinion of the existence of the soul between death and the last day; the question simply is whether departed spirits have the power of making themselves perceptible to us. A man who thinks he has seen an apparition can only be convinced himself; his authority will not convince another, and his conviction, if rational, must be founded on being told something which cannot be known but by supernatural means." In another passage he said, in considering whether there had ever been an instance of the spirit of any person appearing after death, "All argument is against it, but all belief is for it." In fact, his state of mind was not an unnatural one for a man who had a firm belief in another world. If we have an existence after death, it is surely only negative evidence which can disprove the existence of apparitions. If we still exist somewhere after death, there is no *à priori* impossibility of our existing on the earth. Johnson, indeed, was certainly likely to have admitted general evidence in proof of the appearance of a ghost which many men would have at once and rightly rejected. When, however, there was a possibility of testing any particular piece of evidence, he would have been the first to sift it with the utmost severity. This, indeed, he wanted John Wesley to do; and he was angry with him, not for not following up the scent with proper spirit and perseverance as Macaulay says, but for believing in a ghost story without proper grounds. It is necessary to quote the whole passage from Boswell, so that our readers may see how strangely Macaulay has perverted it:—

Of John Wesley he said, "He can talk well on any subject: "Pray, sir, what has he made of his story of a ghost?" Johnson: "Why, sir, he believes it, but not on sufficient authority. He did not take time enough to examine the girl. It was at Newcastle where the ghost was said to have appeared to a young woman several times, mentioning something about the right to an old house; advising application to be made to an attorney, which was done; and at the same time saying the attorney would do nothing, which proved to be the fact. 'This,' says John, 'is a proof that a ghost knows our thoughts.' Now (laughing) it is not necessary to know our thoughts to tell that an attorney will sometimes do nothing. Charles Wesley, who is a more stationary man, does not believe the story. I am sorry that John did not take more pains to inquire into the evidence for it.' Miss Seward (with an incredulous smile): 'Yes, madam. This is a question which, after five thousand years, is yet undecided; a question, whether in theology or philosophy, one of the most important that can come before the human understanding.'"

We may, indeed, wonder that a man of Johnson's vigorous intellect should have refused to accept the general evidence against apparitions, which was strong enough even in his day. In the case of John Wesley's ghost, however, he was anything but credulous. In fact, as is shown by another passage, it was Boswell, and not Johnson who wanted to follow up the scent. Boswell says, "Mr. Wesley believed it, but Johnson did not give it credit. I was, however, desirous to examine the question closely."

The account Macaulay gives of the ghost that Cave was said to have seen, though not so inaccurate, is still not fair. Boswell writes:—"Talking of ghosts, he said he knew one friend who was an honest man and a sensible man, who told him he had seen a ghost; old Mr. Edward Cave, the printer at St. John's-gate. He said Mr. Cave did not like to talk of it, and seemed to be in great horror whenever it was mentioned. Boswell: 'Pray, sir, what did he say was the appearance?' Johnson: 'Why, sir, something of a shadowy being.'" Macaulay says, "he related with a grave face how old Mr. Cave saw a ghost." Of the gravity of his face we are told nothing, but what he related was not what old Mr. Cave saw, but what old Mr. Cave said he saw. Well might Johnson say, "Accustom your children constantly to a strict attention to truth even in the most minute particulars; if a thing happened at one window, and they, when relating it, say that it happened at another, do not let it pass, but instantly check them; you do not know where deviation from truth will end." As for the Cock-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

lane ghost, Johnson scarcely deserves more reproach than did Faraday when he took the trouble to expose the folly of table-turning. He thought, indeed, that it was possible for a ghost to appear in Cock-lane as anywhere else, while Faraday, from the beginning, saw through the modern absurdity. He examined into the facts of the case and exposed the whole imposture in an account which he wrote for the *Gentleman's Magazine*. Later on, "he expressed," writes Boswell, "great indignation at the imposture of the Cock-lane ghost, and related, with much satisfaction, how he had assisted in detecting the cheat, and had published an account of it in the newspapers."

In another part of the article Macaulay writes:—"It is remarkable that to the last Johnson entertained a fixed contempt for all those modes of life and those studies which tend to emancipate the mind from the prejudices of a particular age or a particular nation. Of foreign travel and of history he spoke with the fierce and boisterous contempt of ignorance. 'What does a man learn by travelling? Is Beauclerk the better for travelling? What did Lord Charlemont learn in his travels, except that there was a snake in one of the pyramids of Egypt?'" Any one reading this passage and seeing the inverted commas would at once believe that he was reading Johnson's own words. He is really reading but an abridgment of them, and an abridgment in which the sense has been great altered. We must again give his words as reported by Boswell:—

"Time may be employed to more advantage from nineteen to twenty-four almost in any other way than travelling. When you set travelling against mere negation, against doing nothing, it is better to be sure; but how much more would a young man improve were he to study during those years? Indeed if a young man is wild, and must run after bad company, it is better this should be done abroad, as, on his return, he can break off such connections, and begin at home a new man, with a character to form and acquaintance to make. How little does travelling supply to the conversation of any man who has travelled? how little to Beauclerk?" Boswell: "What say you to Lord ——(Charlemont)?" Johnson: "I never but once heard him talk of what he had seen, and that was of a large serpent in one of the pyramids of Egypt." Boswell: "Well, I happened to hear him tell the same thing, which made me mention him."

Croker adds in a note, "His lordship was, to the last, in the habit of telling this story rather too often." Johnson, in this passage, does not condemn travelling in general. He says, and most men would agree with him, that the years between twenty and twenty-four should not be spent, as was in his time so commonly the case, in mere travelling. He goes on to say that good talkers who have travelled talk little the better because they have travelled. But it is not needful to enlarge on the way in which his meaning has been wrested. It is open to every one to see. So far from having a fierce and boisterous contempt of foreign travel, Johnson, at all events in his old age, when alone he could afford it, had a great eagerness for it. The tour to the Hebrides was a greater undertaking than a tour to Iceland in the present day, and he was sixty-four when he set out for it. On their return to Edinburgh, says Boswell, "everybody accosted us with some studied compliment," while Robertson advanced to Dr. Johnson repeating a line of Virgil. In his sixty-eighth year he was eager for a trip to the Baltic. He writes: "Boswell shrinks from the Baltic expedition, which, I think, is the best scheme in our power. What we shall substitute, I know not. He wants to see Wales; but, except the woods of Bachycraigh, what is there in Wales that can fill the hunger of ignorance or quench the thirst of curiosity?" He had been the year before full of eagerness for a tour to Italy with the Thrales. He said, "Mr. Thrale is to go by my advice to Mr. Jackson (the all-knowing), and get from him a plan for seeing the most that can be seen in the time that we have to travel. We must, to be sure, see Rome, Naples, Florence, and Venice, and as much more as we can. (Speaking with a tone of animation.)" The tour was put off. Boswell goes on to say: "He said, 'I am disappointed, to be sure; but it is not a great disappointment.' I wondered to see him bear with a philosophical calmness what would have made most people peevish and fretful. I perceived that he had so warmly cherished the hope of enjoying classical scenes that he could not easily part with the scheme; for he said, 'I shall probably contrive to get to Italy some other way.'" Later on, in a letter to Mrs. Thrale, he says, "I hope you have no design of stealing away to Italy before the election; nor of leaving me behind you; though I am not only seventy, but seventy-one." On another occasion Boswell says: "He talked with an uncommon animation of travelling into distant countries; that the mind was enlarged by it, and that an acquisition of dignity of character was derived from it. He expressed a particular enthusiasm with respect to visiting the wall of China. I catched it for a moment, and said I really believed I should go and see the wall of China had I not children, of whom it was my duty to take care. 'Sir,' said he, 'by doing so, you would do what would be of importance in raising your children to eminence. There would be a lustre reflected upon them from your spirit and curiosity. They would be at all times regarded as the children of a man who had gone to view the wall of China. I am serious, sir.'"

In writing about Johnson's contempt for foreigners, Macaulay says, "He pronounced the French to be an indelicate people because a French footman touched the sugar with his fingers." The passage in Boswell is as follows:—"The French are an indelicate people; they will spit upon any place. At Mdme. ——, a literary lady of rank, the footman took the sugar in his fingers and threw it into my coffee. I was going to put it aside, but hearing it was made on purpose for me I even tasted Tom's fingers. The same lady would needs make tea *à l'Anglaise*. The spout of the teapot did not pour freely; she bade the footman blow into it."

In the account of Johnson's manners at table there is again exaggeration to be discovered. Macaulay writes: "He could fast; but when he did not fast he tore his dinner like a famished wolf, with the veins swelling on his forehead and the perspiration running down his cheeks. He scarcely ever took wine; but when he drank it he drank it greedily and in large tumblers." As for his dinner, Boswell says that "while in the act of eating veins of his forehead swelled, and generally a strong perspiration was visible." When Macularly makes it not only visible, but also running down the cheeks, we are reminded of what Johnson said about an earthquake which had just been felt in England. "Sir, it will be much exaggerated in public talk; for, in the first place, the common people do not accurately adapt their thoughts to the objects; nor, secondly, do they accurately adapt their words to their thoughts; they do not mean to lie, but, taking no pains to be exact, they give you very false accounts. A great part of their language is proverbial. If anything rocks at all, they say it rocks like a cradle." As for Johnson's drinking, any one reading the passage we have quoted would think that he was generally an abstainer, but that he now and then broke out into excess. Now the fact is that for a great many years Johnson took wine regularly, and then for a great many years did not take it at all. Towards the end of his life, under medical direction, he resumed the practice. Hawkins mentions "his persevering temperance in the article of drinking for at least the latter half (?) of his life;" and Mrs. Thrale says, "For the last twelve years I knew him he left off all fermented liquor." He himself on one occasion said, "After a ten years' forbearance of every fluid except tea and sherbet, I drank one glass of wine to the health of Sir Joshua Reynolds on the evening of the day on which he was knighted. I never swallowed another drop till old Madeira was prescribed to me as a cordial during my present indisposition; but this liquor did not relish as formerly, and I therefore discontinued it." Boswell mentions another occasion when "he was persuaded to drink one glass of claret, that he might judge, not from recollection, which might be dim, but from immediate sensation. He shook his head and said, 'Poor stuff! No, sir, claret is the liquor for boys; port for men; but he who aspires to be a hero (smiling) must drink brandy.'" In the tour to the Hebrides, when he was suffering from a severe cold "he was prevailed with to drink a little brandy," and he one night drank a gill of whisky that he might know "what it is that makes a Scotchman happy." The passage which Macaulay had in mind was no doubt the following. Two or three year before Johnson's death Boswell says that he found that he now took wine. "The first evening that I was with him at Thrale's I observed he poured a large quantity of it into a glass and swallowed it greedily. Everything about his character and manners was forcible and violent; there never was any moderation. Many a day did he fast, many a year did he refrain from wine; but when he did eat it was voraciously, when he did drink wine it was copiously." In the last few years of his life, when he had begun to drink wine once more, he was constantly in very good society as it is called, and it is most improbable that he drank his wine in any but the ordinary wine-glass. With all his want of polish he was most exact in complying, or at least in endeavouring to comply, with the usages of society, and would have been shocked with any one who at dinner habitually took a tumbler where other took a wine glass.

We should have liked to have examined Macaulay's statement that "the judgments which Johnson passed on books in our time are generally treated with indiscriminate contempt." But we have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

not space at our command. We have perhaps said enough to show that, however admirable as a piece of writing may be Macaulay's "Essay on Boswell's Life of Johnson," the great Whig historian nevertheless has not drawn a correct likeness of the yet greater Tory moralist.

THE LATER BLUNDERS OF NAPOLEON III.

(Pall Mall Gazette.)

Some fresh light is thrown on the foreign policy of Napoleon III. by M. Hansen's narrative of his efforts to secure the northern part of Sleswick for Denmark. M. Hansen was at Paris in July, 1866. At that time there was a general uneasiness among French politicians at the recent victory of Prussia over Austria. But this uneasiness only extended to one section of the Cabinet. M. Drouyn de Lhuys shared it to the full. He had long been at issue with the Emperor as to the policy to be adopted towards Germany, and this difference of opinion had been brought to a head by the alliance between Prussia and Italy. The Emperor—so M. de Chaudordy told M. Hansen a year and a half later—had wished well to Prussia all through the negotiations which preceded the war of 1866. He would even have liked to ally himself with Prussia had not his fear of M. Thiers and of public opinion as influenced by M. Thiers stood in the way. As it was, he helped her as far as he could by encouraging Italy to do what he was afraid to do himself. The news of Sadowa convinced him for the moment that the time for making a friend of Prussia had passed, and that all that he could now aim at was to prevent her reaping the full harvest of her victory. M. Drouyn de Lhuys was prompt in taking advantage of this change of temper. He saw the Emperor on the morning after the battle, and warned him that he was in the presence of events which might prove as disastrous for France as the defeats of the first Empire. He urged him to convoke the Corps Législatif, to move 80,000 troops to the eastern frontier to act as an army of observation, and to instruct M. Benedetti to inform the King of Prussia that France would be obliged to occupy the left bank of the Rhine if Prussia by annexing fresh territory should disturb the balance of power in Europe. "The Rhine," said M. Drouyn de Lhuys, "is perfectly stripped of troops, and Marshal Randon has just told me that he is ready to set 80,000 men in motion at a moment's notice." The Emperor assented to the Minister's proposals, and it was arranged that they should be embodied in a Note which was to appear in the next day's *Moniteur*. No such Note appeared. M. Rouher and M de Lavalette saw the Emperor after M. Drouyn de Lhuys had left him, and brought him back to his original purpose. The next day he told M. Drouyn de Lhuys that he had changed his mind, and that he should still play the part of a friendly mediator between the two belligerents.

Some days later M. Drouyn de Lhuys heard from the Prussian Ambassador that Prussia proposed to annex a territory containing some 300,000 inhabitants, in order to unite two portions of her dominions The Minister answered that the transfer of a population from one Government to another was a serious matter, whether it related to 300,000 people or to 300, and that at all events the question could not be decided without the consent of the Great Powers. Upon this the Ambassador at once demanded an audience of the Emperor. He found him, says M. Hansen, weakened by illness, and altogether averse to the idea of war. He felt hampered by his previous encouragement of the alliance between Prussia and Italy, and he had been convinced by M. Rouher that to occupy the left bank of the Rhine with 80,000 men would simply make war with Prussia inevitable, and that at a time when the French army had not recovered from the effects of the Mexican expedition. Under the influence of these considerations the Emperor took a much less peremptory tone with the Prussian Ambassador than the Minister of Foreign Affairs had taken, and M. de Goltz left the Tuileries with the assurance that Prussia need fear no serious opposition from France. M. Hansen argues that the simple threat of occupation would have been enough to moderate Prussian ambition, and in support of this view he adduces two witnesses—the Duc de Grammont, then Ambassador at Vienna, and Prince Bismarck himself. The former wrote to M. Drouyn de Lhuys: "Prussia is victorious, but she is exhausted. There are not 15,000 men between the Rhine and Berlin. You may make yourself master of the situation by a mere armed demonstration, for at this moment Prussia cannot accept a war with France." By itself this assurance would not go for much, but it is curiously confirmed by a passage in a speech delivered by Prince Bismarck on the 16th of January 1874. Granting, he said, that in 1866 France had but few available troops, even a [illegible] could have made a very respectable respectable army when united to the South German corps. Such an army would at once have laid us under the necessity of covering Berlin and of abandoning all our successes in Austria."

By the second week in August Napoleon III. had once more become uneasy, and had determined to ask Prussia for a territorial compensation to France. A "highly placed personage"—presumably M. Drouyn de Lhuys—sent for M. Hansen and told him this, adding, however, that he doubted whether Prussia would consent to give it. The Minister then asked M. Hansen to go privately to Berlin, taking with him a Memorandum containing a proposal by which France might come to an understanding with Prussia without demanding any cession of territory. This Memorandum set forth that change which had just been effected in Germany had upset that balance of power in which since 1815 France had found her only security, that the Emperor was consequently driven to make some additional provision for the defence of the country, and that this might be attained by constituting Rhenish Prussia a neutral State under a Prince of the House of Hohenzollern. By this means there would cease to be any contact between France and Prussia, and the need for increasing their armies would be altogether removed. M. Hansen left Paris on the 12th of August, and on the 16th he communicated the contents of the Memorandum to the Berlin Foreign Office. He was at once told plainly that the Prussian Government did not care for the support of France and would make no sacrifices to obtain it. A hint was afterwards thrown out that the object stated in the Memorandum might perhaps be obtained by annexing Saxony to Prussia, and giving the King the Rhine provinces in exchange. M. Hansen believed that this suggestion was only hazarded in order to ascertain whether France set much store by the preservation of the kingdom of Saxony. This seems also to have been the view taken at Paris, for on telegraphing the substance of the suggestion he was at once told to pursue the negotiation no further. The only other point of interest in the narrative is M. de Chaudordy's prophetic commentary on it in December, 1867. "The game," he told M. Hansen, "is lost for France, and lost for a long time. In 1866 the Emperor did not act with sufficient firmness, and when at last he got something from M. de Bismarck it was too late. M Drouyn de Lhuys wished to save Austria, and he was acting with perfect consistency when after Sadowa he urged an armed intervention on the part of France. Such an intervention would probably have turned to our advantage, but the Emperor would not consent to it. The result is that we now find ourselves in a situation of the utmost danger. For myself I foresee nothing but disaster for the foreign policy of France."

This hesitation, this unwillingness to act when action might have been of some use, this eagerness to act when the time for action had past, this late recognition of the true bearings of changes in the distribution of power, this subordination of foreign policy to home fears, this general mistiness of vision and uncertainty of grasp, which come out so plainly in M. Hansen's narrative, were the qualities which helped to make Napoleon III.'s reputation in the early years of his reign, and brought him to ruin at the end of it. Looking back at those mysterious utterances which all Europe was once so intent upon interpreting, and upon those not less mysterious acts which from time to time gave the lie to all the theories which his words had been supposed to support, we can now see that words and deeds alike were the work not of a profound and inscrutable statesman whose schemes were beyond the comprehension of common natures but of a man who rarely knew his own mind, and who still more rarely knew whether he dared to carry out such mind as he had. If M. Drouyn de Lhuys' policy has been followed in 1866, it is at least possible that Sadowa would never have been fought, or that if fought the consequences to Germany would have been of much less moment. Prince Bismarck knew with what manner of man he had to deal, and his estimate of Napoleon III. was perhaps the determining element in that complex array of motives which impelled him to unite Germany first under Prussian supremacy and next under Prussian rule. He calculated that the Emperor would not take his Minister's advice in time to prevent Sadowa; he calculated that the first effect of Sadowa would be to increase his irresolution; he calculated that by the time he had realized the worth of M. Drouyn de Lhuys' counsel the dread of Prussia would have done its work on the South German States and French intervention would have become a danger to be despised. If Marshal Randon had moved an army to the eastern frontier, and Prussia had been given her choice of neutralizing the Rhine provinces or seeing them occupied by French soldiers, Prince Bismarck himself might have been driven to prefer the former alternative; but by the time that neutralization was offered it had ceased to be an alter-

Digitized by Google

native, and had become a mere petition. As such Prince Bismarck could safely despise it. Upon Napoleon III. the lesson of these events was thrown away. He probably knew that the opportunity for checking the advance of Prussia was gone past recall, but he never put this fact to himself with sufficient clearness to make it the starting point of a new policy. Had he done so, he would have set himself to quiet the irritation of his subjects, and to convince the Prussian Government that they had no opposition to fear from France. Instead of this, he remained for four years halting between two opinions, and was at length driven into a contest which he disliked and dreaded because he had taken no pains to remove a mass of smouldering antagonism which his adversary could fire whenever it pleased him to do so.

Shipping Intelligence.

ARRIVALS.

April 11, *Bengal*, British steamer, Douglas, 1,300, from Shanghai via Kobe, General, to Augustine Heard & Co.

April 11, *Ly ee-moon*, British steamer, Stephe s, 665, from Nagasaki, Ballast, to Hudson. Malcolm & Co.

April 11, *Challenger*, H.M.S, Thompson, 2.800, from New Guinea

April 13, *Thalia*, H.M S., Woollcomb, 2 216, 6 guns, from Hiogo

April 14. *Kanagawa Maru*, Japanese steamer, Roper, 1,325, from Shanghai, General, to Mitsu Bishi Co.

April 14, *Golden Age*, American steamer, Coy, 1,870, from Shanghai, Mails and General, to P. M. S. S. Co.

April 15, *Ariel*, Eng. barque, Fullarton, 358, from Nagasaki, Coals. to P. M. S S. Co.

April 15. *Menza'eh*, French steamer, Pasqualine, 1,008, from Hongkong. Mails and General, to Messageries Maritimes.

April 16, *Venice*, British steamer Watson, 1,270, from Hongkong and London, General, to Van Oordt & Co.

April 17. *Walton*. British barque, John Shield, 550, from London, General, to Wilkin Robison & Co.

DEPARTURES.

April 12, *Triton*, Amr. barque, Heppingstone, 233, for Orhoctsk Sea, Whaling gear, despatched by Captain.

April 12, *Arctic*, American barque, Whitney, 339, for Orhoctsk Sea, Whaling gear, despatched by Captain.

April 13, *Tanais* French steamer, Reynier, 1,010, for Hongkong, Mails and General, despatched by, Messageries Maritimes Co.

April 14, *Bombay*, British steamer, Davies, 1,325, for Hongkong. Mails and General despatched by, P. & O. Co.

April 14, *Oregonian*, American steamer, Harris, 1,914, for Hiogo, General, despatched by P. M. S. S. Co.

April 14. *Takasagu Maru* Japanese steamer, Eckstrand, 1,019, for Hiogo, General, despatched by Mitsu Bishi Co.

April 14, *Mio*, Japanese steamer, Froom-, 1,200, for Hakodate, General, despatched by Mitsu Bishi Co.

April 14, *Lyee-moon*, British steamer, Stevens, 670, for Hakodate and Niigata, General, despatched by Hudson, Malcolm & Co.

PASSENGERS.

Per *Tanais* for Hongkong.—Messrs. E. B. Maitland, A. C. Maitland, M. Brand, Miss Erskine, Mrs. Ellian, Ah Fook. For Marseilles.—Messrs. Haurie, T. Baba, A. Konuro, Brunache and Moulin.

Per British steamer *Bombay*. for Hongkong.—F. Knoblauch, Esq., Captain Schnechstel, and Mr Thomas Dunk.

Per American steamer *Oregonian*. for Shanghai and way ports:—Sir Harry S. Parkes, Mrs. Dennison, Mr. and Mrs. Aston, Mr. and Mrs. Holdsworth, Mr. and Mrs. Page and two servants, Mr. Gubbins, J. M. Smith, Miss Bingham, Mrs. Korthals and servant, Mrs. Harris, Messrs. Gibbon, R. M. Brown, Winstanley, Wasson, Porter, Hogg, Boyce, Hart, Hurlimann, Winckler, Percival, Senmer, Margelison, and six Japanese.

Per Japanese steamer *Takasago Maru*. for Shanghai and ports:—Mr. and Mrs Boulet and servants, Messrs. Stewart, Osoxsan, Van der Vlies, C W. Lawrence Lyemurt, Miss Deville, Miss Doulin, Miss Ekstrand, Miss Marshall Mr. and Mrs. Plummer and infant, Mrs. Ekstrand, Mrs. Somons, Messrs. Miyagawa, Wigton, Bennett Robertson, Freshville, and five Japanese in cabin; 103 Japanese, 7 Chinese, and 1 European in steerage.

Per American steamer *Golden Age*, from Shanghai.—Mr. and Mrs. Conabeau, Mr. McLatchie and son, Miss McLatchie, Mrs. C. S. Coy, General and Mrs. Allen, Mrs. Eugles and 2 child, Dr. Fisher, P. C. Roy, Dr. Willis, Messrs. Olarousky, Wetmore, Phœnix, Walker, Houseman, Gray, Castelof, Sykes, Campbell, Rickerby, Waters, R. S. Edwards and J. C. Edwards, 73 Japanese and 1 Chinese, 161 in steerage.

Per *Menzaleh*, from Hongkong.—Messrs. Smith, J. Ando, and Allafax.

CARGOES.

Per *Tanais* for Hongkong:—

Silk to Marseilles	... ...	121 bales.
to London	... ...	37 ,,
	total	158

Per British steamer *Bombay*, for Hongkong.—Silk, 92 bales.

Per *Golden Age* from Shanghai.—Treasure value $38,400.

REPORTS.

Owing to one of the valves of the pump giving way just after the *Lyee-moon* started from her anchorage at 4 p. m. the vessel had to be anchored outside the shipping until it was repaired. At about 7 30, she was able to proceed again on her voyage.

The *Menzaleh* reports strong winds from N.W.

The *Venice* reports strong N.E. winds and bad weather all the way, up from Hongkong.

The German schooner *Lottie*, from the Kurile Island, reports having heard from the natives of the loss of Mr. Snow's vessel, the *Snowdrop*, during the winter. The *Lottie* brings down about 80 Sea Otter skins, after being up there all winter; part of the time, however, the vessel was hauled up on shore.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, APRIL 17TH, 1875.

IMPORTS.

Cottons.—There is very little change to report in the import market. Transactions are on a limited scale, but prices are very firm, and in some instances even slightly higher than reported last.

Grey Shirtings:—			
7 lbs.	38½ yds.	39 in. per pce.	$1.92½ to $2.10
8 lbs.	38½ yds.	44 in. „ nom	
8 lbs. 4 to 8 lbs. 6	„	39 in. „	2.17½ to 2.55
9 lbs.	„	44 in. „	2.67½ to 2.90
Taffachelaes Single			2.50 to 2.70
No. 16 to 24		per picul	33.50 to 36.50
Reverse		nom.	nominal

White Shirtings:—			
56 to 60 reed 40 yds. 35 in. nom		per pce.	2.40 to 2.50
64 to 72 „ „		„	2.80 to 3.00
Turkey Reds 25 yds. 30 in. 2¼—3 lb.		per lb	0.90 to 0.97½
Black Velvets			8.60 to 9.50
English Drills			3.25 to 3.40
Canvas, Navy, Red Stripe			7.00 to 8.00
No. 28 to 32		per picul	38.50 to 42.00
„ 38 to 42		„	42.00 to 46.50

Woollens.—We make no change in our quoted rates. The tone of the market continues to be much depressed. *Mousselines de Laine* have been sold to a moderate extent at lower rates.

Plain Orleans	40—42 yds.	32 in.	6.25 to 7.75
Figured Orleans	29—30 yds.	31 in.	4.50 to 5.25
Italian Cloth	30 yds	32 in.	0.25 to 0.37
Camlet Cords	29—30 yds.	32 in.	6.25 to 7.25
Camlets Asstd.	56—58 yds.	31 in.	18.50 to 19.00

Daitong	„		3.80 to 3.90
Japan Rice	„		
Kerosine Oil	„		3.40 to 3.50

EXPORTS.

Silk.—Since the date of our last fortnightly report issued on the 9th inst. arrivals are 175 bales, and deliveries about 400 piculs. Under the pressure of continued unfavorable advices from the home markets prices for Hanks are steadily decreasing. We quote: Best (No. 1 to 2) $480 to 500 nominal; Good (No. 2) $440 to 470; Medium (No. 2½) $400 to 430; Common to Inferior $320 to 380. Oshins are weak at previous quotations.

Tea.—Operations have been small and unimportant during the closing week, amounting, in all, to piculs 700 principally medium grades. Prices are weak, and stocks of old crop reduced to about 2,000 piculs of merchantable leaf.

Of New Crop some 4 to 5 piculs have arrived, and for which the holders are at present asking $100 per picul. By the close of this month sizable parcels will be on offer.

Common			$17.00 to 20.00
Good Common			23.00 to 25.00
Medium			28.00 to 31.00
Good Medium			33.00 to 35.00
Fine			Nominal.

TO IMPORTERS

—OF—

ENGLISH GOODS.

A WELL-ESTABLISHED LONDON DRAPER, is open to buy Goods in commission for a good Firm; or as Agent for Japanese Goods consigned to London. Highest references given and required. Address

MR. GEORGE INGATE,

DRAPER,

KILBURN, LONDON, W. C.

Yokohama, March 27, 1875. 3ins.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

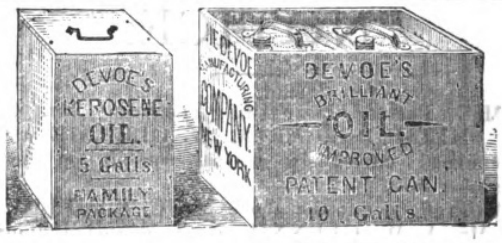
Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.



THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 17.] YOKOHAMA, SATURDAY, APRIL 24, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 23rd April, at No. 83, Main Street, the wife of Mr. A. MITCHELL, of a daughter.

Notes of the Week.

The week just closed will be long remembered as that which witnessed the worst, though not, perhaps, the saddest occurrence in the history of this port. The loss of the *Oneida*, the wreck of the *Nil*, the burning of the *America*, were far more grievous in many ways; but the odium of crime clung to none of them. We have referred elsewhere to the robbery of the Comptoir, and the narrative of it may be gathered from our columns of news and the report of the inquest. A more wretched story has not been told within our experience of China and Japan, nor one more calculated to make frivolous men thoughtful, or thoughtful men sad.

We have been informed on good authority that against the Chinese characters in the late Imperial Proclamation which we rendered in our translation of last week 'a well-founded political fabric,' the explanatory word 'constitution' is set in *Katakana*. This would seem to indicate the intention to give a wider basis to the new forms of government than was originally supposed.

We may also remark that the original of the words translated as "We have happily attained the slight degree of tranquillity of the present day" would be more correctly rendered by the expression "We have happily attained the not slight degree" &c. There is more dignity in this form: the other savours somewhat too much of a humility which is well in the mouth of a subject, but not in the mouth of a monarch addressing his people.

It is reported from China that some embarassment has arisen between the Japanese Minister at Peking and the Tsungli yamen respecting the allegiance of the Loochooans, who, as we showed in our last issue, despatched in June last the tribute-junk they have long been in the habit of sending to China, an act for which they have incurred the displeasure of the Mikado. Now, the Formosan affair was undertaken to avenge the murder of certain Loochooans in the year 1871, and the Chinese, who admitted the justice of the act on the part of Japan, and paid certain monies to Japan as compensation, among other claims, to the families of the murdered Loochooans, cannot with any show of right now go back upon this and demand the allegiance of Loochoo. The temper of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

complying; the Formosa affair rankles bitterly, and there may be some difficulty in adjusting the affair.

A curious misapplication of terms appears in a letter signed 'Cato' published on the *Japan Herald* of Friday night. The writer, while strongly reprobating the robbery committed by the two unfortunate men who destroyed themselves on Monday last, speaks of their act of self-destruction as indicative of "rare, enviable and admirable *moral* courage." Surely he means *physical* courage. There was some of this throughout the whole affair—the robbery itself, the audacious flight in almost broad day-light, a certain coolness on the approach of the officers of justice. But of moral courage there is not a trace. An absolute insensibility to shame, a disregard of reputation, and of all possible future consequences of acts which must have been known to be criminal—these qualities are not evidences of moral courage; they are precisely the reverse, and it is in the highest degree important that the distinctions between the two kinds of courage should be recognized. In England you can get as much physical courage for a shilling a day as you choose to pay for. Moral courage of a high order, on the other hand, is an extremely rare thing. It is chiefly exhibited in obeying the dictates of conscience wholly regardless of the adverse opinions of others, and doing right as right 'in scorn of consequence.' These men did not think it right to rob or shoot themselves.

The account given by the *Japan Herald* of the circumstances attending the burial of the late W. S. Swaby are wholly incorrect, so far, at least, as they relate to the conduct of the Acting Consular Chaplain. Mr. Syle was not about to read any part of the funeral service, the rubric being prohibitory, and most explicit on this point. The address which he is said to have delivered consisted of a few words to the effect that under these melancholy circumstances there was nothing to be said. His presence, we presume, was due to the feeling that nothing which is of importance in what we shall call his 'parish' is foreign to the care and attention of a Christian minister.

The China papers report that Mr. Wade will demand $150,000 of the Chinese Government for the murder of Mr. Margary.

We desire to make an emphatic protest against any such mode of dealing with the affair. Money is not the proper measure of human life, and the sooner the idea of its being made so disappears, the better. We utterly object to assessing the lives of Englishmen at any number of thousands of dollars. We are identified all over the world with the idea that money will purchase anything from us, and this is a reputation which we neither desire nor deserve. Let Lord Northbrook send a couple of regiments to Manwyne, institute an investigation into the affair, punish the responsible mandarins, and hold the place for a year, and let the Chinese pay the expense of the occupation.

The native journals are engaged in a warm discussion upon the Women's Rights question, and many writers are anxious to raise the status of the wife to that of equality with the husband. The eastern custom of concubinage is undoubtedly common in the capitals and the great towns among the wealthy, but public opinion is opposed to and is gathering force. It is probable that any fresh legislation on this subject will

At present the power of dismissal on the part of the husband, though perhaps rarely exercised, is unquestionable.

We are concerned to learn that the Amateur Athletic Association, which at one time gave promise of a vigorous life, already shows some signs of decay if not of absolute dissolution. One would have imagined that a society which has all the muscle and youth of the community to draw upon would be unlikely to perish from dearth of material. But from the indifference which is shown to its arrangements for the Spring Sports, there is we fear too much reason to apprehend that the career of the Association is likely to be prematurely abridged.

Messrs Ishie and Shiwoda Saburo left for Russia by the last French mail as Commissioners from the Japanese Government at the Telegraph Congress at St. Petersburg.

A new steam-launch which has shown satisfactory qualities on her trial trip has just been launched by Messrs. Whitfield & Dowson. It is intended, we understand, for the native trade.

Bail for the appearance of George Withers, late captain of the *Iris* has been accepted for $5,000 by H.B.M. Consul.

Several cases of theft, most of them being of an unimportant character are reported during the closing week.

H. M. S. *Thalia* sailed for Hongkong on the 22nd instant, conveying thither portions of the stores, &c. left by the Battalion of the Royal Marines.

The *City of Tokio*, the sister ship to the *City of Peking*, has arrived after a passage of twenty days.

The Messageries Maritimes Steamship *Tanais*, sailed from Hongkong last evening with European mails to March 12th.

(From the Japan Mail Daily Advertiser.)

Nishimura, who has been appointed to visit China in behalf of the Kaitakushi Department proceeds, says a native journal with the view of making arrangements in that country for the sale there of the productions of Yesso.

We are indebted to the representative of the P. & O. Company for the information that the *Gwalior* bearing the home mails of the 5th March left Singapore on the 10th instant and will proceed at a low rate of speed to Hongkong. It is not improbable that her mails may be brought on by the next French steamer, due here on the 28th instant.

The Loo-chooan question appears likely to turn up again in rather an embarrassing form. For it is reported that the authorities at Loo-choo, on receipt of the news of the death of the late Emperor of China, despatched a mission to Peking to congratulate his successor on his accession and to offer him presents as tokens of their subjection. This anomalous state of affairs appears to have originated in the over anxiety of the Japanese Government, on taking formal possession of Loo-choo, to interfere as little as possible with the old order of government. But they seem to have forgotten that the weak and timid nature of the people of the Loo-choos might very possibly lead them into a position like the present in their anxiety to serve two masters. The Government of the Loo-choos since it was formally annexed to the Empire has been that of an independent *Han*, the only one now existing in this country, and the old order of its Government remained undisturbed. But the foregoing shows that the Loo-chooans are too weak to govern themselves, and that the central authorities will have to take a more active part in their affairs.

It was reported few days since that the Loo-chooan mission now in Yedo had, from patriotic motives, refused to accept $100,000 of the compensation the Chinese Government, and that the Japanese Government had decided to present them with a steamer fully equipped in lieu of this sum. This decision will be modified by the above news, which has just arrived from Peking.

Referring to the banquet given by H. M. the Mikado to his Ministers on the 15th instant, the *Akebono Shimbun* says that it was served in mixed fashion, half native and half European. Shimadzu Saburo, who was present, was conveyed to the entertainment in a *kago*. He wore the old-fashioned dress of the country and his attendants, whose legs were exposed, were armed some with one and some with two swords.

Shiwoda Saburo and others who have been appointed to visit Russia on a special mission in connection, it is understood, with the Telegraph Department will leave on the 20th instant.

Mr. Kuroda of the Kaitakushi Department will leave shortly for Sapporo in Yesso.

The absence from their place of business yesterday morning of Messrs. V. Cantelli, Accountant and W. S. Swaby, Sub-Accountant of the "Comptoir d'Escompte de Paris," and other circumstances which gave colour to the apprehension felt with regard to their non-appearance, led to an examination of the Bank chest when it was discovered that some $37,000 were deficient. On further enquiry it was found that a three-masted schooner named the *Iris* had recently been purchased by C. Adds, an employé in the Billiard Room of the Grand Hotel, for a sum of $11,000; that she had been hurriedly equipped for sea and that the thieves and their accomplice had engaged a captain, a person named Withers, two European officers and a crew of 12 Malays, clearing out ostensibly for some port in the Phillipine Islands. Those who had last seen the accomplices had reason to suppose that they must have embarked shortly after midnight, although, at an early hour on Monday morning, the vessel was still visible in Mississippi Bay. So much being ascertained steps were at once taken to secure the apprehension of the fugitives. To this end the *Sea Gull*, Messrs. Lane, Crawford & Co.'s small steamer, was chartered and warrants obtained from their respective Consulates for the arrest of the criminals. Warrants were also issued for the apprehension of Adds and Withers as accessories to their flight, and furnished with these White, British Consular Constable was despatched in the steamer. And as it was reported that the schooner was armed, and that resistance might be expected, Captain Woollcombe granted a boat's crew of six men of the *Thalia* under charge of an officer to strengthen and, if necessary, protect the civil authority. With these and accompanied by Mr. Pagden and a pilot the *Sea Gull* left the harbour at shortly after 2 o'clock yesterday.

At about ten o'clock last evening the *Sea Gull*, returned to Yokohama bringing intelligence of the capture of the robbers. The *Iris* had reached Kaneda Bay where she lay becalmed. On the approach of the steam-launch at about six o'clock Swabey and Cantelli descended to the cabin and shot themselves, the former through the heart and the latter through the brain, and Adds threw himself into the sea hoping to reach the shore. He was at once captured and the vessel being taken in tow was brought back to Yokohama where she was placed in charge of H. B. M.'s Consul. It is believed that the money is safe. Cantelli who survived his self-inflicted wound some hours expired at 11.30 p.m. o'clock last night. The bodies of the deceased lie at 114 Creek where the Inquest will take place at 2 p.m. this day.

While the inquest which is so near at hand is certain to throw full light upon the antecedent acts which have led to the perpetration of the robbery it were premature to hazard conclusions on the subject. But it must be obvious that, however well considered the plans of escape may have been, their execution betrayed a sense of danger and of precipitate action on the part of the criminals. The person who furnished the stores had barely concluded his transactions with one

Digitized by Google UNIVERSITY OF CALIFORNIA

of the deceased at an early hour yesterday morning, and the sailing of the vessel, in the face of almost certain detection, points to the dread of an imminent discovery to which even the slender chances of escape offered a desirable alternative.

THE complete report of the Coroner's Inquest upon the remains of Mr. Swaby furnishes a connected history of the terrible tragedy which has been enacted so close to us, and dispenses us from relating a story which is better told by the evidence of the witnesses. We have, however, to correct a misstatement for which we are responsible that Adds on perceiving his plight plunged into the water. This, it will be perceived, was not the case. The remains of Mr. Swaby were committed to the grave last evening at 9 p.m., to which, after a preliminary enquiry by Mr. Castelli, Italian Consul, those of Mr. Cantelli had also been borne at an earlier hour. Adds and Withers are lodged in gaol awaiting examination.

IT is asserted by some of the native journals that the construction of the first portion of the railway from the Capital to the North East has been determined upon. Unfortunately it requires somewhat more than a mere determination or scratch of the pen to make a railway, and in the present complexion of the matter, if settled at all, it is more likely to be settled negatively than otherwise. The means can only be provided by the alienation of the pensions of the nobles and by the assistance of foreign capital and this conjuncture is understood to be clearly provided against.

DURING the festival days of Iyeyasu, the 16th and 17th instant, the offerings made at the temple in Uyeno amounted to 3,010 *yen*.

HIRATZ, one of the Commissioners who was recently despatched on a mission to Corea, has returned.

THE *City of Tokio*, sister ship to the *City of Peking* arrived in port yesterday afternoon at 5 o'clock after a passage of twenty days from San Francisco. Outwardly, and with the exception of an ungraceful stern, she closely resembles her predecessor. Her speed is apparently somewhat inferior but this may be due to the prevalence of strong contrary winds during her passage.

IT were perhaps as well that foreigners who make shooting excursions on the Sumida River should learn to distinguish between small birds and the natives of the country, who are scarcely fair game at this or at any other season. On Sunday last a shot was fired from a boat in which four foreigners were being rowed on that river. The shot did not hit the bird but struck a native, who was riding in a *jinrikisha*, in the ear. The foreigners did not wait to enquire the result, but rowed off hastily.

GOTO SHOJIRO and Soyéjima were honoured with an interview by H.I.M. The Mikado on Monday.

A native newspaper indulges in some speculations as to the increasing prosperity of Mitsui's House. This, it thinks, is due less to the removal of the competition of its rivals Ono and Shimada than to the fact of its having associated in its recent operations several wealthy noblemen whose accumulations have largely strengthened its position.

ABOUT a thousand years ago, it is related, an attempt was made to melt a famous idol, the Zenkogi Niorai, which after seven days fruitless endeavour was abandoned. The idol has been recently examined by an official and proves to be of gilded wood!

Rumours are current in the Capital, and have already found expression in print, that another large native Banking Establishment is precariously situated. The reasons assigned do not at present appear to justify the apprehensions expressed.

A serious accident occurred on board H.M.S. *Thalia* yesterday afternoon while the men were raising the anchor, a block, which was suddenly disengaged, striking two of the sailors. On their examination it was found that they had each suffered fracture of the leg.

WE are glad to observe that the yield of the Takashima mines gradually increases. The present average return is 300 tons daily, occasionally, however, the workings produce as much as 400 tons.

DURING the month of March the duties received at the Nagasaki Custom House amounted to $16,000. This was the largest sum received since the opening of the port and may possibly have resulted from the increased shipping facilities and low freights.

THE turbulent spirit of the soldiery of the Capital, of which instances are so frequently afforded, furnishes the native press with ample grounds for comment upon their lawless conduct. It is clear that their presence demands an increased police force to restrain them, and that it causes same apprehension to the people. We observe, however, that a native paper announces some change in their *ichi-roku*, or holiday, which will curtail their leave and it is to be hoped lessen their opportunities for mischief.

THE *Akebono Shimbun* says it is rumoured that since the interview which Goto and Soyejima had with H. M. The Mikado, Okubo has kept his house.

The March number of the *Wan Kwo Kung Pau* contains an article on a very important matter, which we have not seen noticed elsewhere, According to the writer, Li Hung-chang has memorialised the Throne, asking that Foreign learning and the sciences may be placed on a par with the standard subjects in the literary examinations of the Empire; and a correspondent writes us that he has reason to believe the memorial will receive the sanction of Government. The importance of such an innovation is great, and if it be really carried out, good results will certainly follow.—*N.-C. D. News.*

THE IMPERIAL EDICT.

IT is noteworthy that the moment chosen by the MIKADO of Japan for enlarging the foundations of his Government is nearly coincident with a somewhat analogous movement in Russia, where the CZAR has lately assembled what may in some sense be regarded as the first Representive Assembly of Russia. In using this term, however, men reared under constitutional governments have to be extremely careful not to permit it to mislead them. A terminology has grown up out of and with constitutionalism which is its correlative in language, and is beset with associations of all the machinery and motive power of free governments. We speak of a Senate and Chambers and Representation in connection with the newly formed bodies created in Russia and in this country; but we must beware how we permit our minds to attach to these terms a meaning they have acquired amongst ourselves, but which they do not embrace in the cases under consideration. It would, indeed, be better to avoid the use of these terms as much as possible in speaking of creations differing so widely as those of the CZAR and the MIKADO from those of Europe or America, for words are the images of things, and nothing but confused and distorted images can arise from the application of the same terms to widely different objects.

So far as we can judge of the body just created in Russia it embraces representatives of the Government, the bureaucracy, the nobility and the commonalty, who have been called together by the Crown for the purpose of giving their advice and assistance in framing a body of laws to regulate the interests, respective and reciprocal, of these classes. The Central Government is represented by ten leading officials; the administrative and bureaucratic element by eleven presidents of Territorial Boards; the nobility by a similar number of 'Marshals of the Nobility'; and, finally, the Commons send as representatives the burgomasters of St. Petersburg and Moscow, and six leading merchants or manufacturers.

Of the two bodies created in Japan by the Imperial Edict of last week we regret to say that we can give little or no information to correct or supplement that which appeared in our last issue. So far as we know, not one of native newspapers has given any explanatory analysis of their constitution, though great changes and reforms are expected to result from their deliberations. Both in Russia and in Japan the members of the newly formed Councils, though representatives, are not delegates from their respective orders. In both cases they are elected by the Crown, and hold their seats on a tenure which recognizes no power as inhering in any other fountain-head. They are intrusted with a deliberative power in making laws, the Crown holding the control of its negative; personally, in Russia; in this country, in all probability, owing to the antecedents of the Sovereign, by his Council of State.

And it is well that in commenting upon a change so little understood at present as that just announced in this country, we should not hastily assume that because it does not lay the foundations of full-grown representative institutions, it is therefore without value and will be productive of no good fruits. It is a very easy but a very indolent thing to sit down for a couple of hours and write an article on such a subject, based upon an entire ignorance of the disorders which have dictated the change, and of the nature and value of the remedy about to be applied. The Japanese at least have shewn this wisdom in the matter now in hand, that the spirit of imitation which plays so large a part in their progress has not induced them to put together a mere paper constitution on the model of those of the western nations. The process of evolution under which their institutions are assuming a higher and more complex character seems one of natural if of somewhat strained development, and they are unquestionably wise in postponing to, it may be, a distant future, schemes of government for which they are now wholly unfit. How little do we really know of the condition of mind of this nation for whose form of government we are so prone to prescribe, whose ways are not as our ways, and whose thoughts not as our thoughts! If a shoe-maker in the planet Saturn were to make a pair of shoes for one of us without knowing more of us than that we possessed active life, bones, muscles and nerves, should we spare our contempt if he told us that it was our fault that they did not fit us? HALLAM said "No unbiassed observer who "derives pleasure from the welfare of his species can "fail to consider the long and uninterruptedly in- "creasing prosperity of England as the most beautiful "phenomenon in the history of mankind." But how far does the example affect or lead the French, the Germans, the Austrians or Russians, who see the working of it almost under their very eyes? What do Englishmen know, positively and really, about the minds of Frenchmen, or Frenchmen of the minds of Englishmen? Do not most Americans regard European institutions as essentially inferior to their own, worn out, effete, and certainly destined to assume ultimately the American mould? Do not Europeans in the same manner regard American institutions with a despair which is relieved only by the selfish satisfaction that the frightful results of extravagant concessions to liberty will not greatly affect us after transmission through a distance of four thousand miles? The fact is, that men are not alone men. They are creatures of determinate races, and their minds are fashioned and shaped by centuries of antecedents which differ as widely as the results they have produced. We sit down here on the hem of the woven tissue which constitutes this old Empire, and repeat our shibboleths about Chambers and Representative Institutions and Electoral Assemblies, and think we can prescribe for an organization of which we know not the anatomy, the origin or the probable immediate future. Our political philosophy has arisen from the study of oxygen, and we use the same formulæ for hydrogen or carbon. How can we come to other than false and ridiculous conclusions?

But what we *have* seen during the past eighteen months or two years is a series of disorders of a sufficiently severe nature. We have been on the verge of a civil war and an external war. True, we have seen a great deal of serious and most laudable endeavour, but also a great deal of administrative short-coming and failure. We constantly forget, indeed, that the Revolution destroyed the old machinery of Government utterly and entirely, and that we have since been working with a jury-engine. The real wonder is that the troubles have not been far greater and more numerous than they actually have been. No one can deny that throughout all this time of difficulty there has been an ample exhibition of motion and activity, and a very considerable advance. But the oligarchy which has really constituted the Government has too narrow a basis, and we suspect that the members of the Cabinet feel and are anxious to remedy this. Any national convulsion, or even unusual movement, shakes it as a pagoda is shaken by an earthquake. The old things have passed away, a new order of affairs has arisen, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

while a series of experiments, some of them failures, was to be expected, the disposition to make them should meet with a favourable reception from all who desire to see the progress of this nation. It is constantly forgotten that immobility, not advance, is the normal condition of mankind, and an Oriental nation may be easily forgiven many errors in the pursuit of a policy which has overcome one natural law by the superior power of a yet higher law, and is seeking to render its motion safe by lowering its centre of gravity.

It is curious to see, too, that the late Edict has called into being a form of thought which seems to us peculiarly interesting. One of our translations this week entitled 'The Imperial Decree' shows how the mind of the writer is aroused by the appeal of the MIKADO to his subjects to *aid* him in giving effect to his wishes. Let any such spirit as this become diffused among the people, and we should certainly see an intellectual and material advance which would make the promulgation of this Edict an epoch in their history.

THE ROBBERY OF THE COMPTOIR.

WITHIN the twenty-four hours which elapsed between Monday and Tuesday morning last, a crime was discovered in this settlement and a tragedy enacted in its vicinity, which will leave an indelible mark on its history. The voluntary actors in the tragedy were the perpetrators of the crime, and their guilt, which might have been expiated by punishment, was enormously increased by the means employed to evade it. The crime was robbery on a large scale, the dread of punishment dictated suicide, and all that offended and outraged justice could do was to pronounce a terrible verdict, which omitted, indeed, all reference to the first crime, with which it could not deal, but stamped the second as an inexpiable felony. Nothing so shocking as this has taken place in this quarter of the world within our experience, though appalling events of far greater magnitude and numbering many-fold more victims, have entered into the chronicle of events. There have been disasters by sea and on land. Brave men have fallen under the hands of assassins. Ships have foundered with full complements of seamen on board. But no such event as this has yet overtaken a community too small not to regard it in something of the light of a domestic incident, and we should deceive ourselves were we to imagine that we shall escape from something of the odium and shame which attach to it. The lives of men are more or less blended together. In some remote but yet appreciable sense we are our brothers' keepers, and not one of us can tell how far his own sins of omission or commission have brought upon two of ourselves this tragic death and dishonoured grave. We must indeed be ignorant if we imagine that deeds of this nature are not in some sense fruits of the soil from which they spring, and we must be callous and coldly selfish if we think that a passing feeling of horror and sorrow is all we owe to a tragedy so ghastly and appalling. It is right that men should pronounce firmly and without wavering upon crimes like these, right that the law should meet out to them its heaviest penalty. But it is not for us men to apportion the shares of moral guilt. Varieties of natural disposition, peculiar and exceptional circumstances of temptation, compliant associates or dark and defiant opinions may all have had their share in bringing these men to their ruin and shame. But, assuredly, evil, like disease, bursts out and spreads on congenial soil, and the predisposition to either is produced or fostered by the surrounding atmosphere. Can we say it has been otherwise in this case? What can have induced two men in a respectable and indeed honourable sphere of employment, fortified by the traditions of honest family life, bearing names which it should have been their ambition at least to preserve from dishonour, to agree together upon this scheme of robbery, and on its detection to cheat the law by deliberate suicide? Their circumstances were such as would represent affluence to many a struggling young man in England of the highest abilities and education. Their birth, antecedents and employment entitled them to mix in a society where they might have found distraction, amusement and sympathy. They had everything to gain by steadiness, perseverance and an honourable course of conduct, as they had everything to lose by the opposite course. The folly of their choice was only equalled by that which characterised their crime. An argument for the insanity of both might almost have been constructed from the circumstances of their flight. The schooner in which they embarked only sailed within four or five hours of the time at which their duties demanded their presence, and when their non-appearance would inevitably attract attention and excite enquiry. Truly do the gods infatuate those whom they intend to destroy! Let anyone attempt to contrast the condition of mind in which an honest, gladsome, GOD-fearing young fellow, in the prime of early life, would go down to his Monday morning work, with that in which these men saw that morning sun rise the setting of which they were never to behold.—Think of those previous weeks of stealthy crime, the dread of detection, the greater weight to bear with every fresh step in the accomplishment of the design, the sickening success. And then imagine the half hour during that calm, while the steamer was approaching on an errand which they must have understood so well—the last resolution—the last look at this fair earth—the last dreadful deed!

The unskilful hand with which we have touched this scene is the best guarantee we can offer for the utter distastefulness of the task. We have as little wish as art to paint either the acts or the emotions of these men on this terrible morning, and our purpose is one of a wholly different nature. It would be a mere affectation to attempt to disguise the fact that, at least with one of these unfortunate men, the losses incurred in betting and gambling were the immediate causes of his crime and precursors of his fate. In an affair like this of which, from its very nature every detail must be known, we violate none of the duties which common sympathy with others imposes, by mentioning these facts. Rather, perhaps, do we mitigate such suffering as must fall on those who will be most affected by this tragedy. For gambling must be regarded rather as vicious and demoralizing than criminal, so long as men repair by their own labour the losses they sustain. It is true that the passion, if not checked, rarely thoroughly seizes a man without ruining him. But in as far as it may be pursued at a man's own free will without detriment to the property of others, the law only takes cognizance of it as a question affecting the morals of the commonwealth; whilst an offence against the property of others is treated in a very different manner. The first paths to these crimes therefore, though reprehensible, were not base, like the embezzlement of money; and truth and charity alike may acknowledge this.

But there is every possible enticement and temptation to young men in this settlement to walk in these paths, which, far from being deserted during its present prostrate commercial condition, are more thronged and active than in better times. The sports and games which were

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the legitimate recreation and pastime of honourable gentlemen, have lost all the attraction which they possessed for those who found in them the pleasant excitement of a healthy rivalry, and an agreeable distraction from the cares of business. Practices are now deemed legitimate on the turf which would formerly have been hooted by the *habitués* of the lowest race-course at home. A system of race-lotteries, as conducive to and provocative of downright cheating as the tricks of thimble-riggers, has eaten into the vitals of this place, and undermined the spirit of frankness and candour and manliness without which our national sports are but the pastimes of rogues and welchers. The habits of careful industry without which the blessing of work is indeed a curse, disappear before the craving for the excitement of gambling. The social instinct which is one great means of the advancement of mankind, the sympathies which are the parents of benevolent action, the self-respect which makes men jealous of violating in their own persons the dignity of humanity, all wither and die under this horrid blight. Faculties adapted to a thousand high pursuits and purposes are prostituted to ceaseless calculations of odds, and strained to estimate the speed and forecast the success of some new horse, whose reputation and performances displace those of our poets and philosophers, and whose relations to those who surround him give a local point to SWIFT'S terrible satire. In any other part of the world when a man gives his word of honour, he is believed; here he is not. If a body of men in a good position in life are elected to control racing affairs, they are trusted, and no one ever dreams of charging them with conduct unworthy of honourable men. Here they simply are not trusted; and the men among them whose individual reputations place them beyond suspicion are regarded as the mere ignorant tools of those whose names are openly aspersed. Whose fault this is we shall not pretend to decide; we only speak to the fact, which is as certain as that of our existence. We all know that the demoralization of society is certain under these circumstances, and evidences of the fact stare us more unblushingly in the face here than in great cities. The habits which conduce to self-respect and fortify men with an honest and defensive pride, cannot grow in such a soil. Six months have not elapsed since we drew attention to the gambling houses, which, within a few days of our warning, were the cause of a horrible suicide, and now the spirit which they create and foster is responsible for a far more terrible instance of their effects. We can only see in this tragedy the natural growth of the soil we have prepared; and every one who is interested in the prosperity or reputation of this settlement, every one who has commercial affairs to administer which demand integrity and industry on the part of his employés, every one who has children around him whom he would preserve from contamination and bring up in the paths of virtue and honour, every one who feels that we have the great duty of example to the people among whom we have settled, and who are now in their own Press actually pointing at us in illustration of the disregard by ourselves of the obligations preached by those we have sent to teach them, should join with us in endeavouring to extirpate this noxious and detestable weed, by the side of which all really vigorous and healthy life withers and dies.

THE NEW FORM OF GOVERNMENT.

The two following Notifications are published in view of the importance of preserving translations of the various edicts relating to the late changes in the form of government.

No. 87.

TRANSLATION.

NOTIFICATIONS REGARDING CHANGE IN GOVERNMENT.

From "Nisshin Shinjishi" and "Choya Shimbun" of April 17, 1875.

No. 56.

To *Iu, Shô, Shi, Chô, Fu* AND *Ken.*

Matters relating to appointments and promotions have up to the present time been made known from the Shikibu-riyô, but for the future they will be published by the Sei-In.

Due note must therefore be taken of the above.

April 14, 1875.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

No. 57.

To *Iu, Shô, Shi, Chô, Fu* AND *Ken.*

The (name of the) *Rekishikwa* within the Sei-In is from henceforth altered to *Shinshi-kiyoku.*

The above is accordingly made known.

April 14, 1875.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

No. 58.

TO THE *Fu* AND *Ken.*

On the occasion of *Sô-nin-ku'an** and higher officials being detached on duty, or rejoining their respective Departments, or being invalided by petition, their departure and their return must both be reported to the Home Department also.

The above is made known.

April 14th, 1875.

(Signed) SANJO SANEYOSHI,
Prime Minister.

No. 60.

The *Sa In* having been abolished, all memorials &c., are for the present to be forwarded to the Sei In *Bun-kiyoku.*

The above is notified.

(Signed) SANJO SANEYOSHI,
Prime Minister.

April 14th, 1875.

SPIRIT OF THE NATIVE PRESS.

DISCOURAGING THE QUESTION, AS YET, OF "PEOPLE'S RIGHTS."

From the "Nisshin Shinjishi," No. 83, *of April* 19, 1875.

A country existing, men are born, and men being born, a system of government arises. Now, a country lives on endlessly for ten thousands of years, while man's life is limited to but one hundred years, yet still it is by reason of man's pre-eminence in wise intelligence that the country is given a place amongst living things. Thus, then, if a system of government that has its origin in such wise intelligence watch over the country, there must consequently be produced, by the actions of that government enlightenment, knowledge, prosperity, natural philosophy, and all other advantages, so that there is nought that is not intimately connected with the government procedure. For this reason the originator and director of such matters is called "the government." The government, then, being a thing established by the people of the country, the positive absence, from the very first, of wilful obstructions on its part, or of causes of dis-

(* Officials whose appointments come from the Emperor through the Head of their respective offices?)

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

quiet to even one single person, is styled the true system of government.

But though this be so, still men are not all gifted with intelligence, nor is the whole multitude of quick perception, and on account of this, though one may be desirous of finding ability in man, or a ringing sound in iron, it is often impossible to do so in either case. Just as though tiles and stones may form a great mountain, still we cannot find in them either gold, silver, or jewels, while, even though there may exist far away beyond our vision ten thousand kinds of vegetation, still scented grasses and rare trees are not commonly met with. And therefore, although the political fabric, may be said to take its rise from man, still how can any common or ordinary man properly fill the post? It is in very truth a difficult matter for the Government to obtain suitable men.

Well, at the present date there have arisen arguments about the "rights of the people," and there has been wrangling to an absurd extent. Still upon private reflection, I am in anxiety last we fall into words that do not attain the object desired, or empty discussion that is merely spoken of and not acted upon. However rapid advance in reforms may have been made by the people of our country, is it not, nevertheless, but eight years since the Restoration to the present moment? Besides, even amongst the residents in the "three Capitals,*" it cannot be clearly proved whether there be one in a thousand or one in ten thousand who even slightly understands the times. (I do not include amongst these the people of Shikoku &c.) In truth, then, how much more must the olden customs remain in their original state in far-removed places and corners of the country! When upon reflecting carefully twice or thrice, I form a picture in my mind I think as follows:—

Suppose that the "rights of the people" be set afoot;—the name alone will exist, the truth being that they will issue from the *Shizoku* who are but a changed form for the old *Bushi*,† and so in the end there will arise the evil of there being set on foot a separate kind of rights compounded from the "rights of the people" and the "feudal system." Let, therefore, all intelligent lovers of their country fix their eyes upon the real idea of the true advancement, as may be suitable to the degree of enlightenment possessed by the people, of the laws for the fresh development of trust worthy "rights of the people," and take counsel together about matters that should be in all truth and sincerity carried.

ONE WHO IS, AS IT WERE, ASLEEP.

The Imperial Decree.

(Choya Shimbun.)

We have always lamented that our people possess nothing of the spirit of freedom, that their dispositions are too yielding, that they are averse to a bold movement forwards, and thus shrink from political activity. We have often tried to arouse and incite them, but we find it difficult to infuse a motive power into the subservient disposition which centuries of despotic government have produced. They have learned that obsequious flattery and the bending of the back were their sole duties; and but few among them are animated by the desire to elevate the country, to assist the government, to remove the scornful looks with which foreigners regard us, and to extend the reputation of the nation. These things fill our eyes with tears of sorrow. Up to this time it has been the business of the government alone to protect the country and to administer its affairs, and the people believed that all they had to do was to obey its commands. Nor, in our opinion, was it the people alone who thought this. The government held the same views, and taught that the people had nothing to do with the administration of affairs; their sole duty was to obey. Thus it is that those who have been endeavouring to secure to them their rights have been called madmen, traitors and anti-government men. We, who have for these reasons been called madmen, traitors and anti-government men, will now turn round on those who do every thing at the bidding of the government, and who think that the administration of affairs is beyond the duty of the people, and in our turn call them madmen, traitors and anti-government men. It is the Imperial Decree of the 14th inst. which bids us say this, and will not the whole nation observe it? Our Mikado has said "Ye, my subjects, understand my ideas and *aid* me in promoting them." We have been considering these words with great reverence, and would now ask the people what they think is the meaning of this word *aid*. Is the disposition which is careless of the welfare or misfortune of the country, which takes no heed of the administration of affairs and is one of perpetual humiliation, in harmony with this word *aid*? We say that, from this day forward, those who thus humble themselves, who are heedless of the administration of affairs and regard the country as the property of others, are the madmen, the traitors and the anti-government men. Oh, brethren! Arouse yourselves and give good heed to this word *aid*!

But it is no easy task we are called on to fulfill, and our first duty is to enquire what must be the true foundations of this *aid*. We answer morality, knowledge and industry. Without the help of these three principles all the endeavours of the people to discharge this duty will be fruitless. Therefore we earnestly entreat all our brethren that they will be pure in their lives so that their virtues may be examples to others; that they will acquire extensive knowledge in order that our country may become great; and that they will be industrious in order that production may flourish and their homes be rendered happy. Again we call attention to this word *aid*, and ask men what they think of it. Again we earnestly entreat their attention to it, and to those foundations on which alone this *aid* can repose.

The disintegration of old systems.

(Choya Shimbun.)

Since the first year of Meiji, the twilight of civilization has dawned upon Japan, and many of our prominent men have discarded the ancient customs of our country. And when we reverentially ask the meaning of this conduct, they say, "The Chinese learning is antiquated and useless; Buddhism is false; philosophy is a thing which must be left to *savans*; poetry is for the idle; Christianity is foreign." All these things are thus pronounced by them to be bad and are laid aside, and they discuss large questions in arguments which are worth but little, while, on the whole, they do nothing. They abandon themselves to wine, to the lust of money and to sensual pleasures. They take no thought for the welfare of posterity. They live in fine houses and wear fine clothes. They neither respect nor provide for their parents, seeking only to gratify their own desires. Their words and deeds are guided by no laws of ours, much less do they conform to the civilized laws of Europe. Inflated by foolish imaginings which have no parallel in ancient or modern times, they say that such things are excellent, and they do deeds known in no other parts of the world but in Africa and Oceania. And this they call freedom! They say and do whatever they like. And these are specimens of our present prominent men!

Women's Rights.

(Merioku Zaishi.)

The discussions regarding the equality of rights of men and women have of late been so numerous as completely to bewilder us. In all arguments we must well examine the nature of the objects to be discussed, and in this argument we must enquire what men are, what women are, and what their respective powers are. After this we may proceed to the consideration of our subject. But without such previous examination of the qualities of men and women and the nature of their powers, our conclusions will be mere idle imaginings. and our arguments meaningless and endless. For instance, there are two aspects in which we may regard the concession of the best seat to women. Either it proceeds from the idea of protection or the idea of worship. If we think we are protecting women by giving them the best seat, I see nothing to be angry at. But if it involves any idea of worship, then we may justly be angry. Almost all the discussions now noticeable are

* Yedo, Kiôto and Osaka.
† Military class.

Digitized by Google
UNIVERSITY OF CALIFORNIA

like the above, and it seems idle for us to be debating these matters and working ourselves up into a state of excitement about them. What *is* important is to bring forward a subject near at hand and which can be understood by the people. This subject is neither religion nor philosophy, it is mere arithmetic. What is open to every one to do is to reckon the number of the male and female population, and if this be done we shall see that they are nearly alike, so that there is one woman for each man. If there is an excess of women in one place, there must be a deficiency in another. Putting aside all questions about equality of rights, we may safely infer that the uniting of one woman to one man is a right proportion. This is the stepping-stone to all further arguments, and for these we may wait until we acquire more knowledge. But if we are not even mature enough to come to this conclusion,* the best thing for the present is to leave the people who have concubines undisturbed. But we should not sanction concubinage by law; let it rather be secret, for this brings with it shame, which is the origin of purity. If this first stepping-stone is laid, the present endless discussions on this subject will cease, and the time for questions regarding equality of rights will come years hence.

FUKUZAWA.

WOMEN'S RIGHTS.

(*Meiroku Zashi.*)

Mr. Kato and others appear to think that I was the first to commence the discussion on the equality of rights between husbands and wives. But the argument I have lately been endeavouring to press does not relate to any such equality of powers. It touched on the question of wives and concubines, and upheld the doctrine that the status of husband and wife was equal, and that while the former was not justified in any assumption of superiority, the latter should experience no feeling of inferiority. I have not said one word about the equality of power, and being anxious not to be misrepresented on this subject I furnish this brief explanation.

MORI.

WOMEN'S RIGHTS.

(*Meiroku Zashi.*)

Since Messrs. Mori and Fukuzawa advanced their *thesis* regarding the equal rights of husband and wife, clearer views of these relations have become apparent to us, and it is probable that the bad habit husbands have of looking down upon their wives, and the pernicious custom of concubinage, will cease, that husbands and wives will have equal power, and the deeds of Messrs. Mori and Fukuzawa will be pronounced to be great. If we look into the theories of Europeans on this subject, it would appear that the possession of equal power by husband and wife is based on natural reason. But if we observe the practice of Europeans, it would appear that the power of the wife is greater than that of the husband, and that this error has been brought about by the want of a correct view of the dictates of nature. We will point out examples of this. In going through a door the wife passes first and the husband follows her; the wife takes the best seat and the husband the next best; in visiting, the wife is first saluted; in forms of address, the wife is first mentioned. Moreover, while men are in the company of ladies they must be particular in their conversation, and are not permtted to smoke without the ladies' permission being first obtained. These and like customs are innumerable, and the power of the women is far greater than that of the men.

Europeans are accustomed to these habits and see nothing unreasonable in them, but in oriental eyes they seem strange indeed. Being lately in the company of some foreign ladies I smoked as I pleased. But a foreign gentleman approached me and requested me to desist, as the ladies disliked it. Of course, I did so, being desirous of conforming under these circumstances to European customs, which, I presume, forbid the practice. But I found the prohibition most unreasonable, and the person rude who asked me to desist. The reason men are thus prohibited from smoking is that the ladies do not like it. But if I smoke, I do so in virtue of my rights as a man, and if the ladies do not like it they should leave the room. The dislike of women to smoking subtracts from the pleasures of men, and there surely can be no reason in this, as it involves a limitation of the freedom of power. The dislike to smoking is not confined to women, many men also dislike it. But I find no reason for making distinctions between men and women in such a matter, and for smoking before the one and not smoking before the other. If smoking were immoral in itself, or if it injured the health of others, I would most assuredly not smoke. But when it is not a thing prohibited by law or morals, and a distinction is made between smoking before men and before women, I fail to see the reason of it. It seems trifling to give an illustration of so small a kind. But I adduce it to show that the equality of rights between husband and wife is much misunderstood, and that men idolize their wives for the purpose of pleasing them. And this is the reason why some of the celebrated women of Europe have behaved in a manner which it pains us even to hear of, and which is terrible. At present there is much discussion in this country as to the relations which should exist between men and women. It is well therefore that our learned men should take this into consideration, otherwise the power of the other sex will grow gradually, and eventually become so overwhelming that it will be impossible to control it.

Ye learned men, what are your views?

CONFLICTING CIVILIZATIONS.

Choya Shimbun.

* * * * * * *

The Europeans and Americans are enlightened people and do not without reason call us semi-civilized. But what is the meaning of civilization? It surely is not limited to the possession of fine houses, fine dresses, and to sumptuous living. It is not confined to a flourishing state of the arts, of manufactures or machinery. It means an advance in knowledge and politics, a reverence for religion, the proper estimation of good character and the observance of good customs. The remains of our old customs linger in our minds and this cannot be helped. Our people observe these customs and we must let them alone. But the religion of the Europeans teaches that when people arrive at maturity and part from their parental homes, one man may be united in marriage with one woman. The foreigners endeavour and are struggling hard to get our people to adopt their customs and to teach us their religions. We can only spontaneously infer from this that they believe our customs to be bad. They resemble us in forbidding more than one wife, but out of the bonds of marriage they are like ourselves. Do they think our customs bad? While in their own countries they say so. But how is it here? All foreign missionaries are trying energetically to induce our people to adopt their religion, and it seems as if all their endeavour was to turn their eyes from the doings of their own countrymen. This is passing strange! What is the reason that these men violate the doctrines of their own faith? This also has led to much neglect of young children, which is very curious and shows a strange want of natural sympathy. There is not one of their customs they do not try to inculcate to our people. In one particular, however, they observe our custom, and this is the most obscure thing under the sun.

THE FORCE OF EXAMPLE.

(*Choya Shimbun*).

The newspapers are at this moment filled with discussions on the question of marriage and the equal rank of husband and wife. But we meet with many men who justify themselves for still observing our old national customs by saying the customs of foreign nations are but little better. Meanwhile, in column after column of the newspapers, it is argued that these customs are wrong.

The European system of morals inculcates the union of the man with but one wife and their equality of rank. We should suppose from this that foreigners would

* This expression would seem to imply a little impatience on the part of the writer at those who are constantly referring to the backward condition of the country. (ED. J.W.M.)

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

virtuously observe this system. But we find that it is not only in Japan that virtue is rare, and had we not seen foreigners in their own homes (countries) we never could have believed that they acknowledged any such moral obligations. But having seen this we can infer that many of them but lightly regard the dictates of their own laws.

* * * * * *

So long as our Government prohibited intermarriage with foreigners, no foreigner could marry a Japanese wife. But this prohibition has recently been removed and such marriages are now permitted. But I have not yet heard that any such have taken place, and from this I should judge that our customs were best. Moral philosophers would regard these customs with disapprobation,—a censure which would equally apply to foreigners. The people among ourselves who call themselves civilized are the imitators of foreigners. Concubinage among ourselves is an old custom and the Government took no heed of it. But the example of foreigners is the cause of a large number of our own officials and wealthy men persevering in customs which our modern progress would discountenance. Is not this a bad example to our new civilization?

Advocating the Establishment of a Board of Trade.

(*From the Nisshin Shinjishi, No.* 79, *April* 14*th*, 1875.)

When advancing in the true bounds of reform and enlightenment of one's country and homes, the promotion of learning, trade, arts and agriculture must be considered as the starting point. If we now give careful consideration to the political fabric of our own country, we find that encouragement is given to book learning, arts, and agricultural occupations, and that there are various departments and offices which have charge over them, while commerce and navigation alone are left without anyone to further them. This shows a deficiency in a most weighty matter, and is even as though the four limbs of the human body were not fully complete; and for this reason the matter that is at the present moment important and necessary to our country, and that should not be neglected even for a single day, is to encourage navigation and commerce by the establishment of an office for the promotion of trade. There have already been published, in the latter part of the month of March, in a paper called the *Mail* at Yokohama, some arguments in favour of the encouragement of navigation and the prospering of commerce; and though, perhaps, the arguments therein set forth way appear to contain evidence about the history of the advancement or non-advancement of commerce in our own country alone, still, on account of its being a matter intimately connected with the progress and enlightenment of our land, I give praise to the ideas of the writer in question and trust, moreover, that they may be of profit to our country and homes.

(Here follows translation of an article from the *Japan Mail* of March 20th 1875 on "The encouragement of navigation"—originally taken from the "*Nichi nichi Shimbun.*")

(signed.) Muda Yudaka.

The Mitsui Bank.

(*From the "Hochi Shimbun," No.* 644, *of April* 18*th*, 1875.)

In the midst of the troublous time occasioned by the fall of Ono, and the death-throes of Shimoda also, the fact of the establishment of Mitsui in the Suruga-chô standing towering aloft, with its supports firm as the plain stretching out at the base of Fuji, has been a matter looked up to with admiration by our eighty and more provinces. As regards its internal affairs, however, these are probably by no means as trustworthy as its outward appearance. The house (Mitsui) is taking precaution beforehand against the chances that it will, unless measures be presently taken, follow in the road which brought the former two houses to destruction, and so bring down upon itself the ridicule of all quarters. We have heard that the house in question has, in like manner to a bank, gathered together many noblemen and persons of means, and has divided shares amongst them, thus determining its support. Now if matters be just in this state, it must be said that a far more reliable scheme has been adopted than that of letting the house fall while keeping up a semblance (of strength).

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Buddhist Obsequies.

Old people of either sex prepare for the approach of death by making frequent visits to the shrines of Hodoke and Amida Niurai, especially the latter. They also receive frequent visits from priests who preach and engage in prayer, thus "making their peace" and paving their road to paradise. Suicides prepare for death by appeasing the deities' just wrath at taking life, although their own. If people of means, the priests are introduced, and after the official inquest has taken place all is made pleasant for the soul of the deceased, and the peace of mind of the survivors (*see Article* "Suicide" *et seq.*) When an accidental injury or illness occurs the priest is sent for and the sick man's friends make pilgrimages to pray for his restoration. When this is despaired of, the invalid is again visited by the priest, who after his decease selects the *Kai-mio*, or posthumous name, and writes it upon a slip of white paper, pasted on a small tablet of unstained wood. In the meantime the deceased has been moved so that his head is turned to the north, and a folding screen, turned upside down, is placed there. A new desk about a foot in height occupies the space between the head of the corpse and the screen, on which cakes of raw rice-flour, called *makura-dango* (pillow-dumplings), are laid out as also a single rush wick, lighted, in a saucer of oil, with a saucer of unglazed ware in which *senko* (joss-sticks) are placed singly. The eating-tray, cups, saucers and chop-sticks used by the deceased are filled with vegetable food and placed at the side of the corpse, the latter on the left, or wrong side of the tray. Forty-eight hours after death the corpse is arranged for the *kan* (coffin) by ablution with warm water, the cold water being first placed in a tub and boiling water added.* Unless the deceased has otherwise directed, the head is shaved, the priest while he is reciting certain customary prayers making the first three movements of the razor which he afterwards relinquishes to a servant. The corpse is then dressed for interment, the shaven being clothed as priests, the unshaven in ordinary dress. In all cases the shroud is white, of silk, linen or cotton and of the same make as the common outdoor dress of the deceased, the wealthy being atired in the same number and pattern of dresses as they wear in that season on gala or official occasions—a full dress, in fact, but entirely white. The hair of the females, when not shaven, is tied behind and falls down loose (as in the pictures of the ladies of the Court), and stockings are either put on their feet or placed in the coffin. Clogs or sandals, however, are discarded as they are not worn in paradise. The body is then placed in the coffin in the usual sitting posture, the hands of the shaven being joined as in the act of prayer. The *kan* (or coffin) are of various kinds, the commonest being the *haya-oké* (quick tub)—next in order comes the square box or an inner and an outer box of unstained wood, pine or *shinoki*, (*retinospora obtusa*), the latter wood, considered the most suitable for sacred purposes, being commonly used by such as can afford it.

Earthenware jars are also used by the nobility and the wealthy. The better classes fill in the vacant space of the coffin with chaff, tea-leaves or the more costly *makô* incense, the highest ranks using vermilion. Those who are shaven have a cap placed upon the head. The bier is then laid upon trestles, the face of the corpse being turned towards the north, and a temporary altar is raised upon which offerings are placed as before.

* In consequence of this custom with regard to the dead warm water is always poured into a vessel first, the cold being afterwards added. The Japanese dislike to pour hot water into cold.

The people of the house of mourning do not retire to rest the night before the funeral, which is occupied by the priests of the family temple in reciting prayers. Until within the past few years the funerals of the well-born usually moved from their houses in the following order: Priests in a *norimon*; two white lanterns; trunks *(hasami bako)*; lance-bearers; retainers; halbert-bearer; incense-bearer; tablet (*ihai*) with *kai mio*; the coffin on a stand supported on two parallel poles, at the right the long sword of the deceased, at the left the short, both tied up in covers and borne by his highest retainers; the *dzori-mochi* (sandal-bearer); more *hasami bako*; a led horse, usually his favourite, the tail being cut short as a sign of mourning.† To these follow men bearing baskets of rain-coats and more retainers on horse-back or *norimon* or on foot. Then follows the heir on horse-back or in a *norimon* followed by the family and friends who have previously been invited, the *samurai* being dressed in *kamishimo* or full dress, and bareheaded and the bearers clad in white. Among the train are numerous bearers of lanterns, all of these being of white paper. Where possible every article is white or is covered with white paper, cotton or silk.

Upon arrival at the temple, where preparations to receive the *kan* have already been made, prayers are recited. The ceremony varies for each sect and is, besides, regulated by the wishes of the survivors, and their expenditure of money on display. The *indô-michi-hiku*, or guide to the road, is the chief portion of the ceremony. The prayers being ended the body is carried to the grave, accompanied by the priest who recites prayers until the interment is completed. In cases of cremation the body was formerly removed to the cremation-ground without further ceremony.

The funerals of towns-people, which are all on foot, are conducted with less pomp. First comes the priest followed by the coffin borne either in a *norimono*, styled a *nai sô*, or private funeral, or on a platform with two poles by which it is carried on the shoulders of four or more bearers, the coffin being covered with a *tengai*, or small temple-like frame. Clothing of a white material is also placed upon the coffin. Singularly-shaped hats, made of rush, and woven in an open-work pattern are worn by the followers, who are dressed in *kamishimo* with short swords in their girdles.

The poorer class often bury their dead by torchlight to avoid the exposure of their poverty.

To return to cremation. The grave-yards are the same, but the tombs are made only to contain small jars in which the ashes of the dead are placed and labelled. There were various modes of cremation in use. First the coffin with its contents might be burned; this, however, was expensive. In the next the body only was placed in a separate compartment. And the cheapest and most common mode in use was to form a long pile of wood on which the bodies were placed in a row, with tickets to indicate the spot at which the ashes might be collected. The employés of the cremation-ground performed the necessary functions, a few only of the nearest relations attending to witness the preparations. On the lighting of the funeral pyre they took their leave, returning the following day to collect the ashes which they gathered with a wooden and a bamboo stick serving as tongs.‡ The small jars are of unglazed red ware, varying in size from 6 to 12 inches square. Sometimes the ashes were divided into parcels, a portion being sent to the various temples of the family, as by intermarriage its members would have relatives buried at several. Many who could afford the expense sent the jar with its contents to the Kobodaishi Temple at Koyasan in Kishiu, where an immense collection from all parts of the Empire may be found.

The periods of mourning, or *Kibuku*, are for parents 50 days of *ki*, or deep mourning, during which business must be foregone and the use of the razor, *saké* and other than vegetable diet abstained from, and the temple and grave of the deceased visited daily. Other *tera* or *miya* must not be visited, the mourner being unclean.

Buku are twelve months of mourning and uncleanness which follow death, during which the *Kami* may not be visited. Brothers, sisters, husbands or wives, uncles, aunts, and all first-born children are *ki* during 20 and *buku* during 90 days; other children are *ki* for 10 days and *buku* for 45; cousins *ki* for 3 and *buku* for 7 days. But for the children of the mourner and cousins under seven years of age the prescribed term for *ki* is one day only.

Future State of the Buddhist.

There are ten *kai*, or states of existence, named by the priests of the various sects, viz: *Hotoke* the highest state of bliss or absolute nihilification.

Bosatsu, disciples of Buddh who exist in *Shimisen* where they await absorption into *Hotoke*.

Yengaku, probationary to admission among the *Bosatzu*, and *Shôman* on the road to paradise.

Tenjio, the normal state of ordinary sinning humanity not actually guilty of any great sin.

These are the five states of the good.

Ningen or state of existence upon earth.

If a good and devout liver the soul goes to Tenjio and successively works up to the highest state or *Hotoke*, but if a person of indifferent life, a scoffer at religion or a brawler and blood-thirsty man, his soul flies to *Shiura* the place of perpetual quarrels and slaughter, the purgatory of the Buddhist.

If guilty of uncleanness or inhuman conduct such as Adultery, Rape, Incest or eating forbiden food, the soul after death is punished by the great judge Yemma by transformation into a beast and condemned to live on earth. This is the state of *Chikusho*, or transmigration of the soul into inferior animals, birds, reptiles, &c. *Gaki* is the punishment of perpetual hunger and starvation, and *Jigoku* (abode of beasts), pandemonium.

There are eight modes of torture. In *Tokatsu* the wicked are alternately beaten to death and resuscitated. In *Bakujo* the wicked are dragged limb from limb, chopped to pieces, pounded in a large mortar, sawn or planed into various shapes, as if by carpenters or mason's tools, the eyes are gouged, and the tongue or nails plucked out. In *Shingo* the crowd of the wicked are beaten about like potatoes in a tub. Then we have *kiokan* weeping; *dai kiokan*, great lamentation; *shonetzu* and *dai shonetzu*, burning and roasting; hills covered with large needles over which the wicked are driven; lakes of fire and blood and brandings with red-hot iron and tearing the flesh with red-hot pincers. Also *muken*, or being thrown into the bottomless pit of perdition.

The chief of Hades, Yemma, has four executioners who carry into effect his sentences of punishment, *Semeru Onie*, Torturing demons; *Dze sho me po*, executioner and torturer of the living, who is red; *Sho gio mu jo*, green and *Sho metz metz i*, black, both torturers. *Ja ku metz i raku*, slaughterer, flesh-coloured. § The friends of the departed who are not aware of the sentence of Yemma must draw their own conclusions as to the destiny of his soul and therefore pay the Bonzes‖ to pray for it. This is independent of the periodical visits of the mourners. The doctrine of the transmigration of souls leads all devout Buddhists to treat inferior animals humanely. Were it not for this it is certain that they would receive little consideration.

If the *hoji*, or prayers for the soul of the departed, be continued they will eventually succeed in bettering the condition of the sufferer in purgatory, but this much depends upon the piety of the living. The stories founded upon transmigration are very numerous, and the charms, prayers and stratagems resorted to by the living to release the souls of their relatives, or by the spirits to stimulate the flagging efforts of those on earth are exceedingly interesting.

Goku-raku, perfect felicity. These are as before named the five states from existence on earth to *Hotoke*. In the abode of the blest are ever-flowering, beautiful trees, fruits, song-birds, music, a delicious climate, and all that men call joy and ease upon earth. Those whose spirits are on the road to paradise do not need their friends' prayers, rather do their friends pray to them.

Childrens' spirits remain in *Sai no kawara*, the pebble

† Horses' tails are never docked under other circumstances.

‡ Hence the use of chopsticks, one being of bamboo and one of wood, is objected to as "uncanny."

§ Those who stint the measure of food are condemned to perpetual hunger.

‖ Boz, or as pronounced by us, bonze, or bonsan is derived from *Bo*, a temple and *dzu* master.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

plain (from *kawara*, the dry, gravelly bed of a river, of which there are many in Japan of great width). Here the little people employ themselves in making piles of stones which a mischievous demon ever and anon comes round to destroy. Those who succeed in raising a large pile attract the notice of *Jizo-sama* who causes their spirits to enter an unborn child and thus gives them another chance of living to puberty and by their own exertions securing happiness in a future state.

The unmarried of either sex, should they escape perdition, can only look forward to joining the children, as by the neglect of their duties to humanity they lose all claim to a home in paradise.

The soul must pass over the *Sandzu no Kawa* (the river of the three paths, the Japanese Styx) whence stretch out before it the three paths to Paradise, Humanity and Perdition. On the further side of the river an old hag *Shozuku no obasan* examines the passengers, points out the road they should follow, examines their garments—sometimes washing them as in the case of women who die in childbed¶—and when she sends them to Pandemonium unceremoniously strips them. The souls rescued by purchased prayers from Hades must enter the body of new-born infants and live again on earth, thus obtaining one more chance of becoming *Hotoke*.

The friends of the deceased must visit thetemple and the grave on the seventh day after death and every seventh day seven times uninterruptedly. On the seventh day prayers are recited by the priests when the period of strict mourning is thus concluded. On this day the presents to mourners are reciprocated.

On the hundredth day the next ceremonial visit is paid to the temple before which the tombstone should be erected.

The next is the anniversary visit succeeded by the third, seventh, thirteenth, seventeenth (the Tendai sect observes also the twenty-seventh,) fiftieth, hundredth, and every fiftieth anniversary are all observed. *Toba*, or laths, with Sanscrit and Chinese characters are placed on the graves on the periodical visits of the visiting relatives,

Other details are now omitted which will find their place in our account of family and household matters. To conclude with a common proverb:

Gigoku no sata Kane Shidai. "The affairs of Hades depend upon money."

NOTES OF A JOURNEY FROM AWOMORI TO NIIGATA, AND A VISIT TO THE MINES OF SADO.

By J. H. Gubbins, Esq.

Read before the Asiatic Society of Japan on the 14th April 1875.

The Bay of Awomori, at the extreme end of which stands the town of the same name, is among the best in Japan, the harbour being well protected while there is deep water close to the shore on all sides.

The town of Awomori, which is the seat of the Awomori *Ken*, is extremely uninteresting, and there was comparatively little left to see of it on the occasion of our visit, as more than half of the place had been destroyed by fire the year before. Its *Meibutsu* or production for which it is famous, is a kind of sweetmeat made of beans and sugar. No particular industry is carried on, but a considerable trade passes through the town, as it is the favourite place of communication between this part of the country and Hakodate, owing to its proximity to Hirozaki which was formerly the castle-town of the district; while on the other hand it is conveniently situated with respect to the great cattle-province of Nambu. Cattle and rice are the chief exports to Hakodate, while from that place skins, fish, and foreign merchandise of all kinds are imported. Another thing which tends to give a certain importance to Awomori is the fact of its being the principal outlet, so to speak, of the large yearly emigration of the country people who flock in large numbers in the spring of every year to Hakodate—either to join the fisheries on the coast of Yesso, or to pick up what living they can in Hakodate and its neighbourhood, returning as regularly in the autumn to their native places.

Considering the comparatively short period during which out-door work can be carried on in the northern parts of Japan, it seems strange that these people should choose for their periodical flitting the very time of year when, as one would be apt to think, their labour would pay them best; and the reason assigned—which the fact of the yearly emigration itself proves to be in a measure correct namely, that the fisheries are so lucrative that the amount which they earn by this livelihood serves not only to keep them through the winter months, but to defray the cost of their journeys to and fro—leads us to infer that agriculture in these northern districts of the country is not a remunerative pursuit. This emigration is not confined to the male portion of the population; the women emigrate in just as large if not in larger numbers than the men.

At Awomori commences the long chain of hills which runs down intersecting the country from north to south as far as Takasaki and on through Shinshiu. A lesser ridge of hills has a direction from north-east to south-west, but is irregular, there being breaks at intervals and some of the peaks being much higher than others. In this last chain is the mountain Iwakiyama, which like so many other mountains in Japan is shaped like a volcano, and stands out a little distance from the rest of the chain. It is of course impossible to form any accurate conclusion as to the height of a mountain without ascending it, but judging from the size of the hills near Iwakiyama over which we passed we estimated its height roughly at about 5,000 feet.

Proceeding from Awamori towards Namioka, the first post stage on the road to Hirozaki, one passes over the last-mentioned ridge of hills at a point called the Tsugaruzaka the ascent of which is somewhat tedious, though there is a nice view to be had when the top is reached, of Iwakiyama and of the valley in which Hirozaki lies. In the district between Awomori and the Tsugaruzaka the chief product is of course rice, but the cultivation is altogether very scanty. Some of the hills were covered with a coarse-looking medium-sized bush which, seen from a distance bears a certain resemblance to the mulberry-plant, though the leaf is larger. The name given by the Japanese to the plant is *Gomagiri*, and the bark is employed to make the incense-sticks in common use in Japanese temples. The *Sasa* or scrub-bamboo, dwarf-oak, and ordinary pine grow everywhere in great profusion. On the other side of the Tsugaruzaka the country opens out into a broad valley in which the villages of Namioka, Fujizaki, and the town of Hirozaki are situated, and which is bounded by the two ranges of hills already mentioned. The scenery loses much of its desolateness, the broad valley full of rice presenting a cheerful contrast to the country already passed through. The valley is watered by the Hiragawa which flows through it from North-East and South-West, and is crossed by the road some two miles from Namioka. The river when we saw it was only about thirty yards wide, but in flood it attains a considerable breadth. The houses in the villages along the road are almost all built of clay with slight wooden frames, but the better class of buildings in the villages and the houses in the towns are ordinary wooden structures, presenting in point of architecture no marked difference to those seen in Yedo and its environs. I should not forget to mention the water-melons, which one sees everywhere growing in the wildest profusion, sometimes trailing up the sides of the houses and almost hiding the roofs altogether from view with their rich luxuriance of foliage, and at other times forming the hedge-row to a garden. All the way from Awomori to Niigata water-melons are grown, and as they are also found in great quantities down south, this plant may be said to be almost as universal a production of Japan as the staple product, rice.

Hirozaki is an old castle town containing some 30,000 inhabitants. By old castle-town is meant that the town in former days was the residence of a northern Daimio, and possessed a castle. This is now no more. It was burnt down four years ago and the site is now occupied by barracks for the 800 soldiers who are quartered in the

¶ Nagari Kanjo. *See* "Our Neighbourhood." Women who die in childbed are supposed to fall into *chi no ike* (lake of blood). When the cut spread cloth breaks the bonds of mortality are loosed.

Original from UNIVERSITY OF CALIFORNIA

town. The stream called the Tsodzubudzuyama intersects Hirozaki.

The towns here in the north are built in a curious style. Though, as I have said, the houses in the towns have no particular peculiarities of architecture to distinguish them from those further south, yet owing to the heavy snow-fall in the winter when the snow attains an average depth of 12 or 13 feet, the roofs of the houses and the verandahs are built very strongly, and these latter are made continuous—each verandah connecting with those of the houses on each side—so that in winter however great the depth of snow the inmates of the houses are able to go in and out of their dwellings with comfort and even to take a certain amount of exercise. As is the case in all mountainous localities, the roofs are further protected by large boulders and stones which are placed on them in the usual way.

Hirozaki considered in any way is a very uninteresting place. All old castle-towns in Japan have more or less a dull and dead-alive atmosphere pervading them which has a depressing effect upon a new comer, and Hirozaki is no exception to the rule Owing to the increasing trade passing through Awomori, Hirozaki has been quite superseded by the former place, and though still a large town, business appears to be almost at a stand still. Very good apples are grown in the neighbourhood, and a kind of green lacquer ware is manufactured, which however, though of some repute in the locality, is held in small estimation at the capital.

It was a long day's ride from Hirozaki to Odaté, our next stopping place. After emerging from the valley the road led us over the crest of a densely wooded hill some 500 feet high, and it was all the ponies could do to carry us up, the path being entirely composed, as is not uncommon in mountain tracks in Japan, of small logs of wood cut to the same size and laid so as to form steps up the hill side. A curious feature of the scenery further on, was that the hills on our left were covered with fine turf, but otherwise destitute of vegetation, with the exception of some dwarf-shrubs scattered here and there, whereas those immediately opposite these, and to the right of us as we went along, were clothed with the densest vegetation from their bases to their summits, chestnuts and a species of elm being chiefly noticeable. Fortunately for our rate of progression our road skirted the sides of the first named hills, and we were thus enabled to push on at a rapid rate. We saw numbers of horses grazing on the hills all round even in the steepest and most precipitous places, and now and again some of these answering to the call of their owners who had come out to collect them would come bounding down the hill sides uttering shrill neighs and indulging in the wildest of gambols. Our own steeds betrayed an intimate acquaintance with the geography of the neighbourhood which could only have been acquired in this way, and shewed at times an evident inclination to join their friends playing in the vicinity.

Of Odaté as of Hirozaki there is little to be said. Like Hirozaki it also possessed a castle once, and was the residence of a *Hatamoto*, and like that of Hirozaki the castle is no longer in existence. The town holds about 4,000 inhabitants. The principal products of the district are rice and the indigo plant. Curious looking clay ovens were to be seen along the road side as we came from Hirozaki, in which this plant is subjected to some mysterious process before the dye is extracted. Tea has latterly been grown, but not as yet with much success.

We found on arriving at Odoté, that we should have to continue our journey by boat for 13 *ri* as far as a place called Tsurugata, as the bridges had been all swept away by recent floods, which floods are of common occurrence, taking place five or six times in the course of a year. The Yonetsurugawa, the river which proves so troublesome, rises in the district of Kadzunogori in Nambu and flows into the sea on the west coast a little below the town of Tsurugata.

The boats or rather canoes used on this river are of two sizes. It was in the smaller kind that we embarked. Their shape is somewhat peculiar, and a description of them may not be out of place. They are flat-bottomed, long and narrow, the length of the one in which we embarked being about 25 feet, while the breadth was only 2½ feet. They lie low in the water, there being hardly a foot of free-board, and the sides are slightly rounded so as to curve inwards. The draught of the smaller boats, such as the one in which we were, I should take to be about six inches. The prow is very long and high, and does not project sharply outwards, as is the case with ordinary Japanese boats, but goes in a line with the body of the boat in a gradual long curve. The breadth of these canoes is the same all over, except at the bows where they become slightly narrower. They are worked by two boatmen. One of these stands in the stern of the boat and steers with a long paddle; the other either sits in the bow and rows with a very unwieldy paddle fixed in rowlocks made of rope, or else stands up with a pole to ward the canoe off from the rocks and keep it well into the stream. The canoes seem on the whole adapted to the locality and are managed with great skill when shooting the small rapids which occur here and there on the river.

Swinging down with the current at some six miles an hour, we passed through a beautifully undulating country, the scenery being very pretty at times and very picturesque all along. There is a fine view about twelve miles above the village of Tsurugata. Here the hills on each bank rise to a height of 300 or 400 feet, and the stream gradually grows narrower and narrower until at last making a sharp turn to the right it dashes into a steep gorge. From the boat, as it is whirled down amidst the strong eddies of the current, the view of the hills overhead, shaded as they are by dark pines and cryptomerias, is very grand.

From Suyama close to Tsurugata, where we landed, on to Kado the country is beautiful. Large tracts of rich meadow-land, varied here and there by small bits of lightly wooded country, extend down to the sea on the one hand and as far as the hills on the other. In these meadows wild boars, so our guides said, are frequently to be met with even in the day time. Beyond Kudo the country becomes more cultivated; the villages are more numerous and more thickly populated, and the houses composing them differ from those further North in not being mere clay structures but built of wood in the usual style. Near this latter place we saw the ordinary bamboo for the first time, not growing wild but carefully cultivated in a hedgerow along with other trees. Shortly after leaving Kado an extensive lagoon, about 15 miles long by five broad, as far as we could roughly estimate it, and connected with the sea by an arm so narrow that the first impression formed by the traveller of it is that it is an isolated piece of water, comes into view on the right. Near the outlet to the ocean, as if specially stationed there to guard the entrance, are two high hills called respectively Honzan and Shinzan, or old and new mountain, the latter being the name of the higher of the two. As we proceeded further the meadow land gave way entirely to cultivation. The *uri* or small melon seemed to be the chief production of the district, and those we saw were much larger than those grown near Yedo.

A nice view of Kubota, the capital of the Akita prefecture, is obtained a short distance from the town which is situated in an extensive valley at the foot of Taiheisan, a mountain of some 4,000 feet, and on the river Omoga. This river has its source at Iwasaki and flows into the sea on the west coast near Kubota. Kubota has a population of 60,000 inhabitants, and though, like Hirozaki, an old castle-town, has considerably more life in it than the latter place. The houses though built like those at Hirozaki have a more finished appearance, the street are wider and better kept and there are some good shops and fine large tea-houses in the town. Jinrikishas ply to and fro, the roads, however, being too bad to admit of their being used outside of the suburbs, the streets are thronged with a busy crowd, and there is every sign of a brisk trade being carried on. The *Meibutsu* of Kubota are *Tsumugi*, a silken fabric much used in making *hakama* and *kimono*, and the pattern of which is usually black and yellow in stripes, white *Chijimi*, a species of crape with a raised woof which fetches a high price at Yedo, and *Karakami* —the sliding-doors of Japanese houses.

Near Kubota we saw large tracts of woodland fenced in, and at certain spots in the wide enclosures thus formed were fixed posts notifying that the land in question belonged to the *Kaitakushi* or Agricultural Department.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

It is gratifying to see that the Japanese Government are at length disposed to turn their attention a little nearer home, and perceive that Yezo is not the only place where the influence of the *Kaitakushi* may be exercised to advantage; for certainly there is in the northern districts of the main island great room for improvement, and owing to the more genial accessories of position and climate the labours of the Colonization Department in this direction, where such a large field for agricultural experiments is open to them, would, it is presumable, be far more likely to be attended with success than in a country with the Siberian climate of northern Yezo—where millions of dollars have been expended—with what result is only too well known.

Hitherto all the way from Awomori to Kubota and on as far as Miurakami we found that a knowledge of the language as spoken at Yedo and the neighbourhood of the capital was of very little use when speaking to the country people, though of course officials both in towns and villages can invariably speak the Yedo dialect. The dialects vary in every town to a certain extent, near Awomori the Nambu dialect is the one in common use. Owing, however, to the yearly emigration of the country people before alluded to, a medley of many different dialects is the result, which to a traveller is utterly incomprehensible. The harsh language of Kaga, the dialects of Nambu with its peculiarities of intonation, expression and pronunciation, the nasal twang which distinguishes the dialects spoken near Hirosaki, and in the old province of Aidzu—combined with the hard and clipped language of Hakodate, in itself a compound of many dialects, when jumbled up together combine to produce a jargon the disagreeable effect of which on the ear of a stranger may readily be imagined. As an instance of the local peculiarities of dialect which fell under our notice I may state that we met with no less than five different expressions for the common word "*Yes*" namely *Hé*, *Hai*, *Né*, *Na*, and *Chi*. By this alone some idea may be found of the difficulties which stand in the way of a traveller understanding and being understood by the people with whom he is thrown into communication.

The coast line from Hirazawa on loses much of the dreary desolateness noticeable between Kubota and Hirazawa. Hitherto the coast has extended in a straight unbroken line varied by no indentations or bays, while endless sand, and nothing but sand, has reigned uninterrupted everywhere. Here, however, the monotony is broken by several tiny bays, the entrances to which are almost concealed by high fierce-looking rocks which bar the passage to all but small fishing boats, and on the shores of which stand little fishing villages, whose inhabitants were actively engaged when we passed by in the ordinary pursuits of a fishing population. The character of the country too softens and improves. The hills run down close to the water's edge. Wild lilies of a bright orange colour, harebells and wild pinks grow in great profusion, and little hillocks rich in trees and shrubs are dotted all over the rice-fields. Such is the country between Shokoshi and Kosagawa.

The road from Shokoshi on towards Sakata lies along the tops of high cliffs overhanging the sea and over the Misaki-togé or Pass of the Three Promontories. Owing to the hills all round, the view of Chokaisan, one of the highest mountains of Japan, is constantly changing, and although the mountain is clearly seen from a long distance back, yet it is only when drawing near Sakata that one obtains a good view of it, and of the chains of low hills stretching away from it so as to form an accurate idea of these. The whole presents a curious sight.

The volcano Chôkaisan, which the natives of the place are fond of likening to Fujiyama, stands out boldly against the sky, rising up to a height of 8,000 feet and towering far above the low hills which surround it. Seen as we saw it, it forms as it were the centre of a circle of which only half is visible, or of a spider's web, and from this centre three ridges, like the radii of a circle or the principal threads of a web, run westwards down to the sea and are continued out into it in three promontories, forming two bays, and thus giving the name of Misaki Togé to the Pass, whilst a fourth chain of hills extends in a south-easterly direction ending shortly above Sakata. Pilgrimages are made up Chokaisan the mountain being ascended from Fukuura, a small village about 11 miles from Sakata.

The road all the way from Hirazawa is so pretty and the scenery so varied that the journey seems shorter than it really is, and thus when we reached the valley in which Sakata lies, and, entering it from the North close to the foot of Chokaisan rode through the whole length of it up to Sakata, we were not too fatigued to be able to enjoy the rich landscape spread out before us.

The valleys in Japan may appear to some monotonous and uninteresting. They may say that they are all so alike that the eye becomes wearied by constantly dwelling on the same views. But it is not so with a real admirer of Japanese scenery. True it is that these valleys possess in a great measure a certain similarity, and that apparently, to some, the same scene is often repeated. But these valleys are peculiar to the country, it is in them that we find lurking the special charm attaching to Japanese scenery, and to us there is some new beauty in each peculiarly its own. However much the principal features of valley scenery are repeated, and it by no means follows that they always are, there is ever some new accessory of mountain, forest or river, which lends a special interest to each, and which is easily discernible by those who are in any way close observers of nature. Hirozaki, Kubôta, Sakata, and Murakami are all situated in valleys, but beyond a certain similarity which is always to be met within the same geological formations the valleys in which these towns lie are far from being counterparts one of another. The valley of Kubota presents a striking contrast to the others on account of its vast extent, and in each of the three others the prominent features of the landscapes, not to speak of the positions of the towns which differ in each case, have a distinct individuality which forbids the idea of any monotony or sameness pervading them. We must plead guilty to a fondness for Japanese scenery. In spring when everything appears dressed in its brightest colours fairer landscapes are to be seen here perhaps than in any other country. In autumn there is also as much variety, and the many coloured tints which light up the hillsides and bring the woods out in their sombre richness of colouring have more attractions for some than the brighter views of springtime. But this is digressing.

The town of Sakata like all Japanese towns is a very straggling place. It holds about 12,000 inhabitants. Though a considerable trade is carried on in the place it has no *meibutsu*, nor is any special industry as far as we could learn carried on in it. The principal street deserves a word said about it. The houses forming it stand each in a separate enclosure, and as these enclosures are planted with evergreens and other trees, the effect is singular—giving the town the appearance rather of a big village than of a town.

When there we did not lose the opportunity of visiting the grave of Mr. Smith. The site chosen for it is a quiet retired spot in a corner of the graveyard of the principal temple of Sakata, and there are only one or two recent graves in the immediate neighbourhood. The tomb is fenced in with a wooden railing, and a simple slab of stone with the name, age and residence in Japan of the deceased marks the head of the grave. We were conducted to the spot by the head-priest of the temple who seemed to take a certain pride in pointing out that every thing was kept in excellent order.

Murakami lies just at the point where the defile leads out into a broad valley which is shut in on the north and east sides, but is open on the west and south. Also an old castle town it has a very deserted appearance. The castle is in ruins, though some portions of it here and there are still standing. The *Meibutsu* of Murakami are Lacquer (though lacquer ware is not made here in any quantity) salmon and tea, the latter having improved much in quality during the last few years. A great deal of pine-wood from the adjacent forests is cut into lengths and sent to Niigata and even to Yedo to be made into chopsticks, so this may also be included among the *Meibutsu*.

Niigata is so well known that little need be said of the town itself. Everybody is aware what difficulties in the shape of insecure harborage and imperfect road communication with the capital have stood in the way of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

development of its trade, and how, in spite of these drawbacks, the town has gradually increased. It is also known how much the town has gained by the appointment of the present governor, how a prison, a hospital, a school conducted on the new system, and barracks have sprung up, and with what good results the care bestowed in laying out new streets, in restoring the old ones, and in cleansing and improving the network of canals which intersects the town, has been attended.

Under the energetic administration of the present Governor the town has made evident progress, and if the necessary works which are required for the formation of a good harbour were only carried out, if the road communication with Yedo was improved, and if the various resources of the neighbourhood were drawn out as they should be, it would not be long, we venture to predict, before Niigata took a leading place among the towns of Japan.

But it is expecting too much to suppose that all this will be done. Even the scheme for constructing a harbour will, it is to be feared, not be carried out. The townspeople are naturally anxious for the execution of a plan which, if successful,—which there is every reason to suppose it would be—must be of great benefit to their town. The local officials are for reasons of their own desirous of being entrusted with the direction of the works. The plans have been drawn up, the estimates begun long ago, should be finished by this time, but here the matter will probably rest. The development of the scheme presents certainly great difficulties, though not greater ones than modern engineering can surmount. But it necessitates a considerable sum of money, and money the Japanese Government are for various reasons chary of granting. The question will probably be indefinitely shelved, and if the Government ever do take it into their consideration, it will probably be only when it is too late to do any good, and the opportunity will thus have been lost.

Sado, which lies opposite to the mainland off Niigata, may be reached in two ways—either by going direct from Niigata to Yebisu the Northern Harbour, or by proceeding from Niigata to Teradomari—a village 30 miles south of Niigata and thence to the south-east point of the island. The former is the longer route by sea—being 40 miles,—but though by taking the latter route one saves half the distance by water, yet it involves a good day's journey overland from Niigata to Teradomari.

The former may be said to be the preferable route at ordinary times, but in the stormy season the latter is the best. The Bay of Yebisu, the northern harbour of Sado, is a fine bay, being ten miles long with an average breadth of a mile, and affords good protection to shipping, so that in bad weather ships lying off Niigata put in here for shelter, but it is unfortunately open on the north side and consequently in northerly gales, which are very prevalent during the winter months, vessels have to make for the Bay of Omi, a small harbour on the east coast, or for Futami Bay which is on the southern end of the island. At Yebisu there is a temple picturesquely situated on the crest of a steep hill, and from here to Aikawa, the locality of the mines, the scenery is tolerably pretty, and the road just before Aikawa is reached goes over a pass some 500 feet high.

Sado is well known on account of the gold mines to which it owes its impertance. Aikawa the chief town of Sadò, and the head-quarters of the local administration, lies at the extreme south of the island. It has a population of 10,000 inhabitants, but the rest of the island is but thinly populated. The road connecting Aikawa with Yebisu, the small town from which the northern Bay takes its name, is the only decent road on the island, and we fear we must plead guilty to the charge of "damning with faint praise," as all that can be said in its favour is that it might be worse. There are several villages at certain distances along this route, but the western and north western portions of Sadò are mountainous and almost totally uncultivated.

From the fact of there being gold mines in Sado, one is naturally inclined to look for signs of a certain degree of prosperity among its inhabitants, but the reverse of this is the case. The villages are wretched and dirty in the extreme, and the people appear to be miserably poor. What natural wealth it possesses has done little for the island, if we may judge from outward appearances. Even Aikawa, which should be a rich thriving town, has the appearance of an ordinary fishing village. The upper part of the town where the Kencho and mining office are situated is not so bad, but in the lower town dirtiness and poverty prevail in a very marked degree, and the houses are mostly wretched hovels.

As a natural consequence labour is absurdly cheap in Sado, and travelling therefore very inexpensive,—the charge for one coolie per day being 2½ sen.

The mines are within a short walk of the Mining Office and are prettily situated in high hills. The height of the highest of these hills is 1,100 feet, but the principal entrance to the mines is only 700 feet above the sea-level. The gallery which one enters here—the only one which can be explored comfortably—is fitted with a tramway, and extends for a distance of 300 yards with a slight ascent into the hill, when three dark and uninviting shafts are reached—one descending to the left—another to the right—and the third leading straight into the heart of the hill. This latter has been disused for some time, and has only lately been re-opened. We had sufficient respect for our clothes, in the absence even of other deterrent reasons, not to yield to any inducements which might be held out to us to prosecute our researches underground any farther, and indeed there were risks to be run which we little dreamt of when we committed ourselves to the care of our guides. Every now and then a huge truck full of ore would come rolling down the tramway on its way with its load to the mouth of the gallery, which forced our party to have recourse to a general 'sauve qui peut' in the nooks and crannies within reach, and inexperienced as we were, it was as much as we could do to save ourselves from annihilation by clinging closely to the sides of the subterraneous passage.

Since the time the mines were first opened they have been subject, at certain intervals, to inroads from water, and on the way from the mining office we passed several old shafts long since abandoned owing to this reason. From the primitive character of the old workings it naturally followed that from time to time casualties and loss of life resulted from the water coming in. What up to sixty years ago used to be the principal entrance to the mines, was at that date the scene of one of these catastrophes, when no less than 300 people are reported to have perished. That in the face of these accidents and the danger attaching to mining operations conducted when modern appliances and engineering skill were as yet unknown, the works should have been proceeded with,—says something for the perseverance of the local Japanese, but probably their greed for gain induced them to overstep the bounds of prudence, and the very ignorance of the miners of the common laws on which engineering is based possibly made them underrate the dangers to which they were exposed.

Of late years the water has been gradually accumulating to such an extent as effectually to obstruct the working of the mines, and in some shafts, we were told, the water had attained a depth of 15 feet. With a view, therefore, to freeing the mines from this obstruction, a survey of them has been instituted, and the necessary plans and estimates are being prepared. The cost of removing this obstacle will it is said be very great, as it is calculated that it will take quite five years to get the mines into good working order, but is also equally the general opinion that unless the requisite measures to this end are speedily put into execution the mines will eventually have to be abandoned, as they cannot otherwise be worked to advantage.

There is, however, a large quantity of ore on hand, enough, it is stated, to occupy two years in smelting. The new smelting works, which have only recently been completed, will thus come in very useful.

The tramway which was laid down three years ago for the conveyance of the ore from the mines to the town is still in existence, but the tramway system was not found to work well. Owing to the carelessness and ignorance of those in charge of the tramways, accidents were of constant occurrence, and moreover, labour being so cheap, it was found to be just as economical to employ manual labour. Another consideration which probably had some weight is that the conveyance of the ore in the old way from the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

mines gave occupation to a considerable number of people and for this reason alone the tramways were very likely unpopular. Women are chiefly employed in the transport of ore. They receive 4 *sen* a day and are supposed to make three or four trips to and fro in that time.

In spite of the high quality of the ore extracted from them, the cheapness of labour, and the favourable situation of the mines with regard to the town, it is yet a fact that the Sado mines are worked at a loss. On account of the smallness of the population, and owing also perhaps in a measure to that aversion to a change of locality which is common to all Japanese, all the inhabitants of the island are more or less related to each other, and thus if one obtains an official position, it is generally not long before his numerous relations are all similarly provided. Consequently the number of officials employed in the Mining Office and *kenchô* as compared with the amount of work to be done is perfectly ridiculous.

Not only do the mines not pay but they are a source of considerable expense to the Government. We actually heard it stated on good authority, the statement being subsequently confirmed on our return to Yedo, that in one year $60,000 worth of gold was forwarded to Yedo, but that in order to obtain this $75,000 were sent from the capital to meet the working expenses. Unless a radical reform be effected one can foresee only one result from a state of things like this.

Law & Police.

H. B. M.'s CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Saturday, 17th April, 1875.

William Davis, second officer of the British ship *City of Halifax*, was charged by Nicolai, a coloured seaman of that vessel, with kicking and otherwise assaulting him whilst the ship was at sea.

Prisoner pleaded not guilty.

Complainant, sworn, stated that about two months ago the prisoner kicked him whilst he was lying down, and broke some of his ribs. Prisoner said nothing to him before doing so. This occurred in the night, whilst he was lying down asleep on the port side of the vessel. After being kicked, prisoner said, "Can't you hear four bells? Go and take your wheel." He then got up and put on his jacket, and prisoner said, "Some of these days I'll have your head off." Went to the wheel and was steering, when prisoner came up and told him to keep her "off." He then assaulted him again. He said, "better let me be." He complained to the captain, and he said he had seen the prisoner, and that it was all right. This happened three weeks before we arrived in port. The doctor here told him his ribs were broken.

Complainant had no witnesses to call.

Prisoner then called Joseph Reed, sworn: He had just relieved the prisoner, and was on the look-out. They were then hunting all round the deck for complainant, but could not find him for a long time. Went under the top-gallant fore-castle, and found him in a locker, asleep. The prisoner called him. Complainant answered, "that's all right." The prisoner then said to complainant "Do you know it's four bells?" Complainant answered back, giving a lot of vulgar abuse. He did not see the prisoner kick complainant. Prisoner was without boots or shoes; he was "in his naked feet' It was not the first, nor the second, nor even the twentieth time that the prisoner had had to hunt up complainant to do his work.

Complainant had no questions to ask.

Prisoner, in defence, said he pushed complainant on the night in question, to wake him up. He could not kick him; there was no room to do so, it was such a small place. He did not kick him. Two days afterwards complainant had a stand-up fight with one of the crew—a bigger man than himself. He could give no explanation as to how complainant's ribs were broken.

His Honor told prisoner to stand down.

Henry Burgess, a seaman of the same ship, was then charged by complainant with assaulting him at sea.

Accused pleaded guilty.

Complainant, sworn, stated that the prisoner "stracked" him at an early hour one morning whilst the vessel was at sea. Accused seized him by the throat, and the carpenter sang out, "Give it to him."

Complainant had no witnesses.

Accused then called the ship's carpenter.

Joseph Reed, sworn: The second and chief mates had been hunting round the deck as usual after complainant, and after some time found him asleep as usual. Complainant went aft and did what was to be done, and then came forward swearing like mad. Accused said, "What are you cursing and swearing about?" Complainant said, "That's all right." Accused then pushed him, and then both commenced to fight, knocking one another about. He stopped them from going down the fore hatch.

James Banton, sworn: Sometime ago, at sea, the complainant came to him and said that the second mate had been abusing him; told the second mate not to abuse any one on board the ship; he did not want any trouble. The second mate replied that complainant had assaulted him. He believed complainant's ribs were broken before he came on board the ship at Newcastle, N. S. W. Complainant was a very dirty man, and was not "worth his salt." He believed he had been in jail at Newcastle.

In answer to Court, complainant admitted that the U. S. Consul at that port had sent him to jail for 15 days.

His Honour said he should adjourn both cases till Monday morning next, at 10 o'clock, in order to get a medical man's opinion about complainant's broken ribs.

Monday, 19th April, 1875.

William Davis, second officer, and Henry Burgess, seaman, of the British ship *City of Halifax*, were again brought up, charged with assaulting Nicolai, a sailor of that vessel.

The case had been remanded from Saturday last to procure some

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Dr. Eldridge, on being sworn, said that he examined complainant, who was suffering from a fracture of the ribs, but the case had been uncared for, and it was impossible at the present time to tell how long a time had elapsed since the fracture. It might have taken place before the complainant left Australia.

His Honour then dismissed the case.

April 21, 1874.

Thomas Nicolas, late a seaman on board the British ship *City of Halifax*, was charged with stealing a silver watch from a Japanese. The prisoner pleaded guilty.

Youmiro Komijiro, a Japanese merchant, deposed that the prisoner came to his shop in Otomatchi on Monday last, and told him that he wanted to buy a watch. Witness showed him a silver watch for which he asked $8. Prisoner asked him to open it, which he did. The prisoner then took the watch out of his hand and walked out of the shop, going quietly at first, but bolting as soon as the witness sent his servant.

Nicolas was stopped by a Japanese policeman and taken to the station, where, on his being searched by Sergeant Perceval, the watch was found on him,

Sergeant Perceval swore that he searched the prisoner at the station and found the watch in his sleeve. He had no other property about him.

Sentenced to six weeks' imprisonment, with hard labour.

John Johnson was charged with stearling two bronze vases, the the property of G. Sarada. The prisoner pleaded not guilty.

G. Sarada, a coppersmith, who spoke in French, deposed that four days ago he heard a knock at the door. He went and saw the prisoner, whom he told to come in, and asked him what he wanted. Prisoner replied that he wanted work, and was accustomed to gas. fitting. Witness said that the times were so bad that he had not enough work himself. The day before yesterday, while witness was away doing work at the Club, the prisoner went to his house and obtained two copper vases from the female servant on an order which he alleged to be from witness. Prisoner took the vases away, and witness had not yet recovered them.

A Japanese female servant of the last witness was then called and identified the prisoner as having been to the house three times, —once when the master was out, the second time when he was in, and the two had some some conversation, and a third time, when he brought a paper which he said had been given him by Sarda, and was an order for two copper vases. The witness thought it was correct and she gave him the vases, with which he went away.

The jinrikisha man who conveyed the prisoner from the complainant's house was next called, and said that on the 19th instant the prisoner engaged him at that place, and entered the jinrikisha with two vases. They went to the house of a Chinaman, to whom the prisoner offered the vases. He did not come out the same way, for the jinrinkisha man saw him no more.

Sergeant Perceval deposed to the arrest of the prisoner the same evening at the California saloon. On taking him to the station the constable searched him, and found, among other things on his person, a pair of socks and a pair of long stockings quite new, and a pocket-book, from which a leaf had been torn. The torn edge of the blank corresponded with the piece of paper delivered to the servant of complainant.

The prisoner, who bears a very bad character, and who has been several times convicted of larceny (his last sentence only expired last Friday), was sentenced to three months' hard labour. At the expiration of his sentence, failing to find security for his good behaviour, to be deported.

U. S, CONSULAR COURT.

Before Gen. T. B. Van Buren, Consul-General.

April 24, 1875.

Edward Russell was charged by Const. Roget that on the 2nd inst. he was found in possession of a gun which he admitted he knew was stolen property. The gun in question had been stolen from No. 137, Yokohama.

The prisoner having pleaded "Not guilty,"

Mr. F. da Roza, of Shinagawa, Tokio, testified that about the 1st inst. he was informed that a foreigner was about his grounds with a gun. He went in search of the man, and found the prisoner, who was sitting down outside and trying to induce one of the farmers to take him into the house. He had a gun (the one produced in Court) in his possession. He was a little intoxicated, and tried to force his way into a Japanese house. Witness gave information to the police, and was called the next morning by the police to call and see a man. He saw the prisoner, and recognised him as the man he had seen about his place the day before. The prisoner gave his name and designation correctly, and explained his conduct of the day before by saying that he had arrived the previous night in a jinrikisha; that he did not come up for shooting, as he had no ammunition, and that a person had given him the gun. He said he did not know the name or address of that person, who was, however, a Frenchman. As witness had read a day or two previously in the journals that some guns had been stolen in Yokohama, he mentioned the matter to the prisoner, and asked him if that was one of them. For a long time he did not reply. At length, when the question had been repeated three or four times, he said, "I did not steal the gun but this *is* one of them." Witness mentioned the jewellery which had been stolen at the same time as the guns, and asked him if he know anything of that. He replied that the Frenchman had a diamond ring, a gold pencil case, a small locket, and the best of the two guns. Witness wrote down to the police in Yokohama, who came up and removed the prisoner. The gun was not in the police station at Tokio when the prisoner was there, so witness asked him where the gun was, to which he answered that he did not know. Witness then sent him with the police for the purpose of finding the gun.

Guillaume Chapelle, who spoke in French, sworn, deposed that he lived at Tsukidji, Yedo. He remembered seeing the prisoner and another man at his place early on the morning of the 1st inst. Both of them spoke English. They asked him for something to drink. They said they had just returned from a shooting party, and had lost their money, and being anxious to return to Yokohama for fear of losing their situations, borrowed $5 from the witness, leaving a Le Faucheux gun in pledge. The other man bargained with the witness, and the prisoner stood by. The gun was delivered to the French Consulate because witness was informed by the French Consul that the gun had been stolen. He did not see any more of either of the men who left the gun with him.

Felix Domballe deposed to having been robbed at the end of last month of an English doublebarrelled gun, a Le Faucheux gun, and some jewellery, from his room at No. 137. He recognised the gun produced as his property, and had also recognised the Le Faucheux at the French Consulate. He had not seen any of the jewellery.

The witness was subjected to an examination as to the value of the gun which, for some occult reason, he evaded. He fenced with the question, and said that the gun had a value for him, as it had been given to him by his father, and at last was induced to admit that it was worth $5, but he would not swear that it was worth $10.

(The gun is a double barrelled, breech-loading fowling piece, and is worth from $20 to $25.)

Edward Russel, the prisoner, sworn and cautioned, said in defence, that about the 1st instant he met a man near the Brooklyn saloon having two guns in his possession. The man was a stranger to him. He asked prisoner to go to Yedo with him. They each got into a jinrikisha, the prisoner remarking that he had money, to which the other replied, "No matter, I have money." So they went to Yedo. After arriving there, the other man put his hand in his pocket and showed the witness a gold pencil case, locket, and with a white stone, which said he had received from a friend. He took the gun into the house of Mr. Chapelle and asked him to buy it, saying that he had had it for a long time, and that he received it 'from the friend.' At last Chapelle bought the gun for $5, which the stranger put in his pocket. The two then came out of the house, and the stranger, who had left the second gun in one of the jinrikishas, told the prisoner that he might keep it, as he had no need of it. Prisoner demurred to avail himself of the kindness of his companion at first, but at last relented, and taking the gun went in search, so he says, of Mr. Davis. He found his way into a house and drank *sake* until he saw Mr. da Roza, who ordered him away, and he left obediently. Next morning he was arrested by a Japanese policeman.

To the Court: I have been about 18 months in Yokohama. I do not know the name of my companion. He was a Frenchman. I called him Frenchy. I had only seen him once before that night, about six months ago, in Yokohama..

His Honour remarked upon the extreme improbability of the prisoner's statement, and sentenced him to 30 days' imprisonment, saying that, as Russel had been in prison before, he would have given him a more severe sentence, but for the owner of the gun refusing to attach a value to it.

INQUEST.

This afternoon at 2 o'clock an enquiry into the cause of the death of W. S. Swaby, late sub-accountant in the Comptoir d'Escompte de Paris, was opened before a court composed as follows:—Rus el Robertson, Esq., H. B. M.'s Consul, Coroner; jury: Messrs G. W. Thompson, A. W. Glennie, D. Hay, and J. Leckie. Naturally the investigation excited considerable interest, and was largely attended.

Mr Marks appeared to watch proceedings on behalf of the Comptoir d'Escompte.

The jury, having been sworn proceeded to view the bodies, which lay in their coffins in an outhouse. Swaby's face was exposed, and appeared as calm as though he only slept; his breast was also uncovered, and showed a wound in the region of the heart. Cantelli's head was covered by a handkerchief, soaked with blood. When the covering was removed, it disclosed a ghastly spectacle. The forehead was perforated by a small round hole. The surrounding flesh was discoloured, the eyelids swollen and livid, and the nose and lips covered with a light froth. After viewing the bodies the jury adjourned to the British Consulate, where the enquiry was resumed

E. Wheeler, M.D. surgeon, sworn, said: I was called this morning to examine the body of W. S. Swaby. I found a wound about two inches to the left of, and about one and three-quarter inches below the nipple, towards the middle line of the body. I think death must have been almost instantaneous. I did not search the body, but think the bullet must have traversed the apex of the heart. I saw the body a few minutes before 9 a. m. I only saw one wound in the body.

E. G. Vouillemont, upon oath, stated: I am manager of the Comptoir d'Escompte. I recognise the body of the late Mr. Swaby He was employed in the bank. I last saw the deceased at half-past five last Saturday evening, just before I left the office for Enoshima. I asked Swaby to sleep on the bank premises. He promised to do so "with pleasure." I heard no more of him till Monday morning, when I was informed that there was a rumour in the town that Mr. Cantelli and Mr. Swaby had absconded on board the *Iris*. At a quarter to 10 I went to Cantelli's house and asked if he was in. I was told that he had gone to Yedo the previous evening, and had not returned. I came at once to the English Consulate to ask for the issue of a warrant against Swaby, thence to the Oriental Bank to ask for the duplicate of the key of the safe. On looking into it I saw that $37,000 in bank notes had disappeared. I returned to the Consulate to ask for a warrant against the captain and owners of the ship. I went thence to the Italian Consulate to request a warrant against Cantelli. I chartered the *Sea Gull*, which left in pursuit at about 2 p.m., returning soon after 9 p m., yesterday, when I heard that Cantelli and Swaby had shot themselves. I noticed nothing particular in Swaby's behaviour on Saturday. I connect the disappearance of the notes with that of the two deceased because the amount corresponds with that recovered on the vessel. I believe that a larger sum than $37,000 is likely to be found missing.

By a juror: I had always been on good terms with both the deceased, and had the fullest confidence in them. They had access to the money in the chest. I saw nothing at any time in their conduct to provoke my suspicions, nor had I any occasion find fault with them. Cantelli was accountant, and Swaby the sub accountant. I did not take the numbers of the notes. There was never any quarrel between them, and I have no doubt that Swaby was the stronger-minded man of the two. The money could have been abstracted without the knowledge of the Chinese compradore, as Cantelli had sole charge of the key of the chest. I have heard of ten thousand dollars or more having been changed into gold yen in Yedo and Yokohama lately, under suspicious circumstances.

Percy Rait, sub-lieutenant of H. M. S. *Thalia*, sworn, deposed: At a quarter-past one o'clock yesterday. Capt. Woolcombe ordered me, in charge of six men, on board the *Sea Gull*, to go in chase of the *Iris* three-masted schooner, which had left port that morning. At 2.20 p m. I got under weigh. After rounding the lighthouse we sighted the schooner, with all sails flying, and having several boats ahead, apparently towing the ship. We came under her stern on the port side, the schooner making little way as there was no wind. Constable White jumped on board, followed by two men and myself. The first words I heard were from the Captain, who said to both myself and the constable, "You'd better go down to the cabin; they've shot themselves." The constable ran down, and I remained on deck, to place a guard over the Captain, having done which I went below, where I saw a man leaning against the table of the cabin. He appeared to have been shot through the heart. The constable told me the corpse was Swaby. The witness here said he wished to remark that on nearing the schooner he had observed three men standing on the taffrail with binoculars to their eyes watching the *Sea Gull* with great anxiety. They went below and left two men on deck.

Examination continued.—I brought the ship back, and anchored at about 9 p m. When I went down to the cabin I turned over some clothes, and a roll of gold fell out of an overcoat pocket. I did not hear any shots on board. When I saw the men on the taffrail we were the schooner's length away. We were some time getting under the schooner's stern, as it was rolling.

At the request of Mr. Marks, this question was put: Did you recognise the faces of the men on the taffrail?

Answer: No; they were unknown to me. Besides, the binoculars hid their faces. I do not recognise them in any one in Court.

To the Jury.—The Captain of the schooner when he spoke to me was standing on the break of the poop. The schooner was armed. There were two eight pounders on board, which did not appear to be loaded.

F. E. White constable, upon oath, said: At 11.45 a m. yesterday I received four warrants, and proceeded at once to the French Bank, where I was informed that the *Sea Gull* was placed at my disposal. I went to the French Hatoba, and at once proceeded to the *Thalia*. In passing the *Sea Gull*, I told the engineer to hurry and get up steam. At half-past one Capt. Woolcombe ordered a sublieutenant and six men to accompany me. They did, and we went to the *Sea Gull*. It was 2.15 p.m. before she was ready, and we started, steaming round the bay, and keeping out of sight as much as possible, until rounding Kannonsaki, when we perceived the *Iris*, under full sail, making for Kaneda Bay very slowly, as it was almost calm. Boats were round her towing her. When we came within 30 or 40 yards of the vessel, I saw Mr. Adds watching us, and I also saw the heads of Messrs. Swaby and Cantelli just above the companion hatchway, watching us. At almost the same moment they disappeared. We eased the steamer, and when within about five feet of the vessel I sprang on board, followed by some seamen. Captain Withers remarked, "They have shot themselves." The second mate, who just then came up from the cabin, also said that they had shot themselves. I ordered Captain Withers to shorten sail, as I rushed past him. I went down to the cabin, followed by some seamen. On reaching the door of the cabin I saw Mr. Swaby lying athwartship, on his left side, with his head to the cabin door, a pistol in his right hand, which was moving slightly, as though he were trying to lift it again. Blood was oozing from his left breast. He gave two or three groans, and expired. This only occupied about a minute. I called some men to lay the men out, and went on deck, where I asked the sublieutenant to place the captain and owner under arrest.

The Consul asked the constable if he knew anything about Cantelli, remarking that though the deceased was a foreign subject, yet, as the affair had occurred on board a British vessel, it would be well to place the circumstances on record.

Witness: Yes; after passing Mr. Swaby I noticed in the foremost cabin, just inside the door, Cantelli in a sitting posture, glaring at me, and apparently stunned. A pistol was in his right hand, which hung powerless. A wound was in his forehead, just over the right eye. His head hung forward and he gurgled in his throat. I had him laid out on deck, and sent for water. A seaman remained in attendance on him, bathing him until our arrival in port. He would lay quiet for half an hour at a time, and then groan. He died soon after 12, after having been examined by the surgeon of the *Thalia*.

The witness identified the revolver held by Mr. Swaby, and produced in Court. When witness found it, it was smoking in one barrel.

Examination resumed: I set a guard on the vessel. This morning, on the arrival of Mr. Marks, bringing me authority from Mr. Vouillemont to act for him, I proceeded to search the vessel and found $31,337. 50, 48 sovereigns, a few odd coins in the pockets of the deceased, and a cash-box which we have not yet been able to open. This morning I gave the two prisoners (Withers and Adds) into custody.

To the jury: I did not notice any shot marks in the cabin.

Charles Adds, sworn and cautioned by the Consul that any thing he said would be taken down and might be used in evidence against him, said: We were becalmed in Kaneda Bay yesterday, and the Captain thought proper to procure some sampans to tow the vessel out to sea. I saw the *Sea Gull* coming towards us and told the Captain it would be well to hail her and get her to tow us off from some rocks towards which we were drifting. Mr. Swaby was on

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

deck and saw the *Sea Gull*, too, went below and called Mr. Cantelli up. Swaby asked, "where the *Sea Gull* could be coming to?" But neither he nor his companion seemed in the least excited. Just before the steamer came alongside they went below. Immediately before White and two sailors came on board, I heard two reports. The Chinese steward came up and said that the passengers had shot themselves. The second mate went below by order of the Captain. On his return he said "the big gentleman is dead' and the other partly dead." When the armed men came on board Mr. White put the Captain and myself under arrest, and kept us so on deck until our return to port It was about midnight on Sunday when I went on board the *Iris*. The two deceased came afterwards in a boat. They had some trunks and boys with them I believe. They were going as passengers to Manilla. Some time ago Mr. Swaby applied to me to know if I could buy a ship. I replied; 'Yes, but I am not prepared with the money to buy her right away," and said that it might be difficult to buy one at once. At length I got the *Iris*, which I told them could be brought for $11,000. He said that he and Mr. Cantelli were going to leave the bank and thought of going into business. He stated that they had from $40,000, to $50,000 capital between them. I was to be the owner of the ship provided I would give them a passage to Manilla or from there to any other open port. Also for any freight or charter we might take from any port to any other, they were to receive half-share. These were the terms on which they came on board: I was either to leave them at Manilla or at any other open port.

To the jury:—I had known both gentlemen for long time, Cantell for years, but never had any business transactions with them before. The ship was not excessively armed. Neither gentleman showed any uneaseness or anxiety to get away. We got under way at about 5 a.m. They only said that they were tired of Yokohama, and were going into business as they had a few thousand dollars. They said nothing about the circumstances under which they left the Bank. They seemed on friendly terms. Mr Cantelli of course had influence over Swaby as he was the senior. If the ship had been ready sooner we should have sailed before. I told them on Friday that the ship was ready, and they said we would sail on Sunday I engaged the captain; and all arrangements about the ship were left entirely to me. I only heard two shots fired since we left port, and cannot account for a second barrel in Swaby's revolver being empty. The shots must have been fired just as Mr. White and the sailors were coming on board. Messrs. Swaby and Cantelli said that they were going on business which they did not want every one to know, so I did not mention that we were going away. The shots must have been fired, the second mate ordered below, and the constable come on board within about two seconds of time. When I saw the steamer coming alongside I had no suspicion, I was only glad that she was coming as I thought we should have a good chance to get towed off. The deceased gentlemen advanced me $11,000 in two instalments. I drew it through the French Bank. Mr. Cantelli gave me a cheque book and told me that money was placed to my credit and I could draw cheques for anything for the use of the ship as I pleased.

George Withers, also cautioned and sworn, remarked that he was not afraid, and deposed:—I got under way in command of the *Iris* about 5 a.m. yesterday, and got out Kaneda Bay where I put the ship into an anchorage, intending to wait for a high tide. About half past four it fell calm and I engaged some boats to assist me into a proper anchorage I soon saw a small steamer making up for us. I thought it was the Yokosuka boat, and that it was strange she should be making for us I was engaged trimming the yards which engaged me for a quarter of an hour. I then took a pair of glasses to look at the steamer, and at the time noticed my two passengers standing in the companion. The steamer was coming at about 7 miles an hour. I turned round and said to the passengers "there's something wrong here, here's a naval officer and some blue jackets on board" I thought that perhaps the gentlemen had gone away in debt. They immediately went below, and within two minutes I heard two or perhaps three pistol shots below. I ordered the second mate below to see what was the matter, but then Mr. White had got on board, I said to him "you had better go below, there has been some shooting." I was then placed under arrest and could not go below. I never saw my passengers before. I was introduced to the tall one on Monday morning at seven o'clock, just as we were running past the lightship. Mr. Adds told me the day before or the day before that to prepare for two passengers. I did so. I did not notice anything particular about the gentlemen's manner. If I had known that there had been any difficulty, I would never have purchased my anchor.

Ernest Muller, second mate or boatswain of the *Iris*, sworn, said that he was shipped here at $25 per month for six months, and was on watch with the Captain when the steamer came alongside. He then corroborated the evidence of previous witness as to the shooting, the Captain ordering him to go below, the position in which the body of Mr Swaby was found, and the arrival of the constable and seamen on board. He placed the hour of the arrival of the passengers on board at half-past 2 on Monday morning.

Ah Fong, Chinese Steward, late of the *Iris*, having been cautioned to speak the truth, said that when the steamer came alongside the schooner yesterday afternoon he was in the pantry at work. He heard shots about the same time. He did not see the shooting; but he did see one of the gentlemen, the tall one, go into his cabin take his pistol and put cartridges in it, when he heard the shots, he was frightened and ran on deck telling the third officer "two gentlemen makee die." After hearing one shot he heard two others. He did did not know the gentlemen, nor what time they came on board.

To the Jury —He did not see a pistol in the hand of the smaller gentleman. The two came down to the cabin together.

This closed the evidence for the inquest.

The jury then retired to consider their verdict.

After a deliberation of about three-quarters of an hour the Court was re-opened, when a verdict was returned to the effect that William Sutton Swaby did feloniously kill and murder himself.

Mr. Marke, who appeared on behalf of the Comptoir d'Escompte, then applied for a remand on the warrants under which the prisoners Withers and Adds were arrested, the charge against them being that of aiding and abetting embezzlement, and for receiving and holding property knowing it to be embezzled. The prisoners were accordingly remanded till Wednesday, the 28th, at 10 a.m. Bail was tendered to the extent of $1,000 for Captain Withers. The question of bail was deferred till to-morrow.

SIR CHARLES LYELL.

(The Nation.)

The telegraph announces the death of Sir Charles Lyell on Monday, February 22. His name is not less inseparably connected with the progress and, we might almost say, the completion of a great revolution in geological science (though less conspicuously connected with it) than the greater names in astronomy are with similar periods of transition in that science. The establishment of geology as a strictly inductive or positive science was in a great measure due to the early, clear, and steady conception of true method in its pursuit, which Sir Charles Lyell's works have done more to expound and promulgate than all other geological publications in this century It would be difficult to estimate how much of the patient, soberly directed labor of the modern army of geological explorers has been inspired by his researches and the influence of his teachings; but in is clear that the position early won by him through his writings and observations was a most important one for the guidance of a movement in which, from its magnitude and need of many leaders, no master-mind could by wisdom or energy have attained to such relative rank as has been won by genius in lesser movements of scientific progress. Lyell was born in 1797, at a time when the principles of sound method in geology were just beginning to be adequately appreciated. In that year Playfair published his illustrations of Hutton's geological theories, which as completed and amended may be said to have determined the chief line of progress in this century. Ten years later, in 1807, the Geological Society of London was founded. Of this body Lyell was made president at an early age in 1837-8, and again in 1850-1. He had published the first edition of his 'Principles of Geology' in 1832. The eleven editions of this work, of which the last appeared in 1872, and the seven edition of his 'Elements of Geology,' the last in 1871. may be regarded as chronicles of a progress of which he was the principal historian and a chief actor. Narratives of two visits to the United States, one for geological observation and the second for social as well as geological studies, were published in 1841 and 1845.

The publication in 1863 of his work on the 'Antiquity of Man,' marks an interesting *dénouement* of the great movement with which his lifetime was almost coincident, and with which his name and work are inseparably joined. At the end of the last century, the transmutation or development theory was independently and almost simultaneously proposed by three great thinkers, Goethe, Geoffroy St. Hilaire, and Erasmus Darwin. Its final triumph in our day was almost a direct consequence of the principles adopted by Lyell from Hutton and the Huttonians, and urged so clearly and effectively by him in his 'Principles.' Yet Lyell—and this was an in-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

teresting exhibition of a worthy trait of his mind—resisted the theory of development for a long time: until after the publication of that most remarkable book of the century, Darwin's "Origin of Species.' He showed in the early editions of his 'Principles' a decided, though just and appreciative, opposition of Lamarck's theories; and it thus happened that Lyell was one of the few veterans in science who were converted from their older views by Mr. Darwin's arguments. Though nearly seventy years of age, he showed the genuineness of his conversion by rewriting in the tenth edition of his 'Principles' the chapter on the development theory, and other matters relating to it. This change gives his masterpiece a greater logical completeness and coherency than it had ever had before, and redounded to his credit in the way quite as much as in the exhibition it gave of his openness of mind to scientific arguments, or of the moderation of the conservatism which characterized him as a true English Liberal.

Hutton, the knowledge and practice of whose principles Lyell did so much to extend, was the first to declare that geology was in no wise concerned "with questions as to the origin of things." By "origin" was then meant the origin of the natures which things have and their first introduction in the theatre of the world. That cosmology should have been so far banished in half a century from zoölogical conceptions that Mr. Darwin could use, without incurring serious misunderstanding, the title 'Origin of Species' for his great work, is evidence of the progress made. "Origin" has now come to mean the coming to pass of anything in the course of events, and is concerned only with how things go on from one determinate appearance to another. "In the economy of the world," said Hutton, "I can find no traces of a beginning, no prospect of an end"; "a declaration," Lyell remarks, "the more startling when coupled with the doctrine that all past changes in the globe had been brought about by the slow agency of existing causes." But Lyell was not free at the outset, nor for a long time, from another misleading scholastic conception which scientific progress has also nearly banished, namely, the scholastic meaning of the world "species." From his deference to the authority of leading minds in systematic natural history he attributed to the authority of their observations what was only involved in a received meaning of a word, namely, that a species was only properly so called because it exhibited invariable characters and yet that the word was applicable to actual existences. These naturalists, with this meaning in their minds, applied the name to existing and past organic races implicitly asserting thereby more than their authority as observers could warrant. The word now means not an absolute, but only a comparative fixity of character, so that in Darwin's treatise both words of the title, 'Origin of Species,' appear with modern unscholastic meanings. But this was in great measure due to the influence of the doctrines and methods which Lyell has done so much to promulgate. In perfect sympathy with the scientific aspirations of earlier Italian geologists to explain the phenomena of the earth's formation "without violence, without fictions, without hypotheses, without miracles," he early perceived the value of scientific societies devoted to the patient collection of data for science, and principled against the premature speculation of theories. The Geological Society of London was such an institution, in which no "theories of the earth," as they were called, were tolerated. Such institutions, like the monastic refuges for culture of old, were securities to scientific observation against the vanity and ferocity of scholastic disputation.

Among the many graphic and instructive illustrations of geological changes from slowly-working natural causes, Lyell gives an account of a great flood at Tivoli, in 1826, in which the "headlong stream," as Horace had called it, the Anio, produced the most destructive effects; the flood coming "within two hundred yards of the precipice on which stands the beautiful temple of Vesta. But fortunately, this precious relic of antiquity was spared, while the wreck of modern structures was hurled down the abyss." Vesta, the goddess of the hearth, was the mythological representative of the stability of the earth; and when Aristarchus, the Samian astronomer, first taught the Pythagorean doctrine of the earth's motion on its axis and around the sun, he was publicly accused of impiety, for "moving the everlasting Vesta from her place." Lyell is reminded by this coincidence of Playfair's remark, that when "Hutton ascribed instability to the earth's surface, and represented the continents which we inhabit as the theater of incessant change and movement, his antagonists, who regarded them as unalterable, assailed him in a similar manner with accusations founded on religious prejudices." There appears to be a strong natural association of religious feeling with the idea of stability; and three wrongly consecrated stabilities—that of the earth, that of its continents, and that of its forms of life—have one after another given way to the progress of knowledge, and, though with obstinate resistance from religious sentiment, the changes have taken place without permanent injury to religion.

It is in Lyell's character as a scholar and writer, however, quite as much as in that of thinker and observer, that his influence has been and will be felt. His style reveals the man in its calm clear, scholarly spirit of accuracy. His sentences win confidence and disarm prejudice by their entire freedom from overstatement and advocacy. The man revealed by the style is a model of the qualities in mind and character which distinguish the highest modern social and scientific culture. A tender regard, akin to reverence—to reverence without servility—toward established standards of custom and opinion, kept him, while a Liberal in politics, religion, and science, very far from radicalism in any direction. He was a warm friend of America, and during his two visits to this country, endeared to him many personal friends. He was married to a lady whose father was also distinguished in geology, Mr Leonard Horner, formerly a president of the Geological Society, and especially distinguished in the annals of science for the researches for a chronological standard in geology in his examination of the age of the deposits of the Nile mud. Lady Lyell, whom death removed from her illustrous husband two years ago, had been to him a most devoted and efficient helpmate, through powers and interests trained in the same direction, and by an amiability akin to his own Sir Charles Lyell was born in Scotland, educated as Exeter College, Oxford, and called to the bar. He was knighted in 1848, and was created a baronet in 1864.

REUTER'S TELEGRAMS.

Shanghai, 14th April 1875.—Mr. Wade has obtained passports to Yunnan for two English officials to investigate the murder of Mr. Margary.

London, 12th April, 1875.—In the House of Commons, Mr. Bourke confirmed the Exchange of German and Belgian notes which were confidentially communicated to England but neither party appealed.

Captain Boyton, with his life apparatus, has floated 50 miles across the Channel, night-fall prevented his reaching Boulogne. The result was telegraphed to the Queen.

It is reported that there are prospects of the termination of the South Wales lock-out.

Bishop Breslau, having refused to resign his Bishopric, will be prosecuted.

LONDON, 7th April, 1875.

Reactionary educational decrees of the King of Spain have elicited protests from the professors.

The Prince of Wales has returned from a Royal Meeting at Venice, where he was entertained with splendid fêtes, and received with much cordiality and enthusiasm.

LONDON, April 10th, 1875.

Revenue for the year—£74,500,000.

A warlike article in a Berlin Paper is causing uneasiness.

No action is taken by the British Government with reference to the murder of Mr. Margary, pending the receipt of Mr. Wade's report.

Shipping Intelligence.

ARRIVALS.

April 18, *Frolic*, British gun-boat, Captain Buckle, 480, from Nagasaki.

April 21, *Tokio Maru*, Japanese steamer, Dunn, 2,119, from Shanghai, General, to Mitsu Bishi Co.

April 21, *Chihli*, Japanese steamer, Drummond, 809, from Kobe, General.

April 21, *Washi*, British steamer, Hescroff, 221, from Amoy Sugar, to Hudson, Malcolm & Co.

April 21, *City of Tokio*, American steamer, 5,059, from San Francisco, Mails and General, to P. M. S. S. Co.

April 22, *Nevada*, American steamer, Williams, 2,145, from Shanghai, General, to P. M. S. S. Co.

April 20, *Kiusiu Maru*, Japanese steamer, Froome, 896, from Hakodate, General, to Mitsu Bishi Co.

April 23, *Alaska*, American steamer, Howard, 4,011, from Hongkong, Mails and General, to P. M. S. S. Co.

April 24, *Formosa*, Brit. steamer, Stewart, 651, from Hongkong, General, to Hudson, Malcolm & Co.

April 24, *St. Thomas*, Swedish barque, G. B. Hjorth, 450, from Nagasaki, Coal, to P. M. S. S. Co.

April 24, *Bessie North*, British barque, D. H. Richman, 578 from Swansea, Patent fuel, to Order.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

DEPARTURES.

April 17, *Mosquito*, British gun-boat, Paul, 320, for Kobe and the South.

April 21, *Volga*, French steamer, Nondedeu, 969, for Hongkong, Mails and General, despatched by Messageries Maritimes Co.

April 21, *Ariel*, British barque, Fullarton, 358, for Nagasaki, Ballast, despatched by Captain.

April 21, *Kanagawa Maru*, Japanese steamer, Roper, 1 325, for Shanghai, General, despatched by Mitsu Bishi Co.

April 22, *Mora*, British barque, Angel, 624, for Hiogo, General, despatched by, Sitwell, Schoyer & Co.

April 22, *Thalia*, H.M. ship, Woolcomb, 2,216, for Hongkong.

Per Japanese steamer *Kanagawa Maru*, for Shanghai.—Treasure $1,011,000.

Per *City of Tokio* from San Francisco. Treasure $334,470.

REPORTS.

The British gun boat *Frolic* has come to relieve the *Thalia*.

The *Walton* reports very severe weather after leaving the Downs on the 2nd December, until well clear of the Bay of Biscay; the better part of the passage, generally pleasant, excepting a few days on the coast of Japan.

The Japanese steamer *Tokio Maru* reports. left Shanghai April 14th, Nagasaki April 17th, Shimonoseki April 17 h, and Hiogo April 19th at 5 p.m. Anchored at Yokohama, April 20th at 12 p.m. Strong N.W winds to Nagasaki, from Nagasaki to this port light winds and fine weather.

The American steamer *City of Tokio*, arrived here last night, reports moderate weather during the passage, which might have been considerably shortened; but we understand that orders were received from head quarters, not to exceed a certain speed in order to economise fuel.

This vessel looks to be a duplicate of the *City of Peking*, with the exception of a slight difference about the stern which is not quite so much cocked up.

The *Alaska* reports: Rough sea and strong N.E. monsoon first 3 days. Latter part fine and smooth. 24 cabin passengers and 927 Chinese in steerage.

The *Formosa* reports strong northerly and northwest winds after leaving Hongkong. Since passing Van Dieman's Strait experienced a very heavy cross sea and generally bad weather along the coast of Japan.

The *St. Thomas* reports variable weather, strong winds from S. W. to W.N.W.

"Berkeley, Sept 1869.—Gentlemen. I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that **Betts's Name is on every Capsule he makes for the principal merchants in England and France,** thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

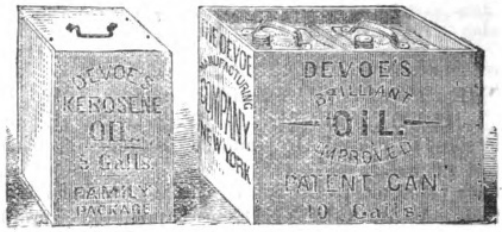
Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.



THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, APRIL 24TH, 1875.

Cotton and Yarns.—Since the publication of our last mail edition prices have undergone little change and may now, in consequence of the quiet condition of the market, be reported as more or less nominal.

Woollens.—Owing to the close of the season all descriptions of Woollens continue neglected. *Mousselines de laine* are considerably lower and the demand for them has somewhat lessened.

Iron and Metals.—Dealings in Metals have fallen to a minimum point and great dulness prevails in this branch of imports. Stocks on hand are reported at 3,000 piculs.

Sugar.—Stocks of Formosa are estimated at 15,000 piculs. No sales have been effected during the closing week at the firm prices asked by holders.

China kinds remain unchanged and, with but small demand, prices are nominal.

COMMERCIAL INTELLIGENCE

EXPORTS.

Silk.—Since the 9th instant, settlements are 575 bales of Hanks, and 75 of Oshiu. Prices may be reported to have further receded at the beginning of the fortnight; but the demand continuing steady, supplies from the interior being scarcer every day, and the stock being reduced to 600 to 700 bales the greater portion of which consists of very undesirable Hanks, holders have somewhat rallied, and the market closes firm at the following quotations. A few parcels of superior Hanks are held at $520 to $540, Best Kakeda at $580.

The shipments of the fortnight are 583 bales, making the total export to date 10,354 bales against 13,461 last year for the corresponding period.

It appears that the present low value of "rawa" has induced a very large demand on the part of native manufacturers. In fact, full sized Oshius, Sodai, Echizen and other so called Taysam sorts having found higher bidders in the native than in the foreign market form an unusually small proportion in the export of this season.

Considering the increasing probability of a very small demand if any, for Silkworms Eggs it is gratifying to hear that the production is to be so regulated this year as to limit the export to 500,000 cards.

Tea.—Since date of last issue a small and unimportant business has been done in "Old Crop" teas, settlements for the period slightly exceeding piculs 700, thus reducing stocks in native holders' hands to about piculs 2,000 of saleable leaf.

Three or four native merchants have received small lots of "New Crop," and sales to the extent of 4 to 5 piculs have been made at prices variously reported from $70 to $75 per picul; but as a rule foreign purchasers have abtsained from sensational purchases of early arrivals this season, and it is to be hoped that no effect will be produced by the small quantity already sold, and that our market consequently will open steady and free from the pernicious excitement it labored under last season.

Prices for "Old Crop" are nearly nominal, and the cargo of the bearer, say 250,000 lbs., will close our tea season for 1874-75.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 18.] YOKOHAMA, SATURDAY, MAY 1, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 25th instant, at the British Legation, Yedo, the HON. MRS. FRANCIS PLUNKETT of a daughter.

DIED.

At Odawara, on the 30th April, KARL EDWARD SCHMID, of H. M.'s Consular Service, Japan, aged 46 years.

Notes of the Week.

Adds, through whom Swaby and Cantelli purchased the schooner *Iris*, and who accompanied them in their attempted escape, has been committed for trial as an accomplice in the robbery of the Comptoir. Captain Withers, who commanded the vessel, was acquitted. The total sum embezzled was stated by M. Vouillemont, the agent of the bank, at $67,775, of which about $47,000 will, it is hoped, be recovered.

The robbery suggests a good many reflections upon the relations between the agents and employés of banks. While on the one hand nothing could be more intolerable than a curtailment of the legitimate freedom of action and liberty without which the best paid place in the first bank in the world would be a bondage, we hold, on the other, that any habitual departure on the part of an employé from steady conduct, or habitual association with men notoriously addicted to heavy betting and gambling on the turf, become the subjects of legitimate remonstrance, and, if this is unheeded, of report to head quarters. We shall not attempt to define the exact limits, but, within certain limits, a principal does well to take some cognizance of the conduct of his employés during their leisure hours, if only for his own security and the discharge of those responsibilities which arise out of the relations of employer and employé. A kindly word of caution, remonstrance or censure at the right time may avert grave subsequent disasters; the omission to speak it may cause loss and subsequent disagreeable reflections.

A meeting of the members of the Yokohama Club has been called for the purpose of abolishing the race-lotteries hitherto held there prior to the Spring and Autumn race-meetings. As the proceedings of clubs are of an entirely private character, we do not consider ourselves at liberty to do more than mention the above fact. Meanwhile it is gratifying to find that such sanction to these lotteries as is afforded by their being held at the Club is challenged and may probably be withdrawn—certainly will be withdrawn, if the party opposed to them can sink all minor differences and unite for this sole purpose. If once the lotteries are thoroughly discredited by being driven out of places of decent resort, and into the lower haunts where men are ashamed to be seen, a great step will have been gained towards their abolition. But the chances are that there will be a hard fight over it, for two reasons. The first is, that all these things in a little place like this are made personal questions, and any man who attempts to make reforms, however salutary, walks, as Tennyson says, "with his head in a cloud of flies," so that if the mover in such matters is unpopular, men vote against his motion on this account. The second is, that these lotteries have been among the means resorted to by many pony-owners to defray the expenses of their stables. Our own view is that no pony-owner should have the slighest connection with them, or even any bets on his horse. His prizes should be his sole gains. This is the only way in which racing will ever be purged of the evils which now beset it.

THE many gratifying assurances we have received from all quarters during the week of the importance and value of the remarks we thought it our duty to make upon what appears to us and to others a very great evil in this settlement, have convinced us that with a fair amount of effort and support from those who share in our opinions, this evil can be largely reduced, if not altogether eradicated. The task of drawing attention to such things is, of course, a very disagreeable one, and he who undertakes it must lay his account in a great deal of abuse and a great deal of misrepresentation. But on two things he may always rely: the first is the support of all honourable men; the second is the disgrace brought by their supporters on those on whom his reflections, intentionally or unintentionally, bear. There is always in a community like this some bad *clique* or journal which can safely be trusted with the latter, and some good manly men who may be relied on for the former.

Unfortunately, these matters are always complicated with a large amount of personal feeling, and we have very little doubt that it is actually supposed that some personal *animus* has dictated our article of last week. As the smile which any such imputation would cause us is no argument to our opponents, they may be more convinced when we say that at the moment of writing our article, we had no conception who were the movers in these affairs. In regard to the Race Committee we happen to know the names of three men on it, but of the remainder we are to this very moment profoundly ignorant. This may seem very strange to men whose thoughts are occupied from spring to winter with these affairs, but others with different tastes and pursuits will understand it perfectly well, and accept the fact we have stated without hesitation or surprise. In a question of this nature, however, we have nothing to do with individuals, be they who or what they may, and the complication with any such motives or considerations seems to us simply childish.

It may be a grievous wrong to many among the racing men that they are not trusted, and the fact that they are not may arise from the false suspicions of those who mistrust them. On which side the fault may lie, as we said last week, we do not know and shall not pretend to decide. But of the fact we are certain. Men are placed in positions of trust, and the *bona fides* of a section of them is impugned at every turn. This may be monstrously unjust; but it is a fact, and that is the lamentable part of the affair. There is an absolute distrust where there should be unbound-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ed confidence. Men should be able and even compelled to say, "Such and such a body or committee have had great difficulties to contend with; their judgment seems at fault here or there; but of their *bona fides*, collectively and individually, no one doubts or can doubt." But can this much be asserted?

Now we say not only that this ought not to be, but that it is monstrous that it should be thus. It honeycombs with doubt and mistrust all that confidence which should exist between men and which lies at the very root of society, a confidence without which no permanent friendships can be made, no cordiality of intercourse can exist, no satisfactory relations can be maintained. The strong belief in honour and honesty withers in such an atmosphere, which, as now exhaled from the turf, blasts everything round it.

Against those who have thought fit to vent their abuse upon us during the past week, we shall not say one word. The evil system of anonymous writing which has made part of the Yokohama press a bye-word in the settlement, is a symptom of this strong demoralization. One twenty-four hours of honest fresh air would kill it, and it would rot—as it should. But so long as it exists, people will say, whether falsely or truly, that it is representative, and they will ask why it is so.

There are some very unsound notions and principles relating to the foundations of government floating about in the heads of some of the more prominent Japanese officials at this moment. There is a tendency to look to *à priori* ideas—'natural rights,' 'inherent powers' &c.—on which to rest the theory of government. From these ideas the deduction is made that, wholly irrespective of any concession from the Throne, the people have an inherent right to a form of popular government, based on the sanction of the people's will, and not on the permission of the Throne. We may be too exclusively English in our view of the question, though, even if so, we are fortified by an example wholly without parallel for its success in the history of the world; but any such views seem to us absolutely false and misleading as principles of government. Of course the possibility of government rests on opinion, whether the opinion of a people, an army, or a force of any kind soever, which in the last resort can be made the instrument of carrying out the commands of those who issue them. But this has nothing in the world to do with 'natural rights,' and the idea of constituting these, whatever they may be, the bases of the theory of government in a country which is passing from despotic to constitutional forms, seems to us absurd. The Japanese may rely that the principle of meeting practical difficulties by practical measures, wholly apart from *à priori* reasoning, is the true method of ensuring their progress and advancement. If the growing intelligence of the people demands concessions from the Throne, let them be made by all means, after due deliberation of the effect of giving them and the adaptation of the forms of Government to such an altered condition of affairs. If the people talk about their rights, let them do so by all means, and as soon as they have secured any rights, let them be respected. But do not let us start with all kinds of confused ideas about natural rights in the people and argue upwards from them to the Throne. It is the Throne from which those rights are derived, and any other theory will lead to the wildest and most revolutionary condition of the national mind.

It is said that the Government has imposed a heavy scale of taxes upon the owners and drawers of *jinrikishas*. The article we published on the 10th ultimo, showing the changes lately made in the general scheme of miscellaneous taxation, gives no colour to this. But should it be the case, we doubt whether any sound exception to it can be taken. The *jinrikishas* are perfectly legitimate objects of taxation, and, on general considerations long since brought before the readers of this journal, it seems well to place some check upon the numbers of men employed in drawing them. An abundance of evidence goes to prove that the form of labour is very injurious to those engaged in it, and if their multiplication can be repressed by any legitimate means, there are good grounds for taking such a course.

The series of Reports issued yearly from H. B. M.'s Consulates has commenced this year with that of Hakodate. It presents very few points of interest, and we have so recently touched upon the proceedings of the Kaitakushi Department in their relation to the Island of Yezo, that it seems unnecessary to trouble our readers with further comment upon the commercial affairs of the island, though we may return to them at some future time.

The result of the enquiry at the Italian Consulate into the circumstances attending the death of the late V. Cantelli was the belief that he killed himself, though the possibility of his having been shot by Swaby was not excluded from the minds of those who made the investigation. The balance of evidence was held to be distinctly in favour of the first theory.

In an article entitled 'Justice in Egypt and the East,' from the *Pall Mall Gazette*, which will be found elsewhere in our columns to-day, the writer encourages a suggestion made some time ago in the *Japan Mail* that the New Indian Code would afford the Japanese a good model for their revised system of jurisprudence. The matter is eminently worthy of the attention of the reformers of this country.

The *London and China Express* states that the Japanese Indemnity Bill has been subjected to important alterations by the House of Representatives. We have shewn some of the objections to the proposals to which the Bill was to give effect, and it will be extremely interesting to see what modifications in it will be made by the Lower House. The intelligence regarding these should reach us by the next American mail.

(From the Japan Mail Daily Advertiser.)

Iwakura was honoured with an interview by H. M. The Mikado on the 23rd instant.

The Government has published regulations prohibitory of the trading of members of the public service. According to the articles of the notification, officials and members of their families are forbidden to enter into any trade the profits of which are derived from commercial exchange (buying and selling) or from any manufacturing process. It is, however, permitted to *kochos*, *kuchos* and school-superintendents to follow these pursuits, and the following modes of investment are excepted as not being comprehended in the prohibition: viz: investments in rice cultivations (agriculture?), in land, houses and mining property, and the profits derivable from the sale of the produce of their own landed property. It is, however, provided that they shall abstain from opening a house of business with the special object of following these pursuits. The notification further orders that any member of an official family, desirous of entering trade with his own means, may do so by separating himself from the parental household.

The *Akebono Shimbun*, relates that on the 23rd instant a music-master named Takemoto, instructor in the *gidayû*, or dramatic recitative, held a meeting at a house in Yedo. The object is not stated, but some 2,300 people were present and 583 *yens* were contributed towards the expenses of the meeting by others who were themselves unable to attend.

A Government notification is published authorising the payment to persons not being members of the police force of a sum not exceeding $2.50 for capturing a thief.

A writer in the *Akebono Shimbun* expresses much pleasure on learning the following incident, and takes the opportunity of moralising upon the changed condition of society which it reveals. A well-dressed man having laid out *three cents* in a toy-shop offered the shopman a 10-*yen* note in payment. The dealer was somewhat perplexed by the demand, and would seem to have taken a passing policeman into his confidence, who, shrewdly suspecting that the note might be counterfeit, asked the stranger to give some account of himself. He was susprised to learn that he was addressing the late Daimio of Kaga. The writer finds in this anecdote evidence that the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

aristocracy are growing "enlightened," sagacious enough to do their own shopping and with a sufficient eye to business to require full value for their money.

The *Hôchi Shimbun*, says that Gotô, Katz, Yuri, Katô, Miura, Toriwo, Itzuda, Matzoka, Fukuoka and Yamaguchi, attended at the Kunaisho on the 25th instant and were constituted peers of the *Gen-ro-in*, (members of the Upper House) at His Majesty's hands. Among these Miura, Toriwo and Itzuda, will continue to hold their former offices. Further intelligence may be shortly expected.

The *Hochi Shimbun* states that the name of Mutz was accidentally omitted from the list of gentlemen who have been appointed to seats in the Upper House.

THE intense interest felt by the public in the preliminary examination of the persons charged with abetting the escape of Swaby and Cantelli was evidenced by the crowded state of H.B.M. Consular Court on Wednesday. No public investigation has probably at any time excited so much commotion in our community, and the reported proceedings which we present elsewhere will be read with general interest. The total amount of defalcation is, we observe, stated at more than $67,000. This, we presume, has been in part recovered.

GENERAL Saigo returned yesterday from Nagasaki.

A Government Notification (No. 68) directs that for the future all memorials intended for presentation to ministers shall be brought to the *Genro-in* where they will be received.

A change in the intended performance at the Gaiety Theatre has rendered a slight post-ponement necessary. On Thursday next the Amateur Dramatic Corps will give "Milky White" and the excellent farce "Cool as a Cucumber."

THE police of Yedo is apparently resolved to suppress not only the traffic in rabbits but also the domestication of these animals. Several persons have been recently punished for having them in their possession.

The following story is curious but seems to require confirmation. On the 30th March a small steam-vessel of 'ordinary size' made its appearance at a village in the district of Amakusa in Shirakawa *ken*, and without introductory parley fired some five or six times at the undefended houses. One of the shots struck the house of a certain Kawakami Sekitchi and the villagers, greatly alarmed, sought for the help of the police. Pending their arrival, however, the vessel had disappeared. Intimation of the event was duly conveyed to the Heads of the *ken*, the Naimusho and to the Naval Department, but the *Nisshin Shinjisshi*, from which we translate the story, does not tell us the result of their investigation.

A correspondent of the *Hôchi Shimbun*, at Kobe gives a lamentable account of the decaying prosperity of the southern settlement. Trade, he says, is declining just as at Yokohama, and many of those who were attracted to the port by its early success are now returning to their former homes in the Interior. Unoccupied houses are but too common, and it is unsatisfactory to learn that the only public works in course of construction are the jail buildings.

A new newspaper enterprise the *Eiri Shimbun* (Illustrated News) has been brought to light in Yedo. The proprietors are actors and the paper is therefore likely to receive the patronage of the fair sex.

We are indebted to the Agent of the P. & O. S. N. Co. for the intelligence that the Company's steamer *Massilia* sailed from Hongkong on Friday morning at 10 a.m. with European Mails to the 19th March.

THE *Hioron Shimbun* relates that at a recent interview between Itagaki and Shimadzu Saburô the former expressed himself as disappointed with the system of drawing soldiers from the lower classes. He admitted that he had formerly favoured this mode of raising an army, but that experience had convinced him that the ranks should be filled with the *samurai* alone.

The *Choya Shimbun* gives an amusing illustration of the simple faith of the peasantry of the interior. An old temple at Suwa has, it seems, been changed from its original purpose to a school house and on a recent examination day was visited by some old women who, depositing their small coin on the teacher's *tsukuyé*, proceeded to prostrate themselves before a map of Japan which was hung on the wall. On being asked the meaning of their reverent attitude they replied that they were thus doing honour to the sacred picture of Buddha.

WE sincerely regret to announce the death of Mr. Karl E. Schmid, formerly First Assistant in H. B. M. Consulate at this port. He had long been in weak health, and was away in the country in hopes of deriving benefit from change of air. Finding himself but little improved, he had determined to return to Yokohama, but died at Odawara on his way down. He will be remembered with regard and esteem.

AN investigation into the circumstances of the death of the late V. Cantelli was held at the Italian Consular Court yesterday morning. The proceedings were, as is customary, private.

The Agent of the P. & O. S. N. Co. has kindly placed the following information at our disposal. The *Gwalior* (with European mail to 9th March) arrived at Hongkong yesterday. The *Bombay* will be despatched for Yokohama viâ Shanghai this morning.

Hiratz and Oku, officials connected with the Foreign Office who recently arrived from Corea, will return to-day.

The *Choya Shimbun* comments with much severity upon the conduct of thirteen officers of the Ashigara Kenchô, who after a drunken revel at an inn in Tonasawa so outraged the sense of decency of the other guests as to compel them to fly the house in disgust.

THE *Nisshin Shinjishi* says a new normal school for females is in course of construction at Sakuranobaba, Yedo. We regret to observe, however, from another paragraph that, however numerous the school-houses, they yield in number to the *Yose* (cheap theatre or penny-reading) where the instruction conveyed is far from being equally innocuous.

Messrs. Hudson, Malcolm & Co., are appointed agents in Japan for the Merchants' Marine Insurance Company, in place of Messrs. Gilman & Co., who are closing their house in Japan. *L. & C. Express.*

THE Japanese Prince Yosihisa-Kita-Sharakawa, uncle to the Mikado, who is staying in Berlin, is confined to his room and severely ill from a cold.—*L. & C. Express.*

THE *Gazette* announces that the Queen has granted an audience to Uyeno Kagenori, Envoy Extraordinary and Minister Plenipotentiary from the Emperor of Japan; to which audience he was introduced by the Earl of Derby.—*L. & C. Express.*

DR. ELDRIDGE,
Surgeon in charge.

TIENTSIN.

In my letter of the 13th instant, I briefly and hurriedly informed you that I had heard H. E. Li Hung-chang, the Governor-General of Chihli, had appointed Sung Paou-hwa, a local mandarin, to the joint British and Chinese Commission on the part of the Chinese Government, to go to the province of Yunnan to investigate the assassination of Mr. Margary in the yamên of the Chinese territorial authority of the town. I further mentioned that the mandarin in question was man of a very subordinate position on the staff of the Governor-General, and who had latterly, for four months been stationed at the village of Koku, in the Customs (Chinese) service there—in charge, I am now told, of the mooring of the junks in that anchorage.

To shew how little the foreign community here, who all know Sung Paou-hwa well, expected the appointment of a man of his standing to go on the important commission to Yunnan, I mention the following circumstance:—

On Sung Paou-wha, on the 13th instant, going to the office of the S. S. N. Company in this settlement, to take his passage in the steamer *Shingking* to Shanghai; and on his mentioning he was going to Yunnan, the agent—never for a moment thinking that Sung Paou-hwa himself had been selected by the Chinese Government as the officer in the joint British and Chinese Commission, but thinking, from his being able to speak pidgin English, that he was going as interpreter to some high officials—naturally asked him "What mandarin has been appointed as the officer of the Commission to go to Yunnan?"—and was not a little astounded to get the reply—"I am the officer appointed." He well might be astonished, for the same Sung Paou-wha had only lately, on Ying Han the Governor-General of the Two Kwang intending to leave here for Shanghai, in the steamer *Shingking*, been engaged in haggling with the shipping clerk in the same office, about paying the regular passage money, which he had been told the Governor-General and his suite would have to disburse. This, then, is the high official whom the Governor-General has considered fit for the important duty, in concert with certain British officers of making strict investigations into the assassination of Mr. Margary—a British officer, carrying a passport bearing the official seals of Great Britain and China! There is something decidedly "rotten in the state of Denmark," if Sung Paou hwa's nomination be accepted.—*Tientsin Correspondent.—N. C. Daily News.*

THE FINANCIAL STATEMENT.

THE statement given to our readers this morning of the estimated receipts and expenditure for the half-year from January to June, 1875, is the third document of the kind presented to the world by the Japanese Government, though it differs from its predecessors in being made up for six months only instead of for the whole year. It has reached us too late in the week to permit of our doing more than very scant justice to it, and it presents so many items upon which it would be premature to express an opinion, without the explanations of them which we trust will be forthcoming hereafter, that we should be in danger of misleading our readers were we to do more than make some of the few general remarks which it seems to suggest at first sight.

The first question, of course, to which such a statement gives rise, is, does it show a surplus or a deficit? And in this respect, the result is as favorable as it is unexpected. The current receipts are estimated at *yen* 38,729,386, and the expenditure at *yen* 39,022,071, showing a surplus of *yen* 19,707,315; and this surplus, added to the balance of the Reserve Fund, (not, by the way, as stated in the last Budget, where it stood as *yen* 21,029,841) now stated at *yen* 20,602,852, shows a total of *yen* 38,010,168, which represents the actual balance in the hands of the Finance Minister.

As these figures are very large, and are swollen by an addition to *both* sides of the account of *yen* 9,000,000 under the head 'Amount paid from the ordinary allowances (to Government offices) towards the Reserve Fund'—an item among the most perplexing in the statement—we may take the total receipts as *yen* 49,729,386, and the total expenditure as *yen* 30,022,071, leaving the balance as before stated.

We should feel bound to congratulate the Government and the Finance Minister on a result so prodigious, were it possible to think that subsequent explanation would not necessarily greatly modify the appearance presented by these figures. That a country like this should be able to show a surplus of nearly four millions sterling on its half-yearly accounts, is, of course, wholly incredible. It is possible that during this half-year the greater part of the yearly revenues may come in, and that, in the second half of the year, the payments may greatly exceed those of the first half, and this would afford an explanation of the anomaly. But we need hardly say that no Government in the world ever yet had a surplus of eight millions sterling on its yearly accounts, or will have until the enormous figures of European and American budgets are many times larger than they already are. It would be ridiculous and gratuitous to suppose that the figures given are deliberate misrepresentations of facts. A statement which will not hold water for one second must have some explanation at present denied to us. Whether it is desirable that a document so weighty as the Financial Statement of a nation should appear without some notes which would serve to render it intelligible to foreigners who are deeply and practically interested in it, is a question not very foreign to the affair. But it is obvious that, as it now stands, no sound judgment can be formed of the relation between the revenue and the expenditure of this Empire from the document before us. It seems well to insist upon this the more earnestly because the statement in its present form will go abroad and excite precisely the same remarks as those to which we have just given expression. MILL speculates upon the possibility of a world in which two and two, instead of making four, make five, and many as are

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the surprises of this country, none have yet equalled that caused by the present Statement, though the feeling may be dispelled by the subsequent explanations for which we now appeal.

But passing on from this point to others demanding attention, we may remark that the task of instituting any trustworthy comparison between the last and the present Budget is extremely difficult. We could compare year with year, or half-year with half-year; but we cannot compare half-year with year without great trouble—which, indeed, we have no desire to spare—but also without the danger of being constantly misled on account of the impossibility of discovering the time when the greater disbursements are made and the greater sums received from revenue. We may, perhaps, infer that the Statement before us is a supplementary one, or is only the estimate for the half-year, and that it will be followed by a Budget for the year 1875 of the same proportions as that issued in June last year for 1874. On some such hypothesis its form is intelligible, though the results remain as obscure as ever. The Statement of last year was very full and elaborate, and, in spite of some errors of form, was really a very clear and intelligible document. It is impossible to say the same of this. For instance; in the estimated receipts there is an amount of *yen* 3,314,234 under the head 'Amount given to Reserve-fund out of ordinary allowances (to Government offices) of surrendered incomes'; while a sum of *yen* 9,000,000 stands immediately under it and under a nearly similar heading. This amount of *yen* 9,000,000, too, stands, under exactly the same title, on the debit side of the account, and how this is to be understood, or what it can mean, we are wholly unable to understand.

Lastly, we come in this provisional analysis of the Statement, to the most important item of all, *yen* 38,010,168, the balance or Reserve-fund in the hands of the Treasury, which should be its cash balance. Now, the whole value of this item depends upon what this balance consists of, whether gold, or silver or copper, and in what proportions. Such a sum, under this heading, would, in the Budget of an European Finance Minister, mean the possession by the Treasury of that amount in gold or silver, and we have nothing but general reasons for supposing it otherwise in this case. But, what if it consists of Government notes? In no sense could it then be reckoned as a cash balance. It is quite true that these notes may be used for the payments of the Government to its civil, military and naval servants. But each note is a token of so much indebtedness, and you cannot call a debt an asset without inverting the first principles of finance.

What may fairly be inferred, we think, from the Statement is that there is an excess of revenue over expenditure. But more than this we cannot infer; and we should be wrong to permit the Japanese to imagine that any account submitted in this form, and left unaccompanied by ample explanation, will satisfy the European public. If these explanations, the chief of which should be the nature of the cash balance, and the condition of the currency, should be satisfactory, the country may be congratulated upon being in a far sounder financial condition than is generally imagined. But we shall not hesitate to state our fears that these explanations will greatly modify the causes for congratulation, and produce some grave reflections upon the entire want of systematic book-keeping which characterizes the national accounts.

THE FINANCIAL STATEMENT.

The following statement of the estimates of Receipts and Expenditure for the period from January to June 1875 has been issued by the Government.

From the "Nisshin Shinjishi," No. 91, of April 29, 1875.

No. 59.

To In, Shô, Shi, Chô, Fu, and Ken, an account sheet of the estimated current receipts and expenditure for the first half of the present year has been sent in as shown in the annexed documents, by the Minister for Finance, Ôkuma Shigénobu.

The above is accordingly made known for your information.

(Signed) SANJÔ SANÉYOSHI,
Prime Minister.

April 20, 1875.

SPIRIT OF THE JAPANESE PRESS.

ON ROBBERS.

From the "Nisshin Shinjishi," No. 86, of April 5, 1875.

The public must have seen the drama in which Ishikawa Goyémon,* when going forth to punishment of being boiled to death, sings this verse:—"Even though the "sands upon the banks of the Stony † River should be "exhausted, the seeds of robbery in the world will never "be wanting." In the words of Confucius it is said that when a bird is about to expire its song is mournful, and that when a man is at the point of death, his words are of worth, and in very fact the spirit of the words of the renowned robber who was without compare throughout Japan, well nigh assimilates to the well founded reasoning of the Sage. If I am asked my reasons for this statement, they are because, in reading with zest the newspapers issued by the various offices, I have learned that yesterday, in Honjô, a robber stole some money, and that to-day, in Fukagawa, a robber stole some timber, in Horidomé a theft of grain was committed, and in Tomizawachô some clothing was carried off. I now only wait, rubbing my eyes, for the news to-morrow that at such a house in such a subdivision of such a district, a robber may have been arrested. The scanty successes and the slight exertions of our numerous police, although hardly worthy to be spoken of, nevertheless gives no opening for censure and fill up the measure of their duties. How can they, then, be considered in the same light as the numbers of unlearned officials drawing the pay of their posts without doing any work, who squander their high salaries, and who, amidst the pressure of daily matters of business, unprofitably think of and reckon upon the closing of their office at three o'clock, in the desire of shortly beholding the beautiful eyebrows and rosy face of their beloved singing damsel. Now here, upon consideration, I find that the laws of the present Court are severe, and its enactments minute.*

* * * * * * * * * *

One cannot pick up (and appropriate to one's own use) anything lost in the streets, even though it be but an old handkerchief or a broken umbrella,—at the bath-houses the entrances for men and for women are separate,—in penal servitude the labours for the old and those for the young are not the same,—and all this is in truth a condition of things far pre-eminent over the reformed and enlightened age of Giyô or times of Shin, ‡ and amongst the whole of the people of our land, whether high or low, there is not a single person who harbours dissatisfaction at it. Nevertheless, what I myself, gnashing my teeth and incensed with rage, am unable to put up with is the fact that the persons guilty of the very worst kind of robbery,—such as the theft of rank by the old feudal nobility,—the theft of status by those whose ancestors performed gallant deeds, the theft of power by the raging tiger and wolf, the theft of intelligence by the unsagacious dog or mouse, the theft of office by the crafty and deceitful, theft of position by the unintelligent and slow, the theft of incomes by nobles and gentry who are dim of sight, dull of hearing and slow of speech, theft of appointments of various degrees by favouring and sycophantic officials, and besides these the theft of name, of gain, profit, renown, rewards, exemption from labour, sinews § and bones, character, exertion, or ideas,—that robbers such as these, I say, by reason of their wiles being deep laid and cunning, cannot be placed in the same category with those robbers who, with muffled faces, and bearing deadly weapons, secretly cut a hole in a door or break through a hedge or wall and so seize and carry off men's money or goods. The residences that they usually inhabit are not like those that are concealed in mountains or forests, that lie hidden in moors or wild plains, or that are pressed into the compass of a cleft in the rocks or of a cavern. Their bearing is proud, they sit and sleep in apartments of sparkling crystal, clothe themselves with brocades of

* A reference is here made to the regulations issued during the past few years with a view to the preservation of public decency and morals.

Kiyôto manufacture, and recline in chairs brought from beyond the seas; their liquors are not foreign only, nor yet native only, their food is found neither on land alone nor yet in the sea alone, and they care nought for the dearness or cheapness of the price.

* * * * * * * * * *

Fair wives and lovely women attend their couch, and singing-girls and dancers throng their halls of entertainment and strike the *samisen* and *koto* so that they become infatuated and take their pleasure too.

How much more, then, do they wrongly deem the delights of their holidays,—when the entertainments, the licences, and the orgies are kept up the live-long night,—the greatest pleasures of this enlightened and intelligent age! When they go forth to other places, some of them ride in carriages or engage *jin-riki-sha*, clatter their lofty *geta* along the road, or don boots made of leather. With English hat and American clothes, or with Chinese headpiece and Japanese garments, they assume an appearance of power,—and with a house-boy running in front of them, while one of their house-servants is in attendance behind, on days when the weather is fine they swagger along the wide street of foreign-built houses. For their confidants, they each select persons of similar mind to their own, and entertain dislike towards those who differ from their own style. There is no such thing as their being powerless as regards drawing in or driving forth their breath, for the promotion of one or withdrawal of another, and there is no cessation in the stroke of their pulse. The faults of that one are repaired by this one, while this one's evil tracks are obliterated by that one. In all their public and private matters there is not one that does not rest upon favouritism and bribery, and by this means, as far west as Nagasaki, in the east to Yedo and Matsumaë, in the south to Hachijô, and in the north to Sado and Aôjima, without respect to distant places or to home districts, there is no spot throughout the sixty and more provinces of Japan in which these robbers are not to be found spreading and flourishing. The thing amongst them especially to be detested is the fact that there is no want of persons who, for the purpose of following out their own private lusts, deceive their Ruler who has inherited the manifold benefits of many thousand years, and sell their own country, and by risking their persons and exerting their strength, conceal from view their evil minds, under the impression that they are indeed faithful retainers and filial children. Under these circumstances, even though there be laid down hundreds and thousands of minute and explicit rules for the protection of the interior of our country, and many myriads of cannons be made as precautions to guard against foreign countries, still, no profit whatever will be gained. Petty thieves such as those ordinarily met with are merely those who, after their extravagant frequenting of houses of ill-fame and love of liquor, being beggars or famine-stricken men whose supplies of food have come to an end, are attacked by poverty and destitution, and being unable to bear up against their misery, left without resources, and no means, are driven to commit these petty pilferings. These wretches, for whose first commencement pity should indeed be felt, are day by day and night by night arrested here or there, and display the energy of the police. But who on the other hand is charged with the heavy duty of arresting the open numerous greater robbers of their country and homes, who, if compared with the former thieves, are as the phœnix amongst flying birds, or the *kirin* ‖ amongst running beasts? This is what the proverb calls exchanging the places of cap and foot gear. Is light in small matters but darkness in great,—haste in minor affairs but tardiness in those of importance,—the daily arrest of pilferers but the monthly escape of great robbers from the meshes (of justice),—good or bad in the sight of Heaven?

THE OPENING OF THE COUNTRY TO FOREIGN TRAVEL.

(Meiroku Zashi.)

The time having arrived for revising the treaties, what we are all most desirous of seeing is that our Government should have jurisdiction over foreigners and the right of taxing them, for without these powers the country cannot be called independent. At present we have not these powers, and are to that extent deficient. But though these aspirations are natural, the present condition of the country prevents our realizing them, and, moreover, we think it will be many years before we acquire these powers.

What foreigners greatly desire is the right to travel freely in the interior. But our Government will not permit this, because it is afraid that our obstinate people, not being advanced in civilization, would impede or even perhaps kill travellers; and as the advancement is least in the interior, the Government is desirous of protecting the more ignorant of the people from losses which might arise to them from business with cunning foreigners.

Our opinion is entirely opposed to this. We think the permission to foreigners to travel should be granted. What we are now deficient in is knowledge and civilization, and it is advancement in education which brings knowledge and civilization. But if this advancement is to be merely the fruit of school-teaching it cannot be attained in a day or two. The reason that the civilized countries of the earth have acquired their enlightenment is that they have bought and sold and carried on commercial intercourse with all other countries, and have acquired knowledge by going freely from one to the other, thus acquiring knowledge by these experiences. It is not so much by books as by these means and by association with other foreigners, that this civilization has been attained. Perhaps there would be no better means of advancing our people in enlightenment than by giving them these experiences. But this is rather a desirable than a practicable thing, because sending our countrymen abroad entails heavy expense. And, it may be added, our merchants can now go abroad in their own or in foreign vessels and carry on trade with foreign countries, though the deficiency both of knowledge and capital places great limitations on this. Looking at the question in these lights, it seems as if it would be very advantageous to us to have foreigners travelling in the interior, and therefore it ought immediately to be permitted, so that our people may associate with them and acquire enlightenment by this practical form of experience. By this means their faculties will be developed, because practical experience is far better as training and exercise than all the book-learning. Still, as we said before, the Government is very anxious about this question, because it is afraid that the more ignorant of our countrymen will be led into serious losses by transactions with the more astute foreigners. But this is also a question of experience, and if our people are not to be brought into contact with foreigners until they are equal to them, when will they get rid of their ignorance? * During the religious wars in Europe millions upon millions were expended on both sides, but with this money abundant knowledge and an advance of the sciences were purchased, because people were brought so much in contact with each other. In those days the loss may have appeared great, but the advantages brought about were certainly far greater and were an ample compensation to both sides. And now, looking ten years backwards at our own affairs, we then thought that the opening of our ports would bring the greatest misfortune on the country that had ever befallen it, and the cry arose for closing the ports and excluding foreigners. But our association with foreigners was only the natural result of the progress of events, and they could not with reason be excluded from the country. Our former Government, therefore, was compelled to open our ports, and from that day forward our country has advanced until it has arrived at the position in which we now see it. It is unnecessary to debate whether we have been losers or gainers by the result. We have now begun

* Those among us who still remember their Greek *Anabasis Majora* will be reminded of the story of the fool who said that he would not let his son go into the water until he could swim. —[ED. J.W.M.]

UNIVERSITY OF CALIFORNIA

to understand the meaning of civilization and the advantages which can be gained by the acquisition of foreign science. We also know that mental development must come by training, that we must be industrious in the arts and manufactures, and these are among the fruits of our having opened the ports two years ago. Now, ten years ago, the only people we regarded as advanced in the European sciences were a few doctors and military men, amounting perhaps to ten in all. But, of course, in those days we did not know the value and merit of foreign laws, civilization and freedom. But now even our young scholars are talking of the merits and advantages of these things. Surely this is a vast gain, and it has come to us from the opening of our ports and commercial intercourse.

The arguments for permitting foreigners to travel in the interior are precisely analogous. Ten years ago the most sagacious among us had no idea of the advantages we should derive from the opening of the ports, and certainly the most sagacious among us to-day do not see all the advantages of permitting foreigners to travel in the interior. But some estimate may be formed of this by measuring the advance we have made in knowledge and civilization during the past ten years owing to the opening of the ports. This advance, however, has only been made or appreciated by the middle and higher classes. But ten years after the country has been opened to foreign travel the lower classes will have greatly benefited from it. Will not the advantages of this, then, be exceedingly great? As it seems to us, the true way of most rapidly attaining that which we so much desire, viz, jurisdiction over foreigners and the power of taxing them, is by immediately opening the country to foreign travel.

Our former Government was very timid, and thought that by opening the ports our stiff-necked people would assail and kill foreigners, but, at the urgent persuasion of foreign powers, the thing was done, and if we really look back we shall find that the actual injury was far less than might have been expected.

Many among us say that foreigners must not be permitted to travel in the interior until we have jurisdiction over and the power of taxing them. These views are held by patriotic men, but they are in their nature the same as the old patriotic cries for the exclusion of foreigners and the closing of the ports. Still, they were only cries; they were never put into force. Surely such cries cannot be called wise. We desire to leave every thing, from the question of government administration down to the advancement in knowledge and civilization of our common people, to a natural progress, and so to clear the road before us that we may be in no danger of stumbling as we go.

IZUDA.

Joint-stock Companies.

(Choya Shimbun.)

The new companies of which we see so many formed now-a-days look very grand indeed for the first few days, and the amount of their business appears extraordinary. Their offices are usually fitted up in European style, and enormous sign-boards are hung out in front of them. On the top of their flag-staffs we see the symbols of the company waving in the air, there is a mat at the entrance and an umbrella-stand, and in the office there are imposing tables and desks and a large number of chairs. In fact, there is hardly any article of European furniture which is not to be seen, and the whole place wears an air of abundant prosperity.

But if we pass the house a month afterwards, lo! we find the doors closed, not a soul in the place, and a piece of paper pasted up in the front of the house informs us that the premises are for sale. The place which was in such prosperity has sunk into utter decay. The fall is as rapid as was the rise, and this is a suspicious fact!

After much meditation, I have arrived at the conclusion that our people are too light-minded and incautious, and that this disposition is chiefly displayed in Yedo. If a man hears of ways in which he can gain a high interest for his money, he does not think how his accounts stand and how his business is going on, he thinks everything will answer to his hopes. So he goes and decorates his house, lavishes money on his dress and keeps a luxurious table. He knows nothing about acting on solid views, and when adversity comes, not having the power to struggle against it, he fails, shuts up his place and declares himself bankrupt. This is the reason of the rise and fall of these different new companies, and I therefore entreat men engaged in mercantile pursuits to abandon this light-mindedness and become more earnest.

Early lessons in Political Economy.*

(Choya Shimbun.)

One sometimes hears it said that it is not the farmers or the *samurai* through whom this country can be advanced, but the merchants. Those who hold this view say that the farmers are ignorant and indolent, and that they will never become industrious; that the *samurai* dispute a great deal, but do not add to the country's wealth; and that though they are always looking forward to a period and state of prosperity, many things decay day by day, and, if industrious merchants do not carry on trade, the whole country will fall into poverty.

All this sounds like reason, but it is not so, for it is not to the merchants that we must look for the origin of trade. It is natural that the merchant should buy cheap and sell dear, but if the farmers and artisans did not furnish the materials for trade, the merchant could acquire no profits.

The above rule is the merchant's guide. But, still, there are wicked speculators who raise and lower the price of articles and try to get the profits solely for themselves, and the majority of these men are dealers in rice. The same is done in other trades, and though there may be exceptions, almost all merchants must buy cheap and sell dear or they would be unable to support themselves. In trading with foreigners we should try to save every penny possible and gain as much as we can, and this would seem to conduce most to the benefit of the country. But what we sell is all originally produced by the farmers and artisans. We buy whatever may be agreeable to the fashion of the time and this is sold to the people at a great profit. But is this good for the country? Merchants are mostly selfish, they regard but little what balance there is in our commercial affairs, and none of them lament the money that goes to foreign countries provided they get a share of it.

But some of our disputants are in great grief about the paucity of our exports and the inequality of the balance of trade. Among our exports tea and silk may be said to be the most considerable. But our imports consist of iron, raw cotton, cottons, cotton yarn, flannel, glass, drugs, paints, &c. and these largely exceed our exports. If we took out of the account our tea and silk what would there be to pay for our imports? Now both the tea and silk come into the hands of the merchant from the farmer, and the merchant therefore is only an intermediary. If the farmers and artisans increase their production the merchants will increase their trade. It is the farmers, therefore, and the artizans who are the foundation of the country, and, should they be idle, however industriously the merchants may work and try to carry on a prosperous commerce, they will fail to do so, and for this reason the Government has established the *Kuangiorio*. †

Education of Adults.

(Choya Shimbun.)

The object of education is to afford knowledge to the people, and it is therefore a matter of vast importance which cannot be overlooked even for a single day. It is for this reason that the Government has established many thousands of schools throughout the country It has been a great blessing to the people, and we shall not be wrong in saying that by the time our present younger generation arrive at the age of manhood, there will many scholars of great ability

* Of this essay, Voltaire's often repeated *mot* certainly holds good. "It contains some things which are new and some things which are true; but the things which are true are not new, and the things which are new are not true."—[Ed. J.W.M.]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

among them. But there is one lamentable fact connected with this, and the sorrow of it falls on those who are too far advanced in years to go to these schools, and who completed their education before the present means of instruction had been provided by the Government. Although we speak of their having completed their education, the best of them only know the Chinese characters, the histories of China and Japan and some of the moral teachings of the Chinese; of the more important sciences of civilized countries they know nothing. Those who possess alike the means and the desire to acquire knowledge, come to Tokio and study under such instructors as they may choose. But those who have both the will and desire, but lack the means to defray the expense of such instruction, carry, alas! hearts heavy with anxiety and disappointment, and are forced to content themselves with imperfect translations of foreign books by which alone they can gain any insight into the knowledge of foreign countries.

The Government, thinking that it is its duty to educate the people, has provided our youth and boys with many schools and colleges. How is it, then, that men of mature age are not provided for with the same care? I cannot understand whether it is because they are supposed to have completed their education already, or that the Government, having many other duties to discharge, has not made any provision of this nature. But it is certain that we are now advancing in civilization, and that knowledge must be diffused among us. Is it not therefore a deficiency on the part of the Government that these men, who ought to be the flower of the country, are not provided with the means of instruction? We entreat that in every *ken* there may be a school established—a branch of the Kaiseigakko—with both foreign and native instructors. This will not only bring knowledge to our adult population, but great advantage to the country.

I again entreat the attention of our officials to this question.

Liability of Signers of Bonds.

From the "Nisshin Shinjishi," No. 86, of April 23. 1875.

In cases where several persons to whom a loan is made affix their seals to bonds for money or other goods lent to them, but do not write down the sum for which each several one is indebted,—even though there should be, amongst those who have thus signed, any person of whom all trace has been lost or who has died leaving no heir, the repayment of the whole amount of money or other goods borrowed shall be enforced against those of the signers who still remain.

The above its therefore notified.

Note. Cases where, even though there be no statements on such bonds of sums separately borrowed, there yet exists clear proof of the separate loans, are not included in the above.

(Signed.) SANJO SANÉYOSHI.
Prime Minister.

April 20th, 1875.

(*Notification from "Nisshin Shinjishi," No. 90, April 28th 1875.*)

The *Gen-rô-in* has been established on the site of the former Sa-In, within the Daijôkûn-dai.

The above is therefore notified.

(Signed) SANJO SANÉYOSHI,
Prime Minister.

April 25th, 1875.

It was made known, by Notification No. 60, that all Memorials &c. were for the present to be forwarded to the Sei-In Bun-kiyoku, but for the future they are to be sent in to the *Gen-rô-in*.

The above is notified.

(Signed) SANJO SANÉYOSHI,
Prime Minister.

[Translation.]

Riot amongst the soldiery at camp of Kumamoto

(*From the "Nisshin Shinjishi," No. 56, of April 32, 1875.*)

It is said that at the begining of the present month an altercation arose amongst the soldiery at the camp of Kumamoto in the province of Higo, between the 19th regiment and the 4th regiment of Artillery, quartered in the Ni-no-maru fort. They used tiles from the roofs as missiles and hurled bamboos and sticks, but by the aid of the officers of the two regiments the affair was at length brought to an and. On the following day, however, they were about to engage in combat, using ball cartridge on both sides, whereupon the officers of both regiments were greatly alarmed, and hurried to the spot in carriages; they were, however, opposed with field-pieces, rifles and bayonets, and matters seemed to be on the verge of a great tumult, when, by the persuasion of Mr. Nomidzu, the Head of the Camp, both sides came to a peaceful understanding. It is said that the commencement of this was a quarrel about a very small matter.

This information has been given us by Mr. Kinoshita.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

"Hakama and Kamishimo."

On their arrival in Japan foreigners always noted the wide pantaloons, and associated them as marks with the swords borne by the officials, deeming both of them badges of gentle condition or at least of official rank.

There are at least eighteen different forms of this nether garment which should be noted *seriatim*. It is first worn by males in the fifth year, and there is quite a little family excitement on the occasion. This is usually the 15th day of the 11th month of the year in which the "young master" attains his fifth year, and is ceremoniously endued with these garments. The *ubusuna* (patron's shrine) is subsequently visited.

The *Kamishimo* (*kami*, upper; *shimo*, lower) which constitutes the old ceremonial costume of the middle classes and is the wing-like overall matching the *hakama*, is worn on this day by the boy and his friends as on other special occasions. Tradesfolk and mechanics wear the *hakama* on special occasions only, such as marriages, funerals, new year's visits and the like, but do not wear the *kami shimo*. The respectable householders wear *hakama* on the occasion of visits of ceremony or official business, and the *kami shimo* or special occasions including anniversaries and visits to temples.

The general pattern of the *hakama* is a small striped design of sober colours, brown (*cha iro* or tea colour), greens, blue with a little red at times and generally some white, in a variety of styles. The material ranges from heavy and expensive silk *kohaku* or *Sendai hira* down to *k k ra*, cotton, and, of late, the cheaper foreign stuffs. *Kohaku* is only used by the nobles of the higher class; *chabujima* and *Sendai hira* by the aristocats; *Tango jima, Go sen hira, kawagoie hira* by the officiers, *kokura* by the *samurai*. the material differs little with the season, but the winter dress is lined for warmth; a thin material was sometimes used, but was not considered correct or officer-like.

Kami-shimo are usually made of *moro* (linen), sometimes of silk and linen, occasionally all silk well stiffened with starch. The stuff is generally light-blue or brown, dyed in a small pattern on a white ground, with the family crest on the back and shoulders, either that of the wearer or his feudal lord.

Sashi nuki is a *hakama* worn only by the courtiers; it is baggy at the lower extremities, generally purple or green with a large white pattern; the material a thin satin with the pattern woven in the material.

Nobakama is similar in shape to the above, but is thus called when worn by the inferior officers of the court.

Okuchihakama is usually either white or red worn by young nobles (*kugeshi* and *kazoku*.)

Kukurihakama is gathered in round the [illegible]

Digitized by Google
UNIVERSITY OF CALIFORNIA

used or special occasions—generally under armour—by the nobles. The material and pattern vary according to fancy; the former is generally very expensive. *Naga-hakama* (long *hakama*) worn formerly by the *daimios* and *hatamotos* at the Shôgun's levees, on new year's day and other special ceremonials, marriages, funerals &c.

Tsugi-gamishimo is the ordinary *hakama* worn with a *katagimi* or overall of *ro* (silk gauze) of black or other colour, as a kind of undress costume for officers of all classes on duty, and is a grade more 'dressy' than the ordinary *haori* or overall jacket. This style was introduced about A. D. 1500 by Matznaga Danjô of Kioto, a retainer of the Ashikaga Shôgun, Yoshiteru. *Hira-hakama* is worn by all classes, and generally a *haori* with it. This is the most common form of the *hakama*; the colours are usually sober and the material inexpensive.

Ma nori bukama, as the name denotes is the riding dress, and therefore longer in the leg, and has stiffening in the seam which is called *semi* (locust) from its giving the garment a spread-out appearance like a locust's wings.

Matchi taka bakama is the same as the above without the *semi*, and is worn by gentlemen.

Fun gomi—a tight-fitting style mostly of expensive and gaudily coloured material, worn by officers at fires, by gentlemen travelling &c. sometimes with a velvet edging.

The *Yoshitsune bakama* is short, only reaching to the calf of the leg with a running string to draw it tight, worn by travellers and formerly under armour.

Soboso is like *fungomi*, but narrower in the lower part.

Hoso bakama is tighter fitting than the foregoing, and was worn by the soldiery before the introduction of foreign style. The *Tatchi take* is like our knickerbocker and is worn with leggings (*kiyahau*) by the common people only.

Karusan is the *Tatchi take* and *kiyahan* in one. *Hi bakama*, scarlet *hakama* worn by the Empress, the concubines and ladies of the palace, the material varying with the rank, the colour the same for all. *Seigo*, a heavy material of raw silk worn by the Empress, is the finest. The others are of various qualities of silk. Latterly camlets and foreign goods have been used by the lower grades of palace female attendants. Girls wear *hakama* occasionally, the hair being then dressed like a boy's, the sleeves of the dress being worn very long.

Suicide.

Females who have resolved upon committing suicide commonly resort to a river, or not infrequently a well, and after deliberately filling the wide sleeves of their dresses with stones jump into the water. The most frequent motive for this act is the sense of their shame and the desire to conceal it; but it is caused not seldom by lovers' quarrels, by the dread of the loss of their personal charms through age or illness and, in the case of *geishas* and courtesans, often arises from the cruelty of their task masters.

Men who are heavily in debt, or crossed in the tender passion, are known to destroy themselves by drowning.

It is by no means unusual (and the native newspapers chronicle such occurrences punctiliously) for a fond but disappointed pair of lovers to bind themselves together and thus to seek in their watery grave an union which had been refused to them in this life. This mode of death is styled *Shinjiu*.

Hanging is less resorted to by women as a mode of destruction—a singular parallel to the horror with which it is viewed by women in Europe. On the other hand it would appear to be frequently selected by men bent upon ending their lives. Trees are pointed out on which numbers have hung themselves, and it is related that they have the power of attracting their victims to them by some fatal power of fascination. A story is told of a vendor of lamp-oil who, on his rounds, passed beneath one of these vampire trees which stood on the site of the present Foreign College of Yedo at Kanda Bashi (then called Go-ji-in ga-hara from the name of a temple that was once situated there) and felt an irresistible inclination to hang himself. A passer-by caused him desist, and he proceeded on his rounds. On his return, however, he was attracted to the same spot to find, to his amazement, another man suspended from the tree and already dead. The frightened *Abura-ya* hastily ran away, leaving his oil tubs at

Some years ago at Kumagaye, about two days journey from Yedo, a guilty couple who could neither marry nor live together resolved to end their lives by committing *Shinjiu* by hanging and appointed a rendezvous at night for the purpose. On their meeting the man climbed a tree and throwing one end of his rope over a branch and the other round his throat desired the woman to fasten herself to the loose end. The man then abandoned his hold upon the rope and much to his surprise found himself upon the ground having, in his descent, hoisted his companion into the branches. Bethinking himself of the folly which could have prompted him to so rash on act he unloosened the rope from his throat and turned homewards. Before he had proceeded far, however, he to his amazement met his sweet-heart who showed equal surprise at meeting him as she also had found suicide to be a mistake. They returned together to the tree where they found a badger, who had assumed the woman's form. Hanging is known as *kubi kukuri*. There are several *kubi kukuri* trees in Yedo.

Ji-gai. Men rarely cut their throats but women frequently resort to this mode of self-destruction, using for this purpose their razors or, if gentlewomen, their dirks, and there are stories of women who have slain themselves with hair pins or *hibashi* tongs. About the year 1680 the fifth Shogun of the Tokugawa line, Tsunayoshi, paid a visit to Yanagisawa and fell in love with the *Okusama* (wife) of the latter. She was at the time enceinte, but her husband succeeded in persuading the Shogun that the child was his. As it proved to be a male a revenue of one million *kokus* and the fortress of Kai were settled upon him. Ii Kamon, (ancestor of the Regent), conspired with the Midai sama of the Shogun to assassinate Tsunayoshi before he could place a false child in the exalted position intended: she cut the Shogun's throat while he slept and subsequently cut her own.

Innumerable instances of this mode of suicide are furnished by all ranks, jealousy being the most frequent motive. A gentleman sent his wife home to her family in disgrace. He was an old man, she a young and beautiful girl. Prior to her being coerced into marriage she had had a lover who continued visit to her in the old man's absence. The latter however discovered their intimacy, slew the gay Lothario, and sent the guilty survivor to her parents' home. On her way home she succeeded in killing herself with the tongs of a brazier, which a servant managed to slip into her *Kago* unperceived, and when her bearers arrived at her home their fair burthen was no more.

The notorious *kara kiri* is a common mode of suicide, differing from the official or judicial method. Here the man (for women never rip themselves open) holds the small knife in the left hand and cuts from right to left across the abdomen, beneath the navel, eight inches and continues the cut upwards three inches.

A skilful surgeon in Yedo succeeded in stitching together the abdomen of a *samurai* who had ripped himself up, but, during a thunder storm which occurred shortly afterwards, the stitches gave way and the patient died.

The writer remembers a young gentleman who being suspected by his uncle of a guilty intimacy with his young wife was peremptorily chasséd. The young man proceeded to the house of the family physician, and while left alone for a few moments succeeded in ripping himself up. On overhearing the intelligence of his death his paramour killed himself by biting her tongue, a common mode of suicide with women.

BRITISH CONSULAR TRADE REPORT FOR HAKODATE FOR 1874.

BRITISH CONSULATE,
Hakodate, 5th March, 1875.

SIR,—I have the honour to transmit in duplicate, the following returns of the trade, shipping, etc of this Port for the year ending 31st December, 1874, viz :

I.—Imports from England and other Countries.
Imports from opon Ports in Japan.
II.—Exports to England and other Countries.
Exports to open Ports in Japan.
III.—Return of Treasure imported and exported.
IV.—Return of Foreign Shipping.
V.—Return of duties collected etc.
VI.—Return of British and Foreign Residents.

SHIPPING.

	Ships.	Tonnage.
1874.	58	35,074.
1873.	55	46,725.
	Increase 3	Decrease 11,651.

Notwithstanding there is an increase of 3 ships on the previous year, there is a decrease on the tonnage of 11,651 tons, owing to a number of small craft engaged in hunting Sea Otters having visited the Port.

	Imports.		Exports.
1874.	£14,730	1873.	£132,216
1873.	£11,119	1874.	£ 71,046
Increase	£3,611	Decrease	£61,170

Imports have slightly increased, but exports have fallen off very nearly half from what they were last year, which again was less than what they were the year before, which is not to be wondered at, the natives exporting largely in their own steamers direct, four and five of which visit this Port regularly once a month.

GENERAL REMARKS.

Colonization. This appears to be at a stand-still. The Colonists are leaving one by one, I am told. The stage-coach which ought to have run from Hakodate to Satsnporo, and the horses are sold, and the new road is going to wrack and ruin.

Telegraph.—The cable was successfully laid across the straits last autumn and they are now only waiting for the line to be completed from Yedo up to Awamori.

I.—RETURN OF THE IMPORT TRADE OF HAKODATE,

FOR THE YEAR ENDING 31ST DECEMBER, 1874.
TO ENGLAND AND OTHER COUNTRIES.

Raw Cotton, piculs	587	$7,200
Kerosine Oil, tins	2,084	3,259
Sugar, piculs	283	1,518
Miscellaneous	—	5,814
Total		$17,791

Equal at 4/6 to the $ to the £4,002 19s.

I.—RETURN OF THE IMPORT TRADE OF HAKODATE,

FOR THE YEAR ENDING 31ST DECEMBER, 1874.
FROM OTHER PORTS IN JAPAN.

Coal, tons	4,033	$22,831
Kerosine Oil, tins	500	1,040
Sugar, piculs	1,017	7,626
Miscellaneous	—	11,737
Total		$43,234

Equal at 4/6 to the $ to the £10,727 13s.

II.—RETURN OF THE EXPORT TRADE OF HAKODATE,

FOR THE YEAR ENDING 31ST DECEMBER, 1874.
ENGLAN AND OTHER COUNTRIES.

Awabi, piculs	1,010	$20,165
Codfish, piculs	502	4,241
Cuttlefish, piculs	1,153	9,950
Irico, piculs	1,554	66,513
Seaweed (long), piculs	98,197	152,704
„ (cut), piculs	4,034	10,759
Sulphur piculs	12,288	13,721
Miscellaneous, piculs		2,263
Total		$241,013

Equal at 4/6 to the $ to £63,227 11s.

II.—RETURN OF THE EXPORT TRADE OF HAKODATE,

FOR THE YEAR ENDING 31ST DECEMBER, 1874.
TO OTHER OPEN PORTS.

Miscellaneous	$34,752

Equal at 4/6 to the $ to the £ 7,812 4s.

III.—RETURN OF TREASURE IMPORTED AND EXPORTED,

DURING THE YEAR ENDING 31ST DECEMBER, 1874.
FROM OPEN PORTS.

Imports	$34,500

Equal at 4/6 to the $ to the £7,762 10s.

TO OPEN PORTS.

Exports	$2,000

Equal at 4/6 to the 7 to the £ 450 0s.

IV.—RETURN OF ALL FOREIGN SHIPPING ENTERED AND CLEARED AT THE PORT OF HAKODATE,

FOR THE YEAR, 1874.

Nationality.	Entered. No.	Entered. Tonge.	Cleared. No.	Cleared. Tonge.
British (General)	17	5,533	15	4,933
American General)	9	941	9	941
American Mail Steamers	11	20,749	11	20,749
German (General)	13	5,345	13	5,345
Danish (General)	6	1,510	5	1,485
Russian (General)	2	996	2	996
Total	58	35,074	55	34,449

V.—RETURN OF THE DUTIES COLLECTED ON IMPORTS AND EXPORTS AND SHIPPING DUES.

FOR THE YEAR ENDING 31ST DECEMBER, 1874.

Month.	Export Duty.	Import Duty.	Entrance Fee Clearance.
January	$1,479.70	$107.00	$ 88.00
February	462.18	—	22.00
March	1,260.03	54.94	111.00
April	—	45.97	22.00
May	1,379.51	4.47	73.00
June	1,595.91	—	81.00
July	1,357.06	21.89	66.00
August	206.45	—	44.00
September	3,595.65	154.33	251.00
October	1,083.42	126.70	111.00
November	2,175.20	—	66.00
December	1,847.74	30.79	133.00
Total	$151439.90	$626.11	$1063.00

RECAPITULATION.

Export Duties	$15,439.90
Import Duties	626.11
Shipping Duties	1,063.00
	$17,139.00

Equal 4/6 to the £3,856.00

I have the honour to be,
Sir,
Your most obedient servant,

R. EUSDEN,
H.B.M's. Consul

SIR HARRY S. PARKES, K.C.B.,
Her Majesty's Envoy Extraordinary.

DESOLATION.

Broken is the golden bowl, the spirit fled for ever.

E. A. Poe.

A green and leafy laneway, now choked with weeds and fallen into disrepair but once a trim and well-kept road in an outskirt of this ancient city, conducts the wayfarer to a ruined boundary-wall and antiquated gate. Although the wall is crumbling to decay, and, here and there, has gaps and holes which shew its thickness, the massive gateway as yet but little altered by the silent sap of time, despite hard knocks from wind and weather, still stands a monument of former greatness, as some great master's cypher in the corner of a painting is wont to give it character, and stamp it as once of value, though mouldered now and blurred and smoke-stained till its very outlines are scarce to be discerned. Within this portal an ancient *momban*, lean and tremulous from age, keeps watch and ward. A relic of the past is he and out of date. 'Tis time he made his bow and disappeared. The age which fitted him is buried, and that which occupies its place requires him not. He is mere lumber, like the bows and lances, the crested helmet and steel corslet, the noble bearing and the lofty courage which are now swept into dust-heaps, or thrust out of sight in holes and corners. Away with such old world properties! Is not money-changing more noble than the art of war, and the rattle of the *soroban* more glorious than the clash of steel? Well! Well! he won't be long in going. He's waiting for the summons to rejoin his chieftain. "I knew him, boy and man," he'll tell you, and, as he warms his withered fingers over the smouldering charcoal, he wrings his hands a little and sighs, and his gaze assumes a far-away expression as though he communed with bygone centuries and kept company with spirits. And as the shadows deepen in that gloomy cell, dark even at noonday, and the glow of the fire brings into bold relief the wrinkled visage and the bony hands of the old retainer, he looks like some weird necromancer performing incantations, his antiquity becomes oppressive, the room turns round, strange flickering shapes appear, strange—

"Merciful powers! what is that?"

"Only a screech owl in the pine tree opposite; is the gentleman unwell?"

* * * * * * * *

Beyond this gateway, so faithfully guarded, a waste expanse is visible, a desolate enclosure, instinct with life and sound and motion once, but now deserted. Of all the princely buildings erstwhile contained within this space not one remains. A square and sombre look-out tower alone is standing; whence, at the dead of night, a trusty sentinel was wont to watch for fires, and clash and clang the bell which hung beside him on occasion. Thrice happy they who slept below him in the knowledge that he who kept the lonely vigil far above them knew naught of slumber. What if a muttering dreamer now and then was startled into palpitating consciousness by the sharp clap of his *hiyoshigi*, he needed but to turn upon his other side and wrap his padded quilt around him to resume his slumber, and begin his dreams anew all the more securely for such evidence of wakefulness. But alas for all human calculations! In spite of man and bell and clapper, the lordly pile so carefully protected is now scattered over neighbouring fields and gardens as dust and ashes, whilst the guardian tower still stands, a wooden text to point a homily on uncertainties, if need be.

Ah me! what drowsy watchman, overcome by new year's cheer, and nodding at his post, and dreaming, it might be, of bright-eyed *geyshas* or graceful dancing-girls was e'er so rudely wakened? What means this lurid glare, this roar of flames, those clanging fire-bells, and those shrieks of frightened women? What feelings fill the guilty bosom of the faithless watchman as the sparks fly upwards to his lonely eerie? What shall he say? How face his lord? Well! Well! The sharp edge of a *wakizashi* cut the thread of his perplexities, poor fellow, and helped him to a hiding place. And so an ancient pile was burned down and its owner rendered houseless on a winter's night. "A bitter night," recounts the withered *momban*, "a bitter night with snow "upon the ground and in the air, when the north wind howled "and shrieked amongst the trees and dashed itself in piercing "gusts against the house and battled with the rain doors, till "the wonder was they stood against its fury; when the giant "*matsu* beside the gateway was bowed and broken as it strained "and struggled with the blast, and the snow-flakes from its "branches and from roofs and eaves were swirled about in "blinding showers. A rare night, I warrant you, for a "fire, when a spark would play a torch's part, and, spite of "ladder and hook and standard, prevail against a host of firemen."

Although the house has disappeared, foundations yet remain which serve to shew its size and shape. See: here, beyond this courtyard, stood the Entrance-Hall, or *genka*, where the visitor made inquiries of the kneeling servants, and, if admitted to an audience of my lord, deposited his wooden clogs and removed his head-dress. To the right were situated the women's quarters. Here the little ladies read and played the *samisen* or *koto*, quarrelled and made friends again, talked scandal doubtless or the latest fashion, smoked tiny pipes or passed their time in learning female accomplishments, such as arranging flowers in vases or brewing tea *secundum artem*. Behold my lady at her toilet, as she kneels before her polished metal mirror. The *kamigui* is busy with her hair, and all around are scattered toilet necessaries. What tying and combing out again, what gums and unguents are required before her locks are built up into the proper shape to suit her wayward fancy! Why should she shave her eyebrows, though, and her fair forehead and comely neck? It is the fashion, Madam, an' it please you, and so is it the fashion likewise to lay on white powder till my lady looks more like a doll of wood than a thing of flesh and blood. Hi! hand her ladyship that lacquered box; she would black her teeth. What! paint those pearls? Bedaub with chemicals those dazzling jewels? Aye, aye! 'tis so decreed and must be done. And now a little patch of red upon the nether lip, put on with delicatest fourth-finger, and my lady's toilet is finished and she's ready for her silks.

The men's apartments stood in the eastern wing. The rooms seemed larger and more numerous here than at the other side. This surely was his lordship's hall of state. There stood the alcove which contained his honor's swords and, mayhap, a painted scroll or porcelain master-piece or two. How large the stone supports are! Doubtless an upper chamber taxed their strength. From here the distant hills were visible, and the hoary-headed Fuji might be seen. There stood the kitchen, a lordly laboratory. A busy place when guests were in the house—where rotund cooks and rosy maids sung songs at work, or bandied jests and gibes amidst the steams of savoury dishes. Southward, where an unweeded garden still exists, were doubtless pleasant sitting-rooms; easy little nooks where his lordship took his ease, where swords were laid aside and friends and intimates, attired in easy garments, whiled away the summer evenings; whence the sound of *samisen* or *koto* were borne away into the moonlight to mingle with the *ogoi* or cuckoo's note. Upon the border of the lake may yet be seen a summer-house, from which the view ranged over mimic hills and valleys, and where the golden carp no doubt were seen disporting in the stream which flows beneath it. An oriel window

Original from UNIVERSITY OF CALIFORNIA

looks upon a *fuji* once trained across the water—beautiful in the olden times, but now, how changed! for the frame on which it rested has given way, and the prostrate creeper has fallen in the water, and, as the breezes play across the surface of the lake, its branches, black and rotted by the moisture, wave to and fro beneath the ripple like the tresses of a drowned woman. An air of poetry pervades the ruined summer-house. Upon its mouldered walls may still be seen scraps of ancient songs, love couplets, some in a woman's hand, and others the effusions doubtless of some lovesick youth, who sought the silent summer-house to nurse his malady. Here, too, an artist has been at work, a merry fellow with droll fancies. See! here's a frog in armour in deadly combat with a crane, and there a rat, with spectacles on nose, engaged in reading an advertisement of poison. These writings still remain, but the hands which plied the pencil, where are they? Gone! aye; things of the past, like the old *yashiki* with its feudal state, its family traditions, its friends and enemies, its courtesies and hospitalities. The world of to-day is work-a-day; romance and ornament are out of place. Take off your cloth of gold, good friends, and don the workman's apron. Forget your old traditions. Tear down your landmarks, and—God save the mark!—get civilized.

THE SPRING MEETING.

The following entries are published:—

FIRST DAY.

1.—THE TRIAL PLATE: Monymusk (late Ravensdale), Saxon, Cyclone, Grasshopper, Oeillet, Pice, Northern Light, Gonderic, Ivanhoe, Summer, Petitpas.

2.—THE GRIFFINS' PLATE: Drizzle, The Swell, The Snob, The Duke, Chevy Chase, Cyclone.

3.—THE CELESTIAL CUP: Monymusk, Braemar, Heather-Bell, Saxon, Gambler, Dibs, Crusader, Pice, Northern Light, Gonderic, Picayune.

4.—THE NIPPON CHAMPION PLATE: Kangaroo, Tim Whiffler, Moscou, Typhoon.

5.—THE CHALLENGE CUP: Monymusk, Braemar, Dixie, Dibs, Heather Bell, Ivanhoe.

6.—THE MAIDEN STAKES: Drift, Drizzle, The Swell, The Snob, The Duke, Sirius, Eclipse, Sirocco.

7.—THE CRITERION STAKES: Monymusk, Braemar Dibs, Gambler, Saxon, Crusader, Oeillet, Pice, Glencoe Picayune, Ivanhoe, Summer.

8.—THE COFFEE CUP: The Swell, The Snob, Despair, Mah-Stotz.

9.—THE CHINA GRIFFINS' PLATE: Cyclone, Grasshopper, Gaikwar, Northern Light, Gonderic.

SECOND DAY.

1.—THE DIPLOMATIC CUP: Monymusk, Braemar, Saxon, Dibs, Gambler, Dixie, Cyclone, Oeillet, Pice, Gaikwar, Northern Light, Gonderic, Picayune.

2.— : Drizzle, Dilemma, The Swell, The Snob, Kangaroo, Eclipse.

3.—THE VISITORS' CUP: Monymusk, Braemar, Dibs, Dixie, Oeillet, Ivanhoe, Summer.

4.—THE LADIES' PURSE: Drift, The Swell, The Snob, Moscou, Lodi, Mah-Stotz, Chevy Chase, Typhoon.

5.— : Monymusk, Braemar, Benachie, Saxon, Heather-Bell, Cyclone, Grasshopper, Oeillet, Tourterelle, Pice, Gaikwar, Northern Light, Gonderic, Picayune, Summer.

6.—THE YOKOHAMA PLATE: The Snob, Kangaroo, Tim Whiffler, Moscow, Lodi, Mah-Stotz, Typhoon.

7.— : Monymusk, Braemar, Saxon, Dixie, Gambler, Dibs, Heather Bell, Crusader, Cyclone, Oeillet, Pice, Glencoe, Northern Light, Gonderic, Thistle, Picayune, Ivanhoe, Summer.

8.— : Drift, Drizzle, Dilemma, The Swell, The Snob, Kangaroo, Sirius, Chevy Chase.

9.—THE SELLING STAKES: Benachie, Heather Bell, Gambler, Crusader, Grasshopper, Tourterelle, Pice, Lingerer, Thistle, Lord Harry, Petitdas.

THIRD DAY.

1.—THE HURDLE RACE: Saxon, Dibs, Gambler, Tourterelle, Thistle, Ivanhoe, Summer.

2.—

3.—THE SCURRY STAKES: Monymusk, Braemar, Benachie, Heather Bell, Saxon, The Swell, Oeillet, Moscou, Lodi, Mah-Stotz, Pice, Gaikwar, Lingerer, Northern Light, Gonderic, Picayune, Typhoon.

4.—THE SOLACE CUP: Tim Whiffler, Kangaroo, The Swell, The Snob, Despair, The Duke, Lodi, Moscou, Sirius, Cyclone, Sirocco.

5.—THE CHINA CONSOLATION PLATE: Monymusk, Braemar, Dibs, Saxon, Heather Bell, Dixie, Gambler, Crusader, Cyclone, Grasshopper, Oeillet, Pice, Glencoe, Gaikwar, Lingerer, Northern Light, Gonderic, Picayune, Lord Harry, Ivanhoe, Summer.

Law & Police.

H. B. M.'S CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

April 28, 1875.

THE BANK EMBEZZLEMENT CASE.

R. *vs.* CHARLES ADDS AND GEORGE WITHERS.

Charles Adds was charged by Mr. Marks, on behalf of the Comptoir d'Escompte, with being accessory to embezzlement and theft before the act, and for receiving property embezzled and stolen.

George Withers was also charged by Mr. Marks with being accessory to the same crime after the act.

Both prisoners pleaded not guilty. Neither was defended by counsel.

Mr. Marks, then briefly stated the crimes with which the prisoners were charged, and on which he asserted that he thought would be able to produce sufficient evidence to justify the committal of the prisoners for trial. At his suggestion, the Court decided to hear the evidence in both cases simultaneously, but to decide separately.

E. G. Vouilemont, sworn, stated: I am manager of the Branch Agency here of the Comptoir d'Escompte. Messrs. Cantelli and Swaby robbed the bank. I could not say whether their frauds extended over a long period of time, but I believe that they commenced in July, 1873, and extended till the time the culprits went away. The total amount of the embezzlement is $67,775. On the 29th, when I heard that the men had absconded, I opened the treasury, and found that $37,000 in bank notes, which had been placed there on Saturday previous, had been abstracted. On Monday evening I began to check the books, and found that $67,775 were in default. The culprits must first have falsified the cash book and vouchers; at least Cantelli must have done so, I could not swear to Swaby. They put paying slips into the cash vouchers when no money had been paid. They sometimes, when a small sum was paid in, made it appear a larger one. For example, if $100 was paid in, they would enter it in the cash book as $1,100. This was done in the case of the account of Charles Adds. I never saw the first prisoner (Adds) before this day. When I first saw his name in the bank's books (on the 29th March last) I asked Cantelli who he was. The reply was that he was a ship-broker. I never had any communication, oral or written, with Adds.

Mr. Marks here produced a pass book found by the constable among Adds' papers.

Witness: I recognize the pass-book. The items to the credit side are, first, $5,984.92, marked March 3rd, and should be April 3rd. With reference to this item, on Monday, 29th March, Cantelli came to my office and asked the rate for a draft on London at 30 days' sight. He told me it would be for the equivalent of £6,000. I asked him the buyer. He answered, "A ship-broker." Did he know him?" "Yes." I issued the draft. The bill was made out and returned to the cashier. The bill produced (marked B) is the one. On the 3rd April Cantelli came to me and said that the man who had bought this draft on London wanted it cancelled, because he did not want to remit it. I told him at first that I would not cancel it,—that he might negotiate it elsewhere. Then he said that he knew Adds, who, if the draft were cancelled, would leave the money to open an account in the bank. Under these conditions I cancelled the draft, allowing the amount to stand to the credit of Adds. As a matter of fact the cash was *never* paid into the bank. The rate of discount at the time the draft was granted was 4/1⅞. The draft was granted at 4/1⅜. The paper next produced (marked C) is a credit slip which I found in Cantelli's waste-paper basket, and is dated 25th March, the day previous to that of the date of the draft. The object of the slip was to credit Adds' account with $6,000, as if the money had been paid. It appears that Cantelli feared detection if he used the slip for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that purpose, so threw away the slip and procured the draft instead. The next item in the pass-book is an entry of $1.200, on the 5th April, but Cantelli only paid $200 to the compradore, falsifying the entry by placing a "1" before the $200. I do not know whether the money was Adds'; for aught I know it may have been paid in by Cantelli him self out of his own money. There was no slip signed by Adds. It is customary, when money is paid in, for the payer to write it on a slip. The next item is $3,050, on the 8th April. On that date Cantelli sent into the compradore a cash voucher for $50. In the evening he altered it to $3,050. Thus there appears $4,000, made up of $3.000 and $1,000, to Adds' credit which were never paid into the bank hitherto. On the 9th of April, again, Cantelli paid the compradore $50, and made it appear to Adds' credit $2,050 in the books of the bank. This amount is in Cantelli's handwriting. Thus the sum of $6,000, besides the draft, appears to Adds' credit, and has never been paid. Adds drew cheques upon the bank, first on the 3rd April for $400; next on the 9th for $5,900; next on the 10th for $6,200; next on the 13th for $200; and last on the 15th for $484.92. This last item exactly balanced the account in the books of the bank to a cent. The cheques are all in the possession of the bank, and bear the signature of Adds. The signature on the bill produced is in the same style of writing. I have seen, in the hands of the Italian Consul, a cheque signed by Adds, in the same writing, for $2,000, which was found on Cantelli's corpse but appears never to have been presented at the bank. The document now produced is a copy of Adds' account in the bank books.

By the prisoner Adds: I confirm my statement as to the period over which the robbery extended. I can tell what sum was missing from the bank. Up to about two months ago the sum of $1,000 only could have been missing from the bank. Every evening I have the cash book and vouchers brought to my room to compare them but I am not in the habit of counting the cash.

John Wynn: I am a master mariner. I know the prisoner the prisoner Adds. The prisoner is the reputed owner of the *Iris* I have had business with him in connection with that vessel. As nearly as I can remember, I first saw the prisoner in connection with this matter one Sunday early in March, at my house in Yedo. I had known him for some years previously. He told me that he wanted to buy a small vessel. I replied that I had an interest in one, the brig *Sarah*, which I took him to Shinagawa to see. He said he thought it was intended for a private expedition, the object of which was not to be known. He asked, supposing he bought the vessel, would I go in her as master. I expressed my willingness, provided the business was legitimate. He told me it was 'perfectly legitimate." I do not know whether it was at that time, but he told me once that the expedition was something like those in the early days of Japan, for the purpose of buying up kobangs. I think I saw him again next day. The sale fell through. I mentioned then another vessel, at that time in Shanghai. He asked me to telegraph to Shanghai. Several telegrams passed on the subject between this place and Shanghai, I sending them and Adds paying for them. That negotiation also fell through. Some time after I received in Yedo a telegram from Adds, "Come down immediately; very important. Adds to Wynn." (telegram produced and recognised.) I came down and saw Adds, who asked me to go with him on board the three-masted schooner *Iris*. I went. He said he was in communication with the agents. Previous to this he had told me that the business was perfectly secret, as if it got wind some other vessel might start, and the speculation he was concerned in would be "no-where." I have known Mr. Adds ever since I leased No. 10, Yokohama, from him. I never knew that he had any business. I never saw him engaged in any. I knew that he had a store before I went into business. I remember him in the billiard room at the Grand Hotel, but do not know whether he was engaged there. He said he was not so engaged. I should say he knew nothing about ships, and was the last man to buy one. I had no suspicions at first of Mr. Adds. I had frequently seen him at the hotel where he was living in the same manner as any other guest. I am not aware that he was in any ostensible employment. When I went with him on board the *Iris*, I examined her, and found her a good, substantial vessel: but not a good cargo carrier. This I mentioned. He said "that did not matter, as they did not want any cargo" He said $11,000 was asked for her, which sum I told him was too much. He said that that sum would be reduced by $900 for breaking the charter. I said that the amount was still too much, and that $9,000 was enough for any one who wanted a ship. He replied that they must have a ship; they had waited too long, and the speculators had received a telegram, telling them that if they did not come at once, their speculation would fall through. He seemed indifferent to money, as they could make plenty by the venture if they could only arrive in time. I returned to Yedo after seeing the vessel, and the next day received a telegram (produced). "Adds to Wynn: All arranged; came down by first train." I went down by the half-past 9 o'clock train. I saw Adds, who said he had arranged to take the ship, and asked me to go with him to Mr. Knobloch's office. I went. There was some delay in getting out the vessel's cargo, owing to the bad weather. At the office, either on the occasion of this or the next visit, Adds paid a deposit of $200 in my presence. Mr. Knobloch asked to whom he should make out the receipt. Adds said, "Make it out in my name." On the following Saturday I went again with Adds to the office. He asked Mr. Knobloch whether he could not have her registered under the German flag. That gentleman replied that he would see. Adds then asked me if I could get her registered under any other flag than the English, saying that he did not like that flag on account of the difficulty in clearing at the British Consulate. I went to the Hawaiian Consulate, Mr. Adds and Mr. Knobloch went to the German Consulate. The Hawaiian representative told me it was impossible to register the vessel under his flag unless the owner were a subject of Hawaii. I told Mr. Adds, who requested me to go to some other Consulate. I went to the American, and asked, Supposing a vessel were registered under the United States flag, could an English captain take charge of it?' I was told "No." It would be easy to change the ownership by effecting a mortgage. When Adds found that he could not register under any other flag, he was content to take the protection of the British flag. All this set me musing; and I came to the conclusion that there must be something wrong. I knew nothing. On one occasion I had asked Mr. Adds where the ship was going, as I wanted to see about getting charts. He told me we should want them "for all over the world." I remarked that that would form a large and expensive collection, and asked him to specify some quarter. He promised to do so that night. He inquired of me about Honolulu, what sort of place it was and told me to be sure and have charts for Manila and the islands about there. I pressed him to give me some idea of what quarter of the globe we were going to. He said he could not. I asked him if he were going to Corea, thinking he might be going on an expedition to sell arms. He did not repudiate the idea of going to Corea, and told me to get charts of that Coast. The next day when I met him he had not made up his mind as to which quarter of the globe he was going to. There was a very good and numerous collection of charts on board, which at my suggestion Adds bought. I told Adds that I must have a letter from him to the Agent introducing me as Captain of the vessel. The following day he showed me one on board the ship, saying that that was the one I should have to sign. (A letter was here produced from the witness to Charles Addis Esq. and owners of the *Iris* agreeing to take charge of the *Iris* for $200, to leave her at any port except Yokohama without notice, on the receipt of one months' salary and a first class passage back to Yokohama. The agreement was to be for four months) This is not the letter, but with the exception of the pay and the term, which should be three months, it is in substance the same. When I saw the terms I would not agree to them, stating that I had business here that I could not leave. I did not state any other reason. I thought, however, that things were going on queerly and that this was a good opportunity of getting clear of the business. I took the stores on board, by Adds' direction, for a six months' voyage. I recommended Captain Withers to Adds. My suspicions were not sufficiently explicit for me to care to communicate them to Captain Withers. Had I been in the place of the latter I should have taken the command. Withers had only two days' notice to take charge and could not be expected to know the owner's business. During the time I was ordering the stores I saw a Japanese female servant of Cantelli's who had been in Adds' service previously, who told me that Adds was in Cantelli's house every night with Cantelli and Swaby, this was the first I had heard of their being together. The conversation took that turn through my recognising her as having been a servant of Adds. After this I met Adds in Batavus' store No. 31. I called him on one side, and feeling interested, having been so long connected with the ship, and wanting to find out who was going, I asked him whether "an Italian and an Englishman were not going." I had previously asked the question in a variety of ways, on several occasions. On this occasion and prior to the question above noted, I asked him "Who were going." He would not tell me and when I put the other question he replied, "No, but, but, whatever put that into your head? neither an Italian nor an Englishman." After this I watched Adds, being determined if there was any thing wrong

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I would find it out. When the ships' stores were at the Compradores, Domoney's, I slept there the Saturday night before the vessel went till one o'clock so that they could not be put on board without my knowledge. The stores ultimately went off on Sunday afternoon, when Mr. Adds told me that the vessel was not going till Tuesday or perhaps Saturday. I waited about the Bund all day up to nine or ten o'clock at night to watch if any one went off. Seeing that the wind was foul, and combining that with Adds' statement I thought she could not go. On Monday morning, however, at seven o'clock when I came down to the Bund, I found that she had gone. I had suspicions, and tried to find out what was wrong. My enquiries resulted in my finding out that the bank had been robbed, and that Cantelli and Swaby had gone. I took certain means to let Mr. Vouillemont know.

By the prisoner Adds:—I engaged the crew. I had an idea that I was going. I did not go, because the agreement you offered me was not satisfactory, and because I had certain suspicions. I may have made the excuse that I wanted the agreement to be for six months, and not for three. I have received no commission on stores I bought for you. It was not my proposition to you to sail under German colors. I did not say that I preferred to sail under any flag before the British. I did not tell you that there would be great difficulty in transferring the vessel from the German to the British flag. When you found that you could not register under any other colors you said that you would sail under the British.

By the prisoner Capt. Withers:—Under ordinary circumstances, a ship master would endeavour to leave Yokohama harbour at 2 or 3 a.m. or at an early hour in the morning. I hear that you left about 5 o'clock. It would take a long time for a vessel to get clear of the bay with baffling winds. You have commanded several ships to my knowledge; here you superseded me on Friday afternoon the 16th, the crew was engaged; the water on board, and the stores ready. When I left the ship there were two carronades on deck, two below, some old muskets, and old cutlasses in a rack, these were on board when the ship was bought. I neither intimated to you nor caused you to be told that I thought the vessel was on an illegitimate business. I do not believe that you knew anything of the purpose of the expedition.

To the Court:—My suspicions were not sufficiently definite to justify my taking any action. I had suspicions, through knowing that Mr. Adds and Mr. Canteli had been on bad terms, and was surprised to hear that they were so much together. I asked Adds whether an "Italian and Englishman" were going because the servant girl had told me that Adds was much with Cantelli and Swaby. When I asked him the question and he did not change countenance I thought I was on a wrong scent.

At half past 12 the Court adjourned till 2 p.m.

On the opening of the Court at 2 p.m. Mr E B. McMahon was called, and having been sworn deposed as follows:—I am a Commission Agent, and reside at 139, 141 Bluff. On this joint property there are three houses. One house is on the top, another in the middle lower down, and one at the bottom. Up to within the last fortnight, the lowest one was occupied by Mr. Thorpe, the middle one by the late Mr Swaby and myself and the top one by Mr Adds. This latter rented his house for one year, from I believe, the 1st November, of last year. I am aware from common report that he went away with the late Messrs. Swaby and Cantelli in the schooner *Iris*. Previously to his going away he had not given me any intimation whatever of his intention to quit his house and I had no idea that he had such intention. He owed rent for the months of February and March when he went away. He left his furniture behind him. He might possibly have removed the furniture without my knowledge; but, however, he left it. I did not think of watching the premises; there was a considerable portion of the lease or agreement, contracted verbally, unexpired. He had never asked me to let him off the unexpired portion of his lease. I have seen Mr Adds, twice I believe only, with Swaby, on my premises. On each occasion it was when I went partially dressed at an early hour in the morning into the sitting room before going to wash. I cannot state any exact date for either of these occasions, I think they were on the 15th and 17th. I am certain it was between the 12th and 20th. I never saw the late Mr Swaby going to Mr Adds' house, nor knew of his going there. I speak to the best of my knowledge.

Mataichi, Japanese domestic servant, affirmed, that he is now in the employ of Mr. McMahon, (was formerly in the employ of that gentleman and of the late Mr. Swaby.) He had been in the same employ for about four years. Since the return of Mr. McMahon from England in February those gentlemen had been living together at 141 late 139 on the Bluff. Witness knows the prisoner Adds. He has been told that Swaby is dead but does not know of his own knowledge. He does not remember exactly when Swaby went away from the house. It was the day following Sunday. He knows that Adds came to Swaby's house after. He would come frequently, perhaps one day, morning and evening and then for two or three days in succession, and then again after two or three days Counting the times of his visits morning and evening, they amounted in all to about ten days. When he came in the morning it was about half-past seven o'clock, at a time when McMahon was generally in bed. He came in his ordinary clothes and not stealthily. He entered without making a noise, "as if to avoid disturbance." The prisoner, whenever he came, and Swaby conversed together. Adds' house was immediately above Swaby's. The witness has been to Adds' house. When Swaby went up there he sometimes ordered witness to take liquor up. This did not happen frequently; perhaps two or three times. On one of these occasions he saw Cantelli there. There was no one else there except Swaby, Cantelli and Adds. They were talking together. The time was from five to half-past in the evening. Witness does not know how long they stopped; he only took up some liquor to the house and returned to his work. He has not seen them together since that occasion He did not remember seeing them on any occasion after midnight. He does not remember having seen any fire-arms at Adds' house. Witness denies having told Mr. Marks that he had seen weapons there. What he did say was that Adds' servant had told him that he had seen his master go out sometimes with guns. He saw Adds last about ten days before he left his house. (On this point Mr. Marks in vain tried to shake the witness' testimony.)

Kiku, a young Japanese female, affirmed, that up to the 17th instant, she was in the service of deceased Cantelli. She knows Mr. Adds. The prisoner in the box is he. She knew Cantelli since July last. She knew Mr. Swaby also at No. 53. She has seen Mr. Adds several times at Cantelli's house, No. 93, and occasionally those two and Swaby at the same place. Some years ago she was Adds' servant. After she left the service of the latter to enter that of Cantelli, Adds did not come near the place until about the end of last month. After that whenever he did come she was ordered by Cantelli to go away. Adds was at the house on the 15th or 16th instant. She never saw any Japanese or Chinese come to No. 93, for the purpose of giving gold *yen* for notes, nor did she either see or know of any great sums of money being in the house. She does not know when Cantelli went away for the last time. Acting on his instructions she had gone to Enoshima at about ten o'clock on Saturday. He told her to wait there for him and he would come on the same day. She waited till 4 o'clock on Sunday afternoon, and then started to return to Yokohama. When she arrived at Totska it was dark, so she remained at that place for the night, returning to Yokohama on the following morning. On her arrival there she went to No. 93, and was informed by the Momban that the master was not yet up. She went to the bedroom, and found that the bed had not been slept in.

At this stage of the proceedings Mr Marks submitted that sufficient evidence had already been adduced to justify the committal of the prisoner Adds. He had evidence to bring forward if the court deemed that already before it insufficient, but the learned gentleman thought that it was quite enough. He would, if the court thought it necessary, go into the case of Withers when that of Adds was disposed of.

His Honour remarked that as far as Withers was concerned there was not the slightest evidence to justify his committal. He was glad to see that in these trying circumstances the accused had found friends to stand by him. His Honour hoped that the scenes Captain Withers had been through might prove a salutary lesson to him. Nothing remained for him to say, so far as this accused was concerned, but to direct his discharge from custody. He left the Court without any stain upon his character.

(The acquittal of Captain Withers was received with open applause, which little attempt was made to check, and he left the Court escorted by numerous friends)

His Honour then proceeded to read the evidence. Having concluded, he asked the prisoner Adds, whether he had anything to say why he should not be committed for trial, cautioning him, at the same time, in the usual form.

Charles Adds.—I never had any dealings with any of the money, except what Mr. Cantelli gave me in his own house, and which he said he would place to my credit, in which Bank I preferred. I told him he might as well place it in his own Bank. From that I used to draw whatever I wanted. Had I known there had been

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

anything wrong at the Bank, decidedly I should not have thought of going there. I knew nothing of what was going on. I never saw any money, never changed any, neither did I know in what shape or form it was when brought on board the ship.

The prisoner was committed for trial.

DAVISON *vs.* BEATO.—O APPEAL.

Mr. Marks, on behalf of respondent, said that this was a motion in a cause appealed from, *re* Davison *v.* Beato. The appeal was filed on the 17th, and he only received it on the 27th, for reasons known to the Registrar. Mr. Dickins filed it. There was some difficulty in dealing with the motion, and the form of law involved as to the power of Court below to amend petition of appeal was a delicate one. The motion now before the Court was not against the appeal; it was only against the form in which the appeal was taken. He knew that if he had moved to dismiss the appeal itself, he would have no *locus standi* But he contended that he had a right to move that the petition be made in proper form, and not otherwise. [Reference to Rules of Court No. 163 which states that the petitioner should file his petition in the Court below.] This petition not being within the rules, and the argument and petition being consolidated, he asked his Honour to grant a rule *nisi*, to enable the cause to be argued, as it involved a very nice point of law. He asked for an eight-day rule, as he heard that his Lordship, who was then absent, would return in a few days. [Here Mr. Marks referred his Honor to Rule No. 164, and continued.] Here was the petition, which occupied two folios; here was the argument, which occupied two hundred, and contained at the end the prayer of the petition; and at the end of the entire document were two affidavits—one by Mr. Dickins, and one by Mr. Gibson. The rules of procedure had not been complied with. Would his Honor look at the argument on the petition? It was a conglomeration of words, which he (Mr Marks) might or might not have the time to wade through, and which, certainly, he had no intention to answer, if answering could be avoided. The learned counsel only asked to have the petition of appeal amended, and the appeal dismissed. In the next place the rules say that the petition should set forth the reason of appeal. Here there were no reasons set forth, only a general allegation that everything done at the late trial was wrong and improper. The petition of appeal also appealed from a decision rendered on an *ex parte* motion of appellant a month after judgment. This alone was sufficient to vitiate the petition. In fact, as the question stood, it should never have been received by the Court.

After some further discussion between counsel and the Bench.

His Honor said there was more in the motion than at first he had thought. It certainly appeared to him that by first writing out a short petition, and adding thereto a voluminous argument, to which again was appended the prayer for relief, which ought to have been at the end of the petition itself, much labour, which might or might not be unnecessary, was cast on the respondents, by seeking to compel an answer to the whole document. He thought, altogether, the case demanded argument, and would let Mr. Marks take the rule he asked—returnable in eight days.

U. S. CONSULAR COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

Tuesday, 27th April, 1875.

John McLean was charged with being drunk.

His Honour discharged him with a caution, as he had given but little trouble, and Police Constable Rozet did not wish to press the charge.

SHIHOSHO SAIBANSHO, YEDO.

24th April, 1875.

J. T. HARDY *vs.* THE SURVEY DEPARTMENT OF THE JAPANESE GOVERNMENT.

Mr. Montague Kirkwood appeared for the plaintiff. The Government was represented by Mr. G. P. Ness.

The claim in first instance was for $3,202, to which a further claim of $8,000 for damages was added, making altogether $11,202.

The following judgment was delivered:—

1st. The proofs brought forward by both parties have been carefully weighed, and must be summed up as follows:—The plaintiff's own statement and the diary of the Survey Department show that from the time of his engagement up to the time of his dismissal plaintiff has very frequently absented himself, neither producing medical certificates nor getting the [illegible] permission from his chief; also that he went to Yok[illegible]lly neglecting his work; that he made several improper entries about the latrines in the official diary; that on the 13th June, 1874, McVean complained of plaintiff's insufficiency of work, as well as of the tone of his correspondence;—besides many other statements have been made by both parties, but as they were not supported by any proofs, they have not been taken into consideration.

2nd. It has been alleged by plaintiff that the defendant has not dismissed him in accordance with a certain clause of the contract. Art XV. of the contract does stipulate that three months' notice is to be given; but this clause does not hold good when the employé breaks his contract, and entirely depends on the employer's convenience; and the article in question clearly says that the employer is not bound in such a case to give his motives. The above allegation cannot, therefore, be admitted.

3rd. A careful perusal of all the clauses of the contract shows that Art. V asks for medical certificates in case of sickness; that Art. VIII. entitles the employer to dismiss the employé, and cancel the contract in case of misconduct, drunkenness, or breach of any of the clauses of the contract. Further, it is said in Art. XIII. that in case of insubordination, drunkenness, misconduct, or breach of any of the clauses of the contract, the employé is liable to pay also a certain amount of damages. Moreover, Art. XIV. stipulates that in case of absence without leave or medical certificate, a fine of $10 per day shall be paid. Now, an infraction of any of the above-mentioned four articles is to be considered as a breach of contract; and whereas it appears from No 2 (of the judgment) that plaintiff has been guilty of some infractions, the defendant had a right, in virtue of Arts V, VIII, XIII and XIV, not only to dismiss him, but also to hold him liable for damages.

4th. On the above grounds it is decided that plaintiff is not entitled to receive any salary since his dismissal, or any damages from defendant.

SHIHOSHO SAIBANSHO.

24th April, 1875.

THE FORMOSA DIFFICULTY.

The official correspondence respecting the settlement of the difficulty between China and Japan in regard to the Island of Formosa has been issued by the Foreign-office, and we subjoin the full text of the principal documents:—

The Earl of DERBY to Mr. WADE.

Foreign-office, Nov. 19, 1874.

SIR,—I learnt with much satisfaction from your telegrams of the 30th ultimo and 1st instant that you had succeeded in inducing the Chinese Government and the Japanese Government at Peking to agree to an arrangement, by which China will pay to Japan 500,000 taels, and the Japanese troops will be withdrawn from Formosa, and I have great pleasure in expressing to you the high sense entertained by Her Majesty's Government of the service which you have rendered in thus bringing about a peaceful settlement of a dispute which might otherwise have produced results disastrous to the two countries immediately concerned and injurious to the interests of Great Britain and the other Treaty Powers. A telegram has been received from Sir H. Parkes stating that the agreement is entirely approved by the Japanese Government, and that they are much pleased with your action in the matter.—I am, &c, DERBY.

The Earl of DERBY to Sir H. PARKES.

Foreign-office, Jan. 14, 1875.

SIR,—The Japanese Minister, Woyeno Kagénori, called upon me for the first time to-day, and took the opportunity to express to me officially the thanks of his Government for the part which Mr Wade had taken in preventing a rupture between China and Japan. He could assure me, he said, that the service thus rendered would be gratefully remembered by his countrymen. I made a suitable reply, saying that it was the wish, as it was the interest, of England to preserve peace and prevent unnecessary quarrels wherever English influence extended; and that it would have been a subject of deep regret to the people of this country if war had broken out between two States with both of which our political relations were thoroughly friendly, and our commercial relations, as we hoped, were destined to increase from year to year. His Excellency's visit being of a complimentary character, no other business was touched upon.—I am, &c, DERBY.

Mr. WADE to the Earl of DERBY.

Peking, Nov. 16, 1874.

MY LORD,—Upon the 6th instant the Prince of Kung addressed a Circular despatch to the Legations inclosing copy of the agreement

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and guarantee signed on the 31st of October, by the Grand Secretary Wênsiang and his colleagues, on behalf of China, and by the High Commissioner Okubo, and the Minister Yanagiwara, on the part of Japan. I inclose translation, which I have authorised Mr. Medhurst to publish at Shanghai. I saw the Prince at the Yamên on the 4th instant. His Highness was very full of acknowledgments.—I have, &c, THOMAS FRANCIS WADE.

The next paper of importance is the following letter from Mr. Wade to the Earl of Derby, dated Peking, Nov. 16. Mr. Wade writes :—

I propose briefly to review the course of the discussion closed by the Agreement, since the month of May last. My report of the proceedings up to that time has already been approved by your Lordship. I had been careful to communicate to the Tsung-li Yamên whatever well-authenticated intelligence I received regarding either the Japanese expedition to Formosa or the attitude of the Japanese Government; but it was not until the end July, on my announcing my intention to leave Peking on a visit to the ports, that certain Ministers of the Tsung-li Yamên came to speak to me spontaneously of the Formosan affair. Their object, apparently was to sound me touching the views of foreign nations, and the possibilty of their supplying themselves abroad with ships and munitions of war. I understood them to express a desire to submit the issue between them and Japan to arbitration; but in this, as the sequel showed, I was mistaken. I was obliged to repeat that, whatever the merits of the case, the sympathies of foreigners could not be strongly with China until the Treaties were better observed, and that the progressist tendency manifest in Japan, again by its contrast with the reactionary spirit of the Chinese, assuredly put the latter at a disadvantage in foreign opinion. On the whole, I cannot doubt that my language was discouraging to the idea that the cause of China would be supported abroad, and the Conference bore no immediate fruit. Somewhat later, however, I had occasion to draw the attention of the Ministers to the unguarded language of certain official documents relating to the Japanese question. As the Chinese certainly did not desire war with Japan, nothing could be less wise, of course, than to speak and write in a fashion that was not unlikely to produce irritation. This brought us nearer together again, and after a long conversation, in which, as I understood them, the Chinese ministers again expressed a desire to invite foreign representatives to unite in arbitration on the 12th of August, I laid before them a Memorandum on that subject.

The news from Japan had become much more warlike. There had been reported a collision in Formosa. The Japanese General and the Chinese Commissioner had been discussing an indemnity, as far as I could learn, to no purpose. The Minister Yanagiwara had left Shanghai for Peking, as the Chinese affirmed, in the middle of a correspondence with the Chinese Commissioner. Great preparations for war were known to be making in Japan. The Chinese were, on their side, arming for resistance. I became convinced that war was imminent, and believing that if such a blow as I apprehended were struck, the consequence would be most serious to all foreign interests, merchant or missionary, I suggested to the Yamên that foreign Powers should be at once appealed to to neutralise for a given time the coasts and rivers of China. This, however, I observed would involve an understanding to act together on the part of the Powers addressed; the action they were asked to take would commit them to no small trouble or expense; it might be certain, therefore, that they would accept no engagement of the kind without a *quid pro quo* were secured them. The interests of England, as the Ministers were aware, were exclusively commercial. After some further discussions, I wrote, on the 28th September, a note to the Prince of Kung, in which, after accounting for my advice, past and present, I put five questions, designed to ascertain, first—Whether the Chinese really desired arbitration at all? If so, what point would be submitted to the arbitraters? Whether there was ground for believing that the Japanese would agree to arbitration? Whether the Chinese Government would make any overtures, and, if so, what to the Japanese? What course, if a rupture ensued, the Chinese Government would follow? In a short but courteous reply the Prince informed me that the Minister would call at the Legation for explanations. This they did, but my questions remained, in effect, without answer. M. de Geofroy had now returned. He had declared his perfect readiness to co-operate in bringing about an arbitration. He, too, had believed that the Chinese desired arbitration. For a time I had reason to think it possible, moreover, that, through M. de Geofroy, overtures might be made from the Japanese side. The High Commissioner Okubo was accompanied by a French "légiste" named Boissonade. I never met this gentleman, but all I heard of him was to his advantage, and I believe that whatever influence he may have possessed was exerted on the side of peace. We came no nearer, however, to any definite solution of the question, and I had all but ceased to hope that either M. de Geofroy or myself whether separately or with the assistance of our other colleagues, would able to effect anything towards the pacific determination of the dispute, when I learned that, on the 10th October, the High Commissioner Okubo had written to the Yamên to say that, unless it were closed in five days, he should leave Peking. The Prince of Kung being absent he subsequently extended this term.

Looking to the necessity that would arise from the protection of our part communities, should war come upon us, I had, on every possible occasion, pressed both the Representatives of Japan for information, but I had never drawn from either what might fairly be termed a statement of the Japanese case. Both seemed equally averse to consider arbitration possible. It was not until the 16th October that the High Commissioner, when calling on me, entered, for the first time, into a detailed exposition of the claims of Japan. The "délai fatal" was to expire some three days later, and the Commissioner's discussions with the Yamên still continued, but they were now narrowed, as I understood his Excellency, to a demand on his part, for an answer to two propositions. He had put two questions which, as I have before stated, were in effect, as follows:—Why has China not done her part in the education of her subjects? Why, when, for want of education, they have committed crime, has China not punished her subjects. If China, argued the Commissioner, claims these savages as her subjects, she accepts the obligation of affording Japan the satisfaction which Japan has sent an expedition to expedition to exact of these people. I inferred from this conversation that the High Commissioner was not inexorably set upon war. There was the less reason that he should be, as one of the declared objects of the expedition had been accomplished by the infliction of a severe chastisement upon the peccant tribes. A money payment had, in fact, been for some time matter of negotiation, but indirectly, and I had no official knowledge of it. Briefly, the Chinese having shown some disposition to pay money (not as war expenses but as compensation to the families of the persons murdered by the Formosan savages), still, according to the Commissionor, declined to specify the amount. He asked for some $3,000,000, and this being refused, and a guarantee for any payment being pronounced impossible, he prepared to leave Peking. The Minister Yanagiwara, on the ground that the postponement of his reception by the Emperor of China was proof of unfriendly feeling towards Japan, was to accompany his colleague.

The Commissioner himself called to take leave of me on the 24th of October, but a few hours after the departure of M. de Geofroy. Like me, M de Geofroy had come to despair of arbitration or mediation. He was, in any case, to have returned to Europe before the end of the year, and the state of his health was now driving him southward earlier than he had contemplated. I was myself waiting from day to day to know whether it might not be also my duty to proceed to Shanghai, where I had written to tell Sir Charles Shadwell I should meet him, should a rupture between China and Japan become inevitable. Having heard the Commissioner's statement, I went immediately to the house of the Grand Secretary Pao, and urged him to move the Prince of Kung to say at once what money China would pay (he Commissioner, be it observed, did not insist upon describing the payment as for war expenses); also, in what way the payment should be guaranteed. Failing any other means, if the High Commissioner would consent, I would myself guarantee the payment promised. On the following day, I was authorised to offer the Commissioner Tls. 500,000, a fifth as a compensation to the families of the murdered Loochooans; the remainder, not as indemnity, but to meet the miscellaneous minor expenses (eventually specified) which the expedition had occasioned Japan. The Commissioner, I was relieved to find, agreed to put off his departure, and, with myself as intermediary, he resumed negotiations with the Yamên. The difficulties in our way were, first, in form, as to the wording of an agreement in such wise as not to make it appear that the act of either Power, China or Japan, was dependent on the abiding of the other; and next, in substance, as to the dates of the essential acts, the evacuation of Formosa by Japan, and the payment of money by China,—and the guarantees for the performance of these acts.

At last, after six days' debate, the agreement and guarantee were signed by the High Commissioner Okubo and the Minister Yanagiwara at the Yamên. There are two points to which, before closing this long despatch, I beg attention; my apparent separation from my colleagues, whose co-operation as arbitrators I had earlier hoped to

invite: and the appearance of my own name in one of the instruments signed by the Chinese and Japanese Ministers. My narrative will have shown that, in the first step in the latter negotiations, my visit to the Grand Secretary Pao, I was, I may say, surprised into action. The High Commissioner called on me on a Saturday afternoon, and was to leave Peking early on the following Monday morning. As to the appearance of my name, I had objected twice to its insertion in papers submitted to me. The paper in which it does figure was not finally prepared, until it was too late in any way to modify its phraseology.

Lord Derby, in reply, wrote as follows :—

SIR,—I have received and laid before the Queen your despatch of the 16th of November, giving an account of the negotiations for the settlement of the Formosan affair, and I have to state to you that proceedings in the matter are approved by Her Majesty's Government.

JUSTICE IN EGYPT AND THE EAST.

(Pall Mall Gazette.)

We noticed some time ago the issue of a Yellow book from the French Foreign Office, with documents relating to the question of judicial reform in Egypt. The consolidation of the various capitulations and jurisdictions in Egypt under one judicial system has long been under discussion, and the adoption of a reform so urgently needed has only been delayed during the last two years by the opposition of France and Greece—the other Powers having all previously agreed. These two, we are informed, have now given their consent.

There is no doubt that under the successive "capitulations," as the treaties with the Mahommedan States have been termed, such great abuses have grown up in the administration of justice under the respective Consuls in Egypt as to become a reproach to all the Western Powers, and a just cause of complaint to the rulers of Egypt. The difficulty has been to devise any judicial system to take the place of the capitulations, which should remove these abuses, and at the same time afford the necessary security to the foreigner. Although Egypt has made great strides in the path of progress during the present generation, it has been contended, with justice, that in no court in that country would a Mussulman and a Christian find themselves on equal terms. Moreover, to say nothing of corruption, there was no code of laws or system of legal procedure that could be accepted by a Western Power as satisfactory.

The interest of this question is not, however, limited to Egypt or the dominions of the Porte. Precisely similar questions disturb our relations with China and Japan, and constitute the chief obstacles to a less restricted access to the interior of both countries. So much, indeed, is this the case, that until some solution is found which shall be acceptable alike to them and to us, there is no reasonable ground of hope that these obstacles will ever be removed. There are some things which force cannot accomplish in the intercourse of nations; and conditions may be imposed by a victorious power which only paralyze diplomacy so long as they are maintained. This has been strikingly exemplified by our past and present position, both in China and Japan. All who are interested, therefore, in the extension of our commerce and the improvement of our relations with those countries, must watch the progress of judicial reform in Egypt with eagerness, as affording the best hope of success in the far East, where a similar difficulty stops the way. The influence, indeed, which any successful result in Egypt may exercise on the relations of Western Powers with China, Japan, and the Indo-Chinese peninsula, including Burmah, Siam, and Cochin China, is of greater importance than the improvement to be anticipated in Egypt itself. Religion separates, law alone can combine; and where this is just and beneficent, there is a common bond of union which enables the Mohommedan, the Buddhist, and the Christian to live in peace under the same governing power. By no other means can the States of Christendom hope to establish with the several Powers of Asia and their subjects, Mahommedan, Buddhist, or Brahmin, any permanently peaceful relations. However systems of law may vary, the fundamental principles of justice are essentially the same; and we may safely trust that China and Japan will both be disposed to accept, as the condition of a recognition of their right to jurisdiction within their own territories, a system analogous to that which is about to be adopted by Egypt. We know that in the negotiations for the revision of the treaties which were entered into at Peking in 1868-9 by the British Minister the consent of the Chinese Government had actually been obtained to the preparation of a code of law and rules of procedure under the superintendence of Sir Edmund Hornby, the judge of the Supreme Court at Shanghai; these were to serve as a basis for the consolidation of the various jurisdictions. The constitution of mixed courts, in which the Chinese territorial rights could be recognized, would have naturally followed, had the scheme been carried out. Although precious time has been lost, we may yet trust that negotiations will be renewed with similar objects in view. Little argument or persuasion can be needed to induce either Chinese or Japanese to accede to propositions having for their object the ultimate restoration of jurisdiction in their own States, the deprivation of which they regard as an intolerable humiliation—indeed, as a wrong to be redressed by force whenever they are prepared to do battle with one or all of the treaty Powers. The reality and intensity of this feeling is little understood in Europe; but it is very well known to those who have lived among the people. The Japanese, perhaps, feel the humiliation more keenly than their less impulsive neighbours, and are certainly louder and more persistent in the expression of their feelings on the subject. Both nations, however—especially the ruling classes—resent the operation of the exterritorial clauses as injurious to their independence, and a danger no less than an injury. Nor is it generally remembered that, although Egypt had been passed under the same yoke—by usurpations and encroachments, and the slow accretions of unchecked abuse—the Porte has never submitted to it. Foreigners have enjoyed the right to settle their own quarrels; but no Sultan has ever admitted the pretension embodied in the Chinese and Japanese treaties, of compelling a native to seek justice at a foreign tribunal and withdrawing foreigners from native jurisdiction. In Turkey all that the Western Powers can claim is to be represented in the native courts, and that none of their subjects shall be sentenced or tried save in the presence of a diplomatic or consular representative. If no more than this were claimed in the Far East, we should hear little of the grievance of exterritorial privileges. Within these comparatively narrow limits they would lose all that is now so irritating and offensive. We are very far, however, from advocating a modification of so serious a nature without due preparation. Neither China nor Japan has any tribunal which can be trusted to administer justice to foreigners, nor even a code of laws that a Christian Power could accept. Still less could they accept the existing rules of procedure, and even if torture to extort confession or evidence were abolished, the notorious corruptibility of the judges and officials, and the prejudice against foreigners, would more than suffice to endanger justice. It may be very true, as the Japanese urge, that we trust British subjects to the action of native laws and judges in countries less civilized, such as the Sandwich Islands or Central America, and that to deny to China or Japan rights allowed to such countries as those is to add insult to injury. But the circumstances are not quite the same.

There are Japanese newspapers, under the new order of things, in which the relation of foreign Powers and the character of treaties are discussed by native writers. The *Japan Mail* has given a translation of a series of essays from a paper known to the Japanese as the "Tokio Nichi Nichi Shimbun." Under the title of the "Subjection of Foreigners resident in Japan to the Laws of our Country," this paper treats the question of Japanese jurisdiction in a way well deserving of attention, from the just and candid spirit shown by the writer. He begins by taking up a position "That all persons living in any country, without discrimination of foreigner or native, should in all things obey the laws of that country, in accordance with a right enjoyed by all Western nations." At the same time he acknowledges frankly that "in no Asiatic country are there satisfactory laws or a complete system of jurisprudence to which life or property could be trusted." And he proceeds, with almost an excess of candour to say that in treaties with these said Asiatic countries, instancing China, Corea, Annam, and Awa, the Japanese Government should refuse to call upon their subjects to obey the laws of those countries, thus cutting away the ground of any objection on the part of Asiatics to the exterritorial clauses of the foreign treaties. He perceives this, and asks, "Is there no arrangement by which the divided jurisdiction treaties can be abolished?" and his reply is perfectly satisfactory. He says there is such an arrangement, and it consists in enabling foreign Governments to entrust their people to Japanese laws with perfect freedom from anxiety "by the compilation of a satisfactory code of laws, by the institution of courts which shall not be influenced by the power of the Government, by the appointment of experienced legal officers and the association along with them of juries, and offering to foreigners practical proof that there is no denial or delay of justice." We may safely assure the Japanese that whenever they succeed in offering such guarantees to the treaty Powers there will be no difficulty in the modification or extinction of exterritorial privileges.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

But, as the writer is aware, though a code of laws may be borrowed from other countries or improvised on the spot, it could not by any act of authority receive immediate application. The want of legal officers and knowledge, to say nothing of the conflict of anterior laws, customs, and precedents on which the whole fabric of society has been built up for centuries, would oppose serious obstacles. It is almost impossible to transplant the law of one country and apply it to another without preparation or enlightenment on the part of the people and the administrators. Greece made the experiment, adopting a code compiled from the French and German laws, as the Japanese writer says, and, though it looked beautiful on paper, it was found "unmanageable in practice, because it was at variance with Greek customs and old precedents." He rightly concludes, therefore, that the proposal to adopt a translation of the Code Napoléon, just as it is, and seek to make of it a Japanese national system of jurisprudence would answer no good purpose. But, he suggests, it may be possible to follow "the example of Egypt in her late negotiations with foreign Powers, carrying out a system of mixed courts jointly presided over by Japanese and foreign legal officers, and thus obtain commercial and civil jurisdiction, so as ultimately to subject foreigners altogether to our laws." There is, perhaps, another example which might better meet the need of the Japanese, who are ready to adopt any innovation which promises independence and rapid progress—if not the Chinese, less disposed to enter upon a vast field of experiment and change Japan might inquire into the code adopted in the government of our Asiatic empire—a code which, by its simplicity and comprehensiveness, has given to 130,000,000 of mixed races, with creeds and local customs which have little in common, a system of law and procedure eminently adapted to secure the blessings of legal order and security. France is charged by the Chinese authorites with going much farther than any other foreign Power, and claiming not only a protectorate over all Roman Catholic missions, but over their native converts; thus creating an *imperium in imperio*, which raises a constant conflict of jurisdiction, and deprives the civil power of all authority over their own subjects—a state of affairs which may be felt intolerable to the most long-suffering Asiatics. Sooner or later this complaint will have to be taken into account, and fairly met, by the Western Powers, or worse will follow. If the death of the youthful Emperor of China should bring to the front the anti foreign party in the State and give them any predominating power in a Regency, it is quite possible this question may be brought forward under the most untoward conditions for a peaceful or satisfactory solution; and another example will then be added to the many which history supplies, of the danger of allowing causes of national hostility to smoulder neglected.

Shipping Intelligence.

ARRIVALS.

April 24, *St. Thomas*, Swedish barque, G. B. Hjorth, 450, from Nagasaki, Coal, to P. M. S. S. Co.

April 24, *Bessie North*, British barque, D. H. Richman, 578 from Swansea, Patent fuel, to Order.

April 24, *Kanko Maru*, Japanese steamer, Kawaiwasaki, 318, from Bishiu, General, to Kaiso.

April 24, *Orissa*, Japanese steamer, Walker, 250, from Yocoki, General, to Mitsu Bishi Co.

April 25, *Korchland*, French barque, Lanco, 267, from Takao, Sugar, to Chinese

April 26, *Malacca*, British steamer, Bernard, 1,046, from Hongkong, General, to P. & O. Co.

April 28, *Niigata Maru*, Japanese steamer, Walker, 1,685, from Shanghai and ports, General, to Mitsu Bishi Co.

April 29, *Costa Rica*, American steamer, Conner, 2,000, from Shanghai and ports, General, to P. M. S. S. Co.

April 29, *Lady Belman*, British brig, Wm. Lee, 253, from Kobe, Kerosine, to China and Japan Trading Co.

May 1, *Wega*, German barque, Mähl, 395, from Cronstadt, Rye Flour, to Walsh, Hall & Co.

May 1, *Tanais*, French steamer, Reynier, 1,010, from Hongkong, Mails and General, to M. M. Co.

May 1, *Fuso Maru*, Japanese steamer, Moore, 450, from Kobe, General, to Mitsu Bishi Co.

DEPARTURES.

April 24, *Kiusiu*, Japanese steamer, Froom, for Hakodadi, General, despatched by, Mitsu Bishi Co.

April 24, *Tokio Maru*, Japanese steamer, Dunn, 2,119, for Shanghai, despatched by, Mitsu Bishi Co.

April 25, *Venice*, British steamer, Watson, 1,270, for Hiogo General, despatched by, Van Oordt and Co.

April 26, *Alaska*, American steamer, Howard, 4,010, for San Francisco, Mails and General, despatched by, P. M. S. S. Co.

April 26, *Bengal*, British steamer, Douglas, 1,305, for Nagasaki, Ballast, despatched by Aug. Heard & Co.

April 28, *Malacca*, British steamer, Bernard, 1,046, for Hongkong, Mails and General, despatched by P. & O. Co.

April 28, *Kiusiu Maru*, Japanese steamer, Christensen, for Hakodate, General, despatched by Mitsu Bishi Co.

April 28, *Formosa*, British steamer, Staurt, 651, for Nagasaki, Ballast, despatched by Hudson, Malcolm & Co.

April 30, *City of Halifax*, British ship, Lester, 853, for Manila, Ballast, despatched by Witkin & Robison.

May 1, *Niigata Maru*, Japanese steamer, Walker, 1,685, for Shanghai and Ports, General, despatched by Mitsu Bishi Co.

May 1, *Nevada*, American steamer, Williams, 2,145, for Shanghai and Ports, General, despatched by P. M. S. S. Co.

PASSENGERS.

Per Japanese steamer *Tokio Maru*, for Shanghai—Messrs. T. Lovell, Hickson, R.A., S. Bates, Wilson, W. Bates, G. Grant, T. Grant, Brown, Hellyer, Bourcerie, Gill, Bernard, Lambeth, Twomby, Anderson, Tsuda, Matsuo, Ashida Yamamoto, Tadokoro, Mr. and Mrs. Nakasawa Yoshida, Kanaki, Kawasaki, Sakabe, Ah Kew, Hoshino, Miura, Takasima, Takano, Arabata, Oki, Kobayashi, one Chinaman, and 158 Japanese in the steerage.

Per American steamer *Alaska*, for San Francisco.—Messrs. Thomas Barclay, R. S. Edwards, D. A. Edwards, J. Middleton, Mrs. M. Townsend, child and servant, Rev. Mr. Burnside, Mrs. Burnside, 3 children and nurse, Mr. and Mrs. Houston and child, J. H. E. Waters, P. E. Roy, Gen. Allen, Mrs. Allen and servant, J. M. Lambeth, Lieut. Hubback, 3 Miss Happers, Mrs. H. A. Bellows, Miss Fowler Mrs. McDonald and 4 children, Messrs. P. H. Moore, C. W. Bass, Lowe, Miss Bradlee, Capt. Harrington, Messrs. Peters, Becker, A. Sykes, E. L. Nisari and Sarasan.

Per British steamer *Malacca*, from Hongkong.—Six Chinese, on deck.

Per Japanese steamer *Niigata Maru*, from Shanghai and ports—Mr. and Mrs. Hardman and son, Gen. Saigo, Messrs. Oyama, Hooper, J. Winckler, Uchinoma Dingi, Fugita, Nagasakia, Okaba, Fukeshima and child, Koemera, Chan Sing, 86 Japanese, and 2 Chinese, in the steerage.

Per American steamer *Costa Rica*, from Shanghai and ports.—Mrs. Goddard, Mrs Hoof, Mrs. S. M. Bryan, Mrs. Birtwhistle, Messrs. D. V. King, De Witt Arnold, D. Fitz Henery, W. White, H. M. McGregor, The Misses Cargill, (3), Mr. and Mrs. Purcell, 2 children and 2 servants, Messrs. R. Johnston, and servant, H. Buchanan and servant, Jno. Hart, W. A. Horne, Mrs. Harrison, Capt. Shufts, Mr. and Mrs Ede, child and 2 servants, and Mr. and Mrs England, 5 children and 2 servants, and 56 Japanese, and 9 Chinese, in the steerage.

Per British steamer *Malacca*, for Hongkong.—Mr. Munro.

Per Japanese steamer *Kiusiu Maru*, for Hakodate.—Mr. Thomson, and 19 in the steerage.

The British brig *Lady Belman* reports: calm weather and rain on Friday.

Per French steamer *Tanais*, from Hongkong.—Mrs. Elkin.

Per Japanese steamer *Niigata Maru* for Shanghai and way ports.—Mr and Mrs Halifax, Mr. and Mrs. Hartley and two children, Messrs. Larkin, Kato, Yeito Morodaka, Kambayashi, Kuratzugoo, Oharie, Thompson, Mr. and Mrs. Konishi, Nigishi, Kozaka, Agowa, Yamamoto, Kawatchi, Oku Hirotsu, Otani, Otary, L. Joseph, Ishizaki, and Kurusaki; 1 European, 3 Chinese, and 134 Japanese, in the steerage.

Per P. M. S. S. *Nevada*, for Shanghai, &c.:—Mr. and Mrs. Staples, Mrs. Jenkins, Mrs. Burness and Child, Miss Colburn, Messrs. Perrigord, Frassinet, R. Walsh, 2 children and servant, Groom, Samson, Hewlett, C. David, Geisenheimer, Heco, Tyler, E. Seymour, J. Buse, House, C. Mills, G. Slade, C. Chevalier, Mrs. Inglis, and child, Mrs. Horsman, Mrs. Morf, Mr. and Mrs. Morse, Dr. Fisher, and 33 Japanese, in the cabin; 500 in the steerage.

CARGOES.

Per *Tokio Maru*, for Shanghai: Treasure, $6,000.

Per British steamer *Malacca*, from Hongkong:—

Sugar	8,181 bags.
Naval Stores	783 pkgs.
Sundries	503 "

Per American steamer *Costa Rica*, from Shanghai and ports:—

Treasure	$2,700.00.

Per British steamer *Malacca*, for Hongkong:—

Silk	277 Bales.

Per *Niigata Maru*, for Shanghai.—Treasure: Yen 1,500,110 and $8,500.

REPORTS.

The *St. Thomas* reports variable weather, strong winds from S. W. to W.N.W.

The P. & O. steamer *Malacca* reports: left Hongkong April 19th, at 5.30 p.m. and experienced strong N. E. winds with heavy seas as far as Agincourt Island. Thence to Yokohama, light easterly winds and calms with fine weather. From Yokosima to Oosima, North and N. W. winds and fine weather. From Oosima to Cape Sagami moderate North and N. W. winds with fine weather. Arrived at Yokohama 6.45 p.m. April 26th. April 19th, at 10 p.m. passed a steamer off Single, Island supposed to be M. M. Co.'s steamer from Yokohama; April 20th, 1 p.m. passed P. & O. Co.'s steamer *Bombay* off Lamock Islands; April 26th, at 7 a.m. passed S. S. *Venice* off Omai Saki.

The German barque *Wega* reports: after leaving Cronstadt had a tedious passage till clear of the English Channel, thence to port

Digitized by Google UNIVERSITY OF CALIFORNIA

has been 155 days, coming by way of Cape Horn and the Pacific; called in here for orders her cargo being for Petropaulovsk and the Ochoctsk.

The French steamer *Tanais* reports: pleasant weather, anchored at 1 30 a.m.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, MAY 1ST, 1875.

IMPORTS.

Cotton Fabrics and Yarns.—The market may be reported as continuing dull, without any material alteration in prevailing rates.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.92½ to $2.12½	56 to 60 reed 40 yds.	35 in. nom.	per pce. 2.25 to 2.50
8 lbs.	38½ yds.	44 in.	„ nom		64 to 72 „	„	„ 2.50 to 2.80
8 lbs. 4 to 8 lbs. 6	„	39 in.	„	2.17½ to 2.55	Turkey Reds 25 yds.	30 in. 2¼—3 lb.	per lb. 0.90 to 0.97½
9 lbs.	„	44 in.	„	2.67½ to 2.90	Black Velvets		8.60 to 9.50
Taffachelass Single			nom.	2.50 to 2.70	English Drills		3.25 to 3.40

Yarn:—

No 16 to 24			per picul	33.50 to 36.50	No. 28 to 32	per picul	38.50 to 42.00
Reverse			nom.	nominal	„ 38 to 42	„	42.00 to 46.50

Woollen Fabrics.—Business continues without animation though rates are nominally unaltered. We quote:—

Plain Orleans		40—42 yds.	32 in.	6.25 to 7.75	Figured Mousseline de Laine	30 yds.	30 in. 0.26 to 0.28
Figured Orleans		29—30 yds.	31 in.	4.50 to 5.25	Multicolored „	30 yds.	30 in. 0.32 to 0.36
Italian Cloth		30 yds.	32 in.	0.25 to 0.36	Cloth, all wool plain or fancy	48 in. to 52 in.	1.00 to 1.30
Camlet Cords		29—30 yds.	32 in.	6.00 to 7.00	Presidents	54 in to 56 in.	0.75 to 0.85
Camlets Assted.		56—58 yds.	31 in.	18.50 to 19.00	Pilots	54 in. to 56 in.	0.45 to 0.55
Lastings Japan		22—30 yds.	32 in.	13.00 to 14.50	Union	54 in. to 56 in.	0.70 to 0.85
Plain Mousseline de Laine		30 yds.	30 in.	0.18 to 0.19½	Blankets, scarlet & green 7 to 8 lbs.		per lb. 0.45 to 0.48

Nominal.

Sugar.—The market is quieter. Large stocks of white sugar, estimated at 45,000 piculs, have had a depressing effect upon prices for these which rule lower.

Sugar:—Formosa in bag			per picul	4.65 to 4.75	China No. 5 Kong-fun		per picul 5.10 to 5.60
in Basket			„	4.45 to 4.55	„ No. 6 E-pak		„ 4.60 to 5.00
China No. 1 Ping fah			„	8.40 to 8.50	Swatow		„ 3.60 to 3.70
„ No. 2 Ching-pak			„	7.40 to 7.60	Daitong		„ 3.70 to 3.80
„ No. 3 Ke-pak			„	6.60 to 7.10	Japan Rice		„ 3.25 to 3.30
„ No. 4 Kook-fah			„	5.90 to 6.30	Kerosine Oil		„ 3.60 to 3.70

EXPORTS.

Silk.—Our last fortnightly report was dated 24th ultimo. Since then deliveries have been 375 piculs. Arrivals barely amount to 200 bales, and the stock is steadily decreasing. A public sale took place on the 28th ultimo, when Sinchu Hanks, common to inferior, were disposed of at $377 and a parcel of Sinchu "filature" fetched $515. On the whole, there is little if any change to report in prices.

	Laid down and sold in London Ex. 6mos. at 4s. 2¼d. ₰ Lyons, 5.35.				*Laid down and sold in London Ex. 6mos. at 4s. 2¼d. ₰ Lyons, 5.35.*			
Hanks—								
Best (No. 1/2)	480 to 500	18s. 6d. to 19s.	2d.	frs. 51 to 53	Medium (No. 2½)	410 to 430	16s. 0d. to 16s.	9d. frs. 44 to 46
Good (No. 2)	440 to 470	17s. 1d. to 18s.	2d.	frs. 47 to 50	Common No. 3	380 to 400	15s. 0d. to 15s.	8d. frs. 41 to 43

Tea.—Business in Old Crop requires little or no comment, transactions being almost nominal and not exceeding 180 piculs for the week.

Some musters of small lots of "New Crop" have been shewn and small purchases of 4 @ 5 piculs have been made at $50 to $52 per picul, but these quotations with a fuller supply will soon be reduced. As it is, most tea houses are waiting larger arrivals, and it is a matter of regret to find buyers again prepared to pay fancy prices when, by a little patience, they might, in the course of the next ten days, operate to much greater advantage.

EXCHANGE AND BULLION.

Exchange.—Sterling rates are unaltered, with scarcely anything doing.

Gold Yen are wanted at slightly higher rates.

Rates close as follows:—		On Hongkong Bank Bills on demand	Par.
On London, Bank, 6 Months'	4s. 2¼d.	„ „ Private Bills 10 ds. sight	¼ per cent. dist.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

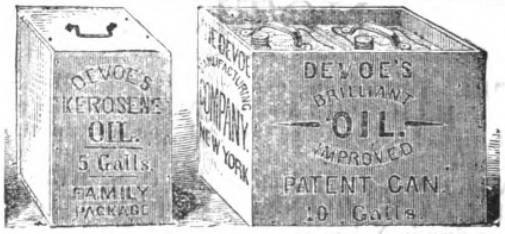
Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.



THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

Yokohama, 25th June, 1874.

MARRIED.

May 8th, 1875, in Union Chapel, Yokohama, Japan, by the Rev. R. S. Maclay, D.D., in the presence of T. B. Van Buren, Esq., U. S. Consul-General to Japan, Captain PAUL A. DITHLEFSEN, of Portland, Maine, U. S. A., to Miss SARAH MACDONALD, of St. Louis, Missouri, U. S. A.

Notes of the Week.

The week has again been marked by two startling cases of robbery. On Monday it was announced that the compradore of the Deutsche Bank had acknowledged, under the fear of discovery, the embezzlement of about $28,000 of the money entrusted to his custody. He was at once given into charge and some of the shroffs suspected of complicity in the robbery were also subsequently apprehended. Later in the week the compradore of Messrs. Walsh Hall & Co. was found deficient in his cash, and seems to have made away with about $4,000, a small portion only of which falls directly on his immediate employers.

These occurrences have naturally excited some discussion about the 'compradore system,' the weak side of which is exposed by them. But the clumsy currencies of the East place this fetter on the arms of foreigners, and so long as they exist the system will probably obtain. It has some evils, but also some great advantages, and the one will be tolerated for the sake of the other. It is probable, however, that some more rigid checks may yet be contrived and imposed on the men actually entrusted with the custody of money, and that the nature of the securities offered for their honesty may have to be more solid than heretofore.

IT would be premature at present to do more than give such details regarding the *Genroin* as have been published in the native papers. It is quite possible that something may appear hereafter to throw light upon what would be its probable fate in the event of any real strain being put upon it. As it stands at present it may have some influence, but it has not a vestige of power, in the only sense in which the word can be used in political philosophy. The amount of this influence will entirely depend upon the character and abilities of the leading men in it, and it may act in either one of two ways; directly upwards on the Cabinet, or directly downwards on the people, whose new or changed opinions will in their turn influence the Cabinet. Most of the old clamourers for a 'House of Commons' have subsided into silence, though some say they are being put off with an old thing under a new name. It is certain that not only would the Government be wrong in yielding representative institutions to anything less than a very strong and intelligent demand for them, but that it is most likely right in thinking that the nation in its present state is wholly unfit for such institutions.

As we have publicly stated that the system of race-lotteries is one which is in a great measure responsible for evils of a grave nature connected with or arising out of turf sports in Yokohama, we think it right to state that the only two Clubs in the place have abolished them. If we commit any breach of etiquette in mentioning this, we must apologize for it before hand. Our justification is that it is well to record acts which show that the majority of the leading members of this community have grappled seriously with the whole question at issue, and are determined that, by no fault or omission of theirs, shall any sanction be given, in places where the tone of socicty is more or less formed, to practices which have been condemned after full trial by the general sense of this community. There was but one way in which the reputation of the place could be vindicated from the imputations cast upon it. That way has been taken, and it is only fair to others and to ourselves that we should be permitted to state this. To refuse the sanction of society to bad customs is the surest way to secure their ultimate abolition.

THOSE who have opposed us in the controversy about race-lotteries must not complain if we support our position by their own avowals or statements. In order to do this we will devote a few words to a letter signed X. Y. Z. which appeared in the *Japan Herald* of Thursday evening last, and which it is wholly useless for our opponents to pretend does nor fairly represent their views and their case. We consent for a monent to waive all our objections to noticing anonymous communications, and will treat the letter as if it deserved the consideration due to a speech delivered or letter written by one who was bold and frank enough to face the responsibility attaching to his words. We shall not even complain that, like every other letter or remark levelled at this Journal, the Editor of it is made the object of personal attack, in direct contravention of all the decencies and conventionalities of the writing of gentlemen.

X. Y. Z. begins his letter thus: "A man must possess a very high character for veracity before such a statement as the following, made by the editor of the *Mail* in his paper of the 2nd inst, will be accepted by the Yokohama public, viz:—"The many gratifying assurances we have received from all quarters during the week, of the importance and value of the remarks we thought it our duty to make upon what appears to us and to others a very great evil" &c.'

There can be only one meaning to these words. They imply that we have received no such assurances, or have not received them to such an extent as to warrant this assertion, and this amounts to giving the lie direct.

One of our charges concerning the demoralizing effect of the whole atmosphere surrounding the turf in this place was that it absolutely undermined the confidence placed in men's words—we even said, 'words of honour'. And here we have a gross and palpable case of it.

Now, we are not going to waste our anger on an anony-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

mous writer. But we shall make free to assert that a more perfect illustration of the charge we brought against the effect of the spirit we denounced never was offered by a clumsy antagonist.

We then come to the next paragraph in which X. Y. Z. says that "the discreditable remarks in the *Mail* issue of the 24th ult. to which the above has reference have caused throughout the whole community an universal feeling of regret that a weak, but perhaps well-meaning and possibly conscientious man should unwittingly have (to use his own words) become "the ignorant and pliant tool" of a small clique of unscrupulous men at whose instigation malicious and slanderous statements have been promulgated upon utterly insufficient grounds.

We first come to the word 'discreditable.' If it is discreditable to denounce the spirit of gambling and the unfair practices of the turf which have, beyond all question, had more or less notorious prevalence in this place; if it is discreditable to point out the destruction, by this poison, of the confidence which ought to exist in society, and that reliance which ought to be placed on men's words; if it is discreditable to try to eradicate the practices which have led to these results; then the remarks of the *Japan Weekly Mail* are discreditable. But if it is otherwise, there is but one alternative, viz: that X. Y. Z. is so dominated by the spirit we seek to exorcise that his sense of moral order is inverted; right is his wrong and wrong his right.

He applies the word 'weak' to us. Does he know what an article like that which appeared in our paper on the 24th ult. costs us? We will tell him. It costs us, not friendships, indeed, but a great alienation from men with whom we have no desire to be other than on friendly terms, and whose good-will, as a mere question of worldly policy, we should do far more wisely to conciliate. The material interests of men in small places are very closely interwoven; popularity is a thing which the great majority of men make considerable sacrifices to gain; the alienation of friendly regards and the certain incurring of cold and averted faces do not conduce to a man's social comfort or his worldly advancement. Yet these are among the costs of a free expression of unflattering opinion on such questions; and these costs we have to pay. There may be weakness in making these acknowledgements; but we doubt much whether it is a sign of weakness to incur these costs.

X. Y. Z. speaks of our being tool &c., of "a small clique of unscrupulous men" &c.

In answer to this we have to state that we have not had the smallest communication, verbal or by letter, with any one of those who may be supposed to be referred to in this allusion. We had never mentioned the subject of lotteries or racing to any one of them. From year's end to year's end we never under any circumstances meet them. Our walks and ways are in diametrically opposite directions. *After* our article was written we were requested by a prominent opponent of the race-lottery system to sign the letter calling a meeting at the Club to discuss the subject; but, so far as our memory serves us, this communication was the first which had passed between us for two years on any subject, and we know no other member whatever of the party. Far, therefore, from having knowingly been the exponent of the views of any *clique*, we have never had the smallest communication with or from any such party or section of the community, and know nothing of its members, their views or their movements.

Our article originated in many representations made to us of the very large sums which changed hands at these lotteries and in the betting rings last year, sums out of all proportion to the incomes or means of those through whose hands they passed; in reflections upon certain circumstances in the local history of the past two years which wear an equivocal complexion never suspected at the moment of their occurrence; and in two or three special conversations in which the evil of the gambling spirit or gambling houses in this settlement were shortly but vividly brought before us. These have been the sole promptings of what we wrote.

X. Y. Z. speaks of our childish sentimentalism on this subject being provocative of ridicule. We shall not reply to the reproach. Of his own understanding we may form some estimate from this letter, which he commences by making a direct imputation on our veracity, and saying in the next sentence that our remarks are those of a "man perhaps well-meaning and" possibly conscientious!" The confusion of mind or utter looseness of moral texture to which this kind of writing is due, enables one to estimate its value, and any sound man will unhesitatingly assess this with a good large *minus* before it. It is just one of those letters to which we referred last week when we said that any opponent of a bad system could safely rely upon the disgrace brought on it by its defenders.

We are ashamed to have occupied the attention of our readers to a matter in which we have been forced, most unwillingly, to obtrude our own personality on them. But we have a firm conviction that right is on our side in this matter, and that the well-being and reputation of the settlement are more or less involved in a correct solution of it.

We will conclude with the narration of a fact for which we can vouch, and the proof of which shall be placed within ten days of his request, in the hands of any member of the Race Club of this settlement should he apply for it.

A gentleman, well known in this settlement and perfectly conversant with the rules of the turf and its local history, was speaking some short time back to the editor of *Bell's Life* on the subject of certain practices connected with racing in the far east. The Editor said "If you will make me a statement to this effect and hold yourself responsible for it, I will identify the ———— turf with a reputation which shall make it henceforward impossible for any honourable man to have his name associated with it."

We are not able to proceed with our analysis of the Financial Statement this week, being without the translations of the documents which supplement the second part and afford the necessary explanations without which it is impossible to do justice to it.

An entertainment was given on the evening of the 4th instant at the Sei-yô-ken Hotel, Tôkio, by Messrs. Pauncefort and Wagner Cuthbertson, which we regret to hear was not so well attended as the just hopes of the performers warranted.

The performance at the Gaiety Theatre on Thursday evening, which embraced the farce "Cool as a Cucumber" and the domestic drama "Milky White," inverted that usual order of representation which assigns to the serious drama the fresh and untouched sensibilities of an impressionable audience. But this is seldom without its disadvantages—some of them we incline to think only too clearly manifested on Thursday—and we shall not imitate it in the few observations which the quality of the performance and the drama itself suggest to us. "Milky White" (which we shall be excused for briefly describing) is the playful name by which a certain cow-keeper is obviously enough known in his village. Deaf, grasping, avaricious and litigious—violent and brutal in his intercourse with the world, he yet nourishes a tender affection for his child *Annie White*, upon whom all the warmth of his else rugged nature is concentrated and shed. He prizes her as the apple of his eye and looks with unspeakable aversion upon the possibility of her affection being wrested from him by a favoured lover and his old age left uncheered by her companionship. In this contrast between the deaf, morose and litigious bully and the tender and doating father lie the strong points of the drama and the interest with which it undoubtedly holds an audience.

Archibald Good, a veterinary surgion whose love for *White's* daughter has induced him to offer many gratuitous services, has succeeded in curing the old man's deafness. Unsuspected by his daughter he enters her room while she is describing the circumstances of her accepted lover to *Dick Dugs*, a cowboy who also aspires to her hand. Infuriated by fragments of the conversation which he overhears and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

applies to himself he drives his daughter from her home, assaults his servant, assails *God* with bitter reproaches and sinks prostrated by his supposed discovery. But relief is at hand. *Mrs. Saddrip*, a poor woman whom he had treated with coarse cruelty, tends him in his desolation and remorse and, unknown to him, shelters his daughter. She again brings them together and the *éclaircissement* which follows reunites father and daughter, the former pledging his hand to *Mrs. Saddrip* and the latter being formally affianced to her devoted lover.

Dramas of this class, relying exclusively upon their construction with a view to powerful and striking situations, must not be too closely scrutinized in the details of their execution. Their frame-work is too slight to bear a heavy weight of dialogue, and the relations of the characters are more frequently than otherwise determined by the special qualities of performers whose peculiar powers they are in the first instance adapted to give scope and effect to. And if they are effective, draw laughter—or, better still, tears, from a world 'unused to the melting mood'—we must not too curiously analyse or expose the simple mechanism by which the skilled dramatist touches our hearts or relaxes our muscles. It would be as idle as to criticise the last Christmas Pantomime. "Milky White" is assuredly no worse than the general run of such plays, and its vogue in England gives assurance that the popular judgment is in its favour.

Having said so much, we shall, without dwelling upon the questionable taste with which the author abuses the effects of antithesis and anticlimax, add a few words upon the performers to whom we are indebted for the representation. Mr. Toodles has apparently devoted much care to the study of the prominent personage of the drama. The abrupt violence of the morose and brutal *White* were pourtrayed with the rough and cordial vigour which marked a sense of the utter perversion of his nature and his antagonism to society, and he was not without power in those more trying passages in which these emotions were softened into tenderness by the presence of his daughter. But he exaggerated some of the worst sins of the dramatist—in those violent antitheses in which a flat jest succeeds a passing touch of sentiment or pathos—into glaring proportions, instead of softening or, better still, retrenching them, and hence, it may not be doubted, sacrificed effects which he had assuredly the ability to make his own. Mr. Toodles must, however, be congratulated upon the success of his embodiment and the care and patience with which he had evidently prepared himself for it by study. His impersonation of the rôle was highly meritorious. Madlle. Violini sustained the part of *Annie* with a becoming grace and truly feminine delicacy which gave reality and colour to her very pleasing impersonation. Delicate in figure and gentle of voice, Madlle Violini does not violate credibility in her assumed sex (and indeed in the introduced song, which was loudly redemanded, showed much skill in her employment of the latter), uses gesture with moderation, and displayed throughout an artistic aptitude which is susceptible of advantageous cultivation and to which such success as "Milky White" obtained was largely attributable. Mr. Vernon has more than equalled his antecedents in his *Dick Dugs*, an admirable piece of low comedy playing for which we must thank the inherent sense of humour, to which he on this occasion gave the loose rein, rather than the dramatist who has done little more than sketch out an outline which he filled in to the intense amusement of his audience. Miss Ella Herbert must also be congratulated upon a happy realisation of the part with which she was entrusted. Her usual gesture was wisely discarded and her impersonation was all the better for it, acquiring a truth and reality which a "gushing" treatment would have rendered impossible. Mr. Coventry acted the slight part of *Archibald* with good sense and, discrimination, though with a stiffness of manner which he should try to abandon.

"Cool as a Cucumber," which preceded the drama, is one of those thin bubbles kept only afloat by the vivacity and sustained self-possession of its hero. It has the defect of being too long for its subject; 'the thread of its discourse is spun finer than the staple of its argument' and this is in no small degree distressing to the actor upon whom the burden of the piece almost wholly falls. We have perhaps seen Mr. Spurgeon in parts better adapted for the display of his pleasant humour, but all praise is nevertheless due to his *Plumper*, whose assurance and coolness were represented with admirable humour and effect. For any colour the trifle has it is indebted to its prominent character, and it will be enough to say that he received full support from the representatives of the minor parts who were associated with him in its performance.

A concert, noteworthy for the assistance, both in the instrumental and vocal music, given by some of the ladies of the settlement, took place in the Masonic Hall on Tuesday evening last.

The concert was opened with Mendelssohn's four-part song *Early Spring*,—an appropriate tribute to the season—sung by the Yokohama Choral Society. The song is expressive of those joyous emotions which, in all ages and among all nations, have been associated with Spring—emotions which have inspired an infinity of poetry and a thousand songs. The aspects of Nature were fruitful sources of inspiration to Mendelssohn, as they are to all true poets. He is never weary of chanting the praises of Spring, and, with equal ease and skill, wreathes his chaplets as offerings at her shrine. And, as he sings, the air becomes rich with the perfume of flowers, and musical with the hum of bees and the voices of birds. "All nature wakens smiling and fair,' and arouses feelings of happiness and gratitude in the heart. In his charming letters from Switzerland and Italy we see how his mind glowed under the influence of fine scenery, and his choice of the poetry which he selected to set to music proves how great was his devotion to external nature. The song was very effectively sung, and served to introduce in this settlement a variety of music of which we hope hereafter to record many performances.

A song of Gounod's, *Ce que je suis sans toi*, followed. It demanded a little more 'singing,' and was delivered rather in drawing-room than concert-room style. It pleased, but would have pleased more had the singer bestowed more of labour on the cultivation of a naturally excellent voice.

De Beriot's *Scène de Ballet* stood next on the programme, and introduced an amateur violinist of whom we have long envied Kobe the possession. His playing is so far above that of the ordinary English amateur—who is, on the whole, a wretched fiddler—that we shall pay him the compliment of criticising it as we should that of a professional player. His intonation, then,—the first requisite in the violin-player—is excellent; to say it was faultless would be to say what is perhaps only true of half-a-dozen living men. His bowing is free, broad and graceful; his *staccato*—the despair of amateurs—rapid, bright and pointed; his phrasing good and musician-like; his *legato* playing smooth, even and singing, and his rapid playing accurate and clear. His feeling and expression are true and arouse sympathy in his audience; he never falls into exaggeration or descends to trick; his schooling has been excellent, and his proficiency is the obvious result of great labour. In power, tone and passion he errs somewhat by defect, though the instrument on which he played is perhaps responsible for part of this impression. Beautiful in a room, and with the true Italian tone, it has not power for a concert-hall, nor would any one do wisely to bring a really great instrument to this country, where any mischief which befalls it is practically irreparable. But his playing of De Beriot's charming music was very delightful, and gave the audience a treat, in its kind, without parallel in our recollection of the settlement. The just tribute of an *encore* was acknowledged by Gounod's *Méditation* on Sebastian Bach's First Prelude.

Hatton's glee, *Absence*, which followed, is written with the skill and knowledge of vocal effects which characterize all this composer's work, but it failed for want of sufficient preparation.

The *Andante* and *Presto Scherzando* of Mendelssohn's second Piano-forte Concerto, with the orchestral accompaniments taken on a second piano, succeeded the violin solo. This concerto was, if we remember rightly, composed about the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

year 1838, and was first played in London at the Philharmonic by Mrs. Anderson—a fine player and the instructress in music of our present gracious Queen. It is a splendid work and a noble specimen of the composer's genius. The *Andante* is a model of lovely melody and pure thought, and the *Presto Scherzando* is full of passion and fire. Both demand powers in the executant of no ordinary nature, and when we say that this demand was amply and brilliantly responded to by the performer who graciously gave her assistance in the good cause for which the concert was given, we have done all that we shall venture to do. Gratitude demands no profusion of words.

We must limit ourselves for similar reasons in speaking of the *cavatina* from La Sonnambula, *Comé per me sereno*, which was received with enthusiastic applause, acknowledged by Bishop's "Should he upbraid," sung with that ease and grace which are the ripe and rare fruits of cultivation and study.

The first part of the Concert was brought to a close with Barnby's favourite part-song, 'Sweet and Low,' sung by the Choralists in very excellent style. Tennyson's lyrics have been greately set to music by feeble hands. They are so exquisitely beautiful that they suggest these attempts to people whose admiration would be far more highly estimated were they to leave them alone. Barnby, however, has achieved a real success in this pretty song, which is likely always to remain a favourite among efforts of this nature.

The second part opened with Arthur Sullivan's setting of Sir Walter Scott's 'Oh, hush thee, my babie,' also very nicely sung by the Choralists. This was followed by a 'Romance' for the violin by C. J. Toms, again beautifully played by the young amateur whose performance in the first part had given so much pleasure. The writing of this little piece is very graceful and original. In the second part of it the harmonies in the accompaniment are somewhat too *cherché*, and now and then become, we venture to think, somewhat impure from this cause. But the piece deservedly gave great pleasure.

Of the trio for three female voices from *Athalié* 'Hearts feel that love Thee' we shall not trust ourselves to write. We could do no justice to its rare beauty and holy rapture. Like its compeer 'Lift thine eyes,' the less said after it, the less its effect is likely to be marred.

The introduction of the Andante to Beethoven's sixth symphony (the Pastoral) arranged for two piano-fortes, was a bold venture, but we think a successful one. It is entitled *Scene am Bach*, (Scene by a rivulet,) in the original score, and depicts the emotions excited by external nature under this special influence. To our own mind, no such pastoral has ever been produced by any poet, though the rank we give it may arise from a disproportionate devotion to the language in which it is written. No painter—not even Turner himself, who, we are accustomed to think, is the Beethoven of painting—has ever given anything to the world so rich and rarely beautiful as this Andante. Everything pales by its side. The "Crossing the Brook" or the "Childe Harold" of the National Gallery—the finest things of their kind in the world—are yet, to our mind, far below this piece of unparalleled music.

The concert was closed with Haydn's chorus from the *Creation*, 'The Heavens are telling' sung by the Choral Society. Owing to a little fault, for which we must hold the conductor accountable, it started badly, but went more evenly in the trios, falling away again in steadiness towards the end. But its sublime splendour was not lost, and it can never be heard without admiration and vivid emotion.

We must repeat the expression of our gratitude to the ladies who so graciously assisted at the performance. The extension of their influence in society by means of the beautiful art through which they exerted it on this occasion, can only tend to subserve the very best purposes, and to promote some of the worthiest objects of social life.

A correspondent (Mr. J. M. Jaquemot) points out that the statement made in a native newspaper, the *Hochi Shimbun*, that the first state discovered in [illegible] been found last year in Kikuzen, is incorrect.

Seven years ago, he writes, during a pretty long peregrination I made in the provinces of Yetchigo, Aidzu and Yonezawa, I saw in Aidzu beds of slate standing on the banks of a river the name of which has escaped me, and which might be easily worked and conveyed down to the coast by water carriage. The officials I was then with, connected though they were with the local Government, in the mining department, had no knowledge of these slates, and had never thought that they were of any use whatever.

Two years ago riding from Shimokogoye in the province of Bushiu to Honjo in Joshiu, along the banks of the river Kanagawa, I met again with some beds of slate. I broke off some specimens with my knife and having brought them to Yokohama, took the liberty to make a present of them to Sir Harry S. Parkes. Those beds might also, I think, be worked pretty easily, and the slate conveyed by boats to the Tonegawa river and thence to Tokiô. I may as well add that the river Kanagawa referred to above, and some of its affluents, run through a whole range of limestone formation, including very extensive deposits of red, black, gray, and green marble.

It is to be hoped that Mr. Jaquemot's information as to the supply of this useful mineral may be turned to some practical account.

(From the Japan Mail Daily Advertiser.)

An important notification has been issued by the Prime Minister to the *Kiobusho*, ordering that the joint preaching of the priests of the Shintô and Buddhist sects shall henceforth cease and that this be communicated to the priesthood.

In the neighbourhood of Fukui in the province of Etchizen a severe hail-storm took place which lasted for some 24 hours. The hail-stones (for the dimensions of which the *Nisshin Shinjisshi* is responsible) weighed 1 to 10 ounces.

The *Choya Shimbun* says that a certain Fukuzawa has caused a large public-room, built after the European model, to be erected in Mita, Yedo. It was opened on the 1st of this month and a large number of people attended to hear a lecture upon English customs and literature.

The *Ly-ee-moon* arrived in port yesterday, from Hakodate, having accomplished the run thither in 49½ hours.

Following closely upon the embezzlement by which the Comptoir d'Escompte has suffered so heavily the announcement of the defalcation of Kung Yow, the Chinese Compradore of the Dentsche Bank to the extent of some 28,000 *yen* was received in the settlement yesterday with considerable susprise. The usual examinations of the cash, made from time to time, had revealed no deficiency, and it is probable that but for the approaching close of the Bank's operations here the fraud might have remained for long undiscovered. The culprit, however, himself avowed his guilt and alleged that he had been led to appropriate the Bank moneys by the unlucky issue of recent speculations in exchange. He does not appear to have had any accomplices. His antecedents are exceedingly unfavourable, as he suffered a term of years imprisonment in Hongkong for a similar crime. The Chinese community is, not unusually, much excited by this event which may be expected to draw attention to the existing compradore system in Eastern Banks.

The *Sumida*, a new screw steamer intended we believe for the Mitzu Bishi Company, arrived yesterday from London, viâ Singapore, after a somewhat longer voyage than is usual. The *Sumida* was built at Sunderland, and is 846 tons registered.

The *Hochi Shimbun* of yesterday, thinks that the appearance of H. M. The Mikado at the Daijokuan on the 4th instant affords evidence of the inauguration of the new political system.

The *Nisshin Shinjishi* relates that on the visit of H. M. The Mikado to Prince Arisugawa yesterday, His Majesty was much interested in an exhibition of portable gas which was lighted in his presence.

Okubo, Minister of Interior, has been appointed to superintend the arrangements for the Japanese Department of the Universal Exhibition of 1876 at Philadelphia.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The theory that crime manifests itself in recurring waves derives some support from a fresh discovery of embezzlement which was made on Tuesday afternoon. Messrs. Walsh, Hall & Co. were warned that their compradore had engaged in speculations which had proved unfortunate and that he might possibly take an opportunity to escape from Yokohama. On examination it appeared that his defalcation to them was unimportant and amply covered by the security of his guarantor, but that he had made away with other sums, deposited in his hands without cover. The total deficit is said to be some $4,000. The culprit was handed over to the police.

THE property lot No. 81 Homura road was sold conditionally yesterday for $ 3.900.

THE Authorities of the Yokoska arsenal, the Kaitakushi Department, and the Government Schools have been requested to make preparations for the reception of the Loochooan Mission who purpose visiting these establishments.

THE *Nisshin Shinjisshi* has a report that a Corean man-of-war arrived on Nagasaki on the 22nd instant. This will probably prove to be one of the Foochow training vessels.

The *Hochi Shumbun* says that a fire of unusual severity broke out on the 30th instant at Nakuogo, a village in the province of Joshiu, and was not arrested until it had consumed 240 houses. A few days before this a still more serious fire occurred at Takayama n Hida, by which the loss of 1,000 houses is reported.

IN the United States Consular Court an Saturday morning, two men belong to the P. M. S. S. Company's ship *Costa Rica* were charged, before General Van Buren, with assault upon a jinriksha coolie at Takashimacho. They were fined $5 each.

The P. & O. steamer *Bombay* with the overdue mails of the *Gwalior* sailed from Woosung at four o'clock on Wednesday afternoon.

THE noblemen whose names were mentioned as having undertaken the promotion of the northern railway to Awomori have, we learn, retired from the contemplated operation. It is again alleged that they have made, or are about to make, proposals for the purchase from the Imperial Government of the Yokohama and Yedo Railway.

A notification issued by the Prime Minister on the 5th inst., has appeared in the *Nichi Nichi Shimbun*, ordering that the Chihokuan Kaigi (or consultative assembly of the officers of each *Shi, Fu* and *Ken*) shall meet in Yedo on the 20th June next and continue its sittings for 20 days. The chief officers are therefore required to be present in the Capital on that day, or, failing their ability to attend in person, to provide a deputy to represent them. The sittings of this Assembly were, it may be remembered, postponed in 1874.

The cricket match yesterday between the "Settlement" and "H. M. S. *Challenger*" ended in favour of the former who won in a single innings.

The Messageries Company's steamer *Volga*, sailed from Hongkong last night with European mails to the 28th March.

IF the population of the metropolis has, as is alleged, diminished since the revolution there has been no falling off in the opportunities for personal cleanliness. The *Choya Shimbun* says that it has been found from enquiries that there are at present 1,000 bath houses in Yedo, while the number prior to the change in Government was but 550.

The *Hochi Shimbun* says that the great-grand-mother of the present Daimio of Mito, recently deceased, was buried with the full Shintô rites on the 6th instant.

BY our to-day's Shipping Report it will be seen that on Monday morning last, eight miles outside the Hiogo lighthouse, the *Parana* fell in with some shipwrecked Japanese, floating on a boat which had capsized, Two men and one woman were rescued, and one man, quite dead, left behind. From the state they were in they must have been exposed for some time, two of the three shewing symptoms of insanity, and all being too weak to move. After sixteen hours' treatment, however, they were all convalescent. It seems strange, with such a swarm of boats as are always passing that spot, the unfortunates were not rescued sooner. Is it true that the Japanese do not admit any moral obligation to save drowing persons?—*Hiogo News.*

From an advertisement our readers will see that the Adjikawa Branch of the Railway is at last to be opened to public traffic on the 1st proximo. This ought to be a boon to the Osaka traffic, though it is impossible to say immediately how consignors and consignees will regard the 10 per cent. extra charge. This step has long been urgently called for, it having been our opinion that a more complete system of feeders was what the Imperial Railways very much required. Indeed we went so far last year as to hint a doubt whether in the long run it might not have been better if the Government had expended some of the money spent on Railways on improuing the exising system of communication in the country in the first instance. The time for a thorough discussion of that point is now, however, in some measure passed, but we are glad to hail the present step as shewing that the Authorities are yielding to advice which will lead them in the right direction. In England, "short" traffic in populous districts is the traffic that pays the dividends, and we see no reason to suppose that the same thing will not happen in Japan.—*Hiogo News.*

WE hear that there is a very prevalent notion among the Chinese that the murder of Mr. Margary is fully condoned by the loss of native lives in the recent collision between the *Ocean* and the *Fusing*. True, they say, we have killed one of you English; but one of your steamers has been the means of killing fifty Chinamen, so no more need be said about the matter, There is a naïveté about this that is quite delightful, and eminently characteristic of the race. Others regard it as a just judgment on Englishmen in general and the English Consular service in particular for the part played by the authorities in the Fawcett case at Chefoo! And who knows how much this may have influenced the Chinese mind supposing the reports to have travelled as far as Yunnan?—*Empire.*

BRITISH CONSULAR TRADE REPORT FOR NAGASAKI FOR 1874.

THE Report of Mr. FLOWERS for the past year is not without some hopeful points. The returns show an increase in the Imports of $248,391, though he remarks that the trade in them has not been a satisfactory one to the merchants. We have little doubt that he is right. The days of profits in the old sense of the word are gone, and have been replaced by the days of bare commissions, tending to a larger business, perhaps, but to closer application, more severe economy, and a gradual lowering of the status of the merchant, so far as this was measured by the profusion of his expenditure or the size of his establishment. Men may still gain an honest livelihood in the East, but very few only will be able to spend or save much money. Steam and the telegraph are the engines which are bringing every thing to a dead level, and if aught of the picturesque is to be left in the political world, we must all keep shoulder to shoulder and support the Monarchies and the Upper Houses.

Mr. FLOWERS regrets, as does every one else, the want of a drawback system, under which goods could be re-shipped from a bad to a better market without the loss of the duty. We beg to offer him a story. At a port not ten thousand miles from Yokohama,—not in Japan, however,—a merchant imported some cottons, paid duty on them, took them out of the original cases, filled those cases with raw silk, shipped them as re-exported goods, and thus not only evaded the export duty on the silk, but claimed and obtained the drawback on the cottons. This happened because the Custom-House system under which the business of the port was in native and most inefficient hands. Without a system of Custom-Houses practically perfect and applied at all the ports, as in China, any regrets at the absence of the drawback system will be in vain.

As regards the exports from Nagasaki, it is very gratifying to find that the extension of the tea trade is bringing with it increased care in the picking and preparation of the leaf. The necessity for augmenting the exports of the country has become strongly impressed on the mind of the Government, which is taking very sound and liberal measures to this end. Loans on fairly easy terms are now made to the farmers or to persons embarking on agricultural pursuits, to enable them to clear and plant land; and every provision for their assistance in times of difficulty which can be prudently employed, has had the consideration of the authorities. The extension of these facilities throughout the country, and to other forms of cultivation, such, for instance, as silk and tobacco, the making of better roads, and the extension of the steam navigation on the coast to ports at present not open to foreign trade, ought soon to tell upon the production and exports of country, the quality of which will improve as the demand for them gradually increase.

In the management of their Tobacco crop in 1873-4 the Japanese fell into an error of which nothing but long experience will cure men—they held it over for better prices. The London market, however, did not rise as they expected, and when at last they were forced to sell, the deterioration the leaf had undergone by keeping was so great that they only realized half its sound value. In England it is a proverb among wise farmers that the man who, in the average of years, sells his produce as soon as it is in a marketable state, makes money, while the man who holds loses. "Sell and repent" is the best motto for men under these circumstances; it saves the bitterness of repentance at not having sold and being caught with large stocks in a market the tide of which is going down.

We have lately bestowed some remarks upon the subject of the duty recently imposed upon tobacco, and trust that no fiscal bar will be placed upon the extension of this trade, for the development of which there is practically an unlimited field. How far it may be possible to introduce new varieties of the plant into the country, and compete with America and the West Indies, not in a mere 'substitute,' the rank at present held by Japan tobacco, but as a staple—is more than we know. But information on this point would not be difficult of attainment, and if the result of enquiry is favourable, steps could easily be taken to introduce these congenial varieties.

The trade in Vegetable Wax seems in a moribund state. The mineral are beating the vegetable oils, and as Mrs. Partington could not keep the Atlantic out with her mop, Petroleopolis will probably ultimately beat Nagasaki.

In regard to the trade in cereals, Mr. FLOWERS' Report is dated before the late notification was issued rescinding the prohibition on their export. This trade has so far not been very encouraging to shippers, but the time may soon and easily come when it will give better results. The danger from the heating of the cargo appears formidable, and seems to demand more preventive measures than have hitherto been taken.

The result of the operations in coal-mining near Nagasaki last year seems poor enough. But there is every reason to hope for better fruits this year. The working of the mines promises to be more systematic, and, we should hope, more economical as experience increases. There appears to be an assured market for any quantity which may probably be put out.

Mr. FLOWERS draws attention to a tax levied, as he avers, in contravention of one of the clauses in the convention of 1866. This demands, and has doubtless by this time received, the attention of the Foreign Representatives. His report upon the roads leading to Nagasaki is deplorable, and seems to show that the improvements in the roads recently noted by a correspondent who has just returned from a long tour in the interior, has not yet dawned upon Nagasaki. Yet the growth of its trade certainly demands this attention.

THE FINANCIAL STATEMENT.

SPIRIT OF THE NATIVE PRESS.

THE ADOPTION OF THE ROMAN ALPHABET.

(Meiroku Zashi.)

We have read over three or four times the argument of Mr. Nishi with regard to the reform and improvement of our alphabet. His explanations are minute and clear, and if every thing were to accord with his theory, the adoption of the European alphabet would be a great gain to us and we should hail it with delight. But, at present, our people are so ignorant that they do not know what education really is, and it requires great labour to teach them our own letters. How much more labour would it require to induce them to discard our forty-eigh character, and replace them with an alphabet which they call 'curling earth-worms?' This would be the hardest of all hard things.

In looking at the most valuable inventions, we see that both profit and injury arise from them at the same time, and as Mr. Nishi has given us a minute explanation of the advantages we should derive from the adoption of the European alphabet I shall not speak of them. But as the disadvantages remain to be told, I will attempt to explain them.

It is the disposition of the human mind to dislike things difficult of acquirement, and to turn to those which are more easy. For instance; if we should write in Chinese characters the words mountain, and river they appear very plain and intelligible, and, again if we write the words 'river,' 'leather,' 'side,' in Chinese, the characters will enable us to understand their respective meanings at the slightest glance, though their sounds are the same. But if we were to write *kawa*, *kawa*, *kawa*, it would be very difficult to undertand the sense is which the word was used. The reason that our letters were so easily changed in ancient times is because our literature was then in a dark condition, and now we do not know what characters were used at that time. But it is probable that they were rude and inconvenient, and, in comparison with those of the Chinese greatly inferior. Our learned men, therefore turned immediately to the Chinese letters, and the people followed their example. The state of our literature in those days was very different from what it is now. The Japanese and Chinese characters have been since mixed together, and have in this form been in use for upwards of two thousand years, and they are sufficiently convenient considering the present condition of our civilization. Now, to discard the Chinese and Japanese characters, and to adopt the European alphabet, would be a task of great difficulty, for the change could not be made with the same ease as in ancient times. At present all documents, from the Notifications of the Government to the letters of common people, are written in mixed Chinese and Japanese characters. Besides this, all controversies, teachings, histories and sciences are found written in the same character, and should we abandon the Japanese-Chinese characters, these things would be no longer understood, and this long period of two thousand years would be practically obliterated. We may suppose that certain learned men would come forward and write these histories in the European alphabet (i.e. transliterate them), but this will obviously be so much double work. In view of these disadvantages, it is obvious even to a child, that it would be folly in us to discard our own useful characters for the European alphabet.

Cannot these characters ever be changed, then?

I answer, yes. The above inconveniences are only inconveniences to us*
But, regarded with more instructed eyes, they would cease to be so.

By whom, then, and through what succession of causes can the change be made?

I reply; What we now stand in need of is, education, let this be either Chinese, Japanese or European; and the faculties of the people will he developed by it. And when they get into the wood of education, they will not he long in discovering the inconveniences of our present system in writing. They will then of themselves raise the idea of the change, which, like a boat going with the stream, will proceed without either labour or opposition.

NISHIMURA.

(Meiroku Zashi.)

Owing to our having adopted the ancient or Chinese mode of writing, what we speak differs from what we write, and this prevents us from speaking as we write, writing as we speak. Many of our people, therefore, are planning to do away with these inconveniences. Some say that it would be well to diminish the number of Chinese characters in use, retaining only certain of them. Others say that we had better retain them all and make new dictionaries and grammars. European customs have lately become prevalent in Japan, such as dress, food, the character of dwelling-houses, our prison discipline &c.; and they have affected our politics and habits of thought. Besides this, there is not one of the European arts or sciences that we have not assimilated into Japan, and, in times to come, foreigners will be permitted to live freely in all parts of this country, and their religion will become prevalent among us. I think, therefore, that their alphabet ought to be imported and implanted among our people.

In ancient times the Chinese characters were introduced into the country, and by these our habits of thought were gradually moulded. But now, all our thought comes to us from Europe. Is there any reason why we should not also employ the European alphabet?

Some may say that as it is very well to bring our material commodities from Europe, so there would

* These were the Bills on the Finance Department given by the Government in exchange for the old *nibu kin*.

* That is, to us in our present state.—[ED. *J.W.M.*]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

be no wrong in introducing the European alphabet to our people, though it is no easy task to accomplish this. Others say that as it is very well to use the Roman alphabet, it would also be well to change our language into English or French. But I think differently, because language, which belongs to a race, a locality and a climate, is not a thing which can be changed, and, this being the case, there is nothing better than to introduce the new alphabet into our language and make rules for the application of it.

By knowing the twenty-six letters of the *a*, *b*, *c*, and their pronunciation, and how to put them together so as to spell words, and by assimilating our writing and speaking, we should greatly facilitate the delivery of lectures, the speaking before assemblies and preaching, because all that was written beforehand might be subsequently read out. But this is not all. Our women and the common people of the interior will be able to read the books of our best authors, and will be able to express their own opinions in writing. At present European mathematics * are greatly in vogue, and all those who are conversant with them think them very convenient, and urge that great advantage would also accrue to us from the use of the foreign alphabet.

(Meiroku Zashi)

A great desire has been shewn since the Restoration to change our written characters for the sake of convenience, and some propose to use the *hiragana*, others the *katakana*, others the Roman alphabet, others desire a new set of letters. Some even wish to exchange our language altogether for English, while others desire to keep and leave the characters as they are so that there are many conflicting opinions. But among all these schemes, the most difficult is to exchange our language for English, while the easiest is to retain the use of the mixed Chinese and Japanese characters, and with this we can manage to move along. But how many are there of us in the country who can understand them? And although we have dictionaries there are so many ways of writing these characters that such assistance does not do much for us. In all edicts and notifications *kana* has to be placed by the side of the Chinese characters, which is extremely awkward, and even then, the number of those who understand them is very limited. Of course it may be said that this arises from the defective education of the people. But this again arises from the extreme difficulty of acquiring a knowledge of these characters, and this has lately become much increased on account of the daily introduction of new words into the language, so that it is a hard task even to understand an ordinary book of the present day. Looking at the subject in this light, it must be confessed that the Chinese and Japanese characters are not very convenient, though the changing of these is like changing our accustomed rice for bread, which, though more nourishing, cannot be done without great difficulty. Letters are the symbols of sounds, and language is the instrument of composition. Through its means we can look into the past and present and diffuse knowledge. It is therefore a thing which cannot be overlooked for even a single day. The spoken and written language should be the same, otherwise what is written can exercise but a small influence over the mental faculties and the emotions. There are some books written in the *kana*; these affect even the minds of children, because they are written in the spoken language. I have heard that the Europeans and Americans are endeavouring to assimilate as much as possible their spoken and written language and to speak as much alike as possible. * The Chinese students who were lately sent abroad were accompanied by a teacher of their own language, and this seems to be a measure of laudable care. Why is it that we are trying to bring a foreign language into the country? It arises from that defective patriotism which prevents us making necessary changes in old habits. Of course it is the duty of our learned men to assimilate the spoken to the written language, and those who are desirous of importing new languages are violators of their duties. As every one is not acquainted with the *katakana*, I think that the *hiragana* is the best for us to use. The extent to which it is diffused may be estimated by its use in sign-boards and text-books.

SHIMIDZ.

[TRANSLATION.]

From the "Ni-shin Shinjishi" No. 95, of May 4, 1875.

It is said that on the 2nd instant, the Appointments and Regulations of the Gen-rô-in were fixed as shown in the accompanying document. We accordingly make them known to all those waiting in expectation of them, as follows:—

APPOINTMENTS IN THE GEN-RÔ-IN.

One President at a yearly salary of *yen* 6,000.
One Vice-President at a yearly salary of *yen* 4,800.
Councillors, number not fixed, at a yearly salary of *yen* 4,200 each.

Shokiku'an (Secretaries).

Dai-shokiku'an of 4th class of official rank.
Gon-dai-shokiku'an of 5th class of official rank.
Shô-shokiku'an of 6th class of official rank.
Gon-shô-shokiku'an of 7th class of official rank.

Shokisei (Under-Secretaries?)

Dai-shokisei of 8th class of official rank.
Gon-dai-shokisei of 9th class of official rank.
Chin-shokisei of 10th class of official rank.
Gon-chin-shokisei of 11th class of official rank.
Shô-shokisei of 12th class of official rank.
Gon-shô-shokisei of 13th class of official rank.

REGULATIONS OF THE GEN-RÔ-IN.

1—The Gen-rô-in is an office to discuss laws, and is thus to debate and determine the establishment of new laws and the alteration of old ones, and also to receive all memorials.

2.—One President; To be a special appointment (from the Emperor?); the one Vice-President to be elected by general vote from out of the number of Councillors.

3.—Councillors; To be a special appointment (from the Emperor?)

4.—Persons chosen out for the appointment of President, Vice-President, or Councillor, can only be persons who have attained some office held direct from the Crown, and who have exerted themselves for the good of their country and homes, or are learned as regards Government or laws.

5.—For precedence the President, Vice-President, and Councillors are to rank as Officials of the first class.

6.—The age of the Councillors must be 30 full years or upwards.

Note.—Persons, however, who have for two whole years performed the duties of offices held direct from the Crown are not included in the above.

7.—With regard to the establishment of new laws or the alteration of old ones, all the matters to be discussed must be given forth by H. M. The Tennô, and even in the case of what appears in Drafts issued from the *In* itself, such is not to be handed in to the meeting direct.

8.—Should any laws, already put in force by offices where the direction of the Government is carried on, not be in conformity with the Regulations, it is allowable for investigation to be made and for the matter to be referred to His Majesty The Tennô; but it is not permitted to discuss the degradation or advancement of the officials.

9.—The *Daijin* and the *Sangi* are at a any time and without regard to circumstances, permitted to attend at the *In* and listen to the discussions or make known their own views; but still they are not to be included amongst the number of officials who have a voice in deciding the debates.

10.—The Ministers and Vice-Ministers of the various Departments are, in connection with matters relating to their duties, at any time permitted to attend at the *In*, to make known the advantage or disadvantage (of the

* Meaning, doubtless, the Arabic numerals.—[ED. *J.W.M.*]

* We are not quite certain of what the writer has here in his mind. If he means that the Europeans are cherishing any hopes of universal language he is certainly in error. No sane man believes that the English will give up the power of reading Shakespeare, the French Molière, the Spaniards Cervantes, the Italians Dante or the Germans Goethe, in their respective languages.—[ED. *J.W.M.*]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

measures) and to represent their worth or otherwise, and also to listen to the discussions; but still they are not to be included amongst the number of officials who have a voice in deciding the debates.

11.—Several Secretaries are created, amongst whom are to be portioned out the various matters appertaining to the *In*.

12.—In respect to the advancement or degradation of the the Secretaries of the *In*, petition is to be made by the President and the Vice-President, who are also to solicit instructions.

Extremes.

(Choya Shimbun,)

Before the last civil war, our proud Japanese and the stiff-necked Chinese scholars said that the Europeans were barbarians and regarded them as degraded. But this is not all. They looked down upon and threw aside every thing imported from foreign countries. They said matches were filthy, and, in spite of the inconvenience, continued their use of the old flint and steel. The same with umbrellas and water-proof cloaks, which they called barbarous, and, in their stead, used enormous rush-hats and straw rain-coats, making such figures of themselves that no one could say whether they were men or beasts. All this happened ten years ago, and we all think it a great blessing that these opinions have disappeared. But now there is quite a strange party whose doings are just the opposite of the scholars whom we have mentioned, though the folly of both is equal. The latter party profess to be 'civilized,' but are really conceited, people. Every thing foreign is good in their eyes; every thing Japanese bad. They think that there is no rational method of writing but the 'crab-walking' mode, and they teach their children, who do not know the Japanese alphabet, to read foreign books. Thinking that unless dressed in foreign clothes they are uncivilized, away they go, purchase a cast-off suit of foreign clothing at a second-hand merchant's, and when they wear them their sleeves extend several inches beyond their hands, and their bodies are puffed out like the sails of a ship going with the wind. They wear large boots of enormous weight over their trowsers, and after walking for a short distance they are greatly distressed by the projecting nails in the inside of the soles. These people may not be as obstinate, but they are just as curious as our former scholars.

Religion.

(Nichi Nichi Shimbun.)

At present the principles of Religion are not understood by the Japanese people. This is to me a cause of great grief. Speaking in general terms, the principle of religion is the truth originally given by Heaven to man and which every one without exception possesses. [Conscience.] On this account the Government itself has not power to suppress the worship of the true God and obedience to his laws by this principle. Of course, parents, teachers and friends also have not the least right to interfere therewith. The enlargement of a spirit of freedom among the people is to be traced to this same principle of religion. If the spirit of freedom is not increased the country certainly will not increase (in power). On this account the rise and fall of countries as that of individuals is entirely dependent on the excellence of their principles of religion or the reverse. The discovery of the only true God and obedience to his laws then is obligatory upon all. Yet rustic and bigoted persons as heretofore have not reformed their habits and degrading customs. Even in my neighbourhood are persons who worship gods of uncleanness and of covetousness for these degrading purposes. And there are persons who neglect all business and worship only to get money; who leave the sick without proper medicines, and trust their recovery simply to praying to the gods. And so persons not having fatal sicknesses have frequently died from this neglect. Ah, these are things which arise from not knowing man or God!

Destitute of reverence for God's glory, and the knowledge of man's duty having been darkened, slander, theft, casting out children to die, [illegible] and such like enormities are found in every village and hamlet. This is so great a grief I cannot quietly bear it. How then shall these ignorant people be instructed, and these customs be swept away?

A certain man replied to my inquiry that all that was necessary was to discover the true and greatly to be adored Creator, and understanding what was man's duty he should reverence what ought to be reverenced, and do what he ought to do. I thereupon immediately determined to learn the holy doctrine of the only one true God and daily I became more impressed therewith, and month after month believed it more fully. Thus knowing God's excellence I learned man was at the head of all creatures. This truth has become as clear to my mind as when darkness flees away from the dawn of day.

Therefore I concluded I must urge its acceptance on my relations, and to such friends as I might meet I should make it known that I might deliver them out of the darkness and advance them into the light, causing them to expand in love and to make truth of first importance, to cease their prostrations to the Buddhist and false gods, and their worship of them for covetousness, forgetting truth and man's duty; and to make it extend even to those who slander, steal, cast out their children, commit abortion, and such offensive practices without the least compunction, that they, desiring to attain to the true dignity of man, should strive without cessation to be converted and repent (of their evil practices).

But then what unexpected thing should happen? A certain priest of my village, a preacher under appointment of the Department of Religion (Kiobusho) envying my worship of the only true God and obedience to the true religion, busily tucked up his skirts and with flapping sleeves hastened to the Chiu Kio In, (department of preaching,) of Kazusa, and made complaint against me, wishing to have me punished. On the contrary, the officer of the preaching department replied to him angrily; "You have been negligent in your duties, and because your teaching has not been efficient they do not believe in your doctrine, but believe in another doctrine."

I know that in all enlightened foreign countries, religious teachers strive to advance the people more and more in truth and in all right actions; but I have never heard of a teacher of religion like the foregoing who not only envied the people's advancement in truth and good works, but also planned to involve them in punishment. Truly a pitiable teacher of religion, is he not? If there are any other such teachers, as the foregoing, of bigoted and degrading ideas, what shall be done to sweep them away? How shall the people's rights be promoted, and how shall the country's or the individual's welfare be advanced? I cannot at all tell! What think you, my thirty millions of brothers?

An account of what truly took place in the middle of February.

SUZUKI SEK KIO.

Matsuzaki Mura,
Im-ba-gori, Chiba ken.

The steamer *Ocean* has been arrested at the suit of the owners of the *Fusing*, for the sum of Tls. 200,000, at which the latter have laid a claim for damages sustained by the collision. We hear that there has been a good deal of difficulty as to the form in which this claim should be raised. The Chinese claimed that it should be tried before the Consul and Taotai under Art. XVII of the Treaty of Tientsin, and the Chief Judge's ruling in the collision case appealed from Foochow (*v. N.-C. Daily News*, Feb. 11, '75) would uphold them in so doing. But the difficulty then arose that the Consular, or Mixed Court so constituted is said to have no power of arresting the steamer. The C. M. S. N. Co. appear to have ultimately resolved on trying the case before the Supreme Court. The Chinese take immense interest in the case, from the fact that a number of mandarins were drowned by the accident; and are said to be seriously inclined to treat the accident as a set-off against the murder of Mr. Margary in Yunnan! averring that damages may be as reasonably claimed for the (accidental) death of so many mandarins, as for the (wilful) murder of a British official!—*Daily News*

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Suicide.

(Continued.)

The subject of suicide in this country might be enlarged upon to a greater extent than the proportions of these notes admit. We will, however, notice a few of the earlier and most celebrated cases.

In A.D. 313 the fourth and fifth sons of O-jin-ten-O (afterwards known as Hachiman sama) had a dispute about the succession to the Throne, each declining the honour in favour of the other, and finally, after three years of debate, the fifth son, Waka Ira ko no mikoto, committed suicide by cutting his throat to make way for his brother who became Nin toku Ten-O.

In A.D. 671 Otomono-Oji attempted to assassinate his nephew, Oieno Tenchi Ten-O,* and failing, hung himself.

In 1170 Yoritomo's uncle, Tametomo, was defeated at Idzu by the Heké, when he disembowelled himself, and then cut his own throat. This is one of the oldest cases of *seppuku* on record. Ten years later Yorimasa failed to depose Kiyomori, and committed suicide by *seppuku* at Bioto-In in Uji.

In 1289 Asaharu Tameyori rebelled, and, being defeated, was ordered to commit *seppuku* in the official palace (Shinden.) This is one of the oldest instrance of judicial suicide, *i.e.* by order of the Government in expiation of crime.

In 1357 a priest named Yegen rebelled against the Ashikaga Shogun Takauji, and being unsuccessful, poisoned himself. There are few instances on record in Japan of suicide by poison, although a Chinese custom and likely to be adopted by scholars of the classics. The poisoning of enemies or opponents, however, was common.

In 1586 the lord of the provinces of Nota, Niwa Nagahidé, who was subject to spasmodic fits, killed himself by disembowelment, to free himself from the excruciating pains he suffered.

In 1591 Hidetsugu, having been accused of plotting the assassination of his uncle Hideyoshi (Taiko) who had adopted him as his son, escaped to Koyasan in Kishiu, and, failing to prove his innocence, chivalrously ripped himself open.

The judical *Seppuku* by order of the Government seems to have been a recent custom, indeed, does not seem to have obtained previous to the time of the Tokugawa dynasty of Shoguns. The most celebrated case is that of Asano Takumi no kami, as a punishment for drawing his sword in the palace, A.D. 1699, when, in a fit of anger and jealousy, he attacked and wounded Kira Ko'skenoské. †

Officers of the Government or of the Daimios were sometimes obliged to expiate the faults of their lords, and these occurrences form the foundation of innumerable tales of loyal and brave men of all times, past and present.

Women have rarely been known to hang themselves. A case of a female who died not long ago of self-inflicted *seppuku* was remarkable and unprecedented in native annals, and there are no cases known of persons being murdered by disembowelling.

When a man's honour has been wounded by persons physically superior or of higher position, the injured man not unfrequently first kills his family, wife and children even, and then commits *seppuku*, leaving behind him a written statement of his wrongs, which then become known to the authorities, and stringent means are resorted to in order that justice may be done to all parties.

Suicide by fire-arms is unusual. Fire-arms are not generally possessed by the Japanese and are never loaded but when out shooting, which is not a common pastime, even few of the high officials caring for it. Hunting is a means of livelihood and almost a hereditary trade. But latterly since foreign drill and arms were introduced, occasional cases have occurred of death self-inflicted with fire-arms, the muzzle of the weapon being placed against the breast, and not the head, as is more common with foreigners.

There are many legends of faithful followers being forced to commit *seppuku* by other disloyal retainers—the axiom 'dead men tell no tales' being well understood in Japan. Warriors beaten in the field often committed *seppuku* in preference to flight, and the wounded invariably themselves put an end to their misery, or got some friend to sever and carry off their head.

Amongst the common people, poverty, discovered dishonesty or other disgrace often leads them to put an end to their lives by hanging or drowning; men principally by hanging themselves, women by drowning in a river or even a well. Lovers vow to die together either by drowning or by the man first killing the woman by cutting her throat, and then committing *seppuku*.

Men rarely cut their own throat, or poison themselves. Those who drown themselves are usually old men. Women of determined character, if they have no opportunity to drown themselves, cut their throat.‡

From time immemorial it has been, and still is, the invariable custom on the occasion of a wedding in the higher classes of society that the bride is provided with a lacquered box, about the size of a small lucifer box, in which are placed two dried beetles, of a golden colour, known as *Tama mushi* (jewel insect) which, if swallowed, are supposed to cause speedy death. This is in case something should happen to make her wish to put an end to her existence.

There are few cases, however, in which these means have been resorted to, and the real poisonous insect is, it may be credited, rarely placed in the box. Although accidents by fumes of charcoal are common with foreigners in Japan, they are rarely heard of as occurring to natives, and suicide by asphyxiation with charcoal fumes is practically unknown to the compiler of these notes, notwithstanding much enquiry, and a personal experience of over a decade in Japan.

Biting the tongue is resorted to by women mostly, but men have been known to attempt it, for instance, when deprived of the use of their hands or instruments, as when in the hands of the police—with women, too, when tied up by villains in attempted outrages.

Setzupukku,§ pronounced *seppuku* also means *hara kiri* or abdomen-cutting. When ordered by the Government, it is conducted with great ceremony and minuteness of detail, and the only way to obtain a correct view of it is by visiting a respectable theatre during the performance of the tragedy of Chiu shin gura (the forty-seven *rônins*). Here the death of Asano by order of the Shogun, and his follower Hayano Kampei (stage name) by his own hand, in his grief and shame, when falsely accused of the murder and robbery of his own father, give illustrations of the different modes of wiping out of a stain on one's honour by means of suicide.

Sometimes a dexterous swordsman severs the head at the moment the abdomen is ripped open, and generally so when the victim is considered by the authorities as guilty of an offence against the Government. In the other case, a friend or faithful retainer may be appointed to this last act of fidelity, to spare the dying man unnecessary and prolonged agony in dying after the self-infliction of the fatal wound. The brave and honest *bushi*, with the small keen stiletto, deliberately rips himself below the navel six inches from right to left and continues the cut for three inches upwards. The cut is not deep, the blade being wrapped in paper, only a small portion of the point being left bare.

The faint-hearted or rebellious or traitorous have the small sword (*tanto* or *ku sun go bu* (.95 of a foot)) laid on a tray in front of them, and when reaching forwards towards it to grasp it, the *kai shak'* (executioner) severs the head from the shoulders, which, in former times, was then placed in a chip box, in the case of an enemy whose head should be brought to his capturers. Of late the friends of the deceased have been allowed to take away the body and the head.

* The same Tenchi Ten-O, was the author of the first poem of the Century of Poetry (see Mr. Dickins Japanese Odes and other Translations.)

† This forms the story of the forty-seven *rônins*, so well told by Mr. Mitford, and a translation of the piece as put on the stage appears in the *Far East* 1873-4.

‡ Women married and single always have razors in theis toilet furniture, often in their pocket dressing-cases.

§ *Kwatzufku* (Kwapuku) splitting abdomen; but the origin of the name "happy despatch" is obscure. There is no equivalent in Japanese, but under certain circumstances it is looked upon as the correct "finale" to an act of revenge, or stern duty.

Original from UNIVERSITY OF CALIFORNIA

Those culprits who are executed for crime at the execution grounds are beheaded with their hands and arms bound, and the heads are exhibited.

A clever swordsman does not completely sever the head at the first blow, but divides the spine and muscles only, then, grasping the head by the hair and shifting his hold of the sword, he holds the head up, the face towards the official witnesses, and then, at their order, with an upward cut, severs the head and throws it down on the mats. The usual dress on these occasions is a light-blue robe of linen over which a linen *kami shimo* is worn.

Men of rank have silver-gilt screens drawn around them on which white poppy blossoms have been painted. These screens are not therefore in common use, and silver gilding and the white poppy are rarely seen, the combination being suggestive and distasteful, especially in those families any members or ancestors of which have been forced to commit *seppuku*.

Although no longer ordered by the Government, and officially discountenanced, yet of late there have been many cases of *seppuku*. Indeed, within the memory of 'old residents,' cases have occurred of high officers committing *seppuku* because their advice was rejected,—Hori Kura no kami, I'ori Oribe no kami, and numbers of others within the last few years of the Tokugawa *régime*. Since then we occasionally hear of the 'death' of an official, but it is looked upon with the same disfavour as duelling is amongst ourselves,—wrong, but sometimes necessary to preserve one's honour.

There are many occasions in which Japanese have died by their own hands, where it is difficult for a foreigner to understand the motive. Such was the case with the two last mentioned officials, whose sole reason was that their advice was not accepted, and they wished to prove their patriotism and honesty of intention. Again, in some instances there is great dependance placed on the fact that a case of this kind invariably brought on enquiry and notoriety, and the end sought was not unfrequently eventually gained; though the honour comes too late, the family benefits, and the victim attains certain fame.

By way of general remark we may say that suicide was frequently compulsory as a punishment for offending officials. Only under guilty circumstances of a special character and enormity did the family suffer beyond the forfeiture of the income of the suicide. Generally, it is the saving of the family, socially and pecuniarily.

In most instances among men, the act springs—strange to say—from the possession of the very courage the absence of which may be inferred among ourselves from a similar act, that is, moral courage, which induces them to destroy themselves in order to save their family.

Men and women tired of life who take their future into their own hands are invariably considered insane, under the influence of the fox, or some such power as leads them to harm.

The custom is not by any means disappearing or dying out. The judicial *setzupukku* only is discontinued, and the native papers frequently contain accounts of men ripping open their own abdomens on points of honor or to vindicate their conduct. As on the case of Tsunayoshi's *Midai sama*, the name may be known to posterity as that of a patriotic hero or heroine.

The Chinese have a report amongst themselves, said to be founded on a letter from Peking, that the Empress Dowager had handed over to Prince Kung what is practically the supreme power of the state. He will thus be according to this account, the head of the Chiün-chi office, and will in future wield the *Vermilion Pencil*, which, with the exception of two years during which the late Emperor used it, has remained in the sole hands of Her Ma-jesty Tsze-An since the death of Hien-fung. The man who is invested with this power is to all intents and purposes Regent of the Empire; and it is said that other princes and high ministers at Peking are showing fear and jealousy. But it is quite possible that there may be nothing in the rumour after all as there have been many almost equally startling current.—*Empire*.

BRITISH CONSULAR TRADE REPORT FOR NAGASAKI FOR 1874.

British Consulate,

Nagasaki, March 26th, 1875.

Sir,—I have the honour to transmit to you herewith the following Returns shewing the Trade and Shipping of this Port for the year 1874, which have been drawn up in accordance with the instructions contained in your Circular Despatch No. 1, of the 13th January last:—

I.—Two tables of the Import Trade comprising a Return of the Imports from England and other Countries, and the other of the Imports from Open Ports in Japan.

Table II.—Two tables of the Exports, one to England and other Countries, and the other to open Ports in Japan.

Table III.—One table of the Treasure Imported and Exported, distinguishing between Imports from and Exports to foreign countries, and local shipments as between open Ports.

Table IV.—A general return of all Foreign Shipping (inclusive of British).

Table V.—A Return of the Duties Collected on Imports and Exports and Shipping Dues.

VI.—A Return shewing the number of British Residents and British Firms, and the Residents and Firms of each foreign nationality.

Imports.

The Returns show a total increase under this head amounting to $248,391, which more than makes up for the deficiency of $229,774 noted in my last report. The total value of the past year's Imports is ($1,875,166) one million eight hundred and seventy-five thousand one hundred and sixty-six dollars against one million six hundred and twenty-six thousand seven hundred and seventy-five dollars ($1,626,775) in 1873; but on the whole, though the amount is larger, the result of the year's trade, as far as Imports are concerned, cannot be considered satisfactory. This market being a small one is very liable to become overstocked, the high rates sometimes offered for any particular article, when stocks are low, not unfrequently leading to this result.

If the system of drawbacks were established, as is the case in most civilized countries, and in China, merchandise might be re-shipped when the market here becomes hopelessly overstocked, but as this equitable system does not exist in Japan, the merchant is often reduced to the necessity of selling his goods at a loss in a market where they are not wanted, or of sacrificing the whole of the duty by re-shipping them.

Exports:—The most important staples of export continue to occupy about the same relative position as formerly.

Tea.—In my last Report I pointed out some reasons likely to operate on the trade in this article during the past year, and to produce a larger export than that of the preceding one. The Returns I am now forwarding—confirm the correctness of my surmises;—the total value of Tea exported in 1874 being four hundred and forty two thousand, seven hundred and eight dollars ($442,708) against three hundred and five thousand, three hundred and sixteen dollars ($305,316) in 1873. As this result is chiefly due to the circumstance that an unusually large part of the 1873 crop was held back until the beginning of 1874, and so came abnormally into the export for that year; it does not, I regret to say, argue a permanent improvement in the position of Tea as an article of export. At the same time, I would remark, that much greater care is now bestowed by the natives on the picking and preparation of the leaf than was formerly the case. During the past two or three years a gradual but very noticeable improvement has taken place in this respect, although this port has not reaped much advantage from it, for it has resulted in the shipment, on native account, of a large portion of the finer classed Tea to Yokohama, where, on account of its suitability for mixing, it realizes higher rates than at this port.

Tobacco.—The export of this article amounts to piculs fourteen thousand and sixteen, against piculs nine thousand six hundred and seventy-four in 1873. In my last report I gave reasons why the export during 1874 would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

be likely to exceed that of 1873, and I am sorry to say, that the increase, although a large one, does not prove that the Tobacco trade here is assuming more important proportions. The export of 1873 was an unusually small one, and my prediction of a larger one during 1874, was based upon the simple fact that the 1873 produce was still in the country, being held back by the natives in the hope that they would obtain a better market for it later on: their ideas, in this respect, were not realized, for prices in London did not advance, and a great portion of the tobacco, thus withheld from sale, became so damaged by keeping that it was eventually disposed of for less than half its sound value.

The supply for the Season 1874—1875 is, I am given to understand, a large one and in quality and condition is quite up to the average of previous years; prices so far have ruled low; previous heavy losses having induced caution on the part of buyers. The greater portion of the present stock consists of medium quality leaf, and it is generally considered here that at the existing price (say seven *yen* per picul), shipments of tobacco have a good prospect of doing well, especially when the shortness of the American crop is taken into account.

Vegetable Wax.—This article again shews a decrease, though not to the extent that might have been imagined, the figures being piculs eight thousand five hundred and eighty-nine against piculs nine thousand eight hundred and sixty-three in 1873. I say not to the extent that might have been imagined, in allusion to the heavy losses shown by the exports made during the last named year, and to the overstocked state of the home markets of which you will find mention made in my previous report. Although prices paid during 1874 have been lower than in 1873, an average of ten dollars instead of twelve dollars per picul, shipments have almost uniformly shown an unfavourable result. The London market has never recovered from the depression caused by the heavy shipments of 1872, and it would seem that the consumptive demand is not sufficiently expansive to enable the market to absorb any unusually large supply for some years. From what I have been able to gather, the prospects of this trade are far from encouraging. The home demand, instead of increasing with low rates, seeems to be falling off, while these rates do not cover cost of production and expenses of shipment. These results are due probably to the reduced price of Kerosine and other articles capable of similar application, and they would seem to point out that vegetable wax, except to a small extent, and for some purposes for which it may be specially suitable, will ere long cease to be exported.

Camphor.—There has been no direct export of this drug to Europe or America, the quantity figuring in the annexed list, piculs one thousand and ninety-five, having gone chiefly to China.

Copper and Bronze.—The former metal has ruled too high for export except in small lots to China, and of the latter one or two small parcels have been sent to Europe. The total of shipments shews a heavy falling off, namely from four thousand eight hundred and sixty-three piculs in 1873 to six hundred and nine piculs in 1874; but copper has never been a large article of export since the opening of Kobé, except in the form of old guns &c. the supply of which is now nearly exhausted.

Rice and Wheat.—One cargo of these cereals, aggregating forty-three thousand eight hundred and three piculs, was shipped to London per "*Shalimar*" in the early part of the year, but I understand the result was not favorable. Should the prohibition since placed upon the export of grain be taken off, I imagine the trade may become important, but as it is one in which merchants at this port have hitherto had little experience, and one, moreover, liable to great fluctuations, caution would probably confine operations within small limits at first. The rice crop has turned out good and the yield far above the averge. The prices have ranged from seven dollars per *koku* in June, to eleven dollars and a half at the end of August, and from that time continued stationary at about eight dollars till the end of the year. These prices present a great contrast to those of 1873, when the price of rice ranged from three dollars ten cents per *koku* in January to four dollars and seventy cents in December.

Coal.—The total export of coals from Nagasaki during 1874 has been about one hundred and seven thousand tons against ninety-three thousand tons in 1873. It may be assumed that the trade in this article has doubled since 1870, and that it now ranks as the most important branch of the Export trade of this port. There is every prospect that the next four years will show a decided increase in the above figures.

Takashima Coal.—With regard to the quantity of coal produced by this mine, I would remark that the accounts handed to the present proprietors in the latter part of the December by the "Kobusho" are in a very disordered state, neither in the office nor from the Custom House can a correct list of shipments be obtained. However, I have ascertained from a very reliable source that the out-put of coal at Takashima for the year ending the 31st of December last was:—

No. 1 pit.....	18,467 tons.
No. 2 „	60,920 „
Total.....	79,387 tons.

In comparing these figures with the previous year of 1873, I find it shows a slight decrease of about three thousand tons.

This arises from two causes:—the stoppage of the works at No. 1 pit and a failure on the part of the former workers of the mine to make the production as large as it might have been had it been conducted by private enterprise. The mine is being rapidly developed, and there is every reason to believe that the success of the undertaking is now fully assured. About three hundred tons per day are now being got up, but it is anticipated that the out-put will soon increase to four hundred tons per day or even more. The coal worked is a capital steam coal, but smoky, and resembles very much the English Newcastle coal. It now finds a ready sale, and enters largely into competition with coal brought from Australia and other kinds. The mines are worked upon the European system, and by English engineers. Many of the Japanese make excellent workmen.

There are several seams of coal in the island, varying from one to sixteen feet thick. It is estimated that for the next twenty years the out-put of coal will be considerable. The dip of the coal seams is about one foot to the yard.

Shipping.—On comparing the total number of British ships that have entered and cleared with the previous year, it will be observed that very little change has taken place:—Two hundred and fifty-one British vessels, of the aggregate tonnage of one hundred and seventeen thousand six hundred and fifteen, against two hundred and seventy vessels of one hundred and nine thousand eight hundred and fifty-three tons in 1873 which gives seven thousand seven hundred and sixty-two tons in favour of 1874, though at the same time the number of vessels has decreased by nineteen. There has been a perceptible increase in the North German vessels; eighty entered and cleared in 1874, of thirty-eight thousand one hundred and two tons, against fifty-three in 1873, of nineteen thousand and ninety tons; showing an increase of twenty-seven vessels of nineteen thousand and twelve tons. Only three British vessels of three thousand three hundred and sixty-eight tons have cleared direct for London.

General Remarks.

"*Go-rin gin*" or "*Tekadyuriyo.*"—I take this opportunity of bringing to your notice this tax which is not only detrimental to the interests of Foreign Trade, but is imposed in direct violation of Treaty Regulations. The Japanese Government ought to understand the invidious bearing of the tax, and the bad faith which its continuance involves.

I believe the same Regulations exist at other open Ports, but with some modification as to the manner in which the proceeds of the tax are applied. At Nagasaki, whenever a Japanese merchant sells goods to a foreigner, whether for export or not, he has to obtain a permit from the Department called "Shonin-sewa-kata," and to pay a tax of one-half per cent. on the value of the goods sold. Should he fail to comply with this regulation his goods would be liable to be forfeited. The same is the case with all purchases made from Foreigners by natives, but there

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is no equivalent tax on their transactions with one another. The "Gorin gin" is levied even upon such articles as curios (if brought to a house for sale), milch-cows, house, furniture, white lime, and other items of domestic use or consumption, but beyond the annoyance it is not much felt except in large mercantile transactions, where it not only has the effect of an increased export or import duty, but places foreigners at a disadvantage with native merchants in local traffic. I am informed by merchants here that they have not unfrequently been required by sellers of tea to raise their offers by one half per cent so as to place them on a par with offers of the same price made by Yokohama native dealers, clearly showing that the tax ultimately comes out of foreign pockets. The Japanese Authorities, I believe, defend the imposition on the ground that it is a local rate intended for native municipal purposes, and not levied by the Central Government, but its payment is enforced by Government officials. Apart from the want of wisdom which such additional burthens on the industries of the country betray, foreigners have reason to complain that it is only levied upon transactions where they are concerned, and this amounts to a breach of the second clause of article 9 of the Convention of 1866.

Roads.—When addressing you last year I drew attention to the great advantage which one or two good roads to adjacent districts would confer upon the trade of this Port. Although I am aware that this, matter affecting foreign interests only indirectly, may not come strictly within the scope of my report, yet I consider that it is one of such great moment to all interested in the prosperity of trade here that I venture again to bring it to your notice.

At present there is nothing worthy to be called a road within a distance of five miles in one direction and nine miles in another. The bridle paths leading to these are so narrow and irregular, are in such a wretched state of disrepair, and moreover so little care has been bestowed in selecting gradual ascents, that they are useless for conveyance of goods. It seems strange that the southern continuation of the To-kai-do which reaches to within about nine miles from this place should dwindle to a bridle path soon after reaching the village of Yagami, and continues to Nagasaki in that diminished form, one reason for this place being thus isolated is, doubtless, the hilly nature of the country immediately surrounding it. But, considering the importance of the object to be obtained, a little expense, in the first instance, should not be allowed to serve as an obstacle, and I am convinced that there is nothing in the nature of the country, which a careful selection of routes and some zig-zag gradients here and there would not enable an engineer to overcome.

In order that the roads should be of any real use, however, they must be made of proper binding material upon Telford's or Macadam's system. The former I should imagine most suitable to the rocky nature of the ground about. The gradients must be sufficiently easy to allow of their use by wheel conveyances. Unless this latter object were attained, any roads would of course be useless for the cheap conveyance of merchandize, and I lay stress upon this point because I imagine it is one very likely to escape the attention of the Japanese should they take the matter in hand.

It is usual with other Governments to devote a portion of the receipts accruing from duties and tonnage dues to facilitate trade in the way of dredging and harbour improvements at the port where the dues are collected. Although the excellence of this harbour renders outlay in this direction almost unnecessary, the very same cause (namely the bold conformation of the land), which makes the harbour so good and inexpensive calls for the outlay of money in another direction. The trade of this port may, I think justly claim that the Government should expend some of the revenue collected at Nagasaki in improving our internal communication.

Dry Dock. Since my last report a little progress has been made with regard to these works.

M. Vincent Florent, a French engineer, formerly employed at Yokoska, has been entrusted by the Japanese Government with the construction of these works.

The Dock will be of these following dimensions :—

Length	460 feet.
Breadth	89 „
Depth of water	28 „

Consequently it will be sufficiently spacious to receive the largest vessel that usually frequents this port.

It is expected that it will take three or four years before it is completed.

I have the honour to be,

Sir,

Your most obedient servant,

MARCUS FLOWERS,
H. B. M's Consul.

Sir HARRY S. PARKES, K.C.B.,
Her Majesty's Envoy Extraordinary.

For Tables see next page.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR.—In answer to certain allegations made in the *Japan Herald* of the 6th and 7th instant I have to make the following remarks :—

6th May.—There had never been a case of an ex-pirate employed by a firm here, nor the incidents referred to in connection with it.

The whole story is a tissue of falsehoods. I challenge the writer of the paragraph to name the individuals.

7th May.—The case of Kung Yao *in re* Messrs. Birley & Co., Hongkong, occurred about twenty years ago, and it is not true that it was known among the whole Chinese community here. I admit that it was known among a few of his countrymen, but the code of honour and obligation to society entertained by Chinese even in a matter affecting themselves in a case of this description is just the reverse to that of Europeans. I admit that it is wrong, but it is the characteristic of the whole nation.

There is and never was such an institution as a secret society among the Chinese of Yokohama.

They have a guild, but it is a charitable establishment, giving refuge to distressed Chinamen and assisting them with passage money to leave the country; and a hall for meeting purposes.

The guild has nothing to do with the morals, business, or employment of the Chinese.

The Manager of the Deutsche Bank in employing Kung Yao, and accepting $4,000 as enough for his security, ought to have been aware that the amount was too small in proportion to the amount of money passing his compradore's hands, and that he ought to have seen at once the risk he was running.

A case similar in some respects to the one practised by Kung Yao in deceiving his employer occurred in Shanghai a few years ago in which the Comptoir was the victim. The comprador exchanged the Sycee in the Treasury for lead. This should have been a caution to any one holding the responsible position of a Bank Manager, and the present Manager of the Deutsche Bank was at that time in the office of the Comptoir.

In the case of the compradore of the Comptoir and the deficiency of $5,000, there is no doubt that the compradore was 'let in' by Cantelli and Swaby. In the case of Messrs. Walsh Hall's compradore, there has been an abuse of confidence, and the loss will be made good.

I am, Sir,

Your obedient Servant,

A CHINESE.

AMATEUR ATHLETIC ASSOCIATION.

The usual Spring Sports of this Society were held yesterday at the old Race Ground. The programme of former years was considerably retrenched and the sports compressed within the possibilities of a single afternoon. We were sorry to observe, however, that the interest which these games have for the past few seasons inspired has sensibly diminished, the attendance being much smaller than usual although only for one day. It is difficult to believe that this should be attributable to the 'hard times' which are quoted as the excuse for so much, and we must fain conclude that muscle for the moment is somewhat out of fashion or perhaps about to surprise us by an outbreak in some other direction. Let us hope the manifestation will be in cricket.

The Sports derived every attraction that fine weather and the band of the "*Challenger*" could lend to them. If the paying visitors were diminished the volume of the honorary attendance showed no relaxation in the love of amusement which our Japanese neighbours generally exhibit on these occasions, and this, at least, must have comforted the competitors.

The races were fairly contested and the Ladies Prize—the *grand prix* of the day—was presented to Mr. Alfred Dare (who won a good race by about two yards only) in a complimentary speech by Mrs. Kirkwood, who took occasion to point out the anomaly between the winner's swiftness and the effigy of the tortoise which formed his prize.

The proceedings ended with the presentation of the prizes to the various winners by Miss Center and a cheer for the ladies.

1.—100 Yards Flat Handicap.—Two Prizes.

First Heat.

F. M. Jonas	1
A. H. Dare, 3 yards	2
F. J. Smith, 10 yards	0
A. T. Watson, scratch	0

Time, 11 secs.

Second Heat.

J. Dodds, 5 yards	†
J. J. Dare, 3 yards	†
C. Esdale, 9 yards	3

2.—Throwing at the Wicket.—One prize.

First Heat.

F. Walker	1
F. J. Smith	2
A. H. Dare	0
H. J. H. Tripp	0
C. Esdale	0
C. Cobden	0

3.—150 Yards Flat, Handicap.—Two prizes.

First Heat.

A. T. Watson, scratch	1
A. H. Dare, 4 yards	2

Second Heat.

F. M. Jonas, 7 yards	1
J. J. Dare, 5 yards	2

Time, 16 secs.

4.—Half Mile Flat.—For non-commissioned officers and men on board the men-of-war in harbour. Entrance free. Three prizes.

Loagan, "Monocracy"	1
McGrath, "Challenger"	2
Firth	3
Brandon	0
Deal	0

Time, 2 m. 30 secs.

5.—440 Yards Flat, Handicap.—Two prizes.

F. Walker, 20 yards	1
J. J. Dare, scratch	2
F. M. Jonas, 20 yards	0

Time, 58 ¼ secs.

6.—Throwing the Hammer, 15 lbs.—One prize.

F. H. Olmsted, 3 feet—75 feet 2 inches	1
A. J. Smith, 4 feet	2
W. P. Mitchell, 6 feet	3

7.—One Mile Walking Race, Handicap.—Two Prizes

C. Esdale, 50 secs	1
A. F. Watson, scratch	2
J. J. Dare, 50 secs	0

8.—Long Jump, Handicap.—One Prize.

A. T. Watson, scratch	1
A. H. Dare, 6 inches	0

9.—Final Heat—100 Yards Flat.

F. M. Jonas, 4 yards	1
A. H. Dare, 3 yards	2
J. Dodds, 5 yards	3
J. J. Dare, 3 yards	0

Time, 10¾ secs.

10.—Race for Boys under 14 years of Age.—Distance 150 yards. Handicap. Five to start or no race. No entrance fee One prize.

A. Kienchan	1
C. Merriman	2

11.—Half Mile Flat.—The Ladies' Purse. Presented by the Ladies of Yokohama.

A. H. Dare, scratch	1
F. Walker, 35 yards	2
J. J. Dare, 10 yards	0
C. Esdale, 35 yards	0
F. M. Jonas, 45 yards	0
A. T. Watson, 12 yards	3
H. B. Henley, 80 yards	0

12.—Pole Jump, Handicap.—One prize.

F. J. Smith, 3 inches H. J. H. Tripp, 18 inches	8 ft. 6 in	†
A. J. Smith, scratch		3

Heavy Men's Race, 100 Yards.

Captain Conner	1
Mr. A. Mitchell	2
Mr. Sams	3

Time 12 secs.

13—Hurdle Race.—120 Yards over Ten Flights. Handicap. Two prizes. First prize, the Storekeepers' Cup, presented.

F. J. Smith, 15 yards	1
A. H. Dare, 3 yards	2
A. J. Smith, scratch	0
T. R. H. McClatchie, 4 yards	0

Time, 17 secs.

14. 150 Yards Flat, Handicap.—One Prize. Open to the Married Members of the Association. No Entrance fee.

Dr. Wheeler, 13 yards	1
M. Kirkwood, scratch	2
W. H. Smith, 18 yards	0
W. P. Mitchell, 10 yards	0

Time 16 ¼ secs.

15.—150 Yards Flat. Final Heat.

F. M. Jonas, 4 yards	1
A. T. Watson, scratch	2

Time, 16 secs.

16.—Consolation: once Round.—One Prize.

For all who have started but not won a prize at this Meeting. No entrance fee.

J. Dodds	1
T. R. H. McClatchie	2
M. Kirkwood	0
H. B. Henley	0

Time, 64 secs.

Law Report.

H. B. M.'S CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

May 3, 1875.

Ralph Anderson and Magnus Dalberg, seamen of the British ship *Walton*, were charged with drunkenness and absence without leave from the vessel. They were arrested by Constable Roget, at half-past eight on Saturday evening, at No. 137.

Captain Shields deposed to the men having refused duty, being drunk on board, abusing the officers, and leaving the vessel in direct violation of his orders. Some liquor had been taken from among the cargo, and these men were suspected by him of having taken it. They were missed from the vessel on Friday night last at about half-past ten. The witness then ordered that no boats should be allowed alongside.

The prisoners stated that they came back to the ship during the same night, and that they were prevented from coming on board by the second mate, who fired at the boat.

Walter Smith, the second officer, admitted having fired two shots from his revolver from the gangway ladder into the water, to scare off a sampan which was trying to come alongside.

Anderson was sentenced to 14 and Dalberg to 7 days' imprison-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ment, with hard labour, and to be put on board their vessel at the expiration of their respective terms of imprisonment.

C. Chesterman, shipmaster, was charged by a Japanese servant a, Takashima-cho with assaulting him. He was further charged by a Japanese constable with striking him, and tearing his coat. The accused was out driving yesterday with a friend, and on his return from Totska stopped for a short time at the above-mentioned place when the alleged disturbance took place. The accused asserted that the servant was insolent to him, got in the way of his horse, and abused his betto. The case was postponed till 2 p.m., to allow time for the production of the companion of the accused and the betto as witnesses. At that hour the case was resumed. The testimoney of the companion of the accused not tallying with the latter's statement, and the betto not being forthcoming, the accused was ordered to pay for a new coat for the constable, and a fine of $2 and costs.

SHIHOSHO SAIBANSHO, KANAGAWA.

Before Mr. OZAKI TADAHARU, Judge.

May 3rd, 1875.

Joseph Taylor *v.* NATIONAL STEAMSHIP Co.

This case again came on again for hearing, when some further evidence as to the value of the work done was taken.

The Court finally advised plaintiff to come to some amicable arrangement with the defendants; but this, he was unable to do. He had been kept waiting for the money now claimed too long He would leave it to be decided by the Court.

His Honor reserved his decision.

VIVIVISECTION.

(*Spectator.*)

[We republish with much reluctance the following painful letter to the Editor of Monday's *Morning Post*, as showing what the practice of Vivisection, when applied at least to the higher kinds of animals, really means. It has been conjectured, probably enough, that the laboratory referred to is not an English one. But whatever slight shades of difference the personal humanity of the physiologist who presides in such laboratories may make, the main characteristics of these vivisections, when performed on the higher orders of animals, like dogs and cats, cannot greatly differ, since they depend on the permanent conditions of the case. Let no one read the letter who has already made up his mind that the practice must be rigidly restricted or put an end to. For such a one it would be needless suffering.—ED. *Spectator*.]

[TO THE EDITOR OF THE "MORNING POST."]

"SIR,—If the Society for the Prevention of Cruelty to Animals intend to give effect to the Memorial presented to it on Monday, and do its utmost to put down the monstrous abuses which have sprung up of late years in the practice of Vivisection, it will probably find that the greatest obstacle to success lies in the secrecy with which such experiments are conducted; and it is to the destruction of that secrecy that its best efforts should be directed, in the Legislature or elsewhere. It matters little what criminality the law may clearly attach to such practices. So long as the present privacy be maintained in regard to them, it will be found impossible to convict, from want of evidence. No student can be expected to come forward as a witness when he knows that he would be hooted, mobbed, and expelled from among his fellows for doing so, and any rising medical man would only achieve professional ruin by following a similar course. The result is that although hundreds of such abuses are being constantly perpetrated amongst us, the public knows no more about them than what the discreet echo reflected from some handbook for the laboratory affords. On the other hand, if special knowledge be not forthcoming, and the public mind be alone left to carry on the crusade against unnecessary vivisection, feeling will be sure to take the place of facts, and the morbid, unreasoning excitement thereby created will either carry matters too far or fail altogether. As nothing will be likely to succeed so well as example in drawing forth information on these points from those capable but hesitating to give it, I venture to record a little of my own experience in the matter, part of which was gained as an assistant in the laboratory of one of the greatest living experimental physiologists. In that laboratory we sacrificed daily from one to three dogs, besides rabbits and other animals, and after four months' experience, I am of opinion that not one of those experiments on animals was justified or necessary. The idea of the good of humanity was simply out of the question and would have been laughed at, the great aim being to keep up with, or get ahead of, one's contemporaries in science, even at the price of an incalculable amount of torture needlessly and iniquitously inflicted on the poor animals. During three campaigns I have witnessed many harsh sights, but I think the saddest sight I ever witnessed was when the dogs were brought up from the cellar to the laboratory for sacrifice. Instead of appearing pleased with the change from darkness to light, they seemed seized with horror as soon as they smelt the air of the place, divining apparently their approaching fate. They would make friendly advances to each of the three or four persons present, and as far as eyes, ears, and tail could make a mute appeal for mercy eloquent, they tried it in vain. Even when roughly grasped and thrown on the torture-trough, a low, complaining whine at such treatment would be all the protest made, and they would continue to lick the hand which bound them till their mouths were fixed in the gag, and they could only flap their tail in the trough as their last means of exciting compassion. Often when convulsed by the pain of their torture this would be renewed, and they would be soothed instantly on receiving a few gentle pats. It was all the aid or comfort I could give them, and I gave it often. They seemed to take it as an earnest of fellow-feeling that would cause their torture to come to an end—an end only brought by death.

Were the feelings of experimental physiologists not blunted they could not long continue the practice of vivisection. They are always ready to repudiate any implied want of tender feeling, but I must say that they seldom show much pity; on the contrary, in practice they frequently show the reverse. Hundreds of times I have seen when an animal writhed with pain, and thereby deranged the tissues, during a delicate dissection, instead of being soothed, it would receive a slap and an angry order to be quiet and behave itself. At other times when an animal had endured great pain for hours without struggling or giving more than an occasional low whine, instead of letting the poor mangled wretch loose to crawl painfully about the place in reserve for another day's torture, it would receive pity so far that it would be said to have behaved well enough to merit death, and as a reward would be killed at once by breaking up the medulla with a needle, or 'pithing,' as this operation is called. I have been often heard the professor say, when one side of an animal had been so mangled, and the tissues so obscured by clotted blood, that it was difficult to find the part searched for, 'Why don't you begin on the other side?' or, 'Why don't you take another dog? What is the use of being so economical?' One of the most revolting features in the laboratory was the custom of giving an animal on which the professor had completed his experiment, and which had still some life left, to the assistants to practise the finding of arteries, nerves, &c., in the living animal, or for performing what are called fundamental experiments upon it,—in other words, repeating those which are recommended in the laboratory handbooks. I am inclined to look upon anæsthetics as the greatest curse to vivisectible animals. They alter too much the normal conditions of life to give accurate results, and they are therefore little depended upon. They indeed prove far more efficacious in lulling public feeling towards the vivisectors than pain in the vivisected. Connected with this there is a horrible proceeding that the public probably knows little about. An animal is sometimes kept quiet by the administration of a poison called 'droorara,' which paralyses voluntary motion while it heightens sensation, the animal being kept alive by means of artificial respiration until the effects of the poison have passed off.

"On the Continent, I have often seen animals operated upon in this condition before an audience, who, as they were incapable of showing the pain they felt, were supposed by those present to be insensible to it, while all the time the poor brutes were suffering double torture that the feelings of the audience might be spared. To this recital I need hardly add that, having drunk the cup to the dregs, I cry off and am prepared to say not only science, but even mankind, perish rather than have recourse to such means of saving it. I hope that we shall soon have a Government inquiry into the subject, in which experimental physiologists shall only be witnesses, not judges. Let all private vivisection be made criminal, and all experiments be placed under Government inspection, and we may have the same clearing away of abuses that the Anatomy Act caused in similar circumstances.—I am, Sir, your obdient servant,

GEORGE HOGGAN, M.B. and C.M.

ARRIVALS.

May 2, *Riga*, British steamer, Clarke, 920, from London via Hongkong, General, to E. Fischer & Co.

May 2, *Peter*, German brig, Holm, 211, from Takow, Sugar, to Kniffler & Co.

May 3, *Ly-ee-moon*, British steamer, Stevens, 661, from Hakodadi and Niigata, Rice, to Hudson, Malcolm & Co.

May 5, *Sumida*, Japanese steamer, Brown, 846, from London via Singapore, General.

May 6, *Indian Empire*, British barque, Baird, 520, from Cardiff, Coal, to M. M. Co.

May 5, *Oregonian*, American steamer, Harris, 1,914, from Shanghai and ports, General, to P. M. Co.

May 6, *Takasago maru*, Japanese steamer, Ekstrand, 1,020, from Shanghai, Mails and General, to Mitsu Bishi Co.

May 8, *Marie*, British schooner, Talbot, 178, from Amoy, Sugar, to Hudson, Malsolm & Co.

May 8, *Velox*, German 3-mast schooner, Mulder, 187, from Takow, Sugar, to Smith, Baker & Co.

DEPARTURES.

May 4, *Korchland*, French barque, Lance, 285, for Nagasaki, Ballast, despatched by Captain.

May 5, *Menzaleh*, French steamer, Pasqualine, 1,003, for Hongkong, Mails and General, despatched by M. M. Co.

May 7 *Lady Belman*, British brig, Lee, 253, for Nagasaki, Ballast, despatched by, Captain.

May 8, *Takasago Maru*, Japanese steamer, Ekstrand, 1,019, for Shanghai and ports, Mails and General, despatched by Mitsu Bishi Co.

May 8, *Costa Rica*, American steamer, Connor, 2,000, for Shanghai and ports, Mails and General, despatched by P. M. Co.

PASSENGERS.

Per *Ly ee-moon*, from Hakodadi & Niigata.—Mr. Edward Duus.

Per French steamer *Menzaleh*, for Hongkong.—Mrs. England, 5 children and servant, Dr. E. C. Stirling, Messrs. William Murray, Mion, S. H. Shafto, T. Katsura and servant.

Per Japanese steamer *Takasago-maru*, from Shanghai.—Mr. and Mrs. Ekstrand, infant and servant, Miss Marshall, Mr. and Mrs. McVean, Mrs. Joyner, Messrs. Hornby Evans, Hartman, Christian, Eyton, Anderson, Macoicar, Tilghman, Noetyly, Peters, Takata, Nishimura, Tatabe, Okamushite and Onozuka; 5 Chinese, and 87 Japanese, in the steerage.

Per American steamer *Oregonian*, from Shanghai and ports. For Yokohama.—Mr. and Mrs. H. J. Hunt, child and 2 servants, Mrs. C. R. Harris, Mr. and Mrs. Hughes and servant, Mrs. Korthals and servant, Mrs. Ruley and 2 children, Mr. and Mrs. Nambu, Messrs J. Ure J. M. Smith, F. Gross, L. Moore, H. Rowland, J. Ryan, Baron Stilfried and servant, H. Finke, P. Heineman, Dr. Nissin, Y. Duplaquet and servant, M. Samson, H. Henriques, C. T. Mills, F Low and servant, J. D. Carroll and servant, Tuck Ching, E. H. R. Manley, C. D. Harman, and 84 in the steerage.

Per Japanese steamer *Takasago Maru*, for Shanghai and ports.—Miss Klein, Messrs. Morf, Johnston, Tilghman, Yoroyuya, Nakajima, Hiyashi, Kawakami, Ishiyashima, Mr. and Mrs. Miyaki, Mr. and Mrs. Omoshi, Mr. and Mrs. Okamoto, Mr. and Mrs. Jimamachi and child, Messrs. Wakamatsu, Ishiyashima, and 4 Japanese, in the cabin; 132 Japanese, in the steerage.

Per American steamer *Costa Rica*, for Shanghai and ports.—Mr. and Mrs. Boyle and servant, Mr. and Mrs, Brown, Miss Brown, Messrs. Ribeiro, Samson, Harrison, England, Benjamin, Denson, Stirling, Marks, Harris, and Glover.

CARGOES.

Per French steamer *Menzaleh*, for Hongkong:—

Silk.....299 Bales.

Per Japanese steamer *Takasago maru*, from Shanghai:—Treasure Yen 3,500.

Per Japanese steamer *Takasago Maru*, for Shanghai and ports.—Treasure $11,000.

REPORTS.

The British steamer *Riga* reports: strong wind and stormy weather with a high cross sea running.

The German brig *Peter* reports: strong wind and stormy weather with a high cross sea running.

The *Ly-ee moon*, reports rough and stormy, and very cold, disagreeable weather throughout the whole voyage since leaving this port.

The Japanese steamer *Takasago-maru* reports: fine pleasant weather throughout the passage.

The French steamer *Tanais*, left for Yokoska yesterday afternoon to be docked and have her bottom cleaned.

The *Marie*, reports, pretty fair weather until the 7th instant, when off of Taka-sima encountered very heavy gale from S.E. and tremendous rain and showers.

The *Velox* reports: bad weather with easterly winds for most of the way. Anchored here at 7 p. m.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills, I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sirs, yours truly, HENRY A. HASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

„ No. 3 Ke-pak		„	6.60 to 7 10		Japan Rice		„ 3 25 to 3.30
„ No 4 Kook-fah		„	5.90 to 6 30		Kerosine Oil		„ 3.50 to 3.60

EXPORTS.

Silk.—There has been but a moderate business doing in Silk since our last report; the deliveries amount to about 250 or 300 bales, and the market rates are steady, and in a few instances even higher than in the previous week. The stocks of Hanks, especially of the best descriptions, continue to decrease. A small lot of Filature Silk, extra, is reported to have been sold at $ 520. Oshius are still in request and scarce, and command full prices.

Tea.—Arrivals of New Crop have now assumed fair proportions and our market for the season may be considered as fairly opened.

Settlements to date amount, in all, to 500 piculs of new leaf at prices which opened at $52 to 55 for first purchases, and now range from $45 to 48 for the same quality. The general appearance of leaf on offer should assure buyers of a season in no way inferior to that which is past.

Old crop Teas are apparently cleared out and little if any stock is at present held in this place.

NEW CROP—Fine	... ...	$44 to 47
Finest	... ...	$48 to 50

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

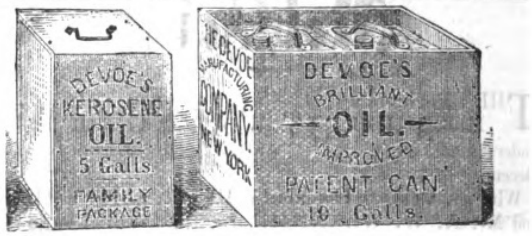
Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.



THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

VOL. VI.—No. 20.] YOKOHAMA, SATURDAY, MAY 15, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATH.

At Yedo, on the 11th May, JAMES L. CLARK.

Notes of the Week.

Race week is holiday week, and our readers will hardly cavil with the logical consequences of the fact which our columns betray. There appears to be a lull in politics, and some of the Cabinet Ministers were among the spectators of the races. It is well to turn our back now and then on politics and finances, and acknowledge that life demands recreation and holidays. When "they seldom come they wished for come"—and they come seldom enough to newspapers.

A short time back Sir Henry James called the attention of the House of Commons to the vast sums, amounting in all to £244,000,000, due by foreign Governments to various capitalists, chiefly English, the interest on which was in default, and the principal practically irrecoverable. Some of the revelations made before the committee called to investigate this question seem so important as warnings to governments inexperienced in the great money market of the world, that we think it well to extract the following from the evidence given in relation to the Honduras loan of 1870, in order that the Japanese Government may see the dangers into which borrowers run when they resort to any but first class agencies in their financial business.

The administration of the loan was to be in the hands of railway trustees. It also recited a supplementary agreement of the 15th of June, 1870, between Gutierrez and Bischoffsheim, by which the priorities in which the funds should be applied were settled. These provisions were to the following general effect:—1, Printing and stationery, £7,500; 2, ½ per cent to contractors for issuing, £125,000; 4, trustees and secretaries, £8,000; 5, amount of commission for cashing coupons due in July, to be paid to Bischoffsheim and Goldschmidt, £30,000; 6, interest on £2,500,000 for two years, £500,000; 7, amortization fund for two years, £150,000; 8, commission for coupons of interest on loan for £1,000,000 contracted in 1867, £30,000; 9, interest on the said loan, £150,000; 10, amortization, £67,000; 11, contract *à forfait* for 3d section, £800,000; 12, interest on federal debt for two years, £10,800; 13, five sums to Honduras Government, £100,000; 14, salary to Mr. Brunlees, engineer-in-chief for two years, not to exceed £20,000. Any surplus was next recited that Bischoffscheim and Goldschmidt had assigned the benefit of the agreement to Lefevre, and that the Honduras Government owed £36,700 to Lefevre for money advanced. * * * * * He was also invested with the cross (not the Grand Cross) of the Order of Santa Rosa of Honduras. That was by Gutierrez. He did not know what for.

(From the Japan Mail Daily Advertiser.)

IT is notified by the Judicial Department that Japanese subjects who may have legal claims to establish against foreigners must lodge information of the nature of their claims at the respective *Fu* or *Kencho* of the foreign concesssion in which the foreigner resides. They will then be supplied with a note to the Consul which will enable them to take proceedings for the recovery of their debts.

THE *Nisshin Shinjisshi* relates of a certain popular tea-house at Uyeno that during the blossoming season of the cherry-trees 64,000 persons visited it within four weeks.

We understand that it is intended to remove the Kaisei-Gakko from its present situation to the former Kaga *Yashiki.*

It would be well if the somewhat erratic computations of the correspondents of the Yedo newspapers could be brought closer together. A few weeks since a native journal informed us that 20,000 *jinrikishas* has been built in a single month. Now we learn from the *Nisshin Shiijisshi* that the aggregate vehicles of the metropolis, including the foregoing, do not exceed 29,649. Of these 150 are comprised under the general head of *basha* and include omnibuses, express-wagons and gentlemens' carriages.

The compradore of the Comptoir d'Escompte, charged with having participated in the robbery of that Institution, has been remanded for examination by the Saibansho authorities.

NISHIMURA of the Kaitakushi has left for Hiogo overland *en route* for China. He proceeds on the special business of the Department.

A proclamation from the Prime Minister announces that the Hegakurio, or Military School attached to the Army Department, is to be abolished.

AN investigation, which was conducted with closed doors, into the late embezzlements at the Deutsche Bank was begun yesterday at the Saibansho. It is understood that no additional facts were elicited by the enquiry.

THE *Nisshin Shinjisshi* says that the former *daimio* of Owari is about to erect a school house at Midoricho Honjo (Yedo). The building will be more than 100 feet square and is estimated to cost about $8,300.

THE average number of visitors to the Exhibition at Nara is said by the *Nichi Nichi Shimbun* to be 5,000 daily.

A notification has been issued by the Prime Minister ordering that the sittings of the *Daishinin* shall for the present take place in the building of the former *Mrihorio.*

H. M. the Mikado visited the palace of Hamagoten at an early hour in the forenoon on Wednesday.

THE *Nisshin Shinjishi* has authority for stating that Superior Courts of Judicature will shortly be instituted in Yedo, Osaka, Nagasaki and Fukushima.

The endless variety of religious institutions in this country would seem to justify the application to it of the sarcasm directed by Talleyrand against England that she "had fifty religious and only one sauce." A native paper tells us that a piece of land in Shiba Sannai measuring 1,700 *tsubo*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

has been purchased by a society styled *Fujiko*, the object of whose adoration is the mountain Fujiyama. It is rumoured that they purpose erecting in the grounds they have purchased a representation of the "Matchless Mountain" to which they do honour in their devotions. The Sandwich Islanders worshipped in the goddess Pelé the traditionary deity of the volcanoes of Mauna Loa and Kilauea. It is probable that the *Fujiko* is a survival of a form of worship as old as the period of volcanic activity of Fujiyama.

The money value of a title has perhaps never fallen so low as its present market rate in this Empire. The *shidzoku* who having capitalised their pensions are not, it seems, unwilling to part with the empty dignity of their nominal rank are said to be ready sellers, and there are, the *Chōya Shimbun* tells us, buyers to be found for their cast-off titles. But as only 15 *yen* are currently given for this dignity it can scarcely be said to be entitled to much consideration.

We are pleased to learn that there is reason to hope that on the return of H. M. S. *Challenger* to Yokohama, Professor Wyville Thomson may be induced to deliver a lecture on the subject of his recent scientific researches during the prolonged cruise of that vessel. The *Challenger*, we are informed, may expected to return about the 6th June.

A Malay arrested on a charge of vagrancy has been handed over to the Japanese authorities.

Mr. Ullmann, Jeweller 72 Main Street, reports the robbery of watchmaking materials, presumably by a Japanese servant formerly in his employment. The matter has been placed in the hands of the police.

We learn that it is intended to send a small detachment of troops to the Loo Choo Islands, avowedly with the view of protecting the inhabitants.

The *Nisshin Shinjisshi* of yesterday says that the *Daijin* and *Sangi* have been summoned to an audience of H. I. Majesty this day.

Fukushima of the Army Department is about to proceed to China.

The *Hochi Shimbun* says that Takeda, an officer of the Imperial Government, is going to China with the view of expediting the payment of the remaining portion of the indemnity.

A fire occurred at Kanda in Yedo, yesterday, which was not extinguished until fourteen houses were destroyed.

The Emperor of Japan ordered last year, through the Japanese Consul at Milan, from the Italian painter Ugolini, the life-size portraits of all European emperors, kings, and presidents, for the adornment of his residence at Tokio. At the same time, portraits of the Mikado and his wife were ordered, and their photographs sent to Italy for the purpose. The work is now completed, and a dozen or so of the pictures are exhibited in the permanent Art Exposition at Milan. The portrait of the Mikado and the Empress have been already sent to Japan, and have given such satisfaction there that it is resolved to found in Japan an Italian school of painting, and to call a number of Italian artists as professors.—*L. and C. Express.*

We hear that the Rev. J. Trew, who was for many years in Burmah, has been appointed by the Society for the Propagation of the Gospel to proceed to Japan.—*L. and C. Express.*

In H. B. M.'s Consular Court, yesterday, before Russell Robertson, Esq., Consul, Owen Olyphant, carpenter of the British ship *Indian Empire*, was charged with drunkenness, and fined one dollar and costs

We learn from a reliable source that two Corean Officers have been beheaded, one on the 19th and the other on the 16th of last month, for interference with the Japanese Ambassador, who went to Corea for the purpose of entering into a treaty with that power.—*Nagasaki Express.*

Lot No. 74, Foreign Concession, containing 287¼ tsubos, was knocked down by Mr. K. De Piotrowski on Monday last to Mr. J. Gillingham for Mex. $200. This lot was originally sold at the land sale of May, 1870, for boos 9.05 per tsubo.—*Hiogo News.*

Two slight shocks of earthquake are reported as having been felt here within the past week.—*Hiogo News.*

The steamer *Kuroda*, from Yokohama, brought about two hundred tons of Hakodate ice.—*Hiogo News.*

We fancy our Tientsin correspondent has arrived at a right conclusion, though from a somewhat mistaken premiss, in blaming so severely as he has done the appointment of Sung Pao-hwa to the Yunnan Commission. Sung Pao-hwa is not a member of the Commission; nor will be take a part in the business of enquiry. He is only going as escort to the delegates sent by Mr. Wade. Even for this office, however, we do not hesitate to say that he is an unsuitable person. The escort of a man so small in rank is directly calculated to lower the importance of the mission in the eyes of the Chinese; and our effort should be to give it every importance that circumstances can invest it with. The appointment should be insisted on, of a special commissioner ranking at least as high as a Taotai, and nominated by the Tsung li-yamen instead of by the Viceroy of Chihli. It is all very well to recognise Li Hung Chang as Commissioner of Foreign Affairs in matters of routine; but he should be allowed no independent say in such a matter as this. The official appointed to escort the foreign delegates should be appointed directly by the Government, so that the officials and people along the route may know his mission emanates from the Court itself. —*N.-C. Daily News.*

A Calcutta telegram quoted in the *Straits Times* attributes an important speech to Lord Napier. He is reported to have said that Colonel Browne was then en route to Simla, having in his possession a letter written by the King of Burma to the Tsaubwa of Bhamo, desiring that every obstacle might be put in the way of the late Mission, and that they should not be allowed to return. If it can be shown that this letter was despatched before Mr. Margary's murder, the King's days as an independent sovereign are surely numbered.—It would seem from this that the report that Col. Browne was on board the *Gwalior*, is mistaken.—*Ibid.*

CHURCH AFFAIRS.

THE present position of our Church Affairs here affords abundant matter for reflection and misgiving, though we have no doubt whatever that a fair share of well directed and earnest effort will enable us to place them again on such a footing as shall be acceptable to the community. But we must look them fairly in the face, and banish any delusions that they will right themselves without such an effort. The withdrawal of the grant hitherto made by the British Government for the maintenance of a branch of the Church of England establishment here, is rather a misfortune than an actual hardship or injury. The grounds on which we could plead for it are not without some strength; but those on which it could be opposed, from the British tax-payer's point of view, are certainly stronger. And, to speak frankly, we think that the imperious word *ought*—which seems, however, unfortunately, to be losing some of its ancient force—comes in here, and bids us take upon ourselves responsibilities in this matter which we have not yet fully realized. As, however, a considerable section of this community certainly feels not only the necessity for maintaining our Church establishment, but the disposition to do so, this sense of duty may be converted from potential to actual force, if the whole question is taken up by a few earnest men among us, and placed before the residents in the shape of a scheme susceptible either of attracting general adherence by its own merits, or of being so modified as to find general acceptance with the English-speaking residents. It unfortunately happens that while the British Government has cut away the pecuniary support it has hitherto afforded us, it has not yet passed any measure or made any order determining the future relations which must exist between the Church it has founded, established and in part maintained here, and those on whom the maintenance of it must fall in future. The absence of this must necessarily be a source of perplexity to those in whom the Church trust is at present vested, and it may even be that no steps of a very definite character can be taken until these relations are settled on an immovable basis. But every effort should be made to terminate this condition of affairs as early as possible, not only for our own sakes, but in the interest of those who have considerately come forward to assist us in carrying on the establishment temporarily, but whose legitimate work is interrupted by the concessions they have made to our necessities and for our convenience. We are at this moment reduced to temporary shifts to carry on the mere services of the Church, and while we most gratefully acknowledge the value of the assistance which enables us to continue these, it is obvious that mere temporary arrangements of this nature are, apart from all other questions, incompatible with that pastoral and parochial work which is at least as important part of a clergyman's duties as his ministrations in the services of the Church. Indeed, our duties in this respect were pointed out with much earnestness and warmth of feeling by the occupant of the pulpit last Sunday, and while there was not a word of reproach in his exhortation on this subject, it undoubtedly gave to our duties in connection with the whole question a cogency and reality which should not be lost upon us.

Yet it must not be imagined that the task of those who seek to re-establish our Church affairs on a permanent and satisfactory footing is altogether an easy one. It is sometimes forgotten that the burden of supporting the establishment falls only upon a small section of a community which can in no sense be called wealthy and which is not very united. We have to some extent followed the example of the foreign settlements in China, where it was customary for every 'hong' or house to have a pew for the accommodation of the members or employés of the house, nor was the burden of providing this accommodation in any sense onerous. Money was easily made and liberally dispensed, the Government contributed a large share towards the expenses of the establishment, and not only were the ordinary costs of maintenance easily met, but any extraordinary demands or necessities were provided for with ease and cheerfulness. But we have fallen on other days—we shall not on that account call them evil. They are days of harder work and more severe economy, days of less questioning belief, perhaps of less social and certainly of less religious cohesion. Indifference, conscientious doubt, and, perhaps, a growing severance between the theological and secular thought of the age,—all these things make it far more difficult than formerly to find the actual money to maintain our Church establishment, and the problem of doing so becomes complicated to that extent.

But we are not sure that the very darkness which surrounds the whole subject, may not, by its thickness, afford grounds for hope that light is at hand. We have a very considerable staff of English clergymen out here engaged in missionary work, and whose force, now much lessened and impaired by being scattered, demands only to be more concentrated to ensure to it better direction and greater results. The religious condition of this people cannot be without exceptional interest for a Church like that of England, and surely the work it is attempting to do in this country is worth and demands something of supervision. Hongkong has its bishop; North China has followed crooked example; the Roman Catholic Church, ever foremost in the desire for spiritual conquest, has its bishop; the American Episcopal Church has likewise its bishop. But the Church of England, by far the richest Church of all, has no bishop. Its minister are like officers without a colonel. They may know their duties, may be anxious to discharge them, and may even be doing so, so far as their individual powers extend. But can any one doubt that they would be far more efficient under some such general supervision and direction as a bishop of the right kind could furnish. Why should not Yokohama be the seat of a see and Christ Church be made the diocesan church? There are two great and wealthy societies in England which have sent bishops into heathendom for upwards of a hundred years, partly with a view of diffusing the light of Christianity to the pagan nations, and party to minister to the spiritual wants of their own countrymen settled in those distant countries. Are they indisposed to help us in this our strait, or to disregard the claims which a country like this has on them? No one can read week by week the translations of the essays of native writers which appear in the columns of this journal, without seeing that there is an immense amount of earnest desire among this people for a guidance by higher lights than any by which they now walk. With what special defect do we foreigners reproach the Japanese national mind, so far as we understand it? With its want of earnestness, its lightness, its desire for novelty for novelty's sake, its want of tenacity of purpose, its curious self-sufficiency. Indeed, the more intelligent of the advanced Japanese frankly and fully acknowledge this. "Will it ever be possible, do you think," said a Japanese, but the other day, "to make earnest men of my countrymen?" There is an abundance of natural quickness and intelligence among them, a wonderful inquisitiveness and receptivity, but there is not

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

enough seriousness, and without this life is so much champagne froth. There is ample work, therefore, for a bishop in supervising the labours of those who have already been sent abroad to assist in the teaching of this people.

But—we almost dread making the avowal,—we have serious misgivings about the class of man we might get as a bishop, and we do not speak unadvisedly. We have seen bishops who, if they were to come here, would do little good, and might do more harm than good. It is no use sending us a man who is not fairly abreast of the thought of the day. We must not be told that LYELL and DARWIN are misleading us because their conclusions do not tally with the first chapter of Genesis. We are quite willing to listen to any one who will come and expound and enforce the living truths of religion of which the Bible contains the *principia* and the richest outcome; who will tell us of our duties and make us more earnest in the discharge of them by his own example; who will face facts, and help us to solve our difficulties. The cry of man's mind is for more light; of his soul, for rest and calm. But we must not have our eyes put out in order that we may see. Our belief must come from our knowledge, not our knowledge from our belief.

SPIRIT OF THE JAPANESE PRESS.

CHANGES PROMOTING GREATER ADMINISTRATIVE EFFICIENCY.

Notifications, from "Nisshin Shinjishi," No. 100, of May, 10th 1875.

No. 75.

The *Zôheishi* (office for making weapons) and the *Bukoshi* (Military Storehouse office under the Naval Department) have been abolished.

The above is published

May, 7th 1875.

(signed.) SANJÔ SANEYOSHI,
Prime Minister.

The Niiharu *ken* having been abolished, the three Departments of Kadori, Sôsa, and Kaijô in the province of Shimôsa are placed under the jurisdiction of the Chiba ken; while the six Departments of Niiharu, Tzukuba, Shida, Namêhata, Kashima, and Kacchi, together with the four Departments of Sashima, Yûki, Okada, and Toyoda, in the province of Shimôsa and under the jurisdiction of the Chiba Ken,—as also three towns and forty-eight villages in the Department of Katsushika, with two post-towns and ninety-nine villages in the Department of Sôma, are all placed under the jurisdiction of the Ibaragi ken.

The above is therefore notified.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

PROCEDURE IN CASES AGAINST FOREIGNERS.

[TRANSLATION.]

("Nisshin Shinjishi," No. 99, of May 9th, 1875.)

No. 3.

The procedure in plaints for civil or criminal matters, laid by Japanese against Foreigners has been fixed as shown below.

The above is therefore made known, May 7, 1875.

(Signed,) ÔKI TAKATÔ,
Minister for Justice,

In plaints for civil or criminal matters laid against Foreigners, at the instance of Japanese the plaintiffs are to state the matter to the *Fu* or *K*[illegible] in the open

Digitized by Google

from such office to make complaint to the consulate of the nationality to which the defendants belong.

The above having been notified, the same is to be published through the whole of the districts, without exception.

(Signed) OKUBO ICHIÔ,
Chiji of the Tôkio Fu.

May 7th, 1875.

LEGAL PROCEDURE.

(Meiroku Zashi.)

There is not an independent country in Europe or America which is not bound by treaties of commerce and friendship with other countries, and each of these has its own laws and rights, none is the superior or inferior of others, and if a man from one of these countries goes to another, he is protected by the administraaion of the country which he visits. But by the treaties we have made with foreign countries, we cannot lay our hands on a foreigners who violates our laws, and therefore these cannot be called equal-sided treaties, nor can we say that we have not lost our national privileges. What is the reason that these treaties cannot be changed? It is because our laws, procedure and punishments differ so greatly from those of other countries. But though we may say our punishments are so different, they are not greatly so; the real difference is that the inhabitants of those countries are free, while we cannot escape oppression. This oppression is not a mere question of government and laws: it exists in the economy of the family, as I will show by examples. Here, if a child or grand-child assaults its parent or grand-parent it has to undergo capital punishment, or, by the new laws, serve with hard labour for ten years. Those who wilfully kill either child or grand-child only have to serve with hard labour. Elsewhere the former crime is punished by hard labour or imprisonment, but the latter is punished capitally. Were we to reverse our penalties, we should assimilate them to those of the foreigners.

But in our modes of criminal procedure there is a great distance between us. For example: a man may elsewhere be suspected of a crime, but he cannot be arrested unless good evidence can be adduced that he committed it. Here men may be arrested on suspicion and without any such evidence. There, though there may be the proof of crime, a man cannot he punished if his crime is not contained in the criminal code. Here, it is only necessary to tell a man that he has done what he ought not to have done, and he may be sentenced and punished. There, juries are chosen from the people, and the duty of the jury is to listen to the trial without partiality and then to record their opinion. Without the conviction by the jury the judge has no power over the apprehended person. Here, we have nothing of the sort. There, if the proofs of the crime are clear and there is no doubt about it, the equivalent punishment for the crime is deduced from the code, and the criminal is sentenced to undergo this. Above all, it is not necessary that men should confess their crimes, and thus torture is not used. Here, is is the law that though the proofs of crime are quite clear, a criminal shall not be punished until he has confessed his guilt, and this is the reason why torture cannot be abolished. Sometimes it happens that those against whom nothing has been proved, are tortured; so that we find innocent people are found confessing to crimes they have not committed, for which, however, they are sentenced to undergo punishment. All criminals are wicked people, so that it is quite natural for them to try to hide their crimes in order to escape the penalties, and it is no easy task to make them confess the truth. It is common to all laws to lighten the sentences pronounced against those who come forward and confess their crimes before any charge has been made against them. Therefore it would not be wrong also to lighten the punishment of those who confess their crimes while they are undergoing trial. The Bible says that even sinners will be forgiven if they confess and repent them truly of their former sins. We do

UNIVERSITY OF CALIFORNIA

adduce it to show that repentance and confession are regarded as good things, and therefore it is not unjust for us to compel the evil to repent and make confession. This is the reason that the people west of the Himalayas will not yoke themselves in treaties with those east of them. The evidence of witnesses is the foundation of the proceedings of all laws, and our former laws did not differ so greatly from these new laws. Both plaintiff and defendant will each plead as best he can, and the lawyers on both sides will embellish their arguments, and were we to listen to them alone, we should be led astray and be incapable of deciding where the right or wrong really lay. How, then, could we come to sound conclusions without witnesses? I believe it to be impossible. But now we pay no heed to the evidence brought by witnesses, and apprehended persons remain unconvicted until they themselves confess their guilt. Is not this a bad custom? Without abolishing customs like this, would it not be a task of great difficulty to make treaties with other nations and bind their free-spirited people by our oppressive laws?

Some have asked me: "If we are only to believe the witnesses and not the parties themselves, how would it be when the witnesses tell falsehoods?"

I replied: "Not only civil but criminal cases may be brought before a higher court, and a criminal even though he may have been convicted of a certain crime has the liberty, within a given time, of appealing to a higher court. This liberty is given in order that men may be protected against the mistakes which might be made by the officers of the courts; therefore, though there may be wrongs committed by witnesses they may be redressed by a higher court. If we are desirous of making treaties on equal terms with foreign nations, we must cease the use of torture first, and, after that, our method of criminal procedure must be changed. In Europe and America there are rules by which proceedings are conducted, so that we should do wisely to settle our modes of procedure from the codes of those nations, just as we derived the *Taihoritz** from *Toritz*,† and the *Shinritz Korio*‡ from the *Toritz*, *Minritz*¶ and *Shinritz* and the laws of the Shogunate. Nor would this be a very difficult task."

While I was engaged in the courts, I attempted, after much consultation with others, to mould our mode of proceeding upon the French code, but before this task was completed I was removed from my post. Of course, as I am of deficient education, I do not regard my lost efforts with any great sorrow or illusions in regard to their value. But I trust that those who are better acquainted with such matters will work diligently and accomplish this thing. Also I should feel exceedingly happy of His Majesty the Tennô would give orders to abolish the system of torture.

Again, people have said to me: "We can well understand that without the abolition of torture no equal treaties can be made, and we cannot acquire jurisdiction over foreigners residing here. But we cannot understand how, solely by abolishing torture, we can resemble the nations of Europe and America. The way in which we can stand on an equal level with Europe and America is by advancement in knowledge, in enlightenment, in the power of the Government, in the strength of our Army and Navy, and it matters little about torturing or not torturing." But I replied: "When we really are advanced in enlightenment and knowledge, it is obvious that torture will no longer exist. So long as this exists, we may be ever so far advanced in the art of war, but all this would merely be so much advance (or retrogression) towards barbarism, and while such an evil exists, it is certain that other nations will not bind themselves to us by equal treaties."

Again, it has been said to me: "If we convict criminals by evidence brought by witnesses, when there are no witnesses there will be many who escape punishment for their crimes." I replied "A foreign lawyer said to me that 'it would be worse to punish one innocent man than that a hundred criminals should escape.' An old Chinese proverb also says, 'Rather suffer yourself to be called unjust than condemn a single innocent person to death.' Is it not disgraceful that we, the people of the present age, are lower in ideas than the ancient people of China? Do you suppose that because the system of torture exists, no criminal escapes punishment?"

The Love of Change.

(Hochi Shimbun.)

The alteration of things from old to new is much desired by those who affect change. But the real desirability of this entirely depends on the amount of obtainable benefit, so that we need not be so anxious to make useless changes; while, on the other hand, if any advantage can be shewn from any proposed alteration, we may fairly submit to any minor inconveniences which the making of it may entail. Our people were greatly in the habit of changing their names. But the fools will remain foolish though they change their names; while the wise will remain wise though they retain theirs. The Government, annoyed by this constant change of names, has prohibited it. But, on the other hand, it makes many changes, such as in the numbers of dwellings, the mode of making out the census &c., and this is thought by all to be unwise as it causes great annoyance to the people. If a single individual changes his name it creates no perplexity, but changing the names of towns and villages causes great confusion. As we have just said, the Government prohibits the former, but does the latter. We wonder what is the reason of this! Are not the acts of the Government those of human beings? How is it then that the names of so many things are changed, and yet it is prohibited to change the names of individuals? Look for yourself, and you will see that the names of certain *Fus* and *Kens* have been changed no less than seven or eight times. It is probable that some one thinks out a name, imagines it a good one and fancies the other a bad one, and then the name is changed and kept on being changed; and all the advantage we obtain from this is that we never can find the person we wish to call upon, and there is much cutting out of new geographical types and the like. Lately, as we said in our issue No. 649, the *Kenrei* of the Ashigara *ken* has changed the names of the peaks and valleys round Fuji, which were all Buddhist names, for Shintô names. This *Kenrei* must have done this in order to flatter some of the believers in Shintô. But if we were to change all the Buddhist names, of which there are so many belonging to the streets of Yedo, Osaka, Yokohama, &c., we should no longer be able to make them out. Perhaps, however, he thinks that every time we change a name it marks an advance in our civilization. If this is so, we imagine our wrestlers and actors must be at the highest pitch of civilization, so frequently do they change their names. If you want civilization, use the true adjuncts of civilization, and not the mere names.

Torture.

(Hochi Shimbun.)

It is said that in civilized countries torture has been abolished, and many say that without the use of it the truth cannot be arrived at. But, after much reflection, and comparison of the fact that innocent people under torture sometimes confess to crimes they have not committed, and the statement that unless by torture the truth cannot be arrived at, I have come to the conclusion that an end must be put to the practice of torture, and I urge the following facts in support of my argument.

Lately in a village called Honji in the vicinity of Osaka, a man named Toku was murdered. A female companion of his named Take was tried for the murder and and gave the following evidence: "While Toku and I were walking one night a man came up to us whose face was wrapped up in a handkerchief, and before I knew what he was about, Toku uttered a loud scream and dropped down dead. The murderer then came up and said to me, "I am a man of Awa, Kitchi by name, and this man Toku three years ago took my wife away from me. I have now killed him in revenge." The judges doubted, and on

Original from UNIVERSITY OF CALIFORNIA

secret husband, whose name is Kuma and who lives in Kitano, is the murderer, and he told me to speak as above on my trial." So the authorities arrested Kuma, and put him through severe tortures, the agony of which was more violent than he could bear. He then confessed that he had murdered the man, and that his reason for committing the crime was that he saw the intimacy which existed between Toku and Take and this aroused an uncontrollable feeling of jealousy in him. He was then convicted, and was nearly dead when released from the torture. But afterwards it occurred to the judges that the knife with which he was said to have committed the deed was such a dull, rusty thing that it was impossible to have committed the murder with such a weapon. The strange expression of Take's face also aroused suspicion, and on the authorities again examing Kuma gently, they were convinced that he was not the guilty person and that the act was committed by none other than Take, whom they determined to examine by torture. Before the appointed day, however, she died of small-pox.

Theatrical Reform.

There is hardly a theatre in any enlightened country that permits day performances, because men have their daily work to do, and after they have finished their dinners they may go to their amusements. This custom must be admitted to be excellent. I have lately heard that the Tokio Fu disapproves of night performances, and though it might not be possible at once to interdict day performances, I equally think that night performances should be immediately permitted, as there is no other *Fu* or *Ken* which prohibits them. It is directly opposed to the custom of foreign countries to have theatrical performances during the important business hours of the day. I have heard that a large proportion of the theatrical *corps* in foreign countries consists of women, and I hope we may have more actresses, and not permit our *corps* to be composed exclusively of men who have so many more important callings. We must also consider that females are not so precious that we cannot spare them to become actresses, as mostly all the daughters of our poorer classes become *geishas* or fall into still more evil ways.

Some may say that there will be so many females desirous of becoming actreses that our manners will be seriously injured. But my reply to this is that there need be no anxieties about our manners, for surely this would not be so bad a fate for the women of our poorer classes as the degraded condition in which we see them to-day. The Tokio *Fu* prohibits performances by women, but all the *Fus* and *Kens* with this exception permit it. This is strange! I have been told that this is because the Chiji and Sangi of this *Fu* do not like night performances or female performers. But as governing is one thing, and personal likes and dislikes another thing, my informant must be mistaken. I cannot, however, understand why they should be objected to, so I publish this in the newspaper, and challenge those who find fault with them to tell me their reasons, so that I may have the honour of explaining to them why more injury may result from male performances by day than from performances at night in which women take a part.

A Hint.

(*Hochi Shimbun.*)

Recently a man who resides at Honjo, Yedo, by the name of Ummedo, had in his possession a newspaper called the *Minkanzashi*, and a neighbour asked if he might be permitted to read it. Ummedo sent his servant with it, who by mistake took it to the wrong house. The person who lived there, mistaking it for a government notification, which indeed it very much resembled, wrote his name on it as a token that he had seen and understood it. He then sent it round to the next house, whence it was passed to the next, and it went the round of the whole ward until, in a few days, it came back to the hands of the original owner.

The reason for this is that our people never think of such a thing as unfolding either a [illegible]on or a proclamation, for they cannot unders[illegible]n the other hand the Government does not seem to care whether the people understand them or not. Here we have proof that not one person in the ward could understand the notification. This is very deplorable.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Swords.

The *Katana* (sword) has always been considered the badge of gentle condition in Japan, and has ever been associated in the mind of foreigners with the *yakunin* (official) or the *samurai* (daimio's armed retainer). The rules of observances connected with the wearing of the long and short sword or the single sword, are most minute, but have fallen into disuse. Of late the wearing of these weapons is by no means common in the foreign settlements, and even rare in the eastern capital, Tokio. But, in former days, the most trivial breach of these minute observances was often the cause of murderous brawls and dreadful reprisals. To touch another's weapon, or to come into collison with the sheath, was a dire offence, and to enter a friend's house without leaving the sword outside, a breach of friendship. Those whose position justified the accompaniment of an attendant, invariably left the sword in his charge at the entrance, or, if alone, it was usually laid down at the entrance. If removed inside it was invariably done by the host's servants, and then not touched with the bare hand, but with a silk napkin kept for the purpose, and the sword was placed upon a sword-rack in the place of honour near the guest, and treated with all the politeness due to an honoured visitor who would resent a discourtesy. The long sword (if two were worn,) was withdrawn, sheathed, from the girdle with the right hand, and placed on the right side—an indication of friendship, as it could not be drawn and used thus—never by the left hand, or placed on the left side, except when in immediate danger of attack. To exhibit a naked weapon was a gross insult, unless when a gentleman wished to show his friends his collection. To express a wish to see a sword was not usual, unless when a blade of great value was in question, when a request to be shewn it would be a compliment the happy possessor appreciated. The sword would then be handed with the back towards the guest, the edge turned towards the owner and the hilt to the left, the guest wrapping the hilt either in the little silk napkin always carried by gentlemen in their pocket-books, or in a sheet of clean paper. The weapon was drawn from the scabbard and admired inch by inch, but not to the full length unless the owner pressed his guest to do so, when, with much apology, the sword was entirely drawn and held away from the other persons present. After being admired, it would, if apparently necessary, be carefully wiped with a special cloth, sheathed and returned to the owner as before.

The short sword was retained in the girdle, but, at a prolonged visit, both host and guest laid it aside.

Women did not wear swords in their girdles by right or fashion, although when travelling it was often done. On the occasion of fires the ladies of the Palace sometimes placed side-arms in their girdles.

The ordinary length of the *katana* blade was 2 feet and $\frac{89}{100}$ inches; the small sword, or *wakizashi*, worn with it, 1 ft. $\frac{8}{10}$.

In full dress, the colour of the scabbard was black, with a slight tinge of green or red in it; the binding of the hilt blue silk; the mountings of the guard and hilt *shakudo* (alloy of copper and silver).

The names of makers are innumerable, and each has his particular form of blade, &c. and mode of welding the hard metal of the edge to the softer and tougher body and backing.

Swords more than three centuries old are common enough, and all of later date are called 'new blades' (*shinto*). Blades made even as far back as the time of our crusades, are to be met with, and there are blades known to be nearly ten centuries old, though these are very rare now. Ama kuni and Shim saki are two of the oldest makers whose swords are still in existence.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Chisakatana is about two feet long to two and a-half feet, and lighter than the ordinary blade, and is worn with the *naga hakama* and the court dress called *daimon* (large crest).

Metezashi (right hand use) is a short sword stuck in the girdle behind, the hilt to the right, used in fighting if the wearer be thrown and unable to draw the swords on the right side of the girdle.

Nikuchi is a short dirk without a guard, worn by doctors, artists and servants of midsama, with the rank of *Hoin* and *Hogen* (about equal to officials of the fourth and fifth ranks).

Tanto and *mamori katana* are stilettos about a foot long or less, worn in the girdle by officers, gentlemen and nobles, in place of the more cumbrous *wakizashi*. *Tanto* (war-sword); a long heavy two-handed sword, generally carried by a sword-bearer when not in immediate use.

Nodatchi is a sword of medium size, worn when hunting or rambling in country places for pleasure.

Tatchi is hung from the girdle by two slings; there are several styles. *Shin-no-tatchi* has a shagreen hilt and on the guard and scabbard and other mountings there should be 75 examples of the crest of the owner.

Tefu notatchi has a lacquered and gilt scabbard.

Sayamaki has a portion of the scabbard bound with silk. The mountings are numerous and the making of them is a special and honourable trade. Goto Yujo was a celebrated maker of the 15th century, whose descendants still exist. The work of this family is called *Iyebori* (the families' chasings.)

The first group, called 'articles of three places,' comprises, *first*, the ferule on the head of the hilt, and the ring behind the guard: *second*, the two pieces of metal interwoven with the silk binding of the hilt, used to hide the hole of the rivet, and to ensure a better and firmer grasp of the sword hilt; and *third*, the small knife and skewer-like pieces of metal inserted into the scabbard so as to be drawn out for use at pleasure. The small knife was used to throw at an enemy; the skewers to attach the heads of slain enemies to the girdle.

The guard *(tsuba)* is often a wonderful piece of workmanship in metal. *Nanban* (southern iron) was considered the best, but they were often made of valuable metal, and worked up with gold, silver &c., into a detailed picture of battles, hunting or scenery. Nearly every article connected with the sword will be richly inlaid to correspond.

Guards are also made of several thicknesses as of leather or raw hide, called *neritsuta shakudo* (copper and silver alloy). *Shibuichi* (one-fourth silver, three-fourths copper.) Silver and gold are used as well as iron.

Seppa are the washers, of where there is one or more above and below the guard, made of flat pieces of metal, brass, silver or gold.

Habaki is a ferule on the 'forte' of the sword extending about an inch below the guard, made of the same metal as the *seppa*.

Kojiri is the ornamental ferule on the lower end of the scabbard, often very expensively inlaid to match the other mountings.

Kurikata is the small cleat on the scabbard through which the *Sage aro* or silk-cord is rove. This is made of various materials, and generally made with the scabbard

Saguri is a small hook on the scabbard to prevent the sword slipping too far through the girdle.

Iska ito is the silk cord bound crosswise on the hilt. There are several styles of binding, *maki, dashi me tuki, kubitemaki, heomaki* &c. Some swords only have shark skin hilts without silk, but generally the silk binding is over the skin *(same)*, those pieces having the largest nodules being most valuable.

The sheath or scabbard (*scia*) is made of a wood called *Ho*, generally varnished. Black and dark colours are preferred; gaudy crimson and variegated colours are affected by the old 'swashbucklers.' Leather covers are worn over the handsomely lacquered scabbards; shark-skin ground down, inlaid with shell-work or peculiar kinds of lacquer.

Sage wo is the the long silk cord, of various kinds and colours of sennet, about five feet in length for large swords, half that for the short sword, used to bind up the sleeves preparatory to fighting.

On journeys the gentleman's sword-bearer carried the honoured blade covered with the *Shiki hada*, a sword-case of leather of cloth emblazoned with the owner's crest.

YOKOHAMA SPRING RACE MEETING.

The Races were on the whole a great success, the sport being generally good, but the finest finish was the last when in the China bettoes' race, three ponies passed the winning post nearly neck and neck. On Wednesday, the weather was unexceptionable and the course in capital order. As a consequence the times of all the events was very fair and above the usual average. The Celestial Cup (¾ mile) was won by *Pice* in 1 m. 38½ sec. The Criterion Stakes (1 mile, 220 yards), won in 2 m. 37 sec. by *Picayune* was very fair going for this course, being 17½ sec. per furlong. When we consider the hill, and the easy manner in which the pony won, he must be considered one of the very best ponies of the meeting, as indeed he was previously thought to be. If he had had a more formidable opponent, if *Crusader* had been in his form of eighteen months ago, when, carrying 9lbs. more he won the "Grand Hotel Cup" (1¼ miles) in 2m. 55s., it would have been a magnificent race and the victory perhaps on the other side.

The Nippon Champion to which we had looked forward so much as a test between *Typhoon* and *Moscou*, was spoilt as far any race between those two was concerned by the ill-temper of the latter, who bolted vigorously soon after the start.

In the "Maiden Stakes" *Sirocco* showed a marvellous spurt at starting, and stayed after it in a way that could hardly have been expected and made one wish that he had been entered for the "*Scurry*."

The sport on Thursday, in spite of a chilly easterly wind, was quite up to Wednesday's mark. *Pice* and *Picayune* again made the best times for the distances of Five Furlongs and half a mile respectively, the first being run in 1 min. 19½ seconds and the latter in 61 seconds, although it must be mentioned that in both cases the start was a running one. *Lodi's* performance, too, of the half-mile in 62 sec. is deserving of great praise, as it was evident by the easy way in which he won that he could have made at least a second better time. Nor must *Typhoon's* ¾-mile in 1.m. 39½ sec. be omitted, when he was carrying 10st. 12lbs. The little creature responded most gamely when called upon, and though evidently considerably distressed, won by nearly two lengths. Since the death of *Montezuma* we have never seen him so extended at the winning post *Crusader* in the "Bar cup" (1 mile, 220 yards) showed 2½ sec. better form than his opponent *Picayune* did the day before, and we really think is not an adversary that the winner of the "Criterion Stakes" can afford to despise.

On Friday the hurdle race was a wretched spectacle. It is not a very difficult thing to train a China pony to rush at and either knock down or jump over a few flights of very low hurdles, but yesterday's race was little more than an exhibition of animals trying to do what they have not been taught. Out of five starters only one can be said to have galloped over the course, and he seemed to think five hurdles enough.

Bracmar's great courage and staying powers, with a certain amount of rush which he always seems to have in him, safely won him the "Sayonara Cup" in spite of the eleven stone and a-half he was carrying.

Grasshopper, *Cyclone* and *Northern Light*, in the order named, appear to be the pick of the China Griffins, whilst the *Swell* seems the only representative of the Japan batch, unless *Drizzle*, who is undoubtedly very fast for a short distance, can be cured of his bolting.

But the most surprising, or at all events interesting occurrence of Friday's racing was the victory of *Mohstots* in very good company, especially his beating *Typhoon*. *Mohstots*, supposed to be a ¾ mile pony, won a mile race beating *Grasshopper* and *Crusader*, to the former of whom he was giving seven and to the latter three pounds, while to *Typhoon* he gave more, we should consider, than a three pounds beating, which was the amount he was receiving from the latter animal. The time, however, being doubtful (stated to be 2m. 17sec.) we are una-

Digitized by Google
UNIVERSITY OF CALIFORNIA

ble yet to pronounce quite decidedly on *Mohstotz's* form, and it is difficult to understand why the riding of this pony should have been so fast all through. If it is the only way he can win a race it speaks volumes for his sulky temper. The two bettoes' races wound up a very good race meeting with two excellent struggles, in the first of which *Tim Whiffler* had to exert all his energies to shake off *Sirius*, and in the latter *Ivanhoe*, *Northern Light*, and *Crusader*, might have been covered with a sheet at the winning post.

THE SPRING RACE MEETING.

First Day.

Wednesday, 12th May.

There was little expectation that the attendance at the Race Course yesterday would equal that of former seasons. The dulness of business may have had its share of this to account for, but the absence of the military and the indifference with which many view the sport must be held still more largely responsible for the comparatively small muster of visitors. There was no music, few ladies were present, and the bright scarlet of our cheerful national uniform which, dotted here and there amid the sombre mass of civil dress, brightened and lighted it up in past seasons, was sadly missed. The day, however, was all that could be desired and the course in reasonably good condition.

The first race was the:—

1.—The Trial Plate: For China Ponies that have never won a Flat Race here. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Monymusk* (late *Ravensdale*), 10st. 11lbs. - - - -	1
Mr. Peter's *Northern Light*, 10st. lbs. - -	2
Mr. Storm's *Cyclone*, 10st. 8lbs. - -	3

After some little delay, during which *Cyclone* unseated his rider, they got away to a very bad start, *Cyclone* being last, and *Monymusk* and *Saxon* having a lead of at least two lengths. The two named made the running, the others coming on some four lengths behind. On reaching the quarter-mile post, *Saxon* dropped behind, and *Cyclone* and *Northern Light* made an effort, but could never reach *Monymusk*, who won by two lengths. *Northern Light* beat *Cyclone* for second honours by a head. Time, 2 mins. 17 secs.

2.—The Griffins' Plate: Value $150, with Entrance Fees added. For Japan Ponies *bonâ fide* Griffins. Weight for inches. Entrance, $10. Five Furlongs. First Pony to receive 70 per cent., Second 20 per cent., and Third 10 per cent.

Mr. J. Robertson's *The Swell*, 10st. 4lbs. -	1
Mr. E. Mason's *Chevy Chase*, 10st. 6lbs. -	2
Mr. Morrison's *Drizzle*, 10st. 8lbs. - -	3

After one fase start, in which *Chevy Chase* ran some distance before being pulled up, they got away to a good start, the only one who lost ground being *Cyclone*. *Drizzle* and *Chevy Chase* took the lead at starting, but were soon joined by *The Swell*, who collared and passed them, and was never afterwards headed, winning easily in the remarkably good time of 1 min. 23 secs. *Chevy Chase* was second, and *Drizzle*, who with *Cyclone* bolted to the outside rails, was third.

3.—The Celestial Cup: Presented. For China Ponies. Weight for inches. Entrance, $5. Three quarters of a mile.

Mr. Pringle's *Pice* 10st. 8lbs. - - -	1
Mr. Morrison's *Monymusk*, 10st. 11lbs. - -	2
Mr. J. Robertson's *Gambler*, 10st. 8lbs. - -	0
Mr. J. Robertson's *Heather Bell*. 10st. 11lbs. -	0

After a good start, *Monymusk* and *Pice* got away with the lead, and kept it throughout, *Pice*, who was never headed from start to finish, winning easily by three-quarters of a length. Time, 1 min. 32 secs.

4.—The Nippon Champion Plate: Value $150. For Japan Ponies. Weight for inches. Entrance, $10. Once Round.

Mr. Marlborough's *Typhoon*, 10st. 2lbs. - -	1
Mr. J. Robertson's *Tim Whiffler*, 10st. 12lbs. -	2
Mr. Ola's *Moscow*, 10st. 4lbs. - - -	0

After a long delay, they got away to a bad start, *Tim Whiffler* having the lead, and *Moscow* being left behind. At the bottom of the hill the last named bolted, and was pulled up. *Typhoon* collared *Tim* on rising the hill, and the race was never in doubt, as he was going throughout well within himself, and eventually won easily by several lengths. Time, 2 mins. 20 secs.

5.—The Challenge Cup: Value $150. For China Ponies. Weight for inches. Entrance, $10. One mile and three quarters.

Mr. Morrison's *Braemar*, 10st. 8lbs. -	1
Mr. J. Robertson's *Dixie*, 10st. 8lbs. -	2
Mr. Sandwith's *Ivanhoe*, 10st. 5lbs. -	3

This was a splendid race throughout. At starting *Braemar* and *Ivanhoe* raced together for the lead, *Dixie* lying some six lengths behind. On passing the stand the first time *Braemar* was leading by some three lengths, but on rising the hill *Dixie* was set going, and soon picked up his lost ground. At the five-furlong post *Dixie* passed *Ivanhoe*, and at the one-quarter mile he collared *Braemar*, and for some little distance he led; *Braemar's* jockey sitting down to ride him, the latter again took the lead, and on coming into the straight was four lengths ahead. Here, however, he bolted to the outside rails, and lost much ground, but he won at the finish by two lengths, *Dixie*, who followed him to the outside rails, never being able to catch him. Time, for the first three-quarter mile, 1 min. 54 secs.; and for the entire distance, 4 mins. 11 secs.

6.—The Maiden Stakes: For Japan Ponies that never won a Race. Weight for inches. Entrance, $5. Five Furlongs.

Mr. Morrison's *Drift*, 10st. 2lbs. - - -	1
Mr. Grigor's *Sirocco*, 10st. 4lb. - - -	2
Dr. Buckle's *Sirius*, 10st. 6lbs. - - -	3
Mr. J. Robertson's *The Snob*, 10st. 6lbs. - -	0
Mr. E. Mason's *Eclipse*, 10st. 8lbs. - -	0

After several false starts, in one of which *Eclipse* bolted round the wrong way and reached the bottom of the dip before he could be pulled up, they went away, *Sirocco* as usual jumping off with the lead. *Drift*, who lay second, soon caught and passed him, and won a very good race by two lengths, *Sirocco* beating *Sirius* (who got a bad start) for second honours by a length. The time was very good—1 min. 22 secs.

7.—The Criterion Stakes: For China Ponies. Winners at this Meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Radley's *Picayune*, 10st. 5lbs. - -	1
Mr. Saville's *Crusader*, 10st 5lbs. - -	2

This was a match between the two placed. *Crusader* jumped off with the lead, and was a length ahead on passing the Stand. They went on thus until passing the half-mile post, where *Picayune* took the lead. On entering the straight Mr. Marlborough eased *Picayune*, and the outsiders thought that *Crusader* would win; but *Picayune* was soon set going again, and won easily by a length, the time being very good,—2 mins. 37 secs.

8.—The Coffee Cup: Presented. For Japan Ponies. Winner of the Nippon Champion Cup excluded. Winners of Two Races at last Autumn Meeting, 10 lbs. extra. Winners at the meeting, 5 lbs. extra. Weight for inches. Entrance, $5. Half a mile.

Mr. Ola's *Moh-Stotz*, 10st. 6lbs. - - -	1
Mr. J. Robertson's *The Swell*, 10st. 4lbs. -	2
Mr. Campbell's *Despair*, 10st. 6lbs. - -	3

This was a gift for *Moh-Stotz*, who took the lead at starting, and won hands down in 1 min. 3½ secs.

9.—The China Griffins' Plate: For China Ponies, being *bonâ fide* Griffins at date of entry. Winners at the meeting excluded. Weight for inches. Entrance, $5. Half a mile.

Mr. Storm's *Cyclone*, 10st. 8lbs. - -	1
Mr. William's *Grasshopper*, 10st. 5lbs. - -	2
Mr. Peter's *Gonderic*, 10st. 8lbs. - -	3
Mr. Ed. Stuart's *Gaikwar*, 10st. 8lbs. - -	4

This was one of the best races of the meeting. After a long delay they got away, *Grasshopper* having a lead of a length. On reaching the trees *Cyclone* joined and soon passed him, and after a splendid finish won by half a length. Time, 63 secs.

Second Day.

Thursday 13th May.

The unpromising state of the weather during the forenoon of yesterday caused some apprehension lest the rain which threatened should render the continuance of the races a matter of difficulty if not of impossibility. Despite a cloudy sky, however, much dust and other resulting inconveniences a very good day's racing took place with a somewhat better attendance, more especially of ladies, than that of the previous day. The band of the *Montcalm*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

was in attendance and performed during the intervals of the races. Miss Van Buren presented the "Ladies Purse."

1.—THE DIPLOMATIC CUP: For China Ponies. Winners of two Races at the meeting, 7lbs. extra. Weight for inches. Entrance, $5. Once round.

Mr. Radley's *Picayune*, 10st. 5lbs.	-	1
Mr. Storm's *Cyclone*, 10st. 8lbs.	-	2

Only the two placed went for this. *Picayune* got a good deal the best of a very bad start, and on reaching the dip was some lengths ahead. After passing the three-quarters of a mile post, *Picayune* was steadied, which enabled *Cyclone* to get on terms with him; but the race was never in doubt, as the first named won as he liked without being called on. Time, 2 mins. 20 secs.

2.—THE YOKOHAMA PLATE. For Japan Ponies. Winners of two Races in 1874, or at this meeting, excluded. Weight for inches. Entrance, $5. Five Furlongs.

Mr. J. Robertson's *Kangaroo*, 10st. 8lbs.	-	1
Mr. J. Robertson's *The Snob*, 10st. 6lbs.	-	2
Mr. Morrison's *Dilemma*, 10st. 6lbs.	-	8

Three went for this, *Kangaroo* immediately taking a lead of a length. After passing the half mile, *Dilemma* closed up with the leader, but could never quite catch him, as although both ponies were severely punished in coming down the straight, *Kangaroo* won by a length and a half. *The Snob*, with whom Mr. Robertson, declared "to win if able," lay last throughout, and appeared to be outpaced. Time, 1 min. 22¾ secs.

3.—THE VISTORS' CUP: Presented. For China Ponies. Winner of the Challenge Cup, or of two Races at the meeting, 10lbs. extra. Other winners 7lbs. extra. Weight for inches. Entrance, $5. One mile and a half.

Mr. Morrison's *Braemar*, 11st. 4lbs.	-	1
Mr. Sandwjth's *Ivanhoe*, 10st. 5lbs.	-	2
Mr. J. Robertson's *Dixie*, 10st. 8lbs.	-	3

At starting *Ivanhoe* led but was passed by *Braemar*, who led by two lengths on passing the Stand the first time, *Ivanhoe* and *Dixie* coming on together. On rising the hill *Dixie* was again last, but he was set going on the other side, took second place, and appeared to be catching the winners, but at the quarter-mile post he was finished, and *Braemar* won as he liked by several lengths, *Ivanhoe*, who passed *Dixie*, was a bad second, and the last named was pulled up. Time, 3 mins. 29 secs.

4.—THE LADIES' PURSE: Presented by the Ladies of Yokohama. For all Japan Ponies. Weight for inches. Entrance, $10. Half a mile.

Mr. Ola's *Lodi*, 10st. 4lbs.	-	1
Mr. Morrison's *Drift*, 10st. 2lbs.	-	2
Mr. Ola's *Moscou*, 10st. 4lbs.	-	3
Mr. J. Robertson's *The Swell*, 10st. 4lbs.	-	0
Mr. E. Mason's *Chery Chase*, 10st. 6lbs.	-	0

Typhoon and *Moh-Stotz* were scratched. This was the race of the day. After a long delay they got away to a beautiful start. *Lodi* and *The Swell* at once took the lead, and at the trees it seemed as if he would make a race of it, but soon afterwards he was finished; *Lodi* then came on by himself, and won hands down by about a dozen lengths. A good race took place for second honours, which *Drift* managed to secure by a head. Time, 1 min. 9 secs. Mr. Ola declared best to win.

The winning jockey (Mr. Hughes was afterwards led up to the Grand Stand, where the prize (a miniature saddle and saddle cloth) was presented to him by Miss Van Buren, who addressed him as follows:—

"The ladies of Yokohama appreciate the exertions of the gentlemen of this Race Club, in providing for their amusement. They desire to present to you this prize, which you have won on a fair field, and over worthy competitors. I trust that nothing but pleasant memories may cluster around this day; that the victory you have now won may prove an incentive to nobler triumphs on the great field of life.

Mr Hughes, in reply, expressed his thanks to the ladies for their gift, and his pleasure in winning it, more especially as it was the first he had ever won, and at the same time stating that his only regret was that it had not been won by a resident of Yokohama.

5.—THE LEDGER PLATE: For China Ponies. Winners of No. 3 and No. 9 on the First Day, or of more than two Races at the meeting, excluded. Weight for inches. Entrance, $5. Half a mile.

Mr. Radley's *Picayune*, 10st. 5lbs.	-	1
Mr. William's *Grasshopper*, 10st 5lbs.	-	2
Mr. Ed. Stuart's *Gaikwar*, 10st. 8lbs.	-	3
Mr. Morrison's *Benachie*, 10st. 5lbs.	-	0
Mr. J. Robertson's *Saxon*, 10st. 8lbs.	-	0
Mr. J. Robertson's *Heather Bell*, 10st. 11lbs.	-	0
Mr. Sinbad's *Oeillet*, 10st 11lbs.	-	0

Seven went for this, and the start was a peculiar one, for although the ponies got away together they were at least a dozen lengths beyond the post. *Picayune*, as usual, took the lead, with *Grasshopper* in close attendance, and the race lay between these two, but the former won easily by several lengths, *Gaikwar* getting third place by a head. The time of the half mile (with the flying start) was 1 min. 1 sec.

6.—THE KANAGAWA CUP: Presented. For Japan Ponies. Winner of the Nippon Champion, 10lbs. extra; of any other Race, 7lbs. extra. Weight for inches. Entrance, $5. Three quarters of a mile.

Mr. Marlborough's *Typhoon*, 10st. 12lbs.	-	1
Mr. Ola's *Lodi*, 10st. 11lbs.	-	2
Mr. Ola's *Moh Stotz*, 10st. 13lbs.	-	3
Mr. Ola's *Moscou*, 10st. 4lbs.	-	4
Mr. J. Robertson's *Tim Whiffler*, 10st. 12lbs.	-	5

Moh-stotz was very fractious, and for a long time would not join his horses, and when the start was made did not get away with the others. *Typhoon* took the lead, but was soon joined by *Lodi*, and the two raced round together, the latter having a lead of half a length. On entering the straight *Typhoon's* rider called on him, and he came ahead, and won by two lengths. *Moh-Stotz* was third. Time, 1 min. 39½ secs. Mr. Ola declared best to win.

7.—THE BAR CUP: Presented. For China Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Saville's *Crusader*, 10st. 5lbs.	-	1
Mr. Peter's *Northern Light*, 10st. 5lbs.	-	2
Mr. J. Robertson's *Dixie*, 10st. 8lbs.	-	3
Mr. J. Robertson's *Saxon*, 10st. 8lbs.	-	0
Mr. Sinbad's, *Oeillet*, 10st. 11lbs.	-	0
Mr. Sport's *Summer*, 10st. 5lbs.	-	0

After a long delay and several false starts, in one of which *Crusader* passed the Stand before being pulled up, they got away togother, *Crusader* and *Saxon* making the running. After passing the five furlongs *Summer*, who had come through his horses, took second place, but on reaching the trees he was finished, and dropped back. *Northern Light* then made his effort, but could never reach *Crusader*, who won easily by several lengths, *Northern Light* beating *Dixie* for second place by a length. Time, 2 mins. 34½ secs.

8.—THE TEA CUP: Presented. For Japan Ponies. Winners of two Races at the meeting or in 1874, excluded. Winners of one Race at the meeting 7lbs. extra. Weight for inches. Entrance, $5. Three quarters of a mile.

Mr. Buckle's *Sirius*, 10st. 6lbs.	-	1
Mr. Morrison's *Dilemma*, 10st. 6lbs.	-	2
Mr. J. Robertson's *Kangaroo*, 11st. 11b.	-	3
Mr. E. Mason's *Chery Chase*, 10st. 6lbs.	-	0
Mr. J. Robertson's *The Snob*, 10st. 6lbs.	-	0
Mr. Morrison's *Drift* 10st. 6lbs.	-	0
Mr. Morrison's *Drizzle*, 10st. 8lbs.	-	0

All the ponies went for this except *The Swell*. On starting *Dilemma* did not get away with the others. *Sirius*, who had inside place, took the lead, *Dilemma* being some lengths behind everybody. On reaching the trees *Kangaroo* challenged the leader, but could never reach him. At the quarter-mile post *Drizzle* bolted, and *Dilemma*, who had come through his horses, took second place. A splendid race took place down the straight, but *Dilemma* could never quite get up, and *Sirius* won by a length. Time, 1 min. 42½ secs.

9.—THE SELLING STAKES: Of $5 each, with $50 added, for all Ponies. China Ponies, 10st. 7lbs. for 13 hands; Japan Ponies, 10st. for 13 hands 3in., to increase for inches as per scale. The winner to be sold for $75 with his engagements, by auction, immediately after the Race, and any surplus realised over the declared value to go to the Race fund. If entered to be sold for $50, allowed 7lbs; if for $25, allowed 14lbs. Five Furlongs.

Mr. Pringle's *Pice*, 10st. 3lbs.	-	1
Mr. Morrison's *Benachie*, 9st. 7lbs.	-	2
Mr. William's *Grasshopper*, 10st. 7lbs.	-	3
Mr. Robertson's *Heather Bell*, 9st. 13lbs.	-	0
Mr. Sinbad's *Tourterelle*, 9st. 7lbs.	-	0
Mr. Ed. Stuart's *Lingerer*, 10st	-	0
Mr. Kirkwood's *Petitpas*, 10st.	-	0

The start was a very bad one, *Pice* and *Benachie* getting the best of it, and they soon increased their lead to about a dozen lengths. The two raced together the whole way, but *Pice*, who lasted longest, came in winner by about two lengths; *Grasshopper*, who picked up much ground, was third. The time, with a flying start, was 1 min. 20 secs.

The winner was sold by auction to Mr. Center for $68.

THIRD DAY.

Friday, 14th May.

Although the dust and high wind which prevailed yesterday afternoon were no light inconvenience to spectators, the attendance at the Race Course was moderately good. The ground here and there exhibited the effects of the late heavy rain. The band of the *Montcalm* was in attendance during the afternoon.

1.—THE HURDLE RACE: Value $75. For all Ponies. Over Six (6) hurdles. China Ponies, 11st.; Japan Ponies, 10st. Entrance, $5. Once round and a distance.

Mr. Sandwith's *Ivanhoe* - - - -	1
Mr. Sport's *Summer* - - - -	2
Mr. Sinbad's *Tourterelle* - - - -	3
Mr. J. Robertson's *Saxon* - - - -	0
Mr. E. Mason's *Thistle* - - - -	0

This race was a failure, as none of the ponies would take their hurdles kindly. In the preliminary jump they all refused several times, but at last most of them got over. At starting *Ivanhoe* took the lead, and cleared his first hurdle beautifully. *Summer* refused, and afterwards bolted to the gate, extinguishing his chance. *Ivanhoe* took a strong lead, jumping beautifully until he came to the last hurdle, which he refused once, but went over at a second attempt, and came in winner. The rest refused every hurdle over and over again, but after a very long interval *Summer* came in, and after another equally long lapse of time *Tourterelle* made his appearance. *Saxon* walked in the wrong way, and *Thistle* broke down and was led in. Time, 2 mins. 37 secs.

2.—THE SAYONARA CUP: Presented by Colonel Richards and the Officers of the Royal Marine Battalion. A Handicap for all winners at the Meeting. Entrance, 10 per cent of amount of Stakes won: compulsory. Open also to beaten Ponies at the meeting, at an Entrance Fee of $5. One mile and a quarter. To be handicapped by the Stewards at the close of the Second Day's racing.

Braemar, 11st. 7lbs. - - - -	1
Pice, 10st. 7lbs. - - - -	2
Moh-stoz, 10st. 10lbs. - - - -	3
Cyclone, 10st. 5lbs. - - - -	0
Kangaroo, 10st. - - - -	0
Sirius, 10st. - - - -	0

After a number of false starts they went together, *Moh-stotz* immediately taking the lead, with *Pice* second. Passing the Grand Stand *Braemar* joined the leader, but was steadied on rising the hill. At the three-quarter post *Pice* took the lead, and at the trees *Braemar* joined and passed him, and was never afterwards headed. *Moh-stoz* was second in coming down the straight, but he was caught on the post by *Pice*, and beaten for second honours by a head. Time, two min. 55 secs.

3.—THE SCURRY STAKES: For all Ponies. A Sweepstake of $5 each, with $50 added. China Ponies, 10st. 7lbs.; Japan Ponies, 10st. Three Furlongs.

Mr. Radley's *Picayune* - - - -	1
Mr. J. Robertson's *Heather Bell* - -	2
Mr. Ola's *Lodi* - - - - -	3
Mr. Morrison's *Bonachie* - - -	0
Mr. J. Robertson's *Saxon* - - -	0
Mr. J. Robertson's *The Swel* - - -	0

After a little delay, caused by *Benachie*, they got away to a bad start, *Lodi* being last. *Picayune* as usual jumped off with the lead, and although *Lodi* took second place on entering the straight, he could never reach the leader, who won easily. *Heather Bell*, who came with a rush at the finish, was second. Time, 50 secs.

4.—THE SOLACE CUP: For all beaten Japan Ponies at the Meeting. Weight for inches. Entrance, $5. Five Furlongs.

Mr. J. Robertson's *Tim Whiffler*, 10st. 12lbs.	1
Mr. Ola's *Moscou*, 10st. 4lbs. - - -	2
Mr. J. Robertson's *The Snob*, 10st. 6lbs. -	3
Mr. Campbell's *Despair*, 10st. 6lbs. - -	0
Mr. Grigor's *Cyclone*, 10st. 6lbs. - -	0
Mr. Grigor's *Sirocco*, 10st. 4lbs. - -	0

There have been some rather bad starts at the meeting, but they culminated in this, where *Sirocco* and *Cyclone* were left at the post, and the others started with an interval of about ten yards between each. No description of the race is possible, and in consequence of the bad start, no time was taken.

5.—THE CHINA CONSOLATION PLATE: Value, $100. For all beaten China Ponies at the Meeting. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Williams' *Grasshopper*, 10st. 5lbs. - -	1
Mr. Peter's *Northern Light*, 10st. 5lbs. - -	2
Mr. Robertson's *Heather Bell*, 10st. 11lbs. -	3
Mr. Sinbad's *Oeillet*, 10st. 11lbs. - -	0
Mr. Robertson's *Dixie*, 10st 8lbs. - -	0
Mr. Peter's *Gonderic*, 10st. 8lbs. - -	0
Mr. Sport's *Summer*, 10st. 5lbs. - - -	0

They got away to a good start, *Oeillet* making the running. In descending the hill *Dixie* was cannonned against and thrown down, luckily without injuring his rider. *Grasshopper* and *Heather Bell* raced together along the opposite side with a lead of two lengths. On reaching the trees the last named was finished, and *Northern Light* took second place, but he could never reach *Grasshopper*, who going well within himself won easily by several lengths. Time, 2 mins. 45 secs.

6.—THE FAREWELL CUP: Presented by a late member. A Handicap for all Ponies. To be handicapped by the Stewards at the close of the Second Day's racing, when Entries will be received. Winner of the Sayonara Cup excluded. Winners of any Race after publication of the Handicap, 3lbs. extra. Entrance, $5. Once Round.

Moh-Stotz 10st. 7lbs. - - - -	1
Grasshopper, 10st. - - - -	2
Crusader 10st. 4lbs. - - - -	3
Dixie, 10st. 4lbs. - - - -	0
Cyclone, 10st. 2lbs. - - - -	0
Typhoon, 10st, 10lbs. - - - -	0
Picayune, 11st. - - - - -	0
Pice, 10st. 4lbs. - - - - -	0
Ivanhoe, 10st. 5lbs. - - - -	0

They got away to a good start *Typhoon* losing a little ground, which, however, he speedily regained, and on going up the hill he and *Moh-Stotz* were ahead, *Grasshopper* being third. After passsng the five furlongs *Picayune* came up with the latter, and they raced along together. At the trees *Typhoon* was done, and soon after *Picayune* retired. *Moh-Stotz* then came along and won easily by two lengths. *Grasshopper*, who ran very well, was second, and *Crusader*, who came with a rush at the distance post, was third.

The bottoes' race for Japanese ponies was won by *Tim Whiffler*, *Sirius* being second, and *Dirft* third. Eleven started.

For the Chinese pony bottoes' race six started, and after a splendid race it was won by *Ivanhoe*, *Northern Light* being second, and *Crusader* third. This was the best race of the meeting, a head only separating the three placed.

To-morrow afternoon the following matches are arranged to come off:—Match for $200; for half a mile; weight, 10st. 5lbs.; Mr. Radley's *Picayune*, Mr. Ola's *Lodi*.——Once round and a distance; scale weights: Mr. Savile's *Crusader*, *v.* Mr. William's *Grasshopper*.

YOKOHAMA GENERAL CEMETERY.

On Monday afternoon 10th inst. at 4 o'clock a meeting was held at the Chamber of Commerce in connection with the affairs of the Cemetery, about ten gentlemen being present.

Gen. T. B. Van Buren took the chair and said the meeting had been called for the purpose of receiving the report and accounts and for collecting funds. He regretted to notice the small attendance but this was probable owing to the mails.

Mr. H. Allen, Jr, then read the minutes and accounts of the last meeting which were passed. He then read the following statement of the Cemetery accounts, together with a list of the interments which are as follows:—

YOKOHAMA GENERAL CEMETERY IN ACCOUNT CURRENT WITH HENRY ALLEN, JR., HONORARY TREASURER.

DR.

Balance to debit new account	...$ 298 86
Superintendents salary to July 1st, 1874, 23 months	... 1,240 00
Labor account	... 849.75
General charges account	... 196 63
Building and repair account	... 111.56
	$2,666 80
Dr. Balance to new account ...	...$757 80

CR.

Receipts on account Interment fees from July, 1872 to July, 1874	...$1,200.00
Receipts on account subscriptions	... 709 00
Balance to Dr. new account	... 757.80
	$2,666 80

E. & O. E.
HENRY ALLEN, JR.,
Hon. Treas. Y. G. C.

Yokohama, 6th May, 1875.

The undersigned have examined the above account with vouchers and have found the same in order.

JOHN LESLIE.

Total	143
Free interments	25
Paid ,,	118
Total	143

The Chairman said that it appeared from the accounts that there was a debit balance of nearly $800.

Mr. W. H. Smith asked if any subscriptions had been collected last year?

Mr. Allen replied in the negative. The matter had been left in the hands of a gentleman who had left Yokohama and nothing had been done.

Mr. Smith thought that in that case the community might reasonably be asked this year for a double subscription. He then put a resolution that the thanks of the meeting and the community be given to the Committee for their labours.

This was unanimously passed.

Mr. Smith then asked if the Jewish community came under the Committee.

Mr. Allen replied in the affirmative, but that a separate portion of the Cemetery had been set apart. There was plenty of space.

Mr. Brower then proposed that the following gentlemen be requested to set as a Committee for the current year:—Messrs. E. Piquet, Geisenheimer, F. Pitman, G. C. Pearson, H. Allen, Jr.

Mr. Smith seconded this and it was carried unanimously.

Mr. Smith then proposed that the thanks of the community be given to Mr. Wake, the sexton, for his zealous service and the good condition he had kept the cemetery in. He had done very well indeed considering the small amount of money he had had placed at his disposal for such purposes.

This was put by the Chairman and carried.

A vote of thanks to the Chair followed and the meeting dispersed.

Law Report.

H. B. M.'S CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

May 10, 1875.

John Macdonald, seaman on board the S. S. *Riga*, was charged by Sergeant Perceval with being drunk and incapable yesterday afternoon about half-past three. On being brought to the station he assaulted a Japanese constable.

A Japanese police interpreter, seeing the man drunk in Water street, called the attention of a Japanese constable to his state, and had him taken into custody.

Fined $2 and costs, or 48 hours' imprisonment.

John Boyce, a fireman on board the *Riga*, also charged with drunkenness, had to pay the jinrikisha man who took him to the station from the hatoba a quarter boo, and fined $1 and the costs of the summons.

—Stewart, a seaman of H. M.'s S. *Challenger*, who was brought to the station in a noisy and drunken condition at 11 o'clock last night, was fined $1 and costs, or in default 24 hours' imprisonment.

THE CIVIL SERVICE.

Saturday Review.

It may not be very easy to say exactly what ought to be done about the Civil Service, but thus much has at least been made perfectly clear by the Report of the Commissioners, that nothing can be more absurd, hopeless, and intolerable than the present system, and that the dead lock which it has produced must come to an end. The Chancellor of the Exchequer has described the proposals of the Commission as reactionary, and so undoubtedly, in one sense, they are; but if does not at all follow that there is any reasonable objection to them on that account. On the contrary, this seems to be a strong presumption in their favour. When a man is sticking miserably in the mud on a bad road, it is no doubt highly reactionary for him to turn round and try to get to his destination by some more practicable route; but most rational persons will be of opinion that this is quite the best course he could possibly take. An emetic which relieves a patient from something which has very much disagreed with him is also equally reactionary and salutary. The truth is that the experiment of open competition, pushed to a fanatical extreme, without any effectual checks or qualifications, has produced the disastrous consequences which were naturally to be expected from it. It is well, therefore, that this mischievous folly should be distinctly recognized, and, if recognized, it follows logically that it ought to be got rid of. Before Sir Stafford Northcote has a right to apply the word reactionary in an offensive sense, he is bound to show that the direction in which the Civil Service has hitherto been moving is the right one. But all the evidence laid before the Commission appears to tell the other way. We may agree with Sir Stafford that a point has been reached at which, profiting by experience, we may hope to establish a really satisfactory system; but that point is, in our opinion, as in that of the Royal Commission, the utter breakdown of the principle of open competition; and the only chance of safety is, therefore, to turn back for at least a part of the way.

The Commissioners go to the root of the question when they say, "It may well be doubted if any examination can effectually test a man's real and permanent capacity for the practical business of life." It is quite certain that a man might be able to pass a Civil Service examination and yet be utterly unfitted to fill a place there by his temperament and habits; or, on the other hand, he might be not very high in the examination list and yet possess all the qualities which go to the making of a Civil official of the most satisfactory type. Again, the Commissioners justly remark that "the method of choosing and determining the superior officers of an important department for the whole of their official career by the test of passing a literary examination at the age of leaving school or college, is, to say the least, an extremely doubtful one"; it is added that "the result is not approved in the office which has had the greatest experience of it." That the unrestricted patronage of former days was bad nobody will deny, but open competition has certainly not proved a more satisfactory method of selection when tested by result. It was lately asserted by a competent writer in the *Edinburgh Review*, who shared none of the vulgar prejudices against an educated bureaucracy, that competition has failed in the Indian Service to afford a sufficient check upon the admission of unfit persons, though the sort of unfitness to be guarded against has changed. As a rule, the successful candidates possess the qualities for which they have been tested, but then this is not all that is necessary, and there is no guarantee whatever that other much more essential qualities will not be wholly wanting. Experience in India tallies in this respect very closely with that at home; and it is impossible to doubt that in various elements of character and social education, the ordinary standard of the Civil Service has ever since the introduction of competition been steadily deteriorating. It was a good thing no doubt that jobbery should be prevented, but what has been substituted has proved to be infinitely more injurious to the interests of the service and of the country; and the first indispensable step towards any improvement is that competition in its present form should be abandoned.

Nothing, in fact can be more amazing than that in a country like England, where everybody is supposed to be proud of doing things in a practical way, such a fantastically pedantic and artificial system should have been tolerated so long, or indeed should ever have been allowed to be established. It is obvious that all that can be tested by a literary competition is a very small part of what is required in a civil official above the level of a mechanical copying clerk. It is no doubt proper that a man's fitness on this side of his character should be ascertained; but that is no reason why his fitness in other respects should be

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

entirely disregarded, or assumed to follow as a matter of course. Moreover, the injury which is done by the introduction of doubtful men is greatly aggravated by the rule of seniority on which promotion is conducted. A youth gets into an office on the strength of an examination which is of very questionable value even as to the genuineness of the accomplishments which it is supposed to measure, and which leaves altogether out of view the most important qualifications for the work to be done; and once in, and merely because he is in, and does not outrageously misconduct himself or neglect his duties, he rises steadily by seniority, blocks the way of more zealous and useful men, and oppresses his superiors with the dead weight of his incapacity. Nothing can be more ridiculous in itself than that a man's fortunes for the rest of his life should be thus made to turn upon the lottery of a schoolboy examination, without reference to any subsequent proofs of industry or talent; but the manner in which the prize is bestowed has also an exceedingly mischievous effect, which the Commissioners have not neglected to point out. Clerks, they remark, who have been admitted by open competition are led to look upon their future career as a matter of right, and fancy themselves wronged if they are not as well off as all who have passed the same examination. It is impossible to imagine anything more effectually calculated to produce apathy and stagnation in a public office than to encourage a lad fresh from school or college to believe that he has only once in a way to make a push, with a crammer's help, for a good place at an examination, and that a steady competence will then be secured to him for life without any exertion whatever on his part beyond a decent formal compliance with the rules of the office. The Commissioners point out that, among other differences between private establishments and public offices, able and industrious men have in the former a better chance of promotion by natural selection, while in the public service they remain on a level with men of inferior capacity. This injustice is enhanced by the capricious and arbitrary distribution of duties among the different classes of Civil Service clerks, so that one in the lower division at a very small salary may be doing really more intellectual and important work than another clerk who has had the luck to make his start in the upper grade with higher pay. It will be observed, then, that there are three radical defects which are signalized by the Commissioners—first, the want of adequate checks upon the admission of unfit persons; next, the tendency to degrade promotion into a system of mere seniority, and "this," they tell us, "and not jobbery, is the real evil of the service"; and, finally, the confusion and injustice which prevail in the pairing off of salaries and duties.

The remedies proposed by the Commissioners, though some of them may require modification in practice, appear to be impregnable in principle. It has been proved by experience that open competition, without any other check as to fitness than that of a literary examination, tends to a deterioration in the character of the service; and it may therefore be assumed that so injurious a system is now doomed. It is suggested that there should still be a competitive examination, much the same as at present, for the lower grade of clerks, who have only common routine duties to discharge, and whose, qualifications can be sufficiently tested in this manner. For admission to the higher division, two examinations are proposed—first, a preliminary test examination, in order to weed out incompetents; and, second a competitive examination in order to determine the successful candidates, who will then be placed on a list in alphabetical order, and be eligible for, but with no legal claim to, any appointment that may be vacant. Here it is that the right of nomination is to come into play as a check upon competition. The Heads of Departments are to be free to choose any of the candidates whom they may prefer, and the candidates, on the other hand, will be entitled, if they please, to reject the offered place, and wait for another chance. The commissioners cannot of course deny that this is a partial return to the system of patronage, to the extent of giving to the Head of the Department the power to exercise some discretion in the appointment of his assistants; but they justify it on the ground that the examination will keep out any persons who do not possess ample educational qualifications, while the selection by a responsible chief will afford the best guarantee for personal character. In any other sphere of life it would be thought madness to expect the head of an important business to get his work done by assistants in the choice of whom he has no voice whatever, whom he cannot dismiss for even the grossest incapacity, and who, secure of promotion by seniority, have no motive to cultivate his good opinion. Yet this is really the present condition of the Civil Service. It is impossible to fasten responsibility on the chief of an office unless he is allowed a certain amount of discretion as to the composition of his staff. In order to reduce to something like order the confusion which at present exists in regard to work and pay, it is further proposed that the whole service shall be divided into two distinctly marked grades, one a numerous body of ordinary writing-clerks, and the other a much smaller staff of clerks who have to use their heads more or less.

It does not require much reflection to see the practical difficulties which must be encountered in attempting to adapt the Civil Service to the new conditions which are proposed. It is impossible to make a clean sweep of the existing system, and set about building up another from the beginning, while, if a gradual transformation is undertaken, there will be obstacles of another kind. The difficulty of the task, however, is no reason for shrinking from an effort to accomplish it, and it is evident that matters have reached a point at which they cannot safely be left. Something must be done, and it is at least some consolation to reflect that, whatever changes may be introduced, they can hardly make the system more unsatisfactory from almost every point of view than it is at present. The cost of the service is heavy, if not extravagant; yet the public does not get what it has a right to expect for the money, and the clerks themselves are discontented and disheartened. The strain which has hitherto been imposed on the loyalty and good feeling of the members of the service cannot be indefinitely prolonged, and the common-sense proposals of the Commissioners would at least go some way to secure efficiency and content as well as, in the end, economy.

THE ASPECT OF EUROPE.

(The Spectator.)

Nothing can surpass the dullness of Europe from the point of view of the journalist and politician—except its disquiet. Toryism is everywhere is the ascendant, and Toryism should be the product of content, yet from every country everywhere, unless we except Great Britain, there comes up a sort of groan of melancholy and alarm. In the remarkable paper on Russia by M Koscheloff, the new and moderate Herzen, which the *Times* published on Tuesday, the writer after admitting all that has been accomplished in the last nineteen years—the emancipation of the serfs, the relaxation of tyranny, the establishment of tribunals intended to be honest, the commencement of representative institutions—finishes by declaring that society is utterly disorganised and without moral length, that the aristocracy are flying to the towns because the police cannot protect them from violence in the country, that they have been superseded as regards the peasants by official Superintendents who are more tyrannical than themselves, that the peasantry are discontented and unwilling to use their new powers of self government, that the officials are slipping back to the old *régime* of repression, and that all, "especially the young, are oppressed by a feeling of deep, unqualified despair." There is rektoric in that statement, of course, but no one who has studied Russia recently denies the existence of painful disquiet; of doubts in the statesmen as to the safety of society; in the Army as to its efficiency; in the people as to their prospects; in the Emperor as the result of his reforms,—doubts which are but so many symptoms of a prevailing *malaise*. The social disturbance in Russia, a disturbance marked by an inclination to threaten the rich and to commit violent crime, is on the increase; the finances are believed to be in grave disorder; the Army, in spite of desperate efforts, is not fully reorganised; and as Mr. Schuyler's report has recently shown, the Asiatic provinces are honeycombed with discontent and infested by a corruption with which the Czar, however willing, is unable to contend. There is a sense of failure and of trouble to come abroad in the air. In Germany—so recently elevated to the top of the world—all classes, except perhaps the great military officers, are ill at ease. The statesmen fear that too much rests upon Bismarck's single life. The Professors and the people fear that Germany may yet be attacked by a coalition, and support measures under which liberty of discussion seems coming to an end a criticism on Prince Bismarck is treated as a heinous crime, and even Members of Parliament are punished for delivering their advice. All classes but the Junkers are oppressed by the iron rigidity with which military service is demanded, and all, Junkers more especially, suffer under that rise in prices, consequent on the spoliation of France, which has made a people always poor feel, while apparently enriched, as if it had suddenly become pauperised. A thinly-veiled religious war is raging in half the provinces of the Empire. Thirteen millions—one-third of the people—are mortified by attacks upon their creed, sanctioned with exultation by another two-thirds; while those two-thirds are disquieted by the thoughts of a possible retribution, in fear

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of which they every day demand stronger and stronger measures of prevention. The disquiet, it is true, shows itself, as usual among Germans and Englishmen, in intense exertion, exertion to perfect the Army, to coerce the Catholic priesthood, to repress every difference of opinion; but overstrain produces many of the results of lassitude. Whatever Germany is, at least it is not content. In Denmark a semi-political, semi social war is raging between the proprietors and the peasantry, in which neither side will give way, in which the dynasty itself is menaced or would be but for its its foreign supports, and amid which not only progress, but even government seems to be becoming impossible. If Denmark were larger, the contest could only be decided by Revolution. In Scandinavia the upper classes, who watch the situation of their country with alarm, dreading Germany as much as they ever dreaded Russia, seem unable, even with the Government at their back, to reorganise the Army they consider essential to their freedom. In Austria the "doubtful experiment" of dual government is about to be revised, there is universal suffering under a financial crisis, and there is a growing perception that the very safety of the State is menaced by pecuniary corruption. The Army is constantly being remodelled, yet its managers never seem confident in its strength. In Turkey bankruptcy is rapidly coming on, the conflict between the Empire and the vassal Princes grows daily sharper, and the Government seems to vacillate between an impulse towards despairing concessions, such as dismissing Grand Viziers on demand from abroad, and releasing Mussulman fanaticism for that sanguinary struggle in which, true to the law of its being, it should one day expire. Now here is the feeling of despair of which M. Koscheloff speaks as so predominant as in the upper classes of Turkey. In France the whole energies of a great people are taxed to bear, without glory, new military burdens, to pay for the expenses of a lost war, and to establish a system of government which shall admit of incessant change and yet be permanent. The conviction that another dreadful war must come weighs upon all minds, and is not accompanied by the usual conviction that it will be successful. Society is shaken by the dread of Communism, and yet the Utopians who lend to Communism what of dignity it has, are neither sanguine nor ardent. There is no gladness in France, nothing but an uneasy waiting for a doubtful future. Further South we arrive at a great country where despair has actually become a force, where over two-thirds of its extent political life seems dead, where a rebellion involving a fourth of the people or a tenth of the area of the State cannot be crushed, where the Treasury cannot be filled, and where a transaction by which insurgent officers are to be rewarded for insurrection and honoured for deserting a King whom they themselves set up cannot, so desperate are the circumstances, be finally pronounced either treacherous or unpatriotic. Europe for ages has had no parallel for the condition of Spain, has seen no people in a condition which seemed to themselves and others so nearly to justify despair. In Belgium the religious strife divides the towns from the country, the Flemings from the Belgians, the parties from each other, till, if Belgium were Spain, and therefore isolated from Europe, it might be the scene of a raging religious war. The United Kingdom, it is true, is tranquil, except in Ireland, and Italy except in the old kingdom of the Two Sicilies, within which social order does not exist; but the two exceptions in each case are sufficient to cause perpetual anxieties, not diminished in either by a sense of inadequate military strength, which yet cannot apparently be increased.

We are not pessimists, we have no desire to deepen the colour of the sketch we have drawn, and we are well aware that the disquiet of the hour must pass away, and that in a time which, in the life of nations, may be imperceptible. We are also aware that beneath the surface wealth is increasing, knowledge is advancing, and civilised man is becoming much more numerous. But nevertheless we desire to draw attention to what seems to us a new, if a temporary phenomenon,—a certain weariness and lassitude in the public mind of the civilised world, so deep as sometimes to be describable as despair. Immense problems are offered to the nations for solution, but their immensity, instead of increasing, seems to diminish political activity. The nations seem to be overwhelmed by them, to stand aloof from them, to watch them like natural phenomena, which must work out their results unaided. No statesman that we see has anything like a conscious grasp of the great difficulties around him. Prince Bismarck may have of some part of his work, that of grappling with the military difficulties of his task, but that is a small part of it, and the rest escapes. As he says, in one of his mighty conflicts—that with Ultramontanism—he "expects no result" from his own laws. And if the Prince is almost powerless, who else is there who is powerful? Outside Germany the nations certainly look to no one, but wait on circumstances, listen with the expectation at once of lassitude and fear for the something which does not happen, but seems always at hand. It may be war, it may a religious revival, it may be a new creed, it may be merely a new discovery in physics, but there is a sense that something is at hand, for which all who wait must wait in irritable patience. That sense is probably unreal, a mere expression of a general anxiety; but it exists and its existence shows how deep that anxiety must be. Everybody, alike says, "All this is provisional," and everybody waits for the settlement as if it were to come without any action of his. We do not remember during the last thirty years any moment in which throughout Europe men were manifesting at one and the same time so much lassitude, listlessness, expectancy—call it what you will—and submitting at the same time to so much strain. The position of Spain, sending up every three months thirty or forty thousand men to terminate a war which she neither expects nor apparently cares to end, represents in an exaggerated form the momentary position of all Europe.

THE CHALDEAN ACCOUNT OF THE CREATION AND FALL.

Important Discoveries by Mr. George Smith.

To the Editor of "The Daily Telegraph."

Sir,—Having recently made a series of important discoveries relating to the Book of Genesis, among some remarkable texts, which form part of the collection presented to the British Museum by the Proprietors of *The Daily Telegraph*, I venture once more to bring Assyrian subjects before your readers.

In my lecture on the Chaldean Account of the Deluge, which I delivered on Dec. 3, 1872, I stated my conviction that all the earlier narratives of Genesis would receive new light from the inscriptions so long buried in the Chaldean and Assyrian mounds; but I little thought at that time that I was so near to finding most of them.

My lecture, as your readers know, was soon followed by the proposal of your proprietors and the organising of *The Daily Telegraph* expedition to Assyria. When excavating at Kouyunjik during that expedition, I discovered the missing portion of the first column of the Deluge tablet, an account of which I sent home; and, in the same trench, I subsequently found the fragment which I afterwards recognised as part of the Chaldean story of the Creation, which relic I have noticed already in your columns. I excavated later on while still working under your auspices, another portion belonging, to the story, far more precious—in fact, I think, to the general public, the most interesting and remarkable Cuneiform tablet yet discovered. This turns out to contain the story of man's original innocence, of the temptation, and of the fall. I was, when I found it, on the eve of departing, and had not time to properly examine my great prize. I only copied the two or three first lines, which (as I had then no idea of the general subject of the tablet) did not appear very valuable, and I forthwith packed it in the box for transport to England, where it arrived safely, and was presented by the proprietors of *The Daily Telegraph*, with the rest of their collection, to the British Museum. On my return to England I made some other discoveries among my store, and in the pursuit of these this fragment was overlooked. I subsequently went a second time to Assyria, and returned to England in June, 1874; but I had no leisure to look again at those particular legends until the end of January in this year. Then, starting with the fragment of the Creation in *The Daily Telegraph* collection which I had first noticed, I began to collect other portions of the series, and among these I soon found the overlooked fragment which I had excavated at Kouyunjik, the first lines of which I took down in the note-book of my first expedition. I subsequently found several smaller pieces in the old Museum collection, and all join or form parts of a continuous series of legends, giving the history of the world from the Creation down to some period after the fall of man. Linked with these, I found also other series of legends on primitive history, including the story of the building of the Tower of Babel and of the Confusion of Tongues.

The first series which I may call "The Story of the Creation and Fall," when complete must have consisted of nine or ten tablets at least, and the history upon it is much longer and fuller than the corresponding account in the Book of Genesis. With respect to these Genesis narratives a furious strife has existed for many years; every word has been scanned by eager scholars, and every possible

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

meaning which the various passages could bear has been suggested; while the age and authenticity of the narratives have been discussed on all sides. In particular, it may be said that the account of the fall of man, the heritage of all Christian countries, has been the centre of this controversy, for it is one of the pivots on which the Christian religion turns. The world-wide importance of these subjects will therefore give the newly discovered inscriptions, and especially the one relating to the Fall, an unparalleled value, and I am glad, indeed, that such a treasure should have resulted from your expedition.

Whatever the primitive account may have been from which the earlier part of the Book of Genesis was copied, it is evident that the brief narration given in the Pentateuch omits a number of incidents and explanations—for instance, as to the origin of evil, the fall of the angels, the wickedness of the serpent, &c. Such points as these are included in the Cuneiform narrative; but of course I can say little about them until I prepare full translations of the legends.

The narrative on the Assyrian tablets commences with a description of the period before the world was created, when there existed a chaos or confusion. The desolate and empty state of the universe and the generation by chaos of monsters are vividly given. The chaos is presided over by a female power named Tisalat and Tiamat, corresponding to the Thalatth of Berosus; but as it proceeds the Assyrian account agrees rather with the Bible than with the short account from Berosus. We are told, in the inscriptions, of the fall of the celestial being who appears to correspond to Satan. In his ambition he raises his hand against the sanctuary of the God of heaven, and the description of him is really magnificent. He is represented riding in a chariot through celestial space, surrounded by the storms, with the lightning playing before him, and wielding a thunderbolt as a weapon.

This rebellion leads to a war in heaven and the conquest of the powers of evil, the gods in due course creating the universe in stages, as in the Mosaic narrative, surveying each step of the work and pronouncing it good. The divine work culminates in the creation of man, who is made upright and free from evil, and endowed by the gods with the noble faculty of speech.

The Deity then delivers a long address to the newly-created being, instructing him in all his duties and privileges, and pointing out the glory of his state. But this condition of blessing does not last long before man, yielding to temptation, falls; and the Deity then pronounces upon him a terrible curse, invoking on his head the evils which have since afflicted humanity. These last details are, as before stated, upon the fragment which I excavated during my first journey to Assyria and the discovery of this single relic in my opinion increases many times over the value of *The Daily Telegraph* collection.

I have at present recovered no more of the story, and am not yet in a position to give the full translations and details; but I hope during the spring to find time to search over the collection of smaller parts of the legends which may have escaped me. There will arise, besides, a number of important questions as to the date and origin of the legends, their comparison with the Biblical narrative, and as to how far they may supplement the Mosaic account.

It will probably be some few months before my researches are sufficiently advanced to publish them in full; meanwhile the interest which I know the public feel in these discoveries must be my excuse for this short and imperfect notice in your columns. When my investigations are completed I will publish a full account and translation of these Genesis legends, all of which I have now been fortunate enough to find, some in the old Museum collection, others by excavation in Assyria.—I am, Sir, your's &c.,

GEORGE SMITH.

THE TIMIDITY OF THE PRESENT GOVERNMENT.

(Economist.)

Many things were prophesied of the present Government: the newness of its members and its contrast to its predecessors naturally suggested many; but no one prophesied that it would not be able to control the House of Lords. On the contrary, every one said that, at least, we should have the advantage of a Government which had a available majority in both Houses, and could compel the two to union. But now the Government has had to relinquish a principal measure because the House of Lords did not like it, and to relinquish it without discussion and with an admission that it was hopeless. There was no change in the opinion of the Government about their measure, for Lord Cairns and Lord Derby both expressed deep regret that they could not carry it. The measure was not a novel one, for the Lords passed the same thing last year. The rejection leaves a great plan incomplete now unless something else is done; for the Lords, after reliquishing the English appeals, which concern the greatest interests and regulate the greatest amount of litigation, are left with the Scotch and Irish, which concern far less interests and rule far less litigation. But even with these advantages the Government gave way, without discussion, to the Tory peers' though all or most of the Liberal peers would have helped them.

In itself the incident is important, for the reform of our Law Courts is one of the reforms most rife for completion, and one with which it was thought the present Government had peculiar facilities in dealing. But the intrinsic importance of the matter is little in comparison with its importance as an instance of the defect which, we are sorry to say, seems to be growing upon the present Government. They are beginning not to govern. At first it was hardly to be expected that they should do so: they were on a sudden required to take office; they succeeded to an active Government which left many things unfinished; they were quite entitled to an interval of consideration before they assumed the habit of decision which usually characterises, and which ought to characterise, strong Governments. But now the present Government has been a year in office: it has had time to see its way, to settle its plans, and fix its policy. It has longer ~~any excuse for extreme~~ timidity. But, nevertheless, it is most timid. All its measures are framed not so as to attain the maximum of public benefit, but so as to incur the minimum of interested opposition. The Friendly Societies Bill is a striking example of this. The great "interest," the people who are of most strength and most to be feared in the matter, are the managers of this existing societies. But the Bill of the present Government is almost avowedly framed to please, as far as is decently possible, those societies. An injudicious friend actually said that the Bill was "most acceptable" to them. To which Mr L we rep'ied, with caustic wisdom, that "of course the cat was pleased to have the custody "of the cream, but that the confiding it to her was not, therefore, "good." A really good Bill would be strongly opposed by many of the present societies whose state is unsatisfactory and whose officials have made it so. But unluckily these officials and these societies have, under the new suffrage, a great voting power, and, therefore, many Members of Parliament fear them. A determined Government with the power of the present one might have dealt with them, but the present does not. Again, even in so small a matter as Mr Goschen's Bill to exclude Scotch Banks from England, the Government do not take a line one way or the other. The matter is very complicated and one on which the guidance and authority of a responsible Government are all but essential. If the present Government had in time declared its opinion either for or against, the matter would probably have been determined before now; at any rate, its ultimate decision would have been certain, for no private member can contest such a question against the voting force of Government. But they have let the matter drift on without giving any sign of opinion, and so, rightly or wrongly, have allowed it to be believed that they were waiting to see which was the stronger party.

This kind of Government is one which is not only bad for the public, but in the end impolitic for the Government itself. Particular interests are not offended, but the public is. It feels that it is being neglected. A vigorous and determined people like the English do not respect a timid and halting Government. In the course of time, if the present Ministry continues to act on this policy, people will say that they are "waiters on Providence"; that, they fear the strong; that they neglect the weak; and so, at last when they do take a line, they will take it in vain, for they will have lost the real authority which, far more than voting power, gives a Government influence over opinion, and which in the end determines voting power itself. The rider who gets the most falls is the timid rider; and the Government which is likely soonest to fail is the overwary, which is so careful not to offend any one that it loses general confidence.

This defect in the policy of the present Ministry is of the greater importance because it is that which was to be expected from its composition. As has often been said, taken as a whole it is composed of men in middle life—near fifty or thereabouts—who have had little experience in business for themselves, who have spent their lives, as far as those lives have been passed in business at all, in criticising others, and whose chief, though in his way a man of genius, scarcely pretends to be a man of business in the least. Naturally such men are timid, and their chief's orders are not

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

encouraging. They are said to be, "Mind you do not get into trouble and do anything which the Liberals can be down upon;" and such general orders are exactly what makes fearful person more fearful still, because any bold line of policy always looks as if it might lead to difficulty, even it when does not.

We regretted this essential weakness in the present Ministry when it was formed, and we are sorry that it is producing its natural effects. And we do so, though we cannot claim to be its supporters. Putting party aside, it is plain that at this moment, and probably for a considerable time to come, the present is the only possible Government. The Liberals are unable to take office in this Parliament, and there is no reason to think that the country would elect another more favourable to them, even if there were a new election, which is not likely. The Liberals are themselves disorganised and divided, and it is impossible even to think of their now obtaining power without anxiety. One cannot tell what they would do or who would do it. In consequence the good working of the present Ministry is a matter of grave moment to all Englishmen, and it is with regret that we observe the symptoms in that working of an essential and characteristic defect.

REUTER'S TELEGRAMS.

Bombay, 3rd May.—There are slight disturbances in Baroda. The Ranees have been deported.

London, 3rd May.—The Belgian reply does not treat generally the question in the German note, and passes over the resolutions for the suppression of the religious orders introduced by the Prussian diet.

London, 2nd May.—There has been a disastrous Colliery explosion at Bunkershill, Staffordshire, 35 persons being killed.

Emperor William has approved the introduction of the Bill for suppressing religious orders.

The Bishop of Munster has been released.

London, 29th April 1875.

War between China and Kashgar is apprehended. Russia is friendly to the latter power.

The 2,000 Guineas:—

Camballo .....First.
Picnic .....Second.
Breechloader .....Third.

The Installation of the Prince of Wales as Grand Master of Freemasons took place in the Albert Hall with a magnificent ceremony. 7,000 masons were present.

London, 27th April, 1875.

In the House of Commons, a motion by Dr. Kenealy, for the appointment of a Royal Commission of Enquiry into the circumstances of the Tichborne Trial, was rejected by 433 against one after a protracted debate.

London, April 16.—In the House of Commons last night, Mr. Disraeli, replying to Mr Hankey, said he apprehended that the Prince of Wales would not visit India as the Queen's representative.

OBITUARY.—Colonel W. A. Middleton.

In the House of Commons, yesterday, an excited and protracted debate took place on a motion of Mr Disareli to reject the petition of a Mr Prettlewell, accusing the judges on the last Tichborne trial of unfairness, and demanding their impeachment. The Petition was rejected. Mr Bright condemned the agitation and tactics of Dr. Kenealy, requesting him to substantiate his charges against the judges.

London, April 17.—In the House of Commons Mr Disraeli proposed and the House voted to annul the motion to summon the printers of the *Times* and *Daily News* to the bar of the House. The Debate on Dr. Kenealy's motion *in re* Tichborne trial was resumed.

Germany has sent a second note to Belgium in which she disclaims interference with the Press. The Prussian Parliament has voted the abrogation of the privileges of Roman Catholics.

London, April 17.—The House of Lords has passed the second reading of a Substitution for the abandoned Judicature Bill, but reserved the question of Appellate Jurisdiction until 1876; meantime an intermediate Court of Appeal is created.

Berlin, 11th April.—The Crown Prince will visit Italy incognito.

prevalent warlike rumours, but considers the re-organization of the French Army disquieting.

The Bishops now assembled at Fulda have petitioned the Emperor against disendowment. The Ministry rejected the petition.

London, 14th April.—Bishop Claughton has been appointed Chaplain-General to the Forces.

Shipping Intelligence.

ARRIVALS.

May 9, *Massilia*, British steamer, Raud, 1,033, from Hongkong, Mails and General, to P. & O. Co.

May 9, *Bombay*, British steamer, Davies, 1,325, from Shanghai, Mails and General, P. & O. Co

May 9, *Stillman*, American barque, Taylor, 586, from Sydney, N.S.W., Coal to P. M. Co.

May 10, *Annie Braginton*, British barque, Chas. Smith, 413, from London, General, to Gutschow & Co.

May 12, *Golden Age*, American steamer, Coy, 1,870, from Shanghai, Mails and General, to P. M. Co.

May 12, *Kanagawa Maru*, Japanese steamer, Roper, 1,300, from Shanghai, General, to Mitsu Bishi Co.

May 12, *China*, American steamer, Cobb, 3,838, from San Francisco, Mails and General, to P. M Co.

May 12, *Montcalm*, French Ironclad, Admiral Krantz, 1,800, from Hiogo.

May 12, *Volta*, French gunboat, Flouraud, 900, from Hiogo.

May 13, *Florentin*, British ship, Jones, 978, from Cardiff, Coal, to Order.

May 14, *Hermann*, German brig, Petersen, 213, from Takow, Sugar, to Netherlands Trading Co.

May 14, *Volga*, French steamer, Nondedeu, 960, from Hongkong, Mails and General, to M. M. Co.

DEPARTURES.

May 9, *Walton*, British barque, Shields, for Hiogo, General, despatched by Wilkin & Robison

May 10, *Peter*, German brig, Holm, 241, for Takow, Ballast, despatched by Captain.

May 11, *St. Thomas*, Swedish barque, Hjorth, 450, for Nagasaki, Ballast, despatched by Captain.

May 11, *Challenger*, British surveying vessel, Thompson, 2,300, for Inland Sea

May 12, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co

May 12, *Riga*, British steamer, Clarke, 920, for Hongkong, General, despatched by E. Fischer & Co.

May 12, *Marie*, British schooner, Talbot, 178, for Takow, Ballast, despatched by Captain.

May 12, *Lycee moon*, British steamer, Stevens, 611, for Nagasaki, Ballast, despatched by Hudson, Malcolm & Co.

May 14, *China*, American steamer, Cobb, 3,838, for Hongkong, Mails and General, despatched by P. M. Co.

May 15, *Oregonian*, American steamer, Harris, 1,914, for Shanghai and ports, Mails and General, despatched by P. M. Co.

May 15, *Kanagawa Maru*, Japanese steamer, Roper, 1,300, for Shanghai and ports, Mails and General, despatched by M. B. Co

PASSENGERS.

Per British steamer *Massilia*, from Hongkong.—Mr. Hooper, Mrs. Hatton, Mrs. Cole and 2 children, and 22 Chinese, on deck.

Per British steamer *Bombay*, from Shanghai.—Capt. McDonald, Mrs. McDonald and 2 children, Mr. and Mrs. Troup, 2 infants and 2 servants, Capt. Sewell, Dr. Focke, Messrs. E. J. Schenk, J. T. Griffin, R. Black, and Nankivell.

Per American steamer *Golden Age*, from Shanghai.—Col. Wasson, Miss M. Bingham, Miss E. Bingham, Mr. and Mrs. Denison, Mrs. Hutson, Mrs. Bayne and 2 children, Mr. and Mrs. Evans, Mrs. Austen, H. E. Sir Harry S. Parkes, Mr. and Mrs. Aston, Mr. and Mrs. Heineman, Mr. and Mrs. Plummer, Messrs. Blanchard, Goodwin, Heineman, Morehead, Hogarth, Winstanley, Ashley, Hyver, Morton, Peter Handlebury, Scott, Korthals, Carr, Marks, W. E. Clarke, L de Sa, 15 Japanese, and 1 Chinese; 96½ in the steerage.

Per British steamer *Bombay*, for Hongkong.—Mr. Conard, Mrs. Wilkie and 2 children, Mrs. Watt and 2 children.

Per American steamer *China*, from San Francisco.—Mrs. Veeder, and Mr. Crace.

Per French steamer *Volga*, from Hongkong.—Madame Lancini, Messrs. Mangeot, Jacobs, Aspinall, Marcus, Kalis, Matsuda, Horii.

Per American steamer *China*, for Hongkong.—Messrs. Uchida, and Alex. Center.

Per American steamer *Oregonian*, for Shanghai and ports.—Messrs. Scott, W. H. Carr, Mr. and Mrs. Hughes, Mr. and Mrs. Troup, Mr. J. Pitman, Miss Garland, M. Mayesima, Mrs. Bryan, Mr. John Ure, Mr. H. J. Hunt and wife, Mrs. Sung and child, Dr. Hill, Messrs. Mendelson, Hill, Hodgson, Smedley, Baron D'Anéthan, Olson, L. Moore, J. D. Carroll, Yamada, Matzu, Yuwan, Garcia, Schuter, and 10 Japanese.

Per Japanese steamer *Kanagawa Maru*, for Shanghai and ports.—Mrs. Bergman and child, Messrs. Fukushima and 2 children, Uyeda, Uyedzima, Moe Sing, Kawabe, Fukushimataka, Shono, Saito, Tsuzaki, Dr. Kirkman, Messrs. Grover, Hunt, Mathews, Fortan, Boufier, Noetzli, Rose, Yejima, Ayaali, Ishikawa, Hartman, Peacock, Peters, Grosser, Katzuru, and three Europeans, one Chinaman, and

CARGOES.

Per British steamer *Massilia*, from Hongkong :—
Sundries ..... 127 packages.
Treasure ....$5,705.88.

Per American steamer *Golden Age*, from Shanghai,—Treasure $27,000.00.

Per *Bombay* for Hongkong.

Silk—To England	8	bales.
France	84	„
Italy...	49	„
Total	141	bales.

Per Japanese steamer *Kanagawa Maru*, for Shanghai and ports.—Treasure, $11,800, Yen 1,215,000.

REPORTS.

The British steamer *Massilia* reports : strong head winds during the voyage up, owing to which had to go very slow most of the way.

The British steamer *Bombay* reports: moderate wind from Shanghai.

The American barque *Stillman* reports light wind and calm.

During the heavy squall that passed over the anchorage yesterday afternoon, the schooner *Lottie*, having but one anchor down and only one solitary Japanese on board, dragged from where she lay off the French Hatoba; down inside the P. M. S. S. Co.'s wharf by which time the squall having spent its force she was secured and hauled off again in the evening when the wind died away.

The only other accident seen was the entire wreck of a Japanese boat at the entrance of the English Hatoba, the pieces drifting inside were picked up on various parts of the Hatoba.

The steamer *Deucalion*, of the Ocean line has arrived at Hongkong but for want of room no part of the cargo which she had on board from *Ulysses* could be sent on by the French mail but is expected by the *Orissa*.

The *Agamemnon* of the same line is reported to have left Singapore on the 6th instant.

„ No. 4 Kook-fah	„	5.80 to 6 20	Kerosine Oil	„	3.40 to 3.50

EXPORTS.

Silk.—Owing to various causes, business in Silk, since our last report, has been extremely restricted, barely 150 bales altogether having been settled, at prices much about the same as previously. The crop in the interior is getting on pretty well, which reason operates probably on the native dealers as an inducement to continue their realisations. Arrivals from the country are again on the smallest scale.

Hanks—

	per lb	per kilo.		per lb	per kilo.

Tea.—Arrivals of new leaf are coming in freely, and purchases are on a fair scale, those of yesterday amounting to 760 piculs, notwithstanding that many buyers were absent during our usual race holidays.

Prices paid are rather full, taking into account telegraphic advices from New York as also that buyers will refrain from purchasing at fancy or extravagant prices, preferring to wait the arrival of the next steamer and that the goods by the Occidental & Oriental steamer by the overland route should tread very close on the heels of the first shipment.

In old Teas there is nothing calling for comment and last seasons produce may be considered as finished.

NEW CROP—Fine to Full Fine ... ... $42 to 45
Finest ... ... $46 to 47 } Unchanged.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

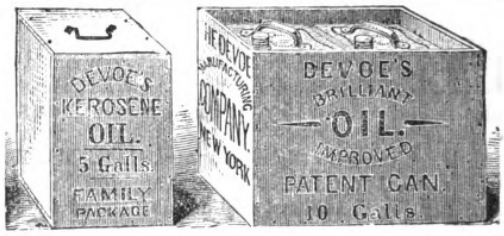
Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.



THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

Yokohama, 25th June, 1874.

Notes of the Week.

The week has been one of uninterrupted quiet and delicious dulness, or let us compromise and say, calm. As we have to do without the pleasures of the west, it is well to idealize those of the east. *Si on n'a pas ce qu'on aime, il faut aimer ce qu'on a.* But of course it is a mere sentimentalism to imagine that any other place than London is worth living in in May, and this recalls the fact that the foreign vegetables reared in this neighbourhood have lost all their original flavour and are simple mockeries. The asparagus and peas have no sort of resemblance to those grown at home, and something might surely be done to remedy this. It is possible that fruit, flower and vegetable shows, at which prizes were given, would do something towards improving matters. Life is unbearable enough without lamb at this time of the year, but to find the peas playing traitors, as if they were predestined to thimble-rig, is too hard. The affair, too, is serious from more important points of view. If the vegetables undergo this deterioration, why not the fruits? and then what becomes of all the Kaitakushi work in this direction? Is it not probable that the system of fertilizing the land adopted in this country is reponsible for the utter disappearance of the quality of the vegetables?

A flower, fruit and vegetable show was held this afternoon in the compound of the Grand Hotel. Some beautiful moss-roses, exhibited by the Misses Dare, claimed special attention. Those under Mr. Jarmain's name were also very good. The strawberries exhibited by Mrs. Ojeda, Mr. Christy, Mr. Arthur Brooke and Mr. Jarmain obtained honourable mention from the judges. Mr. Santô, Vice-governor of Kanagawa was among the exhibitors. We should be pleased to think that this and similar exhibitions would have the effect referred to in the foregoing note.

The negotiations opened some two years ago between the Government of Japan and Peru have had a more auspicious termination than might have been anticipated from the circumstances attending their commencement. A treaty of friendship and commerce between the two countries was signed some little time back, and, after ratification, was exchanged on the 17th inst. at the hands of Senor J. F. Elmore, L.L.D. on the side of Peru, and H. E. Terashima Munenori, specially appointed by H. M. the Mikado Plenipotentiary *ad hoc*. Senor Elmore has been appointed in permanent mission in Japan and China, and has received full powers for the exchange and ratification of both the Chinese and Japanese treaties. His staff, consisting of a Secretary of Legation and an *Attaché* have arrived. Having concluded part of these preliminary duties here, he leaves shortly and temporarily for Peking for a similar purpose in China, after the accomplishment of which he will reside in this country. We trust that the intercourse which Senor Elmore has been instrumental in placing on its present footing will be one of increasing friendship and advantage to the respective countries interested in these negotiations. An official dinner, to be given to the Japanese Cabinet and the Foreign Representatives by Senor Elmore on the 29th inst, will celebrate the exchange of the treaty with Japan.

Although we are little in the habit of commenting upon the translations from the native press which appear in our columns—a task, indeed, which, if superadded to the demands made on our time by their preparation*, would render comment upon other questions impossible—we publish one to-day which we cannot allow to go forth to the world without a few words upon it. It will be found under the heading "Missionaries," and we have no reason to think otherwise than that it represents an honest view of the Missionary question from an intelligent Japanese stand-point. It may not be a very instructed or solid view, but it is at least a fair average one, and is evidently the result of some enquiry and subsequent thought. It is as fairly respectful as the circumstances demand or the conclusions arrived at by the writer justify, and infinitely more so than many of the comments on the same subject written by foreigners in Japan within the past three years, some of which have been unseemly and unworthy in a high degree. We must avow that we had some misgivings in regard to the publication of the essay, and even withheld it some little time in the feeling that it tended to strengthen prejudices which, if we are right in calling them so, should obviously be excluded from the question. We felt, too, that the translation would give pain to many whose whole lives have been practical illustrations of the very best tenets of their profession, whose temporal reward is found in the consciousness that they have done their duty bravely and well, and whose example and labours will leave a bright track of light behind them. On the other hand, it is well that those engaged in missionary work should know what is said of them by the Japanese, and this, not only by friendly partisans, but by indifferent and even adverse critics. No machinery of which mere fallible men are the springs and wheels, can be perfect. Reflections upon dishonest trade cause no personal distress to the upright merchant. No pure statesman winces under protests against the intrigues or corruption of low politicians, and no honest lawyer feels disturbed by the exposure of the knavery of cunning attorneys. Rather, indeed, do all sound men of these classes rejoice in any efforts which tend to remove scandals from their avocations, and free them from imputations with which an honourable jealousy on their part more or less connects themselves.

We ought to add that the injurious reflections made in this essay upon the members of the missionary body are

* The majority of these translations come to us in a very crude form, from which they have to be reduced with every care that the sense, and, as far as possible, the manner of the original are preserved.

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

certainly undeserved, if applied generally; and it cannot for a moment be doubted that the presence among the Japanese of a body of men leading pure and placid lives, devoted to the good of others, is a benefit alike to us and them. We shall not, however, affect to disguise our absolute preference for the Roman Catholic ideal of missionary life and work.

THE Government, attributing the murder of the Loochooans in 1871 in part to the poor character of the vessels in which they navigate the China seas, and desirous that they should avoid the heavy losses which they constantly sustain by shipwreck, has presented the Loochoo Han with a steamer.

Mr. Mori deserves high credit for having what the French call 'the courage of his opinions'. We all had our laugh over his scheme for the adaptation of the English language to the condition and necessities of his countrymen, and we have little doubt that he will now acknowledge we were right. But the example he has set of turning his mind earnestly towards the advance and elevation of this nation, and the Courage he shows in expressing his opinion under his own name in the best journals of the capital, where it is frequently to be seen, deserve all praise, and he has many friends both here and abroad who will be pleased to see this and to find it acknowledged.

Among the passengers by the *City of Tokio* is General Capron, late the Commissioner and Adviser to the Kaitakushi Department, on whose career here we have made some remarks which will be found elsewhere. Mr. Wasson, one of the leading assistants in the Department, returns with him.

(From the Japan Mail Daily Advertiser.)

An amusing series of blunders is reported by a native newspaper to have occurred at Itabashi, near Yedo. The district has recently been the scene of numerous robberies to suppress which the inhabitants would seem to have organised watching parties, in their own interest, independently of the police. On a dark night of late the watchers fell in with a body of the latter, and mistaking them for those whom they sought, proceeded to "comprehend" them, after their own fashion. But the police resisted manfully, and in the *mêlée* which followed succeeded in worsting their opponents and in carrying them in triumph to the Police Station. Both parties, it is added, looked rather foolish when the lamplight revealed to them their late opponents.

Archibald King a mechanic in the employment of the Imperial Government has been committed for trial by H. B. M. Consul in Yedo on a charge of rape. Bail in $1,500 for his reappearance was admitted.

A RUMOUR is afloat, says the *Choya Shimbun*, that important changes are contemplated in several departments of the Government. It is said that with the exception of the *Daijokwan*, Army, Navy, Interior and Foreign Departments, in which it is not proposed to make any change, all the Public Departments will be reorganised and will henceforth be conducted as Subdepartments. It is difficult, however, to believe that the important functions of the Treasury and Public Works Offices can be successfully incorporated with those of other departments. We give the version of the native correspondent.

REGULATIONS BY SANJO SANEYOSHI FOR THE MINTING OF MONEY.

1. With the exception of the holidays below, the Mint officers will receive, every day from ten in the morning until one o'clock in the afternoon, ingots of gold and silver presented by Japanese through the Mitsui Company at Osaka, and by foreigners through the Oriental Bank at Kobe.

LIST OF HOLIDAYS.

All Sundays: from the 1st to the 3rd January; 5th and 30th January; 11th February; 3rd April; 17th September; 3rd November; from the 29th to 30th December.

2. No unrefined metal will be received from the 16th June to the 15th August in each year.

3. In case of suspension of the works for any serious reason, all metal will naturally be refused; but official notice will be given of the suspension.

4. For native gold and silver, either foreign current gold and silver coin, whose value will be palpably evident, will be paid according to the rate of exchange; for gold, in gold current coin; for silver, in the money called the Trade Dollar.

If the authorities at the Mint should deem it necessary to test the metals offered, they will receive them provisionally, and then, after showing to the offerer the note of assay, will decide upon the acceptance or not of the metal offered.

Ingots of gold should weigh at least 50 ounces (about 424 momme); of silver, at least 1,000 oz. (8 kuan 560 m.).

5. Generally, material whose quality is uncertain, whether native gold or silver, or coined pieces of gold and silver, Japanese and foreign, with the exception, always, of the silver boos which may be possessed by foreigners, shall be provisionally deposited in the Bullion Office, and after they are tested, the net analysis by melting of the nature of the metals shall be taken, if they are found proper for minting.

It is evident that it is useless to apply the test of melting to native metal already subjected to the test of refining in the workshops of the Mint set apart for that purpose.

6. In case the tests by melting and analysis should prove that the ingots of gold and silver are useless for minting, they will be returned to the depositor after he has paid the dues for testing. The dues in question shall be paid agreeably to tariff arranged by the authorities of the Mint.

7. Gold and silver useless for mintage, and ingots containing a mixture of gold and silver will, be, at the option of their owner, received in the offices established for the purpose in the Mint. Working dues for refining will be charged according to the tariff s ttled by the offices in question.

8. General rule. When the Mint receives native metal, the Chief of the Bullion Office will give a temporary receipt; and the Mint, having stated the value of the metal, will make out a bill accounting for the metal, and a table of the analysis. The Master of the Mint will send these particulars to the depositor, and with the consent of this last will receive his metal.

9. When the Mint has *definitely* accepted ingots or money in gold or silver, after deducting from the quantity of pieces to be coined the value of the work incurred, it will give a bill at 20 days sight for the amount due.

The amount of the said bill will be paid to Japanese by the Mitsui Company, and to foreigners by the Oriental Bank, within the fixed time.

10. The price of workmanship for current gold pieces is fixed at one per cent.

11. For the Trade Dollar, in silver, the charge is at present 1½ per cent.

12. Dues for testing by melting are 1 per 1,000 gold and silver.

13. As for current coin worn thin by use, a charge of 5 per cent. for workmanship will be made on gold pieces, and 10 per cent. for the Trade Dollar; and such pieces will be taken for re-minting according to their value by weight. There is naturally no charge for re-minting made for the number of of coins deficient.

14. If, as a result of putting these regulations in practice, experience should show the necessity of certain points, the requisite rectifications and developments will be effected, no matter at what instant. In that case, immediate notice will be given.

(Signed,) OKURA-SHO.

20th April, 1875.

General Capron of the Kaitakushi was entertained at a farewell dinner by the members of the Cabinet on the 18th instant. His engagement having terminated he returns to America by the *City of Tokio*.

An accident occurred on lot 113 yesterday from the falling in of a framed roof on which some native workman were engaged. Two of the men were much injured by their fall and were removed in an insensible condition.

The admirers of the iris (the *hana-shobu* of the Japanese: *acorus calamus*; Linn.) will shortly have an opportunity of seeing this graceful water plant in its perfection at the village of Horikiri, on the Sumida-gawa where the gardeners devote themselves to its cultivation. The day on which it is said to come into bloom is about the 1st June. At this period, says Dr. Cochius in a paper read before the German Asiatic Society, Horikiri in the vicinity of Mukoshima exhibits a spectacle rarely to be met with of its kind. Irises of the loveliest hues, and in endless variety of form, crowd the ponds and flower-beds. House-boats filled with pleasure-seekers dot the ample stream, and, on the river-side road, people may be seen, all alike bound

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to the iris gardens, where, seated in the tea-houses or bowers which crown each little height they enjoy the charming scene, its *agrémens* being in no small degree increased by music and conviviality.

Tanezashima, an officer of the *Naimusho* has received orders to proceed to the Loochoo Islands with Matzuda whose appointment was recently announceed. The *Nichi Nichi Shimbun* adds that Kawarata of the same department has also received orders to accompany the deputies and to take up his residence there.

The agricultural class in Japan would seem to have much faith in the effect of petitions for the removal of their wrongs. It is not long since we related that a farmer had been arrested for obtruding a history of his grievances upon H. M. The Mikado, and the *Hochi Shimbun* gives us another instance which occurred among the same class on the 19th instant. The petitioner, however, would seem to have been somewhat too energetic in his action, and the police, probably suspecting some ulterior purpose, lost no time in removing him from the Imperial presence.

It has hitherto been customary to permit the Shintô priesthood to raise money by the sale of *ofuda*, (cards upon which the names of gods or deified emperors were printed), which they forced upon the chief men of the wards, who in their turn compelled the householders to purchase them. This mode of supporting a priesthood has, however, become very unpopular of late with those upon whom the charge has fallen, and it is announced that the Government has now resolved to put a term to the practise.

The *Choya Shimbun* says that the experimental cruise of the training-ship which is sent to sea by the *Kaigunsho* will most probably begin to-morrow. Some 38 native youths and 3 foreigners form portion of the crew.

The *Eiri Shimbun*, a journal devoted in a large degree to the interests of the drama, mentions that the Governor of the Nagano *Ken* had recently thought fit to prohibit theatrical representations within the limits of his jurisdiction. A secret performance was nevertheless arranged by the people of the village of Niwai, but the police, having gained intelligence of this, broke in among the astonished spectators, arrested the actors, and did not leave the village until its inhabitants were made thoroughly sensible of the impropriety of amusing themselves clandestinely.

THE review of the troops at Narashino by His Imperial Majesty The Mikado has been postponed for the present.

Two hundred stout fellows have been selected in Sakata *Ken* and are now in readiness for the vessel on which they are to embark for Sapporo in Yezo. The purpose with which they are sent there is not explained.

IT IS probable that some of the native newspaper rumours will be found to rest upon slender foundations. The following, for instance, from the *Hochi Shimbun* would seem to require some explanation:

Mr. Takeda of the *Kangiorio*, who left to-day for China, proceeds to that country with the view of purchasing donkeys.

Messrs. Bourne & Co. sold lot 149 Bluff containing 454 *tsubos*, with residence, &c., for $3,000 yesterday.

Mr. T. Wallace sold the following racing ponies yesterday—Gonderic, $51; Dixie, $129; Heather Bell, $55; Saxon $53; Dibs, $115; Dilemma, $106; Drift $130; Benachie, $50; Eclipse, $47; Thistle, $41; Mormon, $75; The Duke, $68. Others advertised for sale were bought in privately.

FOR some reason, susceptible we trust of satisfactory explanation, the meeting of the Asiatic Society advertised for yesterday evening did not take place.

Mendoza, a Portuguese subject, has been arrested on a charge of assaulting an Imperial Custom House official and a policeman who endeavoured to arrest him for being in possession of contraband tobacco.

The *Nisshin Shinjisshi* relates a story of an old man who hung himself at the wrestling tournament a few days since. He had used his employer's money in making wagers, and having lost all destroyed himself rather than face the disgrace of his predicament.

We hear that the Taotai has issued a proclamation recalling his former order about the "Defence Tax," and has thus made the resemblance to the Tientsin episode complete. The Native merchants will resume business forthwith.—*N.C. Daily News.*

We understand that the Taotai has assented to Mr. Medhurst's proposition that a joint investigation should be held into the circumstances of the Quinsan riot; and that the two prisoners were handed over to the City authorities on Saturday. The Tipao of the village has been ordered down and on his arrival the case will be tried.—*N.-C. Daily News.*,

Information has been received in Amoy that an agreement was entered into last week between Mr. Dreyer, on behalf of the "Great Northern Telegraph Company," and a Mandarin deputed by the Peking Goverment, for the construction of the telegraph line from Foochow to Amoy, at the expense of the Chinese Government. And the Government is to pay the Company for destruction of property and for damage by detention up to the time when the new contract was entered into.—*N.-C. Daily News.*

THE KAITAKUSHI, AND THE DEPARTURE OF GENERAL CAPRON.

THE present out-going American Mail carries among her passengers General CAPRON, for four years the Commissioner and Adviser of the Kaitakushi or Colonization Department. For the better information of distant readers we may mention that the term Kaitakushi means literally 'development,' and has been chiefly used in connection with the efforts made by the Japanese Government to develope the resources of Hokkaidô, as the Island of Yezo is commonly called. General CAPRON's efforts have not, however, been confined to the northern island, but have extended to the introduction upon the main island of the Empire, commonly, but erroneously, called Nippon, of better breeds of cattle and horses, of the finer European breeds of sheep, and of the fruits of which this country stands so greatly in need. This is a large scheme, and, from its very nature, many years must elapse before its results are apparent in any but a few spots dotted here and there throughout the provinces. It has also been in some sense a scheme of experiments, rendered necessary by the very conditions of its existence. It is obvious that the adaptability of the soil and climate of Japan to the new animal and vegetable life which it was proposed to introduce here presented a problem which could not be settled off-hand, and though General CAPRON's large experience of the kind of work on which he has been engaged in this country made him a good judge of what could probably be done to the best advantage, he has had to feel his way carefully as he went along, and to avoid the errors into which an excess of boldness or caution might have drawn him.

But General CAPRON's greatest difficulty has surely arisen from the wide gap which exists between the minds of the Japanese and our own in all matters of administration; between the way in which they go to work on a scheme of this kind and in which we go to work. Here has been the real trouble. In the first place they do not feel any implicit confidence in foreigners—as, indeed, they would be egregiously foolish if they did, for they have had some wretchedly bad foreign servants. A man who has to direct or advise in the direction of a large department, must first win their confidence, and this is not done in a day. More than this, an adviser who would create and maintain a good influence in Japan must adapt himself with more or less patience and self-control to the disposition of a people apparently very amiable, but who, whether so or not, have a rigid code of politeness which rarely permits the slightest trace of any other feeling to betray itself in their countenance or manner. Of course he should be firm and honest, and the ascendancy which these qualities give a man everywhere else they give him here. But it is easy for a man to find himself "Doctor Fell-ish" is this country. He may be sound, straight-forward, industrious and able, and yet not be liked. The Japanese, we suspect, would acknowledge this themselves, and an extreme rigidity of purpose, however fundamentally sound, rather displeases than impresses them. Then, they are extremely fond of doing things in their own way, and can only be gradually weaned from this. Again, their departments swarm with unnecessary officials, who can neither be dismissed nor sufficently employed; and, as a log of wood laid across the rails may upset a train, an excellent plan may be thwarted by a few ignorant, obstinate or malicious men whom jealousy or perversity may drive into covert opposition. These things will gradually right themselves in the administrative

be got rid of in a day, or a year, or five years. Indeed, they will always exist to a greater or less extent, and the great thing meanwhile is to work as well as possible with such tools as are at hand. It is, of course, very easy to say that unless a man can get his plans carried out and his directions obeyed, he should resign his post. There are positions and cases undoubtedly where this would be a clear matter of duty. But certainly General CAPRON's was not of that nature. His business was to bring all his best experience and judgment to bear upon the work he had in hand, to do all in his power to carry his views, and to protest when those views were disregarded. If report speak truly, he has done this as consistently and explicitly as any man could have done it; —with firmness, indeed, but also with the temper and judgment of one whose experience of life has been too long and too practical to permit of his harbouring many illusions regarding the rapid perfectibility of the human race.

That General CAPRON can be satisfied with the results of the Department of which he has been the foreign adviser, is not to be supposed. He has seen a good deal of money spent which should have produced larger results. He has seen things done of which he cannot have approved. A good deal of his time must have been spent in scolding and protesting, and, with the exception of ourselves, perhaps, he has been the best abused man in Japan. All the former of these troubles have been incidental to every new work in every country of which we have any record or experience, and certainly to every other department of this Government which has had to deal with new and hitherto untried problems. Were Englishmen to reflect on the blunders often made by their own Government, or by large corporations, on a scale to which the whole sum spent annually by the Kaitakushi is a mere drop in the bucket, they would see that Japan has no monopoly of folly, and that there are many whistles lying about the world which cost more and sound less than even those purchased in this country. As for the criticism to which the department has been subjected, we are disposed to regard much of it as having been sound and legitimate, and a careful review of what we have ourselves said does not suggest any modification of it. But neither shall we depart from the position we took up that, though identified with the Department, General CAPRON cannot be held answerable for errors made by it which he did not originate. When some points in its administration were criticised by ourselves, General CAPRON came forward in its defence, and, refusing to be exonerated from blame at the expense of his associates, covered the attack by asserting his own responsibility. But we cannot permit an act of gallantry to thrust on us a false issue, and must persist in believing that, if the records of the Kaitakushi are ever given to the world, one of the most prominent figures in them will be that of General CAPRON exhorting, imploring, protesting and,—possibly, as he is a gentleman of the old school swearing, (even Dr. Primrose swore once)—at the airy and untrammelled doings of some of the volatile or reckless officers of the Department.

But, after all this, what has actually been done? Where are the fruits of the experiment? We will say, so far as we know.

There are the nurseries at Yedo, from which, this year alone, forty thousand young trees have been sent up to Yezo, without mentioning what has been done in previous years. There are, and mostly in fine thriving condition, specimens of all the valuable fruits of Europe, and fields

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for the conversion of the enormous tracts of waste land in this country into pasture or corn lands. There are some fine strains of cattle and sheep, and many half-bloods which show how the native breeds may be improved by crossing, if care is taken to maintain the improvement. The horses also promise well. In Yezo there are many new spots settled and some model farms and nurseries at work. There are saw-mills, and there has been an abundant introduction of improved tools of husbandry into the Island. There are the geological nda mineralogical surveys of the Island, and the reduction of these surveys to maps which, of course, were long and laborious operations. These have enabled the Japanese to realize, as they never hitherto have done, the real value of the northern Island. There has been a fine road made from Hakodate to Sapporo, but we are afraid it has been allowed to fall into temporary disrepair, and that it cost a great deal of money which we shall never see back from it. But the operations in Yezo have not, on the whole, yet borne much fruit, judging from the accounts of unprejudiced travellers or resident critics—and these we are bound to consider as good evidence. These results are very shortly summed up, it is true; but many of them possess vigorous life, particularly the nurseries and cattle operations. Every hour which passes, night or day, adds to their value, and we are disposed to think that when the service they are rendering is fairly estimated, it will be said that they contain the germs of great blessings to the country. General CAPRON will have done well if he has left behind him, in addition to the recommendations and projects of former years, some exhortations and warnings in regard to the administration of the Department. He has had great difficulties to contend with, but he gained early, and has ever maintained, the confidence and goodwill of his Japanese colleagues, and he leaves the country with abundant recognitions of services which have been honest, zealous and faithful, although, owing to no fault of his, they have not had that entire success which alone could satisfy a man of careful yet energetic spirit.

SPIRIT OF THE NATIVE PRESS.

MISSIONARIES.

(Choya Shimbun)

Those who think our country is the most advanced in the whole world are just like "the frogs in the well," and cannot escape the reproach of being called foolish. But those who cherish a feeling of idolatry for everything which comes from foreign countries, are just like old men and women who prostrate themselves before idols. Recently it would appear that there are some facts connected with the Christian missionaries which cannot be called satisfactory, and as they are indiscriminately reverenced by many of our foreign scholars, who do not think what they are doing, we write the following to record what we have heard and seen.

A rough estimate of the number of foreign missionaries and native converts shows as follows:—

Greek Church; one missionary, and three thousand native converts.

Roman Catholic Church; forty missionaries and twenty thousand converts,

Protestant Church; seventy missionaries and two hundred native converts.

This will clearly show that it is easier to enter the Roman Catholic than the Protestant Church. And we must speak a little of China—for it is our neighbour—where the Roman Catholic missionaries number three hundred thousand converts and the Protestant nearly ten thousand. A foreigner told us that among the missionaries there are many who are planning to make money and to diffuse their religion at the same time. Doing these two things, however, is difficult. He continued by saying that Père Nikolai of the Greek Church is very frugal in his own life but exceedingly charitable to the natives, and that, as he is aided by the power of the Emperor of Russia, and receives money from the Russian Government, he differs from other missionaries, and the aid thus afforded him enables him to be thus warmly charitable to our people.

The Roman Catholics have made their converts principally at Urakami in Nagasaki, Goto and Hirado. These are composed chiefly of mean and ignorant farmers and fishermen, and the priests, believing that all the Japanese are as foolish as their converts, treat all as though they were savages. They have therefore made many converts among the lower classes, but have not yet succeeded in persuading any of the gentry.

As there is a great number of Protestant missionaries, one leaves the work to be done by the other, and that is the way they go. Therefore they are not so diligent, and when there is an opportunity for them to receive money, they will leave their divine calling behind, and will work for salaries. Again, there are some carrying on mercantile business under other names, and in any matter relating to profits or losses they are much more sharp than the regular merchants. Therefore it is natural that they do not do make many converts. Some say that they will not teach the ignorant natives without being paid for it, but there are no such wrong deeds as these among the Roman Catholics. Is not this strange?

On the whole, and speaking in general terms, they all receive money from their native countries, but they do not pay as much attention as they ought to the interests of their sects; and those, as we have stated, who do not teach without getting paid for it, are receivers of money from their native countries and here live in splendid houses. It is a sad fact for their respective sects in those countries, and all the respectable foreigners living in the country dismiss the missionaries saying that they are mean and miserly-hearted people. (Search for yourself, reader, and you can discover the whole truth.) That the Japanese, not knowing their secret doings, should feel reverence for them, is indeed a pitiful thing, and some of them when they see a missionary think it is Jesus Christ, which is just like our old ignorant folks who believe that a Buddhist priest is Shakka himself. Of those of us who, without knowing whether they are doing well or ill, get a small smattering of foreign languages and of certain portions of the Old and New Testaments we do not speak, as they are not worthy of mention. But it is very perplexing to us to see some of our famous gentlemen paying reverence to any one, be he never so mean, who is called a missionary.

We do not, however, mean to say that all the missionaries are the same, and we only earnestly lament that it is not easy to admire all their deeds, or pleasant to have to laugh at our ignorant people who hold these persons in esteem without knowing their faults. If anyone believes that our opinion is wrong, all he has to do is to enquire into the matter of the respectable foreigners at the ports or the native servants who are in the service of foreigners; then the whole facts may be made clear. Oh! religion is not a thing upon which we can decide in an instant, as to what is pure and what impure. Examine, therefore, carefully into the doings of the missionaries.

THE TACTICS OF THE PRIESTS.

(Choya Shimbun.)

We were brought up in the opinion that the Buddhist and Shinto priests greatly excelled the common people both in understanding and talent. But this certainly is not the fact, for we have found among them very dark, ignorant minds. They cling fast to old customs and think nothing of the coming enlightenment. What they do and say seems rather injurious than beneficial, and they seem anxious to block up the road to civilization, which is indeed very deplorable. They were recently desirous of bringing about an union among themselves by very unjust means, and obstinately refused to yield to the sounder arguments for their separation, until the Press took the question in hand, and ultimately by orders of the Daijokwan the stubborn Daikioin was divided; though of this subject we have no wish to speak further.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

What compels us to speak is this. There is a newspaper published by them, and a strange paper it is. Whenever we chance to see it, it contains arguments against Christianity, and as this seems to be its chief topic, we presume its object is to oppose the entrance of Christianity. With a glance only at the old Chinese translations of the Old and New Testaments, the writers compose imaginary and continuous arguments against a religion which has been observed by the most advanced Europeans from ancient times until now, and by a clergy of great knowledge and wisdom. The boldness of these men is indeed astonishing, but their folly is laughable. Recently the Government repealed the law prohibiting Christianity, as may be observed on the notice-boards, and since that time the Government has not interfered with foreigners converting people to Christianity in the five ports. And as the Government well knows that religion ought to be free, it will probably tolerate Christianity tacitly until it can safely pronounce it entirely free. But these writers do not understand the laws of nature and the views of the Government, and persist in saying that Christianity is corrupt. Moreover, they interfere with the rights of others by insisting on their own rights, and violate the principle that religion is a thing which should be left to the free choice of men.

Now we will institute a comparison by way of explaining to them, by a simple process of reasoning, what is the effect of their action, though it may produce no great impression on their empty brains. Here we have two teashops side by side, one belonging to A and the other to B. It comes into A's head that he should like to get all B's customers. So he goes to a newspeaper and inserts an advertisement to this effect. "The tea at the shop next-door is adulterated, and should it be drunk it will greatly injure the health. Come, therefore, and buy of me." Can this be called just? This is injuring the rights of others by our own claims. Now this is just what this newspaper does, so if the priests are desirous of making more converts, they had better abandon their newspaper and spend the money it costs for better and more important purposes. I feel so much pity for them that I am forced to give them this advice.

The Introduction of Christianity.

(Meiroku Zashi).

If a man opens his mouth now-a-days the word *civilization* drops from it. But the passage from barbarism to civilization is like the change from the darkness of night to the full light of day. It must come step by step, and the advance depends upon the views of religion and science which prevail in a country. There are two kinds of science, and it is well to distinguish between them. There is the superstitious reasoning which is mere vain study—the five elements of the earth, the constitution of the heart and soul and the like. And, on the other side, there are the true sciences which have facts for their foundation, as astronomy, natural philosophy, chemistry, economics, &c., the sciences of Europe. The countries in which these true sciences are diffused are called enlightened. But it would take any country, even in Europe or America, very many years before every one of its inhabitants understood these, and how much longer would it take an oriental country? When would our people arrive at such a result?

But how must we work in order to place a people like ours on such a road of educational advancement? It is by religion. The efficacy of religion is to lead the uncivilized to advancement through good paths. There are many forms of religion. In our country we have two, Shintô and Buddhism. In foreign countries I do not know how many there are. But the most famous are Buddhism, Mahommedanism and Christianity. The Christians are divided into three great sects, the Greek, Roman Catholic and Protestant churches. Among these the Protestant is the best, but this again is divided into petty sects, Lutherans, *Karubin (sic.)* &c. Among these again these are divisions, old and new, and the new sects are found in the most advanced countries. Among these religions, the more powerful sects oppress the less powerful. But the old forms disappear before the new, as is clearly to be seen by reading history. We must leave this aside, however, and direct our attention to our own history. Before the entrance of the Chinese characters into this country religious observances constituted the instruments of government. Then Atteck (a Chinese) presented to our Mikado the books Rongo† and Senjimon,‡ and from that time the Chinese sciences were taught among us. After this Buddhism arrived, and Nakatomi Kamako and Moriyano exerted themselves strenuously to oppose its entrance. But, for all this, it soon prevailed throughout the country. When the different sects, such as the Jodoshu, Zenshu &c, were formed in China and Japan, many attempts were made to withstand them, all which turned out failures.

Not so very long ago many thousands of Roman Catholic converts were slain at Shimabara by order of the government, and for a short time that religion was excommunicated, and again when the Roman alphabet was brought over we defended the passage against it. But from the day when the Americans came to Uragawa the minds of the people began to change, and this alphabet is now making its way very fast. The word *civilization* is repeated very often in our hearing, but how many of us does it really affect? It is only the officials, the scholars and the press; and when we contrast these few with the mass of our population we find them to be only one in many thousands who still cling fast to the old customs, and who intoxicate themselves with such sayings as *Jigoku* and *Gokuraku* (Hell and Heavens of the Buddhists), and thus we cannot be called even a semi-civilized people.

The entrance of Christianity is the natural outcome of the time, and I do not believe that any such occurrence as took place at Shimabara will be repeated. There is nothing better than Christianity to aid in the advancement of the world, but there are sects which are injurious, as well as sects which are beneficial. The best mode, therefore, of advancing our country is to introduce the most free and enlightened form of Christianity and have it diffused among our people. How would it answer to bring over teachers of such a form of Christianity, and allow them to educate our people in the same manner as we employ foreign instructors of the different sciences in our various government departments?

TSUDA.

Speculations upon progress.

(Meiroku Zashi.)

A religion is established by the number of those who believe in it, and faith comes with their inability to understand all the doctrines it comprehends. A man argues from what he does know to what he does not know. This belief, however, would not be knowledge. In the same way, the belief of ignorant men in idols of wood and stone, in insects, beasts &c. and that of intellectual men in heaven, God, the laws of nature, &c., are beliefs resting on no substantial facts. And though the objects of belief in both cases are different the faculty appealed to is the same. Both are based on the same principle, and belief is inherent in the hearts of all human beings.

An athlete however strong, could not, by the force of his muscles, wrench the belief of another from his mind nor could an eloquent man by means of his eloquence.

A government therefore ought to leave religion to the free consciences of men, and it has no right to say "we insist on this belief and prohibit the other belief." For a government itself is composed only of men, who, though of course superior in knowledge to ignorant old men and women, certainly profess many things they do not understand, and it is unreasonable for them to inforce on others beliefs of the foundations of which they are themselves ignorant—beliefs which are of no value unless grounded on reason.

Some have said to me.—"Your argument is doubtless very just, but if our people cast away their native gods and embrace others, would not this be like the inversion of root and stalk.?"

I replied.—"There is no top and bottom in the question of beliefs, which are only the opinions of men as to what is false and true. Ignorant old men and

† Moral reasonings of Confucius.
‡ The thousand-character classic.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

women believe in stones, pieces of wood &c., and think that they can hear and answer their prayers. But should they actually discover that they cannot, they would cease to believe in them."

Others have said.—"Your argument is reasonable enough, but how about beliefs which are rooted in our national history?" I replied:—

"A man begins to obey the laws of the Government the very day he is born and ceases on the day of his death. But as his obedience or disobedience of the laws is all that the Government is concerned in, it has no right to examine into the question of his belief. The business of the Government is to unite and uphold the nation, to protect men from injustice, to maintain peace and order; and as it has the power, so it is bound by its duty, to do this. Religion, on the other hand, is not a mere question for the present, it concerns also the future and the good or evil in men's hearts. Its duty is to enlarge the number of believers, to teach them to examine into their hearts and into the purity or impurity of their motives, to cease from evil, to do good, and that their future happiness or misery depends on their conduct. Government and religion, therefore, stand on two different foundations, and the foundations of government will not be injured by the presence of religion.

There is in the world a form of government called *Tokukurashii** which prevailed in ancient times in Judæa Egypt, India, and prevails at this moment in Thibet. In the dark ages, while people were yet uncivilized, a great here world usurp sovereign power both as a priest and king, and tranquillized people in this double capacity. This was well enough in the dark ages, but as people gradually became civilized, this form of government disappeared. If the people remain ignorant, as they still are in Thibet, the government and the religion remain united. But should the people discover that all this is false and be unable in other affairs to distinguish between sense and nonsense, it is liable to go to utter destruction.

A King of some barbarous country in ancient times attained sufficient astronomical knowledge to enable him to predict eclipses of the sun and moon. But this was kept secret for generation after generation, and the people of that kingdom thought that their kings possessed supernatural powers, and therefore obeyed them. But gradually, as the people progressed in knowledge, they acquired the art of calculating the eclipses themselves, and the power of their kings vanished. Those, therefore, who resort to such trickery are certain to be ruined. And, in like manner, if there should be anything resembling the doctrines of a theocracy in a government, the connection between itself and religion should be immediately severed, so that no injuries which ought to be confined to the religion should also fall upon the structure of Government."†

Reply to both the above.

Mr. Tzuda argues that we should introduce the best religion existing in the world, and make this the basis of our national religion. Mr. Nishi is of opinion that as religion and the question of the foundations of government are two very different things, the connection between the two should be severed, and there should be an entire freedom of conscience to all.

My own opinion is that the true duty of a Government is the protection of life and property, and that men should be left free to believe what they like, provided their belief entails no injury upon others. A more minute explanation of these views may be found in treatises on universal (or international) law under the heading 'Religion.'

Mori.

Exclusion of the Yetas from office.

(Choya Shimbun.)

Since our last civil war it has been said not the least partiality would be displayed in the choice of officials, and that there was a chance for everyone who possessed talent to occupy some post under the government. But there is something in connection with this which I cannot understand. There can be no doubt that the former *kugé*, and what are now called the *kazoku*, and the *yetas* are all human beings. Therefore I shall not suppose that the mighty and righteous God gave wisdom and talent to the former, and left the others in meanness, ignorance and mental destitution. Of the *kugés* there are about 300 families numbering 5,000 persons in all, and among them there are about 50 in the government service. But there are 500,000 *yeta* families, who number 3,000,000 of individuals. Perhaps there may be some of these in the government service, but I have not yet heard of it, and it is certain that there is not one occupying a high post. Now if we assume that the choice of officials by the government is just, and made as by means of a fine silk sieve, our deprivation of wisdom by the righteous Gods may justly excite our displeasure.*

Although it is said that everything has been reformed, and that the principles of our present administration are broad and liberal, many of the old prejudices remain, and none of our party are in the government service. When the slaves were freed in America some of the blacks were immediately elected as representatives, and it is even said that one of them may fill the chair of the President. This is what may be called true freedom.

Written by one formerly a *Yeta*.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Celebrated Swords and Makers.

Old weapons are frequently presented to Kami shrines, especially those dedicated to Hachiman and Dai Jin Gu.

The following are some of the numberless celebrated blades and their forgers.

Ama-kuni of Yamato who lived about A.D. 700 was a celebrated maker. One of his blades is said to have been carried off by a crow during the reign of Kanmu Ten O, A.D. 782, and has since been known by the name of the *Kogarasu maru** (little crow). In A.D. 940 Taira Sadamori became the possessor of this sword, which was drawn by him in the wars with Masakado, who was lately deified at Kanda, Yedo.

Shin-soku, who lived in Usa no Mia of Buzen, was ordered to forge a blade for the son of the Emperor Heizei Ten O in A.D. 806, and he cut his name on the blade, the first time this was done. There is a legend that Riu Jin† came to his assistance.

Of ninety-nine swords he is said to have made, only eight had his name on them, and the Hachiman shrines are named as being in possession of these blades, which are now little else than a mass of rust.‡

Ohara Taru dai yu Yasutsuna of Hoki, a cotemporary of Shin-soku, forged a blade which in 947 which was used by Ra'ko (Minamoto Yorimitzu) to kill Shi ten dô ji, a celebrated robber. He dreamed that this sword, then

---

* Japanese form of the word 'theocracy.'

† It is impossible to doubt that this is a blow aimed at the theocratic element in the theory of the Japanese government, which, however, will die away here as it has elsewhere.

* This is a form of irony which may often have been observed in these translations, and it is worth analysis. It consists in putting as true an alternative known to be false, but through which the true one may be seen, because the utterance of the true alternative might bring the writer into trouble. In this case he evidently means, not that the Gods have deprived his caste of sufficient mental faculties, but that the Government unjustly excludes its members from office.—[Ed. J. W. M.]

* Names were given to swords, as to vessels, horses and other favourite possessions, the commonly used affix *maru* meaning "perfect," in this sense and still used for ships. Formerly even the young sons of nobles were thus styled, as Take chi yo maru, a common title for the heir to the Tokugawa line: as also to castles, such as Hon maru (true perfect) or Nishi maru (west perfect).

† Riu Jin is the same as the Old man living at the bottom of the sea in Ringu (Dragon Shrine) the father of Toyohame who was married to Hiko-hohodemi. These were parents of Fukiawasedzu no mikoto, whose fourth child was Jimmu Ten O. Hiko quarrelled with his brother, and descending into the depths of the sea became enamoured of Toyo and lived with her in coral caves until she was about to bring forth her child. Hiko then built her a hut on the sea shore, roofing it with cormorant's wings. Here Fuki was born, and his mother Toyo then became a crocodile and returned to her home in the deep. Hiko having displeased her. She left her sister Tama-ori-hime behind, who married Fuki. Jimmu Ten O was their fourth child.

‡ There are some of these old blades in the Exhibition at Tokio, one is marked as valued at 700 *yen*.

still at the Isê shrine, alone had power to break through the spell of invincibility that surrounded this celebrated robber, who is even now known to children as a ghoul. This sword was placed in the Isé Mia as an offering by Tamura Shogun. Another sword of the same make was likewise placed at Kehi-miojin in Echigo by the Shogûn Toshihito.

Ohara Sane-mori, another maker of celebrated swords, lived at the same time. One of his blades was called *Nuke maru*, from its having flown out of its sheath and destroyed the *Ja* (enormous serpent) that came to swallow up Taira Tadamori, who had laid the weapon sheathed beside his pillow, when lying down to rest. Another blade called *Korgarashi maru*, also in the possession of the Heiki family, was reputed to cause trees to wither if it was laid down touching them.

A.D. 985: Yukihira was another celebrated sword-maker. One of his swords was used by Watanabe, the follower of Yori mitzu (Raiko), to cut off the arm of the Onié§ (ghoul) when sent by Raiko to exterminate the wicked ghouls.

A.D. 987. Mune chika, a sword-smith living in Sanjo street, Kioto, in the province of Yamashiro, made a blade called *Cho maru*, possessed by Gonguro of Kamakura. Another was placed in the temple of Fudo son at Echigo, and became the property of Wada Saburozaiemon, who repaired the temple at his own cost. The blade was thereafter called *Fudo maru. Cho maru*, was called from a *cho* (butterfly) being worked into the 'forte' of the blade.

Another was called *Kogitsune maru* (little fox) from its having been forged by the assistance of Inari (Uga no mitama), when Ichi jo no In (A.D. 887) ordered one of the finest workmanship. The name of the maker, Mune chika, was cut on the observe, and the name *Kokitiune* on the reverse side of the hilt *(t ka)*.

Tomonari of Bizen was a noted sword-maker of the same period.

A.D. 1,004 there lived in Yamashiro Yoshi iye, to whom appeared Sumiyoshi Daimio Jin (of the temple at Osaka) and ordered the best blade that could be welded. When it was finished, the maker was on his way to the temple, as ordered, but while crossing the water he dropped the sword into its depths. A cormorant dived, and finding, flew away with it. Shortly afterwards a new sword was found at the Shrine of Sumi yoshi, which proved to be the lost blade, and it is now called *Wuno maru* (*Wu*, a cormorant.)

A.D. 1186. Gotoba no In was partial to sword-makers, the most celebrated of whom were sent for by him in rotation, as follows:—

1st	month,	Bizen no Norimune.
2nd	„	Bitchiu no Sadatsugu.
3rd	„	Bizen Nobufusa.
4th	„	Awadaguchi no Kuniyasu.
5th	„	Bitchiu no Tsunetsugu.
6th	„	Awadaguchi no Kunitomo.
7th	„	Bizen no Muneyoshi.
8th	„	Bitchiu no Tsugunieyê.
9th	„	Bizen no Sukemune.
10th	„	Bizen no Yukikuni.
11th	„	Bizen no Sukenari.
12th	„	Bizen no Sukenobu.

The blades made by Gotoba no In are marked with a chrysanthemum and a stroke beneath, (*kiku ichi mon ji*‖).

A.D. 1204. Yoshimitzu of Awadaguchi in the province of Yamashiro, commonly known as Toshiro. His make of swords, having cut through a druggist's metal mortar (called *Yagen)*, are known as *Yagen Toshiro.*

Rai-taro Kuni-yuki is name of a celebrated maker of this period. In 1248 Kuni-mitzu flourished; in 1250 Kuni-yoshi. In 1279 Nagu-mitzu made a sword, afterwards worn by Iyeyasu, called *Adzuki naga mitzu* from its cutting a bean *(adzuki)* thrown into the air.

Other celebrated makers are:—

A.D.	Rai Kuni toshi.
1,293.	Shin to go Kuni mitzu.
1,303.	Yuki mitsu of Sagami.
1,319.	Sadamune of Sagami.
1,320.	Go no Yoshi hiro of Yetchiu.

The last is the most celebrated of these renowned makers. He proudly refused to cut his name on the blades, saying that their superiority would be recognized without this.

A.D. 1322 Mura-masa of Senjiu mura in Isé, commonly spoken of as Senjiu in Mura-marsa. His swords would, it is said, cut a sheet of paper floating on the stream if the sword were only held in the water to meet the paper. Such was the reputed keenness of these weapons, and so great the desire to test it, when a fitting opportunity occurred, that the Tokugawa government forbade their being worn.¶

In 1326 Masa-mune, the most celebrated of sword-makers, forged some of his best blades, now still in existence. The welding shows a peculiar golden tinge, like forked lightning through a dark cloud. He folded his metal from four sides, beat it out and refolded in a peculiar manner.

In 1338 three lived in Mino, at the village of Seki Shidzu saburo Kani-uji, a pupil of Masa mune.

In 1362 Okane-mitzu, a celebrated maker of sabres, having more sweep in them than the blades of other makers.

A.D. 1370 Kane-sada was a reputed sword-smith of Seki.

All swords made since 1570 are called *Shintô* (new swords) and the old but inferior blades are included with these. The swords of previous make are called *Kotô* (old swords).

Horikawa Kuni hiro A.D. 1600 was the best of the new (*Shintô)* makers.

In Setsu (Osaku) Tsuda Echizen no kami Suke-hiro was another maker of about the same period (1624).

Subsequent makers are numerous, but as there are no special legends connected with their blades or particular characteristics pertaining to them, the list of their names is unnecessary.

The edge of the Japanese sword is tempered separately from the body, by being covered with clay when placed in the fire, and this process brings out the marking peculiar to these swords. These processes vary and are called *Suguha* or straight edge: the style of Kuni mitzu. *Hoso suguha*, (fine thin) straight edge; the Yamashiro style. *Oomidare*, large irregular wavy: the Sagami and Bizen style. *Komidare* small irregular wavy-same style.

Choji, like cloves laid side by side: Bizen style.
Jinka, overlaid petals, like flower petals: Bizen style.
Hitatsura, marked with cloudy spots: Soshiu style.
O Notare, large wavy line; common to all.
Konotare, a small wavy line; common to all.
Saka achi, serrated; principally Bizen.
Gunome or *gonome*, five curves and a straight line alternating: Mino and Seki style.
Sambonsugi, three serrated marks and a straight line alternating.

*Niye** are spots on the hard metal of the edge, peculiar to certain makes; and *Niyoie*, cloudings and markings in the welding. The markings on the point, called *boshi*, are of several kinds, denoting the peculiar makes.

All these details must be thoroughly studied by every Japanese gentleman, and *Hon Nami* (experts) were pensioned by the Tokugawa government to teach the "true marks."

The shapes of blades were classed as following:—
Ken, two-edged falchions.
Tatchi, swords with a greater curve.
Katana, the common large sword.
Wakizashi, the ordinary medium blade.
Tanto, the short sword, of late most worn with the *Katana.*
Yoroidoshi, a short thick blade.
Yari, a lance.
Naginata, a large-headed lance.

§ *Vide* Stories *(Kodomo Banashi)*.
‖ Many of the Imperial family and daimios imitated this Mikado, and patronized amateur and professional sword-making.
¶ The compiler of these notes possesses one, and has experience of the fear and superstitious reverence evinced by natives of all classes for the swords of this maker.

* Swords are said to retain the stain of human blood, if it is not ground out speedily after the death of the victim.

Unokubi tskuri, (cormorant's-head-shaped) a blade flattened out at the point.
Kamuri otoshi, a small pointed stiletto.
Shobutskuri, like a flag leaf, flat backed.
Hiratskuri, broad shaped.
Iwomune, sloping backed.
Hako mune, square backed.
Ogisaki, round pointed.

Kirimono, are grooves or hollows in the blades filled with crimson lacquer or carvings of Fudô, *Marishiten*, (dragons) and sometimes Bonji (Sanskrit) letters or Chinese characters, such as read "*kimi ban zei*," ('will cut for ten thousand years'); *ten ka tai hei*, (peace beneath Heaven); *sei shin ho koku* (honest heart and patriotic). Some swords have been engraved with poetry of thirty-one syllables.

The shapes of the haft and the marks thereon are a serious study to all true swordsmen.

Yasuri me (fire-marks) to keep the hilt from slipping.

Hirayasuri; *yokoyasuri*; *taka no ha*; *Ya hadzu*; are the various styles, each having some peculiarity of the maker.

FROM THE ITALIAN OF GABRIELLO CHIABRERA,

(16TH CENTURY.)

Parla il poeta alla bocca ridente della sua donna.

Pretty pair of roses red,
On thornless head
That unfolding with the dawn
Of the loves reveal the pleasures,
And the treasures
Of the pearly teeth adorn.

Tell me, roses, precious flowers,
From Love's bowers,
Tell me why and how, if I
On your mistress ardent gaze,
In quick amaze,
Smilingly apart ye fly?

Is it ye would courage give,
Bid me live;
Whom must else slay your disdain?
Is it, rather, ye are glad
At the sad
Death of me whom ye have slain.

Pretty roses! whether ye
So smilingly
Cruelty hide or kindness mean,
I in new-made rhymes would fain
Your charms explain,
Your sweet smilings still between.

When sweet waters murmur low,
And sweet winds blow
Rustling o'er the waking lea,
When the mead with proud array
Of flow'rs is gay,
O smiling Earth, we welcome thee.

When the zephyr dips its feet
In the fleet
Clear ripple of the sea,
That scarce seems to lift the sand
Of the strand,
O smiling ocean, we welcome thee.

When the golden skies, all bright
With lily-white
And roseate tints, awake the lea,
And on wheels of sapphire blue
Revolve anew,
O smiling Heaven, we welcome thee!

Fair to see, when all is mirth,
O smiling earth!
O smiling Heaven! fair to see
When all is joy—but earth or sky
Cannot vie
In their smilings, sweet, with thee.

TIS.

Law Report.

H.B.M.'s PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

May 19, 1875.

R. F. LIVINGSTON *vs.* E. LEWIS.

This was a suit brought by the complainant, who laid damages at $2,000, for an alleged slander perpetrated on the 16th March, at the Brooklyn Hotel, by which he had sustained much damage to his business and character.

Mr Livingston conducted his own case.

Mr Litchfield appeared for the defendant, who denied the charge of slander.

Robert F. Livingston, sworn, said: I am a publican, and keep the house No 81, known as the "British Queen." On the night of the 15th March last I was in my own house, between 11 and 12. Several parties were there at the time. At about half-past eleven defendant came into my house and said there had been a fire that night, and that there would be another before morning. At about a quarter to 12 there was a cry of "fire," and a person called Greensward said to me that there was a fire in the quarter somewhere. I and a man named Coleman ran to see where it was, and were told that it was No. 136. We went to Mr Coleman's house and found that the fire had been put out. I returned and closed my house. On the 16th, at half-past eight in the morning. Mr. Thompson and Mr. Scott came to my house. In consequence of what I heard from them I went to the Brooklyn Hotel at 11 a.m. Mr. Lewis was there. I asked him what he meant by saying that I had set fire to his house and Coleman's. He asked me to go on one side and speak privately. I replied that I had nothing private to say, and that he must speak in public to me. He then said that I had set fire to his house and Mr. Coleman's, and that my motive was to burn the papers of the schooner *Kiushiu Maru*, which belonged to me and Mr Coleman, in order to do the latter out of his share in the vessel. He also said that a pocket-hand-kerchief with my name on it had been found saturated with kerosine oil in an earthenware pot, and that the police had seen me set fire to it. On the 18th March I brought this action. I have sustained injury to my business through loss of custom in consequence of what the defendant has said of me. People do not come to my house until they know the truth or not of defendant's statement The defendant has followed me from house to house blackguarding me.

Cross-examined by defendant's counsel: I did not do my share of blackguarding. When defendant has followed me about abusing me I have told him that he did not tell the truth. My house is frequented by sailors, men-of-war's men, and officers of ships. It is not set apart for dancing. There is a piano there, played by Mr. Greensward. I only heard one alarm of fire. Mr. Lewis only came to my house once that night, at half-past 11 o'clock. He did not come to my house afterwards at past twelve. He did not ask me if I had heard that his house had been set on fire that night. I did not say to him in reply, "Yes, you ——— ———, that is twice I have missed you; but watch for the third time." I told him, when he said that "there had been a fire in his house and that there would be another," to be careful what he said, as his words might be used against him. Greensward was present. I know that on the following morning complaint was made at this Consulate about a fire. I heard at half past three in the afternoon of the 16th that Lewis had been to the Consulate. He did not tell me so himself, nor did he ask me to come with him to the Consulate. It was about 11 in the morning when I went to the Brooklyn. I found Lewis already there. I asked him what he meant by spreading reports about me. I did not say. "This is a fine charge you make against me." I believe Capt. Jamieson was stopping at the Brooklyn, but I do not remember seeing him there that morning. Lewis did not say, "They are only the words you used yourself." I have been burnt out myself, and had to escape in my shirt and drawers from the fire, so that I should be the last person to set fire to any one else's house. On that occasion other persons escaped as well. I do not know that they had any money. I have never been charged before with setting fire to my house. The letter produced is not in my hand-writing. It was sent though me to Mr Lewis, at Scott's house. [The letter was to the effect that if the defendant would go to the Consulate and make a statement that he had maligned the complainant, pay expenses incurred, namely $22, and publish an apology in the local papers he (complainant) would withdraw from the case.] He offered to pay me half, and shake me for half a dozen of champagne. I refused. I have been eight years

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

in Japan, seven of which in Yokohama. I have not borne an excellent character. I take a glass of drink now and then, and sometimes take my own part. There have been two complaints against the conduct of my house for fighting in it. One was when the Marines first came here, and settled their differences in my house. The police took the men out of one door and let them come in at the other.

G. W. Millar, sworn, said:—I am a stevedore. I recollect something that passed between Livingston and Lewis about the 16th March in the Brooklyn Hotel. Livingston came in first, and Lewis second. I was sitting down. Lewis called Livingston, and told him that he wanted to speak a word or two in private to him Livingstone said, "I have heard something about what you have said about me. Say what you have to say publicly. I want no privacy." Lewis replied that what he had said he meant: that Livingston had set fire to his place, and that he could prove it, as he found a pocket handkerchief with his (complainant's) name on, saturated with kerosine oil. Livingston replied, "I believe you set your place on fire yourself, as your lease is up. I should be a fool to set fire to your house, my own being uninsured."

By Mr Litchfield: I did not think there was anything serious in the quarrel between the two until a few days after the 16th. I heard nothing about the Consulate. [The examination of this witness caused some amusement, as he gave his testimony in the broadest English, and bore the fire of cross-examination with great good humour. He concluded by saying that "nobody could squeeze anything out of him but the truth;" and in the course of his evidence avowed his predelection for a "cocktail," and said something about "joining the Temperance Hall."]

At noon the case was adjourned until half-past one.

J. H. McGrigor was the first witness called after the adjournment. He deposed as follows:—I am a machinist and an American citizen. I want to ask a question before I am examined. I have been summoned to-day against my will, and to the detriment of my business, and I want to know who is to bear my expenses. (The *subpœna* issued by the U. S. Consul-General, commanding the attendance of this witness, was here exhibited.)

The Court ruled that, as the witness had been summoned by the plaintiff, it would be well for Mr Livingston to make the witness a reasonable offer. The plaintiff having expressed his willingness to allow MacGrigor $10—the amount, as he said, of his daily wages—the examination was proceeded with) On the 16th of March, in the morning, I came ashore from the Mitsu Bishi ship on which at the time I was working. I met 'Chips" (Lewis) in the street. He seemed excited, and said, "Mac, I am going to put him through;" "him," as he explained, being Sam Livingston, who had set fire to his house on the previous night. He was then, he said, going to the Consulate, to charge Livingston. Some time afterwards, about eleven o'clock, I found Lewis and Livingston together at the Brooklyn Hotel. Livingston asked the other if he were mad or drunk? Lewis said he was neither, but he was going to "put Livingston through," at the Consulate, for "putting fire to his house." That is all I know.

By Mr. Litchfield: When Lewis left me he went in the direction of the Consulate. When I saw the two at the Brooklyn, Lewis appeared half sprung. If any man were to ask me if I were mad or drunk, he might lose the balance of his legs. I did not hear Livingston say to Lewis that he had set his own place on fire.

By the plaintiff, through the Bench; I never heard Lewis say anything about setting his place on fire. I have heard him say he would expose Livingston if he went on with this case; but I don't know what he meant.

Edward Greensward, an English subject, sworn, said: I am a piano-forte tuner and repairer. On the night of the 15th March I was employed by Livingston to play during the evening. He went out, and asked me to "keep an eye to the bar." During his absence Mr Coleman came in, and commenced quarrelling with another person. Livingston came back and separated them. During this time I heard a cry of "fire." Went to the door and saw that there was a bright blaze at 136. I told Livingston. [Here followed some irrevelant testimony.] After detailing some proceedings of the night, the witness continued: Mr Lewis came into the British Queen. He seemed very excited, and said that there had been two fires that night, and there would be another before morning. After the closing of the British Queen, I thought it my duty to tell a policeman what Lewis had said, having done which I went to bed. About three weeks or a month previous I had heard Lewis say if he did not "get what he wanted," he would set fire to those premises, No. 136. Lewis made the remark that there "should be a fire before morning" in two different places, first at the British Queen, and next in front of 136. I heard Livingston say to the defendant, "You should be careful of what you are saying, as it may be used against you on a future occasion." Lewis slung his arms around and said there would be another fire before morning. Livingston had been home an hour before I gave the alarm of fire. During that time he was sometimes before, sometimes behind the bar, with his coat off to stop the quarrel between Coleman and the other man.

By Mr Litchfield: The quarrel lasted for half an hour before Mr. Livingston came home, and for half an hour afterwards. I heard the cry of fire from half an hour to three-quarters of an hour after Livingston came back. Roget was the policeman to whom I told what Lewis had said. It was close to 136, after the fire had been put out. Lewis was not present. I was on my way home. I did not say to the policeman, "There have been two fires, but watch for the third one." When I spoke to him it was about half-past twelve. Lewis, when he came to the British Queen, was very excited. He might have been drunk. I have been three years at the British Queen. The house is frequented by officers and engineers of vessels, and men-of-war's men. The attendance has been less since before the 15th March.

John Coleman:—I am a Russian, I keep a saloon. On the 15th March Livingston and I were together all the evening till 10 o'clock, when he went out and returned shortly. We had some business to settle about a schooner when I heard the cry of fire, we both went out together; but could see nothing, neither smoke nor fire; we had gone to my house and were on the second story. I met Lewis close to my place. He said to me, "You were nearly burnt out." This was close upon twelve o'clock. My house is on No. 136, and is called "the Pacific Saloon." Lewis said that "Mr. Livingston tried to burn the house down in order to do me out of my share is the schooner *Keiso Maru*." At the time the ship's papers were locked up in Livingston's safe.

By Mr. Litchfield:—I do not know whether Livingston generally takes his coat off to stop disputes. On this occasion he did to so protect me from being struck by the man I was disputing with. I do not read the paper and know nothing of the article in the *Gazette* which speaks of an attempt being made set fire to the Pacific Saloon.

R. M. Ford, an American citizen, by business a Commission Agent, deposed that on the night of the 15th March, he was in the British Queen for two hours from half past seven o'clock. No fresh evidence was elicited from this witness He heard Lewis say at the house that there had been two attempts to fire his place that night and that there would be another before morning

By Mr. Litchfield:—I have been Commission Agent for several months. I had been previously deputy marshall in the U. S. Consulate. I left because I had enough of it. I was then publican for one month, at the *Brittannia*. It did not keep me, and I gave it up. I knew the deceased Ryan or Thompson. I believe he was alive at that time at this fire. At present I have two rooms at Mr. Livingston's place. I do not think Mr. Livingston's character is any worse now than it was before the fire. I never knew him to be over and above bad.

H. W. Hohnholtz, a German storekeeper, sworn, deposed,—I am in charge of the fire brigade. On the night of the 15th I was awoke by my boy with an alarm of fire. I got up, put on my uniform, and went to 126 the site of the fire. The engine as I arrived was returning and the fire was out. I examined the premises, and had reason to believe that the place had been set on fire. I expressed that opinion. On my return I went into the British Queen to have a drink. I suppose it was nearly twelve o'clock. Livingston was there and Lewis came in. I mentioned that I thought the place had been set on fire. Lewis said "Yes," and that he knew the man who did it. I did not like the conversation, and I went home. Next day I went to Mr Douglass No. 42. There I saw Lewis who spoke about the fire and said he knew who did it. I asked, "who"? and he said "Sam Livingston." I told him "it was dangerous to speak like that," and asked if he could prove it, and in which way? He replied that he had found a flower pot filled with Kerosene, and containing a handkerchief marked "F. R. S.," which proved it to be the property of Sam Livingston. He then told me he would go right down to the English Consulate and have Livingston arrested, I am certain that the house was set on fire because the fire occurred in an unoccupied part of the premises. Something had been shoved in between two partitions and ignited at the height of five feet from the ground. The next morning when in company with the police I found a stocking soaked in kerosene close to where the fire broke out. If No. 136 had properly caught fire, No. 8 would have been in danger. On the night of the fire I was shown by the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Police an earthenware pot full of charcoal and other things among which I noticed the smell of kerosene.

In the course of his cross-examination Mr Hohnholtz said that he knew nothing against the British Queen as a house of call, that he used it from time to time. He left on the night in question because he heard swearing and knocking on the counter. He could not say whether the disputants were drunk or sober. He did not stop long enough.

Christain Thompson, a Dane, shipkeeper, deposed to knowing that two fires occurred on the night in question and continued:—The first one occurred in the water closet of the Pacific Saloon, the second in the kitchen of the Far East. I put the first fire out myself. I found a handkerchief soaked with kerosene and wrapped in paper. It was on fire. I seized it and threw it into an empty fire pot. I was in charge of the Pacific Saloon. I afterwards saw a man with a lantern in the passage at the back of the Far East. This was between eleven and twelve. (After some more irrelevant testimony which was not taken down witness continued). I went home changed my clothes and on my return I saw Lewis talking to a policeman and heard him say that Livingstone had set his house on fire, and that if he had not closed he would have him locked up at that time. As it was he would give him in charge in the morning.

By Mr. Litchfield:—When I saw the light of lantern I ran out and saw in the street a Japanese policeman. I also saw a Japanese run out of the passage by Mr Lewis' house. Then the flames burnt out and I put them out.

Bernard Harold, an American citizen and proprietor of the Brooklyn Hotel, sworn said:—I know nothing whatever of this case. I heard a lot of talk in my hotel, between Lewis and Livingston and got so disgusted that I would not listen. One was as bad as the other. I do not know which began the attack.

Malcolm Scott:—I am a British subject and proprietor of the New York Saloon. I knew nothing of this case beyond what I heard from flying rumors, and read in the papers. I have heard Mr. Lewis state jocularly that he would set fire to the whole of Yokohama. I think I have heard him say that he would set fire to his own place.

By Mr. Litchfield:—I think that it was two or three years ago in front of the British Queen bar that he said he would set Yokohama on fire. I have tried to make the two friends. All of us Saloon keepers are friendly together. We patronise each other.

This closed the case for the prosecution.

Mr. Litchfield, having promised that any words spoken by Lewis in the Brooklyn Hotel on the 15th March had been evoked by the complainant himself, called

Constable Roget, who deposed. On the night of the 13th March there were two fires on Lot No. 136. The first was about half past eleven. After the second I searched the place and found a pot and a handkerchief soaked in kerosene. I afterwards met Greensward in the street who told me that he had heard that there would be a third fire before morning. I immediately reported the matter to the sergeant of Police. I saw Lewis that night who told me that Livingston had set fire to his house.

David Jamieson:—I am a British subject and master mariner. On the morning of the 16th, Lewis came to the Brooklyn hotel and asked to see me. I went on one side with him, and he told me that an attempt had been made to burn him out, and went with him to the Police Station and returned to the Brooklyn. Livingston came in and said to Lewis, "This is a fine charge, you have made against me of burning your place, if you wanted money to fix up your place, you should have taken another way of doing it" Lewis denied making any charge. If any had been made it was through Livingstone's own conversation and through the police. Lewis challenged him to go before the Consul. Livingstone replied that he had been to the Consulate, and had already received a letter to appear before the Consul. This was about 11 a.m. I did not hear Lewis ask him to go and speak privately.

To the complainant:—I do not remember hearing you tell the defendant that he would also receive a letter from the Consul, as you were going to complain to him.

To the Court:—I heard what passed at the Police Station. Lewis asked the Constable to shew us the things that had been found at the site of the fire. I saw them. There were some partially burnt rags soaked with a mineral oil in a small earthenware pot.

E. Lewis:—I am the proprietor of the Cambrian Hotel. Previous to the 15th March I was proprietor of the Far East No 136. There was a fire on the night of the 13th on my premises at 136. I was then in bed at No. 46, the Cambrian Hotel my new premises. I do not know the hour. I took a *jinrikisha* and went to No. 136 with a Japanese woman. There were some Europeans sleeping there. I saw Constable Roget. While I was in the alley-way looking at where the fire had been, Greensward the musican of the *British Queen*, came up and spoke to the Policeman. In consequence of what I heard I went to the British Queen, where I found Livingston behind his bar drunk, with an awful, long, brown overcoat on him reaching down to his feet. I said "Sam did did you try to burn me out?" He said, "Yes, you Welsh————that is twice I have missed you, but look out for me the third time." I asked, "Did he mean it?" He said, "Yes and he would tell me more tomorrow Next morning as soon as the Consulate was opened I saw the Consul, and asked if there was sufficient proof to have the man arrested, saying that I had no more proof than his own words and the musician's. Soon after I was in the Brooklyn Hotel, when Sam Livingston came in and said; this is a —— fine game you're been carrying on. If you want money to fix your new house, I'll settle it up with you." He accused me of setting fire to my own premises to get clear of the lease. I became excited and we had some very high words. While I was at the Consulate, subsequently to this, Mr Scott came to me to try and settle the matter between us. Proposals have been made to me to the same effect several times, and I answered invariably that they must come through the Consulate. My words to Mr. Hohnholtz were founded on the statement of Livingston to me.

To the complainant:—I never sent Scott to you.

(The succeeding cross-examination conducted by Livingston was of the most colloquial description and richly adorned with slang. It elicited nothing but recriminations between the two.)

To the Court.—I did not say in the Brooklyn Hotel that Livingston set fire to Coleman's House and the Far East in order to destroy the documents relating to the schooner *Keiso Maru*. Nor did I use words to that effect. I deny that I ever said that Livingston's handkerchief had been found soaked with Kerosine. What I did say was that if the handkerchief was Livingston's it would be easily proved, as his handkerchiefs were all stamped.

Mr. Litchfield said that this closed the case for the defence. The question for judgment was whether the words alleged to have been spoken were spoken in the Brooklyn Hotel and if so if they were slanders. The learned counsel then reviewed the evidence laying particular value on the testimony of Captain Jamieson. Not one of the witnesses for the prosecution had said a single word as to what had been said on the occasion of the conversation in the Brooklyn. (His Honor here reminded the learned Counsel that Mr. Miller had given very direct testimony on this head) Counsel contended that to make slander actionable the words in the declaration should be proved to have been uttered, and that this had not been done in this case; that vague abuse was not slander; the alleged slander, if perpetrated, arose from a mere repitition of words he had used himself. The learned Counsel then proceeded to discuss the question of damages as it regarded the feelings, character and business of the complainant. As regarded the latter he contended that the class of men who frequent such saloons as the complainant's would not be likely to withdraw their custom from them in consequence of their hearing reports against the character of the proprietors. As regarded the question of feelings and character he left it much to the decision of His Honour; but he submitted there was no ground for substantial damages.

His Honour said that the evidence before him was quite sufficient to convince him that slanderous words had been used, and that there was no justification for them. No special damages had been proved, and His Lordship must look upon the case as a jury would look upon it. He could not quite say how a jury would look upon it. Probably the damages sustained had not been very heavy, and indeed, in cases of this sort the actual damage might be trifling. But, no matter what a man's position, he had a right to be protected against slander. His Lordship thought that in this instance a judgment of $25 would show that a man has that right of protection from such aspersions as had been cast upon the complainant, with costs of court only.

H. B. M.'S CONSULAR COURT.

Before H. S. Wilkinson, Esq., Vice-Consul.

Friday, 21st May, 1875.

Charles Lester, a respectably dressed young man, described as a pianist, was brought up on remand, charged with stealing a pocket-book, containing the sum of $49 and some documents, from the person of George Dawes.

George Dawes, a tourist, deposed to being with the prisoner on morning of the 15th inst., when he had in his pocket-book one $25 note, one $20, and 4 rios. They took jinrikishas at about half-past

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

four a m, close to the Catholic Church, and drove down towards the Railway. Before they came to the Railway Bridge, on the left hand side, they stopped at a little Japanese shop, where beer and spirits are sold. There witness changed a dollar, and saw Lester try to change one: but did not know whether he succeeded. At that shop they had each three glasses of spirits. Witness then laid down, waiting to go up to Yedo by the 8 o'clock train. He put the pocket-book in the inside breast pocket of his coat. The pocket book was large, and would be easily removed from the breast pocket. When he woke about a quarter to eight, Lester had gone, having left word that he would return at eight. The pocket-book and its contents had gone too. Witness then went in a jinrikisha to Kanagawa, hoping to find the prisoner, but did not, and in the afternoon of the same day took out a warrant for his arrest. He next saw the prisoner in the Cambrian Saloon on the following Tuesday, and asked "What he had done with the pocket-book?" He replied that he had not seen it, and accompanied him to the house where it had been lost. There two Japanese said that they had seen him take it. The prisoner went out of the shop with witness, and told the latter that if he kept quiet he might get it for him. Witness said that he did not care so much for the money in the pocket-book as he did for the papers. Lester said that he would meet him at the Cambrian Saloon at twelve that day. The witness took out the warrant for Lester's arrest through Sergeant Percival. After a long and fruitless search, Lester, who appears to have displayed considerable skill in evading Dawes, who, on his part, showed equal pertinacity in tracking him, was at length arrested by Sergeant Percival.

To the Prisoner: I do not know how much money I had when I came to Mr. Mills' house.

Charles Lester, in defence, stated that on the morning in question, at about half-past four, Mr. Dawes asked him to go out for a drive. He consented, and they went to the Japanese shop, where the complainant had some drinks and went to sleep. The prisoner went away, and did not return to the house till the following day. Beyond denying the robbery, his statement did not materially differ from that of the prosecutor. He said that he found the pocket-book at last in a jinrikisha, and took it back to the house on Oramachi, where it was asserted to have been lost.

Mr. Wilkinson told the prisoner that he did not believe his statement, but fully believed that he stole the pocket-book. He understood the prisoner had been a sailor.

Prisoner: No, Sir.

Mr. Wilkinson: Had you been, I would have endeavoured at the expiration of your term of imprisonment to send you out of the country, as you seem to be a man who has seen better days, and to have considerable ability. You will go to gaol for four weeks, with hard labour.

The pocket-book when recovered contained no money, but the papers are said to be complete.

MR. WALLACE AND MODERN SPIRITUALISM.

Mr. Alfred Russell Wallace certainly has as good a right to the attention of literary and scientific men, when he speaks with weight and earnestness, as any writer of the day. He has, we believe, a perfectly good claim to a share in the credit of the great discovery made by Mr. Darwin as to the influence of the process of 'natural selection' on the modification of organic forms. His books on natural history are amongst the most delightful of modern times, and the evidence of his earnestness as a seeker of truth seems to us at least as good as any evidence could possibly be, if the class of facts which he wishes us to believe are to be freely accepted. But what we are disposed to complain of, in the interesting and very remarkable little book which he has just published, on "Miracles and Modern Spiritualism,"* in this,—that he does not at all see how completely revolutionary the new doctrines he holds are in their effects on the whole world of moral evidence, and how completely at sea we shall be in relation to all questions of evidence, supposing we are compelled to admit, not simply that his own testimony establishes the existence of some unexplained order of facts,—which is possible,—but that the spiritualistic theory of these, and of a large class of still more astounding, though similar facts, is the only possible one. We absolutely agree with his able and quite unanswerable reply to Hume's so called refutation of the possibility of miracles, and we quite agree with him, moreover, that the fact that through the history of Europe has run a thread of occasional marvel, now taking the form of miracles which have conquered the most rigid scientific doubt, as in the case of the Port Royal miracles,—now, again, of animal magnetism or clairvoyance, or other marvels of that nature, which have resisted the attempts of sceptical analysis to explain them away,—is one which ought to afford a presumption that the similar marvels of the present day have more or less foundation, and are not wholly due to the dreams of imagination or superstition. We should therefore assign very great value to the strange facts for which he gives us his own personal attestation, and it seems to us simply irrational to call his facts "stale," as one of his sceptical reviewers, for instance, has done, "staleness" being of the very essence of the case. Scientific facts always are and ought to be "stale" before a theory is found for them. If they are not 'stale,' they are hardly worth considering at all, at least with a view to their explanation. Now Mr. Wallace gives us on his own personal evidence some very curious facts, as to which, if his own memory is to be trusted, he can hardly have been deceived. After mesmerising a pupil of his, for instance, he formed a plain of several persons, at one end of which he stood himself, while his patient was at the other, and when under these circumstances, "in perfect silence," he himself was "pinched or pricked," the patient would immediately put his hand to the corresponding part of his own body, and "complain of being pinched or pricked too." That is a correspondence of sensations which we suppose Mr. Wallace was eminently competent to test and to affirm, and which we should certainly accept as implicitly on his evidence as we should accept the Speaker's testimony to a meeting of the House of Commons on any day on which he had specially voted it. For the same reason, we do not see any reasonable way of disputing the following testimony of Mr. Wallace's, without denying either his good faith or his sanity, which would, in our opinion, be very unreasonable indeed,—certainly to the present writer, who happens to have personal experience of his apparent coolness and simplicity in discussing and reasoning on these matters:—

"A still more remarkable phenomenon, and one which I have observed with the greatest care and the most profound interest, is the exhibition of considerable force under conditions which preclude the muscular action of any of the party. We stand round a small worktable, whose leaf is about twenty inches across, placing our hands all close together near the centre. After a short time the table rocks about from side to side and then, appearing to steady itself, rises vertically from six inches to a foot, and remains suspended often fifteen or twenty seconds. During this time any one or two of the party can strike it or press on it, as it resists a very considerable force. Of course, the first impression is that some one's foot is lifting up the table. To answer this objection, I prepared the table before our second trial without telling any one, by stretching some thin tissue paper between the feet an inch or two from the bottom of the pillar, in such a manner that any attempt to insert the foot must crush and tear the paper. The table rose up before, resisted pressure downwards, as if it were resting on the back of some animal, sunk to the floor, and in a short time rose again, and then dropped suddenly down. I now with some anxiety turned up the table, and, to the surprise of all present, showed them the delicate tissue streched across altogether uninjured! Finding that this test was troublesome, as the paper or threads had to be renewed every time, and were liable to be broken accidentally before the experiment began, I constructed a cylinder of hoops and laths, covered with canvas. The table was placed within this as in a well, and, as it was about eighteen inches high, it effectually kept feet and ladies' dresses from the table. This apparatus in no way checked its upward motion, and as the hands of the medium are always close under the eyes of all present, and simply resting on the top of the table, it would appear that there is some new and unknown power here at work. These experiments have been many times repeated by me, and I am satisfied of the correctness of my statement of the facts. On two or three occasions only, when the conditions appear to have been unusually favourable, I have witnessed a still more marvellous phenomenon. While sitting at the large table in our usual manner, I placed the small table about four feet from it, on the side next the medium and my sister. After some time, while we were talking, we heard a slight sound from the table, and looking towards it found that it moved slightly at short intervals, and after a little time it moved suddenly up to the table by the side of the medium, as if it had gradually got within the sphere of a strong attractive force. Afterwards, at our request, it was thrown down on the floor without any person touching it, and it then moved about in a strange life-like manner, as if seeking some means of getting up again, turning its claws first on one side and then on the other. On another occasion a very large leather arm-chair, which stood at least four or five feet from the medium, suddenly wheeled up to her after a few slight preliminary movements. It is, of course, easy to say that what I relate is impossible. I maintain that it is accurately true; and that no man, whatever be his attainments, has such an exhaustive knowledge of the powers of nature as to justify him in using the word 'impossible' with regard to facts which I and many others have repeatedly witnessed."

Now, it so happens that we have heard precisely equivalent statements as to the motion of a large object of this kind placed at a dis-

Original from UNIVERSITY OF CALIFORNIA

tance from *all* the persons in a private room, from two other witnesses, who seem to us as trustworthy as Mr. Wallace himself, —one a near relative of the late Mr. Nassau Senior, a person who took no interest in the fact, though asserting reality, and another an intimate friend of the present writer's. All these three witnesses may, no doubt, have been subject to hallucications, but is not that as strange an hypothesis as to admit their evidence? They have none of them ever betrayed any indication of heated or superstitious judgment except their affirmation on this head, and it won't do *both* to explain away the evidence by assuming hallucination, and also to prove the hallucination by the fact of their giving this evidence. Indeed, the difficulties into which we fall, if we are to assume that honourable persons, unconnected with each other, and cool and judicious in all the transactions of ordinary life, are liable to see heavy objects moving when they don't move though they are confirmed by a number of other witnesses in saying they do move, are not less, but rather greater than those which result from accepting the asserted facts, and admitting that a new explanation must be found for them. But the case is surely very different when we come to the following statement of Mr. Wallace's, as to a circumstance which occurred in a séance with Miss Nichol (afterwards Mrs. Guppy, who is credited by certain wild spiritualists with having made a journey through the air from Highbury to Lamb's Conduit Street in a few seconds, and having penetrated closed walls and doors under spiritualistic influence) :—

"The most remarkable feature of this lady's mediumship is the production of flowers and fruits in closed rooms. The first time this occured was at my own house, at a very early stage of her development. All present were my own friends. Miss N. had come early to tea, it being mid-winter, and she had been with us in a very warm gas-lighted room four hours before the flowers appeared. The essential fact is, that upon a bare table is a small room closed and dark (the adjoining room and passage being well lighted), a quantity of flowers appeared, which were not there when we put out the gas a few minutes before. They consisted of anemones, tulips, chrysanthemums, Chinese primroses, and several ferns. All were absolutely fresh, as if just gathered from a conservatory. They were covered with a fine cold dew. Not a petal was crumpled or broken, not the most delicate point or pinnule of the ferns was out of peace. I dried and preserved the whole, and have attached to them, the attestation of all present that they had no share, as far as they knew, in bringing the flowers into the room. I believed at the time, and still believe, that it was absolutely impossible for Miss N. to have concealed them so long, to have kept them so perfect, and, above all, to produce them covered throughout with a most beautiful coating of dew, just like that which collects on the outside of a tumbler when filled with very cold water on a hot day."

Now, of this circumstance several explanations much more reasonable than the admission of its extraordinary character may be suggested,—all, no doubt, implying that some one or other was trying to play on the credulity of the rest. We know nothing of Miss Nichol, though Mr. Wallace does, except that assertions have been made about her which would make the legal theory of *alibi* altogether irrelevant in any case of criminal evidence, and we submit that it does not in the least follow that because Mr. Wallace himself is clearly trustworthy, all Mr. Wallace's friends are so. His observation of simple facts may be excellent, and his observation of character very little to be trusted. The fact itself, too, if due to extraordinary causes at all, goes far beyond the former one in the extraordinariness of its character. It implies that solid walls and doors are wholly insignificant obstructions to the passage of material things like flowers; and indeed, there would be no reason that any philosopher could assign why, if flowers can be passed by any invisible power through closed walls and doors, a stout woman herself should not be carried through them with equal ease,—and then Mrs. Guppy's famous transit in the air from Highbury to Lamb's Conduit Street in a few seconds might be a fact, and not a fib.

And this brings us to our main quarel with Mr. Wallace. Admit the spiritualistic theory, which he thinks it so unreasonable, on the evidence he arrays, for us not to admit, and what would follow? Why, that the whole science of evidence would become a new science, that no explanation of any physical fact whatever would be any longer impossible, and no explanation of it would be certain. For what do Mr. Wallace's so-called facts imply,—we do not mean those facts to which he himself bears witness, but those which he evidently accepts? They imply that the invisible intelligences he assumes can not only give *themselves* a visible form, like the old apparitions, under given but very variable conditions, but that they can so transmute the various substances of our earth, including our own bodies, as to produce as wild a confusion as any with which magicians were ever credited in Arabian fables. If, at the will of an invisible intelligence, hot-house flowers can pass the walls and doors of a room, rain and snow could pass them equally (and much more easily), and the art of our builders might be frustrated by any malicious spirit who could find a medium to his mind. Imagine a suit against a builder for not having made a house watertight, and the builder pleading in reply that it *was* made water-tight, but that at a séance in No. 7, the invisible agencies agreed to open the pores of the walls in No. 6 to the beating of the storm? What would a judge say to such a plea as that? Or imagine Mrs. Guppy accused of a murder and the sitters in Lamb's Conduit Street swearing that she was with them virtually at the same moment, at she easily might be, if the story of her "levitation" could be believed by anybody, and the accuser replying that no doubt she was, but that she fell into a trance, the moment after the murder and disappeared, through closed walls and doors! What would juries and judges say to evidence of that kind? Yet according to Mr. Wallace, it would be quite conceivably an honest reply.

Nor do the wild follies of human credulity on this subject limit themselves even to such evidence-annihilating creeds as these. Take the following statement, made in the *Spiritualist* news-paper of the 25th January, by a certain Prince Emile de Sayn-Wittgenstein,—his name is in the *Gotha Almanach*.—who appears to be a tremendous spiritualist residing at Vevey, in Switzerland, and who frequently communicates, with the English spiritualistic journals. He gravely writes to the *Revue Spirite* the following letter, which the *Spiritualist* of the date mentioned thus translates :—

Vevey, Dec. 18, 1874.

"Here is a curious experience which has occurred through the mediums' ip of my second little son, aged three years. Some time before his birth, spirits announced to me that the child would be gifted with powerful medial faculties; and many very singular physical manifestations which have occured in his presence, at different times, have confirmed me in the faith that I had in their word. I was given to understand that, several ages ago, this child was incarnated in England, where he gave himself up to the practice of necromancy, alchemy, and astrology, by means of which much evil accrued, and which at length brought upon him a miserable death. His present incarnation, I am assured, is accorded in ordered to give him an opportunity of repairing the evil which he committed long ago, by contributing to the building up of the Spiritist temple at which we are working, by means of the medial powers which he has brought with him as a legacy from his last incarnation. All this is logical, and entirely in agreement with our notions respecting the object of reincarnation. Well, then, some weeks back, the child was playing and prattling in my study, when I suddenly heard him talking about England, concerning which country nobody, to my knowledge, had ever spoken to him. This roused my attention, and I asked him if he knew what England meant? He answered me: '*Oh yes: it is a country, where I was a very, very long time ago.*'

Q. Were you a little boy then as you are now?—*A. Oh no; I was tall, taller than you are, and I had a long beard.*

Q. Were mamma and I with you then?—*A. No; I had another papa and another mamma.*

Q. And what were you doing?—*A. I played a good deal with fire, and once I burnt myself so, that I died.*

I think you must acknowledge that if even all this is no other than a child's reverie, yet that the coincidence is sufficiently strange to make one believe that reminiscences may come even to a child in his play.

Some weeks back, the same little boy went to his mother in the morning, telling her that his grandmother (whom he had only seen when a baby of some months old, therefore of whom he could have had no recollection) had come to her and had passed the night talking to her; and that *he* had seen her well and had heard her. Now it so happened, that my wife had been dreaming much about her mother, who had died some months previously. What think you of this?

EMILE DE W * * *."

Now, does Mr. Wallace think statements of this kind worthy of special examination? Yet they seem to us to rest on precisely the same kind of evidence as the stories of Mrs. Guppy being passed through brick walls. Further, in the *Spiritualist* of last week the editor gravely tells us that a certain Dr. Newton, so called, is not the original Dr. Newton at all; *he* left the body some years ago, but his bodily organism is used by "a band of spirits," "for benevolent purposes, out of love to mankind." In fact, his name is "Legion." The visible and legal Dr. Newton is not an individual, but a class. Now, supposing the class called "Dr Newton" should be accused and found guilty of murder, we suppose it would be legitimate to hang the body that bore his name, in spite of the fact that it sometimes belongs to one person and sometimes to others. The truth is, that if Mr. Wallace's theory of the strange facts he has witnessed be admitted, it lets in hypotheses which put human evidence actually out of court. You might easily hang a medium for what his or her body did under the command of some other spirit during his or her night's rest, and without his order consciousness or knowledge. All our modes of testing either fact or theory disappear at once before this tremendous assumption of the new sect. And we, therefore, cannot help asking Mr. Wallace if

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

he really thinks the stories of changed identities, of baby reincarnations, of flitting through stone walls, and the rest of it, demand investigation as much as his alleged new facts? And if so, what will investigation mean? Is it investigation to ask, as Prince Emile de Sayn Wittgenstein did, a baby of three years old where it lived before and how it died? Is it investigation to put letters, as another foreign Spiritualist, "Baron Kirkup," is said to do, behind a picture in your library, and accept the replies asserted to be given by four spirits, who sign themselves "Regina," "Amine," "Isacco," and "Dante" (!) as coming from a spiritual world? Is it investigation to listen to Mrs. Tappan's "trance" discourses on the conditions of life in the spiritual world, and to attach to them the sort of importance which we attach to Mr. Wallace's description of the tropical birds or snakes? It is clear that if the class of hypotheses to which Mr. Wallace gives credit as explaining some of the facts he believes in, are in any sense tenable, the laws of human evidence must be very nearly worthless, and it becomes exceedingly difficult to understand what is meant by investigation at all. We can quite believe that certain motions inexplicable on ordinary principles occur under given circumstances. On adequate evidence, any reasonable being would believe in apparitions of the dead; and there is a good deal of adequate or all but adequate evidence in relation, at all events, to apparitions taking place at the moment of death. But admit these new hypotheses, and all laws of evidence are thrown into confusion by them. If a physical body such as we all of us own can be passed through stone walls by a merely spiritual 'open sesame!' if a man may be dead whose body continues to live under the guidance of a group of spirits, if a body of three years old may rehearse its doings hundreds of years ago,—and all these things, though not asserted by Mr. Wallace, are, we suppose, as capable or incapable of demonstration as many of the facts to which he gives credit,—and the word "investigation" ceases to have its old meaning; to prove that a thing is "there" is no longer to prove that it has not within a second or two been many miles distant; to prove that A B says something, is not to identify the speaker, who may be one of a hundred spiritual intelligences; to shew that a child's age is three, is quite consistent with its having had as long a life as that Irish changeling of a few months old, in the fairy legend called, "A Brewery of Egg-shells," which suddenly called out, 'I have lived on this earth two thousand years, and I never saw a brewery of eggshells before." There is no fairy story too wild to be rivalled in the new spiritualistic literature. Rubies and pearls fall from the air into the hands of the sitters at a séance, unseen music ravishes them, and hands without arms or bodies, like those in the story of "The White Cat," conduct them from room to room. Now is it reasonable in Mr. Wallace to expect any one to accept evidence which subverts the laws of evidence, on easy terms? We have the greatest possible respect for his personal testimony to any limited class of facts, however new. But the class of facts to which he introduces us seems with suppositions which render all approved laws of evidence worthless. And then, with few exceptions—remarkable exceptions, in the case of Mr. Wallace and Mr. Crookes, and a few other, no doubt—look at the sort of people who are the guarantees for most of this stuff;—men and women of no culture, ignorant, superstitious, ungrammatical, gaining their livelihood by the belief of certain portions of the public in their remarkable powers. It is on the faith of such a class as this that we are to believe that solid flesh can permeate brick walls, and disembodied spirits play hide-and-seek with human personalities in the folds of human organisms? Surely Mr. Wallace must concede that it requires one kind of evidence to establish the existence of a limited class of new phenomena, and quite another to establish the existence of phenomena which strike at the very root of the principles on which phenomena have hitherto been analysed and explained.—*Spectator.*

THE FUNERAL OF SIR CHARLES LYELL.

The following *epitome* of the sermon of the Dean of Westminister, delivered on the occasion of the funeral of the late Sir Charles Lyell, will prove that we were not so sanguine as was supposed in hoping for a bishop who would do justice to Lyell and Darwin.

The words of the text, the Dean said, have a sense wider than the mere literal transcript. They express the transition from that gulf which the ancient Greeks called Chaos to the order of the Universe which a modern philosopher described under the head of the Cosmos. The words in the original which portray the formless void of the earth convey most precisely the image of warring elements, while the words used for the moving of the Divine spirit on the face of the waters express the gentle brooding as it were of a bird of peace. The language, however poetic, childlike, parabolical, and unscientific, impresses upon us the principle which applies in both the moral and in the material world that the law of the Divine operation is the gradual, peaceful progressive development of discord into harmony, confusion into order, darkness into light. It chanced that within the short month of February by a most unusual coincidence of mortality, twice had the gates of the Abbey been opened to pay the last honours to two men widely apart in all else but alike in the share they took in unfolding and exemplifying this Divine law, the one the acknowledged chief of the English musicians of our time, the other the acknowledged head of those who, whether here or elsewhere, have devoted their talents to the study of the history of our mother earth. Of all the branches of art and letters, none more reveals the hidden capacities of the human soul, or the fearful and wonderful structure of the human frame than the slow process through which from the most barbarous sounds, the spirit which brooded over the harp of David and inspired the genius of Beethoven and Mendelssohn has gained its majesty and glory. This passing allusion to a great musician, this indication of the latent capacities for spiritual emotion brought out by abstract and inanimate things, elements seemingly without form and void, was no unfitting prelude to the consideration of that study of nature of which he who has just gone was so bright an example. It is well known that when the study of geology first arose it was involved in interminable schemes of reconciliation with the letter of Scripture. There were and are two modes of reconciliation which have each totally and deservedly failed. The one attempts to wrest the words of the Bible from their real meaning and force them to speak the language of science, and the other attempts to falsify science to meet the supposed requirements of the Bible. The "Seventy" finding that the hare was described as chewing the cud inserted the word "not;" and on the other hand, the Jesuits, in editing Newton's *Principia* announced in the preface that they were constrained to treat the theory of gravitation as a fictitious hypothesis, else it would conflict with the decrees of the Popes against the motion of the earth. But there is another reconciliation of a higher kind, or, rather not a reconciliation, but an acknowledgment of the affinity and identity which exist between the spirit of science and the spirit of the Bible. First, there is a likeness of the general spirit of the truths of science to the general spirit of the Bible truths, and secondly there is a likeness in the methods. For instance, the geological truth which our industrious student was the chief instrument in clearly setting forth and establishing was the doctrine, wrought out by careful, cautious inquiry in all parts of the world, that the frame of this earth was gradually brought into its present condition, not by sudden and violent convulsions, but by the slow and silent action of the same causes which we see now, but operating through a long succession of ages beyond the memory and imagination of man. There need be no question whether this doctrine agrees or not with the letter of the Bible. We do not expect it should. For, had there been no such scientific conclusions, we now know perfectly well, from our increased insight into the nature and origin of the early Biblical records, that they were not and could not be literal, prosaic, matter-of-fact descriptions of the beginning of the world, of which, as of its end, no man knoweth or can conceive except by figures or parable. It is now clear to all students of the Bible that the 1st and 2d chapters of Genesis contain two narratives of the Creation, side by side, differing from each other in almost every particular of time and place and order. It is now known that the vast epochs demanded by scientific observation are incompatible both with the 6000 years of the Mosaic chronology and the six days of the Mosaic Creation. No one now infers from the Bible that the earth is fixed that it cannot be moved, that the sun does literally go forth as a bridegroom from his chamber, or that the stars sang with an audible voice in the dawn of the Creation. But when we rise to the spirit, the ideal, the general drift and purpose of the Biblical accounts we find ourselves in an atmosphere of moral elevation which meets the highest requirements philosophy can make. The discoveries of geology are found to fill up the old religious truths with a new life, and to derive from them in turn a hallowing glory. When the historian of our planet points out that the successive layers of the earth's surface were formed by such agencies as we know of now, by the constant action of wind and wave, of floating ice and rolling stones—that there were not separate centres of creation, but one primæval law which formed and governed all created things what is this but the echo of those voices which of old declared that in the beginning the heaven and earth were created, not by a thousand conflicting deities, but by One supreme and indivisible, and that

Original from UNIVERSITY OF CALIFORNIA

He hath given all things a law that shall not be broken? And we may compare the vast infinities of time and space, that long ascending order, that gradual progress demanded by geology with the words in the sublime 90th Psalm, read at the Burial Service, "A thousand years in Thy sight are but as yesterday when it is past, and as a watch in the night." Surely the view of the gradual preparation of the earth for mankind is grander than that which makes him coeval with the beasts which perish, and we ought to honour the archæologist who by unhasting, unresting research revealed in all its length and breadth the genealogy and the antiquity of man and of his habitation. He rent the veil and showed the long vista in the Temple of the Most High not made with hands—"*Apparet domus intus et atria longa pate cunt.*" Not the limitation but the amplification of the idea of God is the result of the labour of such a student, and not the descent but the ascent of man is the outcome of his speculations.* If, as he used to say, we have in our bones the chill of the contracted view of the past in which till now we were brought up, the enlargement which he effected of that view ought to give a warmth, a fire to our soul of souls, in proportion as we feel that we are indeed not the creatures of yesterday, but the heirs of the ages and of worlds that have perished in the making of us. As to the likeness of the general spirit of the method of science to that of the Bible, the Bible is a model to the student in its slow but increasing purpose of revelation, through sundry times and divers manners, warning each succeeding age to have its eyes open and every member of the human race to be the "disciple"—that is, „scholar," as the Founder of Christianity called His followers. To invest the pursuit of truth with the sanctity of a religious duty is the true reconciliation of religion and science Such a union has been the special glory of one great school of English geologists, and the two pioneers of the science at the time when it had to fight its way against prejudice, ignorance, and apathy, were both honoured dignitaries of the English Church; and now within these walls there rests beneath the monument of Woodward one who was the friend of Sedgwick and the pupil of Buckland. He followed truth with a sanctified zeal, a child like humility. For discovering, confirming, rectifying his conclusions there was no journey he would not undertake. From early youth to extreme old age it was to him a religious duty fearlessly to correct all his own mistakes, and he was always ready to receive from others and reproduce that which he had not in himself. In his mind science and religion were indivisible. The freedom of religious inquiry in the National Church, the cause of humanity in the world at large, were to him as dear as though they were his own personal and peculiar concern. There is unusual solemnity in the thought of his passage into the eternal world on which, as in a shadow or mirror, he had so long meditated in those long ages of which he was, as it were, the first discoverer. The "lofty and melancholy strain," the 99th Psalm, which old tradition ascribes to Moses, the Man of God, whether it be or not the funeral hymn of the great lawgiver, well represents the feeling of one grown gray with vast experience, who at the close of his earthly journeyings contrasts the fleeting generations of man with the granite forms of the mountains at the feet of which he has wandered, and contrasts those mountains and man alike with Him who existed before, beyond, and above them all. It sums up with peculiar force the inner life of the Christian philosopher who concluded his chief work with the contrast between the finite powers of man and the attributes of an infinite God, and who felt persuaded that after all the discoveries on earth or sea or sky the religious sentiment remained the greatest and most indestructible instinct of the human race.—*Mail.*

* It is wholly impossible to doubt for a moment the meaning and intention of this sentence, and thus Dean Stanley's alleged races the two great names we coupled in our article of last Saturday.

REUTER'S TELEGRAMS.

London, 11th May, 1875.—Sir Stafford Northcote's Budget resolutions have been adopted.

The Emperor of Russia has arrived at Berlin, and the result of his interview is anxiously awaited.

Mr. Bourke announced that the British Government had received entirely satisfactory assurances from Berlin. The Government considered that there was no cause to apprehend a disturbance of peace.

The *Schiller* went ashore in a fog. 311 persons perished and 44 were saved.

There is an active demand for money in London.

London, May 8th, 1875.

The steamship *Schiller*, with the homeward Australian and New Zealand mails, *(viâ* San Francisco), and over 200 passengers, has been totally wrecked off the Scilly Islands; only a few of those on board were saved.

The *Berlin Post* considers the Belgian Note to be meaningless and unsatisfactory.

London, 7th May, 1875.

The Ex-Confederate General Rifley goes to China to superintend the construction of defensive works on the Chinese Coasts and Rivers.

London, 5th May, 1875.

A reply of Belgium to Germany has been communicated to the Chambers. It promises to follow the initiative of Germany in the modification of laws.

The Pope is suffering from weakness.

The Chester Cup has been won by "Freeman."

London, 24th April.—In the House of Commons Kenealy's motion for a Royal Commission of enquiry on the Tichborne trial has been rejected by 433 votes against one after a protracted debate.

Disraeli and Bright, in speaking, strongly opposed Kenealy's motion,—Kenealy's speech was principally confined to a weak attack on the misbehaviour of the Judges.

London, 28th April,—The Gaekwar of Baroda has been sent to Madras.

The 2,000 Guineas was soon by Gamballo—Picnic second—Breachloader third.

The Prince of Wales has been installed Masonic Grand Master. The Cermeony, which was magnificent, took place in the Albert Hall. Seven thousand masons were present.

(*From the Ceylon Observer.*)

London, 21st April.—The Berlin rumour that Russia and Austria had agreed to support the policy of Germany, as expressed in the Note to Belgium, is contradicted.

The following military appointments have been gazetted:—Colonel J. S. Trevor to be Colonel, Royal Engineers; Brevet promotion: Major General Richard Strachey to be Lieutenant-General; Colonel R M Kennedy to be Major-General.

Mr. Wade, British Minister at Peking, has obtained passports for two English officials to proceed to Yunnan to investigate the circumstances of the murder of Mr. Margary.

London, 21st April.—A long debate was held in the House of Commons on Lord Elcho's motion that the present organization of the British Army is unsatisfactory and calculated to cause apprehension.

Mr. Gathorne Hardy repeated his desire to give Lord Cardwell's scheme the fullest trial. He was unprepared to take any step to reverse it, but admitted the necessity of thoroughly reorganising the reserves. He emphatically asserted that Lord Elcho's views were those of a pessimist.

The motion was ultimately withdrawn.

Sir George Campbell has been elected for Kirkaldy by a large majority.

A meeting of colliers, thrown out by the South Wales lockout, have resolved to insist upon a settlement by arbitration.

London, 22nd April.—A Chinese Commissioner of inferior rank has been appointed to investigate the matters concerning the Yunnan Expedition and the murder of Mr. Margary.

Aden, 22nd April.—The steamer *Mirzapore*, with Indian mails, left Aden for Bombay at six p.m. yesterday.

Obituary.—General M. Barlow.

Bombay, 23rd April.—The Gaekwar of Baroda was deported yesterday by special train, under a European guard of soldiers, to Allahabad.

It is rumoured that he will be imprisoned at Fort Chunar.

The Viceroy's Proclamation is expected to-day.

Trincomalee, 23rd April.—1.40 p.m. A riot occured in the evening of the 20th, owing to an affray between the Muhammadans of number 10 and 4 Mosques owing to the objection of the priest of number 4 officiating in Mosque number 10 on the occasion of a funeral.

The Police and several Muhammadans were assaulted.

The Assistant Agent was absent on circuit.

The presence of another judicial officer might have prevented this riot.

We hope the Government will see to this and provide one speedily.

Rangoon, 14th April.—Lieutenant Anderson arrived

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

at Mandalay with the Viceroy's letter and presented it on the 12th instant.

Popular feeling at Mandalay is very antiforeign.

Half the Rangoon garrison battery is under orders for Thyetmyo.

Bombay, 16th April.—The *Undaunted* with Admiral MacDonald sailed from Plymouth on Wednesday.

He relieves Admiral Cumming in command of the Indian Station.

The *Glasgow* leaves shortly and will await the arrival of the *Undaunted* at Aden.

Cholera is increasing at Nassick and several cases have occurred at Bombay.

Some Ryots at Baroda and in the Mofussil are in arms. They refuse to pay taxes; a small force has been sent to punish them.

Various claimants to the succession of the Guikwar-ship were told by Sir Richard Meade yesterday they had no claims.

Shipping Intelligence.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietorsof NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

YOKOHAMA, MAY 22ND, 1875.

IMPORTS.

Cotton Fabric and Yarns.—Owing to the race holidays, and continued depression of the native trade, the import business has been all but suspended since the publication of our last Mail Summary. *Shirtings* have been exceedingly slow of sale at lower rates, while *Yarns* have been dealt in to a very trifling extent in the better qualities only. In other Cotton Goods the business done is undeserving of note.

Grey Shirtings:—				White Shirtings:—	
7 lbs	38½ yds. 39 in. per pce.	$1.90 to $2.10		60 to 64 reed 40 yds. 35 in. nom per pce.	2.40 to 2 65
8 lbs.	38½ yds. 44 in. „	2.20 to 2.40		Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0 80 to 1 00
8 lbs. 4 to 8 lbs. 6	„ 39 in. „	2.17½ to 2 55		Black Velvets	8.50 to 9 35
9 lbs.	„ 44 in. „	2.67½ to 2 87½		English Drills 15 to 40 yds 30 in.	3.25 to 3.40
Taffachelas Single	nom.				

Yarn:—

No 16 to 24	per picul	32.00 to 37.00		No. 28 to 32	per picul 37 00 to 40 50
Reverse	nom.	nominal		„ 38 to 42	„ 42.00 to 46 00

Woollens.—Transactions in Woollens generally, which have shared the common depression, have been exceedingly limited. In *Mousselines de laine* some little business has taken place at the quoted rates.

Plain Orleans	40—42 yds. 32 in.	6 25 to 7.75		Figured Mousseline de Laine	30 yds. 30 in.	0 25 to 0 28
Figured Orleans	29—30 yds. 31 in.	4 50 to 5.25		Multicolored „	30 yds. 30 in.	0.32 to 0.36
Italian Cloth	30 yds. 32 in.	0 25 to 0.36		Cloth, all wool plain or fancy	48 in. to 52 in.	1.00 to 1 30
Camlet Cords	29—30 yds. 32 in.	6.00 to 7 00		Presidents	54 in to 56 in.	0.75 to 0 85
Camlets Asstd.	56—58 yds. 31 in	18 50 to 19.00		Pilots	54 in. to 56 in.	0.45 to 0 55
Lastings Japan	22—30 yds. 32 in.	13.00 to 14 50		Union	54 in. to 56 in.	0.70 to 0 85
Plain Mousseline de Laine	30 yds. 30 in.	0.18 to 0.19½		Blankets, scarlet & green 7 to 8 lbs.	per lb	0.45 to 0.48

Nominal.

Iron and Metals.—The Iron market is depressed by the heavy accessions to stocks and closes with a still falling tendency. We quote as follows.

Iron flat and round	per picul	$4.10 to $4.50		Iron wire	per picul
„ nail rod	„	3 80 to 4.30		„ pig	„ $2.20 to 2.40
„ hoop	„	4.50 to 4.75		Lead	„
„ sheet	„	5.00 to 6.00		Tin Plates	„ 8.50

Sugar.—Stocks have again increased and the market continues quiet at quotations.

Sugar:—Formosa in bag	per picul	4.55 to 4.65		China No. 5 Kong-fun	per picul 5 00 to 5 50
in Basket	„	4.45 to 4.55		„ No. 6 E-pak	„ 4 50 to 4 80
China No. 1 Ping-fah	„	8.40 to 8.50		Swatow	„ 3.50 to 3 60
„ No. 2 Ching-pak	„	7.40 to 7.80		Daitong	„ 3 60 to 3.70
„ No. 3 Ke-pak	„	6.60 to 7 10		Japan Rice	„ 3 25 to 3.30
„ No. 4 Kook-fah	„	5.80 to 6 20		Kerosine Oil	„ 3.40 to 3.50

EXPORTS.

Silk.—Since the 13th instant, short supplies have limited settlements to 170 bales of *Hanks*, and 30 of *Oshius*. The stock is reduced to 500 bales, and we have no change to report in the prices quoted in our last. The shipments of the fortnight are 254 bales making the total export 11,184 bales against 14,221 last year for the corresponding period.

The crop is generally reported to be progressing well. In the Bushiu and Joshiu districts the worms are reaching the third stage and the supply of leaf is abundant. We hear that the total production of Silk-worm's Eggs for this season is to be limited to 1,000,000 cards.

Hanks—

		per lb	per kilo.			per lb	per kilo.
Best (No. 1/2)	480 to 500	18s. 6d. to 19s.	2d. frs. 51 to 53	Medium No. 2½	410 to 430	16s. 0d. to 16s.	9d. frs. 44 to 46
Good (No. 2)	440 to 470	17s. 1d. to 18s.	2d. frs. 47 to 50	Common No. 3	380 to 400	15s. 0d. to 15s.	8d. frs. 41 to 43

Tea.—Business is assuming important dimensions, settlements of "New Crop" since the 10th inst. exceeding 4,000 piculs, and making a total since the opening of our season of some piculs 5,200. With the arrival of full supplies prices approached a more reasonable scale than was prevalent at this period last season but which is fully demanded by the latest telegraphic intelligence from the American markets. The general appearance of the crop promises well, the quality in cup is excellent, and if some parcels shew appearance of hurried and imperfect picking we may hope for an improvement on this later on in the season.

Prices are difficult to quote as gradings are necessarily very different to what they will be a few weeks later on, but for Teas classed as under all however "very desirable cup quality" we quote.

Medium and Good Medium		35.00 to 36.00		Finest	43 to 45
Good Medium		36.50 to 38 00		Choice	46 to 48
Fine		39.00 to 41.00			[in limited supply.

Two sailing vessels will be almost immediately laid on the berth for New York direct, freights ruling £3 to £3. 5/ per 40 cubic feet.

EXCHANGE AND BULLION.

Exchange.—Sterling rates continue easy at quotations, although with the opening of the Tea season there has been a little more doing in Private Paper. *Gold Yen* advanced to 410½, but have again receded to 411.

Rates close as follows:—

On London, Bank, 6 Months'		4s. 2¼d. to ⅜	
„ „ Sight		4s. 1¾d.	
„ „ Private, 6 months		4s. 2¼d.

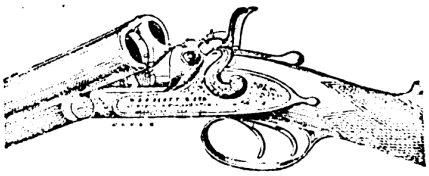
BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,



thus enabling vendor purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

INVENTORS & MANUFACTURERS OF THE CELEBRATE.

PARAGON LAMPS,

Burning Kerosine, Petroleum, or Paraffin.

Unrivalled for Simplicity, Economy, Durability, Safety & Brilliancy of Light.

OVER 5,000 PATTERNS OF

Handle Lamps	Factory Lamps
Table Lamps	Ship Lamps
Hall Lamps	Chandeliers
Church Lamps	Brackets
Billiard Lamps	Lanterns
Railway Lamps	Stoves

Fitted with our famous PARAGON BURNERS, which give a magnificent white and steady light, equal to 25, 20, 14 & 11 candles.

Our CLIMAX COOKING & PARAGON HEATING STOVES, in six sizes, will be found extremely useful in every household, being always ready for use, and saving time and money, coals, trouble of lighting fire, dust, and refuse.

Our HURRICANE LANTERNS are absolutely wind-proof and rain; simple in construction, and give a splendid white and steady light. They are the most serviceable Lanterns for use in Stables, Farms, Gardens, Boats, Cellars, &c.

Having been exclusively engaged in the production of Lamps for many years, the reputation which we have established for our manufactures in America, Australia, China, India, & all other Foreign Markets, enables us to satisfy the requirements of every buyer; our assortment being large & complete in every branch. For brilliancy of light, simplicity and durability of construction, our Lamps cannot be excelled; whilst the style, finish, & decorations are exquisite, & generally much admired. We therefore can confidently invite the attention of all Importers, & in recommending to you the above course, we point to our prospective mutual advantage. Catalogues, containing more than 1,000 Patterns sent free of charge.

May 22, 1875. B. 24ws.

GEORGE FLETCHER & Co.,

BETTS STREET, ST. GEORGE'S EAST, LONDON,

AND

MASSON WORKS, DERBY.

Established over Thirty years as

MAKERS OF EVERY DESCRIPTION OF MACHINERY FOR SUGAR PLANTATIONS AND REFINERIES,

and well known all over the world.

Also the ORIGINAL PATENTEES of the MULTITUBULAR BOILERS FOR THE COPPER WALL.

Multitubular and other Steam Boilers.	Cattle Pumps.
Condensing and High Pressure Steam Engines.	Vacuum Pans with all their accessories.
Donkey Engines.	Centrifugal Sugar Machine.
Distillery Engines.	All kinds of Apparatus for reburning Animal Charcoal.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 22.] YOKOHAMA, SATURDAY, MAY 29, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Since the last census was taken (1873), there has been an estimated increase of 150,000 in the population of Japan. It is extremely difficult to form any trustworthy opinion regarding the amount of error in the census as at present taken—for error there must of course be even with the very best methods. But, in spite of all may be said to the contrary, we doubt if it is very large. In no country in the world is the machinery of the government more searching than in Japan. In no country are the meshes of the net which it throws over the people smaller and more difficult to escape. In no matter is there so little temptation to evade or falsify. No statistics are, *à priori*, so likely to be correct as those of population, provided the method adopted to collect them is moderately good. If we put the probable error at ten per cent. we shall hardly be very far wrong, and it may even be less than this. This would give us as nearly as possible thirty millions of people in the Empire, and better reasons must be adduced for doubting this estimate than any which we have hitherto heard or seen, though before the publication of the last census we attached considerable weight to them. It is true that all travellers speak of the sparseness of the population away from the great high roads, that there is a vast area of mountainous country which cannot possibly be highly populous, and that the nothern part of this island and the whole of Yezo carry a very small population to the square mile. But, on the other hand, there are very many rich and fertile plains abundantly populated; there are far more large towns than most foreigners imagine; and foreign travellers have actually only gone over a few of the principal beaten tracks of the country. Then, again, the figures in the last census are full of what Paley calls 'undesigned coincidences.' The relative number of males and females in the different *kens* tallies with what we know of the general laws of population. The relation between the religious establishments and the population, in districts widely separated from east other, also tallies in a remarkable manner, as does the relation of the whole population to the sections of it made by divisions according to age. It is quite certain that these *are* undesigned coincidences, and it would be as idle as perverse to ignore their value. There remains, therefore, only the question of probable error, arising from imperfect methods of taking the census. This we shall admit to be considerable, though ten per cent. would seem to provide an ample margin for it. In European countries, or at all events, in England, the census is taken on some appointed day of the year, generally on Sunday. It is done by a house-to-house visitation, a paper being left to be filled up, in accordance with stated instructions, by the master of each household. On the next morning the paper is called for, and sent by the returning officer to the Registrar-General's office, where the returns are classified and compiled. In this country we think that the returns are not all made on the same day, though it is probable that the 'coming and going' which constitutes the chief source of error in taking a census, nearly balances itself when spread over many millions of people, and, in this view of the subject, the assumed error of ten per cent. may be considerably larger than we have any good reason for assessing it at. But, be this as it may, it might be well if the Japanese Government, prior to taking the next general census, were to apply to some of the western governments for copies of the regulations and forms under which their census is taken. Some good hints might doubtless be obtained from them, and such error as now exists be considerably reduced. The religious statistics of the Empire would be of great value and interest at this moment, could they be ascertained. But it would be impossible to secure their trustworthiness until or unless an entire freedom of conscience had been granted by the Government by special edict, and acted upon in spite of all arguments to the contrary. We should be pleased to think that the day is not very distant when such returns can be compiled and relied on.

WE are compelled by the length of Mr. Consul Robertson's Report for the past year to defer until next week the publication of the Tables attached to it, together with our remarks upon the Report and other matters of interest more properly belonging to this week, and more or less referred to in our translations, especially those on Saghalien and Loochoo.

The deferred meeting of the Asiatic Society will be held in Room No. 19 of the Grand Hotel, Yokohama, on Monday evening next at half-past eight o'clock, when a paper will be read by C. H. Dallas, Esq., entitled "Notes collected in the Okitama *Ken*, with an itinerary of the roads leading to it".

THE *Nichi Nichi Shimbun* of the 26th instant reports the occurrence of an unusually severe hailstorm in the neighbourhood of Hachoji. The country for some 12 miles square was covered, the cereal crops have been totally lost and the mulberry trees severely damaged.

We have received a short communication in regard to the loyalty shewn by Englishmen towards each other in foreign lands, which we will publish in our next issue if the writer of of it will be so good as to send us his name.

(From the Japan Mail Daily Advertiser.)

Monday being the anniversary of H. B. Majesty's Birthday the vessels of war and many other ships in harbour were dressed with flags. The usual salutes were fired at noon by the French and Japanese war-ships in harbour only, the English and American vessels now in port not being saluting ships.

According to a telegram from London, dated 12th instant, the joint occupation of Saghalin, or Karafto, by Russia and

Japan has been determined by the cession of that island to the former.

An accident occurred to the torpedo projector, which has been constructed by Messrs. Whitfield & Dowson for the Japanese Government, causing it to sink in about four fathoms of water in Missisippi Bay on Sunday last. On being raised on Tuesday she discovered no signs of damage from her immersion.

A boat belonging to the Lighthouse steamer *Thabor* won both of the sailing matches which took place yesterday. Owing to a want of proper handling, a French boat which was preparing to start was overturned without, however, any serious consequences to her passengers.

The lamentable prevalence of blindness and of diseases of the eye in this country would seem to render a movement for the education of the blind specially acceptable. The *Nichi Nichi Shimbun* relates that a meeting was held on Saturday, at the residence of a Missionary at Yedo, for the purpose of considering the subject of composing books suitable to the use of the blind. Nakamura and Tsuda were among those who were present as also Editor of the paper (Mr. Fukichi, we believe). Another meeting will shortly be held with the same intention.

The *Hôchi Shimbun*, says that during 10 days of the wrestling matches at Ekô in, Yedo 34,385 tickets were sold. This would show no diminished popularity of this national pastime.

The P. & O. S. S. *Malacca*, bringing European mails *viâ* Brindisi to the 10th April, sailed from Hongkong on the 23rd instant at 10 a.m.

The *Nichi Nichi Shimbun* instances as evidence of the gradual improvements of the sanitary arrangements in the public prisons in the capital, that, whereas during the whole of last year the deaths were 28, and in past years were still more numerous, no death has occurred this year up to the period of writing in the Tenmacho prison.

The usual mode of disposing of the dead by cremation, which was forbidden by Imperial Proclamation in 1873, is again permitted by a notification which abrogates the prohibition. It would be interesting to learn whether the removal of the ban is due to the pressure of social feeling or to the tendency which the Government exhibits to leave the practise of religious rites to the untrammeled sense of the people. It is possible that the revival of cremation in Europe has not been without its influence.

The *Hochi Shimbun* says that a banquet will be offered to the Representatives of Foreign Powers at the Imperial Palace on Friday the 28th inst.

The artists of the capital who are employed to paint the signboards which indicate, usually in English, that foreign articles are sold in the Japanese shops, use the language they operate in with an audacity which more than reciprocates the "pidgin" Japanese in which the foreigner explains himself, the difference being that the latter is merely oral while the *litera scripta* unfortunately *manet*. One of these reckless signboards, raised above a store in the Honchô Dori in Yedo, has long been a puzzle to the passing foreigner. What can "Rock and Haing and Glass to sale" be held to mean? An enquiry from the owners elicits no satisfaction. They profess to have suffered from the vagaries of a scholar who has obviously betrayed their confidence. They will not remove their sign: enigmas answer; and some, they deem, who come to scoff may remain to pay. Fortunately, a correspondent who has taken pains to study the myth comes to our aid, and suggests—what may be thought to be a good shot at the meaning of the sign—that it is intended to show that locks, hinges and glass may be bought at the emporium beneath. If our correspondent will tell us what is meant by "Wereids Specifica"—words which meet the eye on hundreds of signboards throughout the metropolis—he will have satisfied further a curiosity by which many residents of the capital and others profess to be much afflicted.

A correspondent points out that the words "Wereids Specifica" may be explained, on the supposition that the spelling is incorrect, as meaning the "Universal Remedy." The words are Dutch and the nostrum was probably introduced by the early traders from that country.

The *Akebono Shimbun* is very satirical over the long lists of official appointments which are now emitted daily. A new memorandum appears, it says, every day, devoted to the sole purpose of conveying intelligence of further additions to the swelling list of bureaucrats. Should this continue, it thinks, Japan will soon see as many officials as there are men in the Empire.

The *Nichi Nichi Shimbun* gives on good authority the intelligence of an insurrection having broken out at Kôchi *Ken* in Tosa. Manabe, an officer of the *Ken*, has proceeded there from Yedo for the purpose of quelling the riot and investigating the grievances of the rioters.

Referring to the insurrection in the Kochi *ken* the *Hochi Shimbun* says that the malcontents are composed of the *shidsoku*. Manabe, who has been despatched by the Government on a private mission, was formerly an officer of the Daimio of Tosa.

The *Japan Herald* draws attention to a placard which is exhibited at the boat-house at the French Hatoba, and which affords another instance of the courage with which our neighbours approach the mysteries of Anglo-Saxon. The exactness with which the fractional rates both for "common time" and "strung wind" have been calculated show that much arithmetic, if but little grammar, has been employed in its compilation.

"THE RULE OF THE SMALL BOAT.

The cargo can not be laden in the small boat: but a little trunk. Carpet—bag and hooting laden.

The cargo—boat is separately furnished.

The embarking of persons are ordained three, more than three person increase three sents a persons.

The sick, and the drunken must not embark alone.

THE BOAT OFFICE.

The four-oared race which has been arranged by the Yokohama Rowing Club will take place this afternoon and tomorrow at half-past five o'clock, two heats being rowed on either day. The course appointed is from the P. M. S. S. Co.'s wharf to the English Hatoba.

The repetition of the drama "Milky White" has been announced for Wednesday next. The price of admission has been reduced for the occasion.

A serious fire occurred in the village of Omiya in Saruga on the 14th instant; 730 houses were destroyed.

A notification from the *Daijokuan* intimates that in order to avoid the inconvenience which the measure is likely to occasion to trade and the public, the period of withdrawal from currency of paper money emitted by the *Daijokuan* and *Mimbusho* under the value of 1 *yen* will be extended to May 1876.

The Imperial visit to Yetchujima has been postponed. It is said that the inhabitants of the district manifested much alarm on learning that cannon practise was in contemplation,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and that they were with difficulty assured that the demonstration was wholly pacific.

The *Choya Shimbun* gives the report that the officers of the *Kunaisha* (or Imperial Household) are negotiating for the purchase of Mr. Inouye Bunda's property at Nogé, presumably as a summer residence for the Mikado.

It is also vaguely rumoured that the late British Legation would be devoted to His Majesty's use, but this last report is without confirmation.

The *Formosa Herald* says:—The news from Formosa is somewhat conflicting, but from what it can gather, the position of the Imperialists is in no way improved. An irregular kind of warfare prevails, in which the Aborigines (who are fighting for bare life) are almost invariably victorious. The recent execution of an Imperialist officer—for rank cowardice in the face of the enemy—may have a salutary effect on the rest, but this is doubtful.

The Government of Japan is manifesting much greater interest in the condition of the lower classes of the people, and in the condition of the country outside the immediate vicinity of Yedo, than it used to do. The Governor of Nagasaki and several officers of rank, we learn, are out on a fortnight's expedition for the purpose of inspecting the condition of the country and wants of the people. Mr. Miyagawa is a gentleman favorably disposed towards the advancement of civilization in the country, therefore we may anticipate that his present journey will be the means of bringing under the notice of the Government, the numerous wants of the people residing in Nagasaki Ken, and urging the accomplishment of those most required at the present time.—*Rising Sun and Nagasaki Express.*

It is stated that the Japanese Government has expressed to the British and French Governments the satisfaction felt at the withdrawal from Yokohama of the Royal Marine battalion and the French troops which have been stationed there for some years.—*London and China Express.*

Captain Paul Boyton has made a series of experiments with his life-preserving apparatus from the Medina, at East Cowes. These were witnessed by the Queen and Princess Beatrice from the deck of the *Alberta*. When the experiments had been brought to an end, Her Majesty sent for Captain Boyton, assured him that she was much pleased with what she had seen, and ordered a suit of the dress for use on board the Royal yacht. To night Captain Boyton will make an attempt to cross the Channel, starting from the Admiralty Pier at Dover at ten o'clock. The Queen has desired him to send her the first message of his arrival, if successful, in his trip to the French coast.—*London and China Express.*

THE FINANCIAL STATEMENT.

WE are not sufficiently well satisfied with the manner in which we presented to the public the Financial Statement issued on the 20th *ultimo* by the PRIME MINISTER, to allow it to remain in its present state. It appeared in our columns in two instalments, and in less perfect condition than it might, we will even say, should, have appeared. We accept the full responsibility of the blemishes in it, and can only plead in excuse for them that the Statement itself took us by surprise; that we were not aware that the first instalment of it was to be followed by a second; or that second by an explanation of the details of the whole document. In now laying it before the Public in a more perfect form, we do no less than the importance of the question demands. For the Japanese may rely upon this, that their standing before the world depends now far more upon the nature of their Budget than was the case ten years ago. Then, we were still under the fascination of Mr. LAURENCE OLIPHANT's accounts of the country, tempered at times, it is true, with tales of assassinations, and such daily disturbances of equanimity as Sir RUTHERFORD ALCOCK recounts in one of his despatches. But Japan was still in those days a land of romance and illusion. Whatever may have been the troubles of Yedo and Kioto, they gave little concern to the world at large, which still expatiated with rapture over the quaintness of Japanese art, the charms of its scenery, the politeness of its people, the beauty of its daughters, the wealth of its *flora* and the glory of its "matchless mountain." The merchants made money. There was no talk about enlightenment and civilization. There was not a hat in the Empire. The rich rustling of the *hakama* had not given way to the less romantic article of dress which has replaced it, the two swords were still regarded as the emblems of gentle blood or cherished rank, and Japan was still something of fairy-land. But times are changed. We have now a ten per cent and an eight per cent loan, a national debt, pension bonds and paper issues redeemable at various dates, a press tied with little more than a silken cord, railways, telegraphs, gas, hats, and all the higher insignia of European civilization. "Bless thee, Bottom, thou art indeed translated!" OLIPHANT would surely exclaim if he were now to return to his paradise of 1858.

But, with loans and debts and bonds, we have entered upon another stage of existence. The charm of novelty and the illusions of romance have disappeared, and, as happens when two young people begin to feel that each is necessary to the other's happiness, the guardians on both sides begin to ask questions upon serious subjects. The lines

> So is thy purse be empty,
> Come not to me a-woping,

are now applied to nations, and "a lang pedigree" is reckoned but scant compensation for a short purse. It is this of vital importance to Japan to make a clean breast of it in regard to her finances. Whether they are a little better or a little worse, provided she is paying her way, does not greatly matter to any one save herself, but that they should be known, be understood, and be above all suspicion, is of paramount importance. We have here a country containing over thirty millions of people, the surplus fruits of whose labour, if made accessible to markets by roads and railroads, would soon accumulate into great wealth, but who yet remain poor from the want of cheap and easy communication. Public works are a prime necessity in this country, and as they cannot and ought not to be constructed out of revenue, money

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

must be borrowed to carry them out. But whether this money shall cost eight or five per cent *per annum* greatly depends on the yearly financial statement issued by the Government and the confidence reposed in it.

On the appearance of Table I, published in our issue of the 1st May, we argued that the explanation of the enormous surplus it showed would most probably be found in the fact that the larger part of the taxes was received in the first half of the year, and the larger part of the disbursements made in the second half. And thus it proves. The Government has also found so much inconvenience from this source, in view of the fact that the Financial year has hitherto been reckoned from the 1st January to the 31st December, that a change has now been made, and it will, for the future, be reckoned from the 1st July of each year to the 30th of the following June.

The second point on which it appeared of the highest importance to obtain correct information was the nature of the balance held under the name of the Reserve-fund. We showed that if this was merely a balance consisting of notes, it was practically no Reserve-Fund at all. We have, however, assurance of the highest authority that it consists of $14,390,700 in gold and silver, the balance consisting of notes, derived chiefly from the income from reproductive works, the greater part of which comes in in paper, the expenses on them being also paid in the same manner.

We are also in a position to give a reply to a question put by ourselves some weeks back regarding such amount of the last loan as had been actually expended for the purpose designated in the proposal under which it was brought out in London. This, it will be recollected, was the redemption of the hereditary incomes of the higher nobles and of the pensions of the *samurai*. The amount so expended to date is £1,605,980, and there appears to be a growing feeling in the country that as the hereditary incomes and life pensions involved the idea of some sort of service being rendered in return for them, the abolition of the claim for service justifies the rather hard terms on which it was proposed to commute the allowances. It may be added that the acceptance of the terms is entirely voluntary, and while the amount already laid out in purchasing these annuities shows the disposition which exists in large numbers of the pensioners to avail themselves of the offer of the Government, there are yet many who are content to draw their yearly allowances as of old. There is one amount (8,453,854 *yen*) under the heading 'Balance of Debts' which deserves notice. As explained, it is no new addition to the debt, but represents the sum of the bonds bearing interest at 8 per cent. issued to those holders of *kinsatsu* who choose to present them at the Treasury. This was a measure adopted, at the instance, we think, of the Foreign Representatives, who feared some time time back that an excessive issue of the paper money would bring about disasters in trade by which Japanese and foreigners alike would be heavy sufferers, and suggested the measure as one calculated to give support to the paper currency.

Such other questions as may be suggested by the figures of the Budget will be mainly elucidated by the explanatory statement attached to it. We may add that the present statement is provisional only, and nothing more than it pretends to be, an estimate for the half-year. It will be followed in due time by the Budget for the whole year. It would appear that the proposed redemption of 5,000,000 *yen* of currency, promised in the last Budget, has not been lost sight of, but has been deferred owing to the draft on the Exchequer caused by the Formosa affair which amounted to about this sum. We observe also that the Budget for the entire year will provide for this redemption of 5,000,000 *yen*, and an additional 4,000,000 besides. The estimated surplus for the whole year is something over 3,000,000 *yen*, and we ardently hope nothing may occur to endanger it.

THE MISSIONARY IDEAL.

A MEMBER of the Missionary body has addressed a letter to us which will be found elsewhere, and, in reply to it, the few following words—we have neither time nor space for more—will partially explain the grounds for the preference we expressed in our last issue for the Roman Catholic over the Protestant ideal of missionary work and discipline. But, in order that there may be no mistake as to the sphere of this preference, we may say at once that it extends no further than this special ideal. It does not extend to the teaching of the Roman Catholic Church. The open Bible is with us a *sine qua non* in religious teaching, and with any system which closes it we are at entire variance. We shall also frankly admit the high claims to admiration presented by the great body of the Protestant missionaries throughout the world. Indeed, before going any further, we will adduce the testmony of three men who have recently occupied great positions in India, where Protestant missionary exertion, from the days of Heber downwards, has played a most prominent part. At a recent meeting held in London Lord Lawrence, who, be it remembered, spoke as an ex-Governor-General, stated, that among all the agencies at work for the elevation of the races in India under the dominion of England, none were comparable with the exertions of the Christian missionaries. Lord Napier (Baron Ettrick), the late Governor of Madras, said that these missionaries were creating a more beneficial revolution than any of which he could find a record in history. Sir Bartle Frere, the late Governor of Bombay, gave testimony of a precisely similar nature. These men spoke as statesmen, who had had to deal with the government of millions of men, one of them having occupied the greatest position which any Sovereign ever had the power of conferring on a subject. Lord Lawrence ruled 220,000,000 of human beings. He was chosen as the fittest man for the post either in England or India, and no race, the Romans not excepted, has ever developed such a genius for government as our own. If there be no value in this testimony, the best of human opinions is worth nothing. Remember, too, that this is no question of the truth of any given doctrine of Christianity. It does not touch the speculative part of the discussion. These men all spoke as rulers responsible for the welfare, contentment and good order of the people under their charge, as administrators who had to raise revenue, move armies, and maintain police, and who had to deal with missionary work as a practical question. Thus much we think it right to say, so that there may be no doubt as to our estimate of the positive value of Protestant missionary exertion. We will even go further. We should unhesitatingly declare for Protestant missionary exertion even under what we consider an inferior system, rather than for Roman Catholic missionary exertion under a higher system. But we look on the Romish system, *qua* system, as incomparably better than our own, and chiefly for the following reasons.

The whole Protestant system of missionary labour involves a wide and marked departure from that prescribed

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

by CHRIST. Whether it is that which experience has found to work best, is wholly another question, upon which we shall say little. Considered from a certain stand-point, and presuming on the very small amount of enthusiasm presented by average men,—a quality, however, which the Protestant system most distinctly tends to repress—it may be wise to work with such instruments as the average condition of society provides in abundance, and which other avocations in life find equal to the necessities they impose. But, of course, any one who refuses to alloy the pure gold of CHRIST'S instructions with a baser metal introduced to adapt them to more convenient currency, will demur, at whatever cost, to a system which simply sets them at defiance. He will insist that this high duty can be only discharged by men of an altogether different mould to those ordinarily appointed to discharge it. What was demanded was this, that they were to renounce houses and lands and father and mother and wife and children; that once having put their hand to the plough, they should not look back; that, even if engaged on the most sacred duty of affection, they should let the dead bury their dead, and go themselves and preach the kingdom of GOD; that they should not so much as have the holes of foxes or the nests of birds for their dwelling-places; that they should start on their lofty errand without scrip or coat or shoes, and shake the very dust from their feet against those cities which refused to receive them. Were it not that feelings of habitual reverence prevent men from laughing at such ideas, the majority of us would not hesitate to designate them as supremely unpractical and absurd. We frankly confess we regard them utterly otherwise. They seem to us supremely, let us say, divinely, wise; and not only practical, but calculated to raise mankind to an indefinitely higher moral level than that on which we now stand. It seems to us that this sublime enthusiasm, the sole object of which is the good of others, and which demands an absolute self-renunciation, is the most potent engine in religious work. Three short years of it served to change the face of the world, and to leave an example and an ideal of humanity behind them which appear brighter and more perfect the more we scrutinize them. For this enthusiasm and self-renunciation the Romish system provides. Our system quenches both. We neither get the one nor the other, and thus the force of the example set by CHRIST, personally, in his every day life, is lost. There is extremely little self-sacrifice in the life of the Protestant missionary. He is, generally speaking, a very worthy man, who lives simply—the talk about fine houses and sumptuous living is wicked nonsense—and who derives from the Society to which he belongs about as much income as he might make in any other calling. He has none of the risks of trade, none of the responsibilities of a profession, none of the haunting jealousies of social ambition—the curse of the vulgar. His work is in no sense heavy or exhausting in which other men's work is not so. He lives among his friends, brings up his children, puts them out in the world, and makes his meals off pulse as little as the rest of us. If he leads a temperate, placid life, the pleasures of the heart and the intellect are all open to him, and there is far more real happiness to be had out of these than from excitement and the feverish pursuit of a lower order of pleasures. His life is useful, virtuous and happy. But it is, speaking generally, as far from having anything heroic or provocative of enthusiasm in it as the life of a tax-collector. We do not undervalue the homely and more retiring virtues—on the contrary, they are, we are persuaded, sources of great happiness to their possessor and to those about him. Still less do we wish to see men posturing before the world, eternally thinking of themselves, and laying traps for sympathy and admiration. But to suppose that such a life as we have sketched, even supposing it to be employed on the intellectual difficulties which confront the missionary in countries possessing an ancient and deeply rooted form of civilization, is one which will ever make more than an occasional convert here and there, is simple delusion. If you wish to convert nations you must do as the Franciscans and Benedictines did, not as we now do. A man who is easy in his circumstances and happy in his daily life, can never convert multitudes. He is not oppressed with the miseries of life, he is no "man of sorrows and acquainted with grief"—or, if he be, it is such sorrows and grief as are personal to himself. He hears nothing of that unceasing wail which ascends—whither?—from toiling, heart-broken humanity. Of its real agony he knows nothing. He has his hours for consultation and his spiritual pills and specifics, nor shall we deny that he is sometimes right in his diagnosis of the disease of his patients, and even in his treatment of them. But of the yearning, ceaseless sympathy with the tears of humanity which characterized CHRIST, he knows and feels practically but little. Easy circumstances are the grave of enthusiasm, and a religious teacher without enthusiasm is light without heat.

But we must distinctly guard ourselves from being supposed to make reflections upon those who merely illustrate a system, which, though not the best, to our idea, is one for which much may be pleaded beyond the possibility of refutation. The missionaries have done a vast amount of admirable work all over the world, and nowhere better than in the East. But their successes in the actual work of Christianizing the eastern nations have been extremely small. Such successes as have been achieved have been chiefly by the Romish Church, and we attribute this to the fact that her missionaries imitate to a great extent the daily example of their Divine Master, in that absolute renunciation of self which is the only true evidence of an enthusiasm in the cause of humanity. With them it is a divine calling; with us it is a profession or avocation. Our system, we repeat it, is the grave of enthusiasm and self-sacrifice. St. Paul set the world on fire in spite of his logic; but he did it by his sublime enthusiasm, his inexhaustible and profound sympathy with humanity, his poverty, his afflictions, his stripes, his imprisonments, his journeyings, his perils, his shipwrecks, his watchings often and fastings often, his hunger and thirst, his cold and nakedness. Had he dined every day at two o'clock on three courses, we might to this moment have had the gladiatorial games going on in every city in Europe.

Some estimate between the congruity of CHRIST'S instructions to his missionary apostles and those which have taken their place, may for a moment be formed by imagining the early apostles leaving for Italy or Asia Minor with their wives and families, and having quarterly supplies of stores sent after them. We have not the very remotest intention of casting ridicule upon the question, and beg that our protest in this regard may be most scrupulously respected, and if the above incongruity involves anything of that nature, the fault most clearly lies in the facts and not in our statement of them. It is no use to tell us that the whole condition of affairs is altered since the days of the early Church. Men eat and drank then, and used

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

clothing, travelled in ships or on land, and CHRIST spoke as a man for men, and knew all this as well as we do. Yet he spoke as he spoke; and if we are to be told that his words do not apply to the present condition of things, we may fairly ask why, and who says so. Among others of his words, these are recorded, "Why call ye me, Lord, Lord, and do not the things which I say"? Whatever else the system of Protestant missions now illustrates, it does not illustrate the scheme laid down for them by their Founder.

We trust we have not said one word which will wound the feelings of any one of a body of men whom an experience of over twenty years has taught us to respect very highly for their works' sake. But we are accustomed to test this question by the probable view which CHRIST would take of it were he to visit the earth at this moment, and judging of this by his own instructions to his apostles, we are sorrowfully and profoundly persuaded that he would say that these instructions had been utterly set at naught.

THE FINANCIAL STATEMENT.

The following statement of the estimates of Receipts and Expenditure for the period from January to June 1875 has been issued by the Government.

From the "Nisshin Shinjishi," No. 91, of April 29, 1875.

No. 59.

To *In, Shô, Shi, Chô, Fu and Ken.*

An account sheet of the estimated current receipts and expenditure for the first half of the present year has been sent in as shown in the annexed documents, by the Minister for Finance, Ôkuma Shigénobu.

The above is accordingly made known for your information.

(Signed) SANJÔ SANÉYOSHI,
Prime Minister.

April 20, 1875.

EXPLANATORY STATEMENT OF THE ESTIMATE OF RECEIPTS AND EXPENDITURE FOR THE PERIOD FROM JANUARY TO JUNE 1875.

Before entering upon the necessary explanation of these Tables, it is requisite to cast a retrospective glance at the results of the finance of last year. Had the year been one of perfect peace, it would have left a considerable surplus in the Treasury. Unfortunately, the expenses attendant on the Saga insurrection and the Formosa Expedition will probably aggregate 6,000,000 *yen*, though the accounts are not yet finally closed. Yet the 5,000,000 *yen* appropriated in last year's estimates for the redemption of paper currency, and 1,700,000 appropriated for contingent funds for the Army and Navy, together with other funds spared from economies of other Departments, are not only sufficient to meet this expenditure but admitted of the surplus shewn in the estimates. Added to this, there are 773,000 *yen* to be received from the Chinese Government, which sum, less 154,000 *yen* to be distributed among the surviving families of the murdered Loochooans and in the Oda *ken*, will effect something towards the diminution of the above expenses.

There is one more point for remark here, viz.: the alteration of the fiscal year. The original fiscal year from January to December proves inconvenient from the fact that the land-tax is collected partly in one year and partly in another, rendering it difficult to adjust the accounts of the year, and impossible to depend implicitly on the estimates, which have therefore sometimes been sources of disappointment to the Government. Such an arrangement cannot be justified either on the score of wisdom or convenience. In this view the original system has been modified and the new fiscal year ending 30th June adopted. This arrangement will admit of more accurate estimates and returns of receipts and expenditure, and obviate confusion in the accounts of succeeding years.

The preparation of the estimates for the first half-year of 1875 originated in the modification of the fiscal year, and the cause of the large surplus of receipts over expenditure is that the revenue is not collected monthly in equal amounts. In other words, the bulk of the revenue is collected in the first half of the year, while

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the large surplus thus shewn is applied to disbursements made after the 1st July. Thus it is that this sum cannot be regarded as an available surplus, but must be cautiously expended. Although this large surplus is shewn only in the present year's accounts, owing to the change of the fiscal year, the facts above stated should be borne in mind when the next accounts are hereafter presented at the close of the coming fiscal year.

1st.—With a view of exhibiting the condition of the Reserve Fund and the estimated receipts and expenditures during the first half of this year, say from January to June, three Tables, I. II. III. have been prepared, and a statement has been appended to them of the position of the national debt and the paper currency. The forms of the accounts are as nearly as possible those of last year.

2nd.—The amounts given in Table II, exhibit minutely the aggregate of all the estimated monthly collections of revenue from January to June, including the surplus from 1874.

3rd.—The method of estimating the amounts of revenue and expenditure by the valuation of Rice, is the same as that adopted last year. Detailed explanations of this are not given here.

4th.—The annual allowances to former daimios, their retainers, temples and churches, sums granted as pensions, &c. are all paid at one fixed period. This being after the 1st December this year, these amounts are naturally excluded from this Table. The sum under heading in the Table 'Liquidated Allowances' is that which is to be carried to the Reserve-Fund from the Revenue Accounts, and therefore merely shows the debit and credit between the Revenue and the Reserve-Fund.

5th.—The salary tax and the amount contributed out of the expenses of the Imperial Household (save the tax on Annual Allowances, which is not collected before June) will be applied to the War-fund to make up the deficiency in the original expenses of the Army and Navy. In regard to appropriating the Contingent Fund for the Army and Navy, special steps will be taken for this purpose, and it is thus excluded from this Table.

6th.—The expenses of assaying old coins, the compensation to be paid on the liquidated allowances, and the purchase money of newly issued bonds, depend on the circumstances and voluntary demands of the people. The estimates under this heading are therefore based on the experiences of last year, an exact calculation of them being obviously impossible.

7.—The appropriation, out of the revenue of the year, of 4,000,000 *yen* to be carried to the Reserve-Fund and delivered at the Kokusaikyo (Office of Public Debts) is intended to be applied towards the redemption of the national debt. In addition to this, the sum of 3,000,000 *yen* which would have gone to the Reserve-Fund out of the revenue of last year but for exceptional exigencies of the State, is now carried to the Reserve-Fund.

8th.—The sum of 2,300,000, the purchase money for ships of war, is purposely kept out of this table on account of the uncertainty of its being disbursed during the first half of the year.

9.—The reason for the apparent increase in the domestic debt over the sum named in the Budget of last year, was the new issue of 8 per cent bonds (called Annual Allowance liquidating bonds) and of 6 per cent bonds (Paper currency exchanging bonds) in accordance with the voluntary demands of the people during last year. Debts also contracted by the old *Hans* and which had remained unascertained, were finally settled and the amounts added to the public debt. Even at the close of the next fiscal year some variation under these headings will be found unavoidable.

10th.—The Table of Currency hereto attached shows the actual amount of various forms of paper currency in circulation in the month of December last. These several forms are, 1st, Dajiokwan and Mimbusho *satsu*: 2nd, Notes on demand: 3rd, Currency issued by several of the late *Hans*: 4th, New Currency; The former three sorts having now been called in to be exchanged for the latter, as the latter increases the former will decrease, and there will be no difference in the amount of the floating currency. It has been resolved to abolish the old currencies within a given period, and to assimilate the issued by the old Hans were so considerable in number and varied so much in value in different places, that although the amount of them has been ascertained, the probability is that there will be some departure from the actual estimates. When the exchange of all these currencies has ultimately been effected, the decrease, if any, will be notified forthwith, while, on the contrary, should there be any increase discovered, the amount will be redeemed from the Reserve-Fund, and the total amount of floating currency exhibited in the Table will in no way be exceeded.

SPIRIT OF THE NATIVE PRESS.

REQUIRY IN REGARD TO FOREIGN RELIGIOUS TEACHINGS.

From the "Nisshin Shinjishi," No. 76, of April 10, 1875.

Memorial.

It has been ordered by the Government that religious tenets are left to the option of the people, and directions have been given to the teachers of both Shintoism and Buddhism, whereby they are caused to guide the people in accordance with the "three articles of Religion."

I have, however, heard that of late in the foreign settlements in our country foreign religious precepts are being incessantly promulgated, and that our people are in a friendly way enticed thereby. Now, such teachings as these, from the very commencement, hold lord and father in light regard, and eventually cause men to fall into the habit of setting at naught their Ruler and of disregarding their parent. The fact of this teaching being pernicious to the Empire is a matter needing, from the very first, no discussion. I have been told of this, and am fortunately too unworthily holding a minor office of religious instruction, and am thus unable to refrain from slight consideration as to whether it would be a source of trouble were I, at the time of my expounding religious precepts, to publicly throw open to reproach the foreign doctrines. I beg that you will promptly give me clear directions, and so humbly beg to make the above interrogation.

March 18, 1875.

(Signed) YAMAGUCHI ICHIRÔ.

* *Gon-shôkôgi*, and guardian of the Shrine of Hachiman at the village of Ikari, in the 5th subdivision of the 11th district in the province of Awaji, in the Miyôdô Ken.

To SHISHIDO TAMAKI DONO.
Vice-Minister for Religion.

Reply of Department of Religion.

(Permission is granted) according to the enquiry above. However, in matters outside the province of religion, careful attention must, of course, be paid that no hindrance shall arise of such a nature as to affect the public (*i.e.* international) relations of the Government.

March 18th, 1875.

REPLY BY A CONTRIBUTOR.

From the "Nisshin Shinjishi," No. 106, of May 18th, 1875.

In No. 76 of your newspaper dated the 10th of April, appears a letter that had been sent in by a person called Yamaguchi Ichirô, a *Gon-shô-kôgi*, † residing in the province of Awaji and within jurisdiction of the Miyôdô Ken, to his superior official. In consequence of the letter in question misrepresenting the ‡Religion of the Lord of Heaven, I will give some explanations regarding the unreasonable character of those misrepresentations. In Mr. Yamaguchi's statements it is said that religious teaching such as this contemns one's lord and father, and eventually causes people to fall into the habit of setting at nought their Ruler and of disregarding their father, and that the fact of its being pernicious to the constitution of our

* "Preacher" of the lowest rank.
† "Preacher" of the lowest rank.

Digitized by Google
UNIVERSITY OF CALIFORNIA

country is a matter that from the very outset needs no argument, &c. Mr. Yamaguchi, without producing the slightest proof of this, lays upon the religion of the Lord of Heaven this evil reputation. It is to be feared that upon the perusal of this letter by the public there will be many persons who believe in its misrepresentations; and consequently, for the purpose of refuting its statements, it will be sufficient to give here, for a short space, an exposition of the tenets of the Religion of the Lord of Heaven,—as shown below. If it be asked how this is, I reply that in the 4th *(sic)* of the commandments of the Lord of Heaven strictly observed by Jesus Christ it is said—"Honor thy father and thy mother";—and again, if we look at the account of the words and the deeds of Jesus, we find,—to compress into one word, the action of Jesus throughout the space of thirty years,—that it is written that he served his parents and practised filial piety. Nor is this all,—for if, in consequence of what I am now discussing, there be read the words spoken publicly in the Sermon of Jesus, it will be found that, being at a certain time desirous of teaching the persons who on account of matters of filial piety had disobeyed true religion, he admonished them with these words,—"Even though your parents are in want, ye take no heed at all, but on the contrary, displaying a proud spirit make offerings to the Temple of the Lord of Heaven; and yet, in the teachings of the Lord of Heaven it is said there is a punishment from Heaven for those who honor not their father and mother." Again, this 4th (*sic*) commandment does not apply merely to the father and mother of one's own family, for the following reason, namely, that on a certain day men came to Jesus and asked him if it were well to pay tribute to the Ruler of the country. In reply to this, Jesus said that they must pay to the person holding jurisdiction over the land the things that appertained to him, and must also obey him; and for this reason Jesus paid the same on his own behalf and that of his disciples also, and furthermore treated with respect the officials high in rank and authority. In accordance with this speech of Jesus, His renowned follower Paul has minutely explained the matter of respect, saying:—"The Lord of Heaven is the original source of power and rank, and you must therefore reverence those who have juirisdiction over you, and recognise that their powers are powers received from the Lord of Heaven, and so with obedient heart, and love and reverence, pay the tribute." Again, He said to those who followed His teachings, "Pray always to the Lord of Heaven for the peace and happiness of the Sovereign in particular, and also of those who hold high positions." Now this certainly must be said to be in harmony with the precepts of the Lord of Heaven. These religious rules have been observed from olden times by His followers, and it must be allowed that even though at times there be persons who disobey them, it is still unreasonable to condemn this teaching upon the grounds of the offences of such persons. If Mr. Yamaguchi makes it his business to read the writings in which are recorded the sage precepts and careful reasoning of the public teaching of the Lord of Heaven, he will find explanations of this 4th *(sic)* commandment. The questions and answers are as follows:—

Question: Are there, besides one's father and mother any persons to whom respect should be paid?

Answer, There are,—the Sovereign and the officers of the Government.

Q. Why must they be respected?

A. They are the parents of the people, and consequently they must be treated in like manner to one's own parents, with love and respect,—and in accordance with the commandments of the Lord of Heaven, their directions must be observed &c. &c.

After reading the words here written by me, persons of enlightened intelligence, and who are endowed with integrity may comprehend the unreasonable nature of what has been stated by Mr. Yamaguchi. If it be asked how this is, I reply that it is questionable whether Mr. Yamaguchi composed the above statements while understanding the precepts of the Lord of Heaven in connection with matters of respect and reverence, or while not understanding them. If he made the statements while not comprehending this, he is a person who has allowed hi[illegible] to utter mis-statements, and can he perhaps hav[illegible] in order to receive the praise of mankind? Still, if he be a person ignorant as to even one or two points in this (religion), he should specially keep silence before the multitude of mankind, and, on the other hand, if he (made his statements) while comprehending the precepts of the Lord of Heaven, then he wilfully caused men's minds to go astray. He states that he himself follows the profession of teaching men, but the fact of his having made up these misrepresentations must, on the contrary, be called an act of disobedience to that profession. In the face of this discussion the truth or error (of the matter) at issue between Mr. Yamaguchi and myself will be well understood by persons of learning; and even if there be followers (of Christianity) who are at variance with myself, they will neither hate nor reject (my arguments). Nevertheless, when there arise statements containing misrepresentations of the sage precepts of the Lord of Heaven, I cannot avoid giving an explanation of the matter.

(Signed) KINGO,
Dwelling at Okuyama in Yedo.

LOOCHOO.

Substance of an Article in the "Nichi Nichi Shimbun," 25th May, 1875.

Loochoo has given proof of allegiance to both China and Japan. But now the Japanese Government have sent to these islands an officer of the Home Office, and troops from the Kumamoto garrison, and have made Loochoo a present of a small steamer. Orders have also been given to assist the people of Miyako Shima with grain.

The writer is not aware what the Government policy is in regard to Loochoo, but he has heard that they were desirous to make the Loochoo Han-o (King) come to Yedo to offer his thanks for the punishment of Formosa and for the revenge procured him on his enemies. His officers, however, firmly declined to allow him to go. They said he had been brought up in the interior of the palace and that he had not strength of mind to leave his own country, much less to come to Tôkiô. He believes it was ultimately arranged that he should be represented by one of his relations.

The Japanese Government wishes to put a stop to the double allegiance. But it seems that at Loochoo this is a very difficult matter. They look upon China as their father and Japan as their mother. They are very anxious lest if they abandoned China and became wholly dependent on Japan, their trade would suffer.

Japan has nevertheless resolved to put an end to the double allegiance, and has not allowed the despatch of envoys to congratulate the new Emperor on his accession. (The envoys who arrived in Pekin in March last did not come for this purpose.)

It is said that the object of officials (Matsuda Daijô of the Home Department) and troops being sent to Loochoo is (while allowing the internal Government and legal system to remain unchanged) to bring foreign intercourse and military matters under the control of Japan. It is intended that the Loochoo trading establishment at Tung Chow and other Loochooans in China shall be brought under the jurisdiction of the Japanese Consul.

This is not positively certain, but we feel that the object of the Japanese Government must be of this character.

There are two ways of putting an end to the double allegiance. One is for the Japanese Government to order the Loochooans to give up their allegiance to China, and if the Chinese Government should call the Loochooans to an account for their neglect to bring tribute, to accept all the responsibility themselves. (This would be an easy matter to negotiate, for Loochoo is clearly recognised as belonging to Japan by the Pekin Convention of 1874.) The second plan would be, before this order to Loochoo, to notify the Chinese Government that in future the Loochooans would not send their tribute. It is hoped the Government will consider well before choosing between these two plans.

The *Hôchi Shimbun* advises the abandonment of [illegible]ochoo. We cannot agree with this [illegible]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Formosa question was the subject of great differences of opinion and when even Kido left the Government so strongly did he disapprove of the expedition, there might have been some grounds for such an opinion, but it is strange that the *Hochi Shimbun* should now propound this view when all the difficulties have disappeared. Half a year ago the editor of that paper would not hear of selling or abandoning Saghalin—now he talks of abandoning Loochoo!

Notification.

Message from the Dajokuwan to the *Loochoo Han*.

"Choya Shimbun," of May 23rd, 1875.

The reason of the men of Miyakojima in the *Han* of Loochoo having been cast away last year on the island of Formosa and meeting with disaster there, being that the *Han* possess no serviceable ships, and the frequent loss of exported produce through the ships meeting with bad weather on the passage between Loochoo and Shanghai being a deplorable matter for the benefit of the people (of Loochoo) we have made this a particular case and hereby present you with a steamer.

You will take care to become thoroughly versed in navigation, and avoid meeting with casualties.

N.B.—With regard to the handing over of the steamer this will be managed by the Home Department.

From ditto to ditto.

Rice 1,740 *Koku*.

This is given as compensation to the 66 persons of Miyakojima who were cast away and met with disaster last year in Formosa. It will be apportioned according to the enclosed statement.

N.B.—With regard to the handing over of the rice this business will be conducted by the Home Department.

Rice 1,620 *Koku*.

To be given to the families of the 54 men who were killed, at the rate of 30 *Koku* to each house (or family).

Rice 120 *Koku*.

To be given to the 12 survivors at the rate of ten *Koku* per man. Altogether 1,746 *Koku* of Rice.

From ditto to ditto.

In order to protect the *Han* a detachment of troops from the camp at Kumamoto (Hiogo) the 6th military station, is to be stationed (in Loochoo).

On Saghalin.

"Tokio Nichi Nichi Shimbun" of May 27, 1875.

Having read a telegram with reference to the cession of Saghalin which appeared in a Yokohama daily paper, the *Japan Mail Daily Advertiser* of the 25th instant, we endeavoured obtain proofs of its correctness but were unable to ascertain whether it was true or not. This telegram was sent to Peking and was despatched from London on the 12th inst. It runs simply as follows:—"Saghalin has been ceded by Japan to Russia."

The joint occupation of Saghalin was in no way advantageous to Japan. Nor is this all. Expenses were incurred in affording protection (to our subjects in the island) and complications and fends occurred, so that loss and injury were sustained, and it was for this reason that we started discussion on the subject and stated our wish that the Japanese Government should abandon the island. With regard to the views then prevalent—we were denounced by the majority of the people as enemies to the country and we were spoken badly of in nearly all the papers. These views were just like a sudden squall of wind which lasts for a short time and leaves no traces behind when it is over. Now unexpectedly this startling telegram comes to hand.

The cession of Saghalin being what we have already wished for, the present cession of the island falls in with our wishes and there is therefore no reason for us to be astonished.

We are not surprised that the cession of the island has been decided upon. What we are astonished at is that the Japanese people should have been as yet unconformed of this important telegram. The telegram came through China and as it was a private telegram delay occurred, fifteen days being occupied in the transmission. If it had come direct as an official telegram it would have reached our Government at once, we believe. There is no reason why Enomoto, the Japanese Minister resident in Russia, who is entrusted with the conduct of such especially important negotiations as these were, should not have reported the settlement arrived at to the Japanese Government. But why should the Japanese Government keep secret intelligence received from the Minister and not communicate it to the people? some will say—"Because it was a diplomatic secret"—Now a diplomatic secret is a matter concerning affairs of state, and as it is conjectured that if during the process of negotiations with a foreign country this be made public, discussion will be raised, the policy of the Government interfered with and their secret schemes disclosed, it is kept secret. For instance, *in order to secure a victory at a distance of more than 1,000 *ri*, the stratagem to be employed is kept secret, just as a place is screened off by a curtain from the outside public. The importance of secresy is before disclosure takes place, not afterwards. Now the cession of Saghalin is a *fait accompli*. Why should the Government fear to communicate this to the people?—what necessity is there for keeping it secret? Again, if they were to keep it secret what would a diplomatic secret benefit thereby? It is clear, therefore, that the Government have most certainly not concealed this important information. It has not been concealed and it is likewise almost certain that the reason of its not having been notified to the people is that the Minister Enomoto has not sent any information to the Government, and that the reason that the Minister has not reported this is that the cession has not been finally decided upon. We cannot help thinking that this is the state of the case.

And this being our opinion, is this important private telegram to be set down as false news? And if so what scoundrel could have fabricated such a falsehood? It is a most startling piece of information. Even if we decide that no official telegram has been sent from the Minister to the Government, it is still most startling news. Again if we decide that an official telegram has been received, but that the Government have withheld its purport from the people—it is still a most startling piece of information. How is it possible not to say that we have received an astounding telegram?

With reference to this cession of Saghalin, although until we hear what the official telegram says we cannot guarantee its correctness to the public † yet we believe the London telegram must have some foundation in fact. We are therefore eagerly awaiting the speedy announcement of the true facts of the case.

Moreover, if the Minister Enomoto in the matter of the St. Petersburgh negotiations, has decided upon the cession of Saghalin, what agreement has he made for its transfer, (as regards the agreement itself for instance, do we take over the right to the Fisheries, do we exchange Saghalin for other islands, or again do we receive a large sum of money for Saghalin &c. &c.)—or has he handed over the island without making an agreement. These are matters which we in common with the rest of our countrymen are desirous of learning, and, therefore, we believe that on the day when the Government receive a trustworthy official telegram they will without any concealment at once communicate its purport to the people. We await that day to deliver our judgment.

The land-tax.

(Nichi Nichi Shimbun.)

In 1872 a notification was issued touching the sale of land, and again in 1873 another about the reform and settlement of the land-tax. But as, up to this time, nothing has been done, the people are in much doubt and anxiety on the subject. I have always held that this is a very important matter, and hoped that it would be settled after due deliberation. Yet it is not enumerated in the list of subjects which are to be discussed by the chief officials of the *kens* at their approaching meeting.

* Adaptation of a Chinese Proverb.

† Literally "we cannot turn to the public and, affirming its correctness, vouch for the same."

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Yet so important a matter could hardly have been forgotten, and I must presume that it has already been settled. But, if so, this should be announced to the people, so as to allay their anxieties. If, however, it is to be deferred until the institution of a House of Commons, there was no necessity to issue these notifications so early and cause so much general anxiety.

If the Government is going to tax the land ten per cent. and to relieve the people from the distress which the heavy imposts they now bear bring upon them, it ought to be done in a kind manner. But if these imposts are to remain unreformed, and the people are to be thus taxed according to the necessities of the Exchequer, I have not a word to say. The imposition of taxes must be done by experienced people. Heretofore many modes of examining (surveying?) lands have been notified, but they could not avail much to those who had the land under their very eyes. This is attributable to the fact that almost all the government offices have been filled by *kadzokus* * and *shidzokus* † who have never paid any taxes. Speaking to them on such matters is like talking of swimming to men who have never seen water. There are, indeed, a few officials from the *heimin* ‡ class, but they have all gone at an early age into the towns for their education, and know nothing of the land question. To us farmers there is nothing so annoying as to receive notifications written by people who know nothing about us. Japan is neither in want of rich lands nor ample population. Yet we yearly become poorer because there is a diminishing production. Our indolence may have something to do with it. But I think that our minds are led astray by notifications, desiring us to do what we cannot do, and we are too perplexed to work with any real zeal. As a proof of our declining prosperity I adduce the fact that the price of land to-day is just one half of what it was ten years ago. This is not caused by any reduction in the value of our productions, but by the great general desire to sell land. The interest of money is just double what it was ten years ago. Still, it is not on these accounts that the farmers are annoyed, nor by the heaviness of the taxes and such like. I entreat the Government not to issue notifications based upon what "is done in civilized countries," but adjust their measures to the actual condition of the agricultural classes.

KAKUZAIMON YOSHIDA,
Kumai ken.

THE DEATH RETURNS.

(Nichi-Nichi Shimbun.)

It has lately been ordered in this *Fu* (Tôkio) that, on the occasion of any death, an account shall be sent in to the authorities of the cause, and the methods of treatment employed by the doctors. But there are many people here who take no heed of doctors when they are ill, and who are content to leave their case in the hands of the Buddhist priests, fearful that they would offend the gods by resorting to such remedies as medicine, &c. There are many who leave the world in this way, and some even in our neighbourhood. As such people were never placed under medical treatment, the doctor cannot send in the required statement, so that the only thing obtainable would be a return from the priests of the number of prayers or offerings made to such and such gods, concluding with 'in spite of this he died.' Will this answer the purpose?

A HINT TO THE HIGHER NOBLES.

(Nichi-Nichi Shimbun.)

A number of the *kadzokus* recently sent in a memorial to the Government requesting that any one, whether of the *shidzoku* or *heimin* class, who had done any honourable deed, should be raised to the *kadzoku* class. We cannot tell whether this means that the *kadzokus* cannot do anything without the aid of others, or that it is not a good thing for them to be idle. At all events it seems as if they wished their pensions to be made perpetual. But to our view, it would be far more manly were they to speak out and say, "It is wrong that we should devour the Government; so we will give up our pensions."

EQUALIZATION OF PUNISHMENTS.

(Nichi-Nichi Shimbun.)

The punishments of the *kadzoku* and *shidzoku* differ from those of the people. Is this according to natural law or not? If not, there must be times when it is appropriate, and others when it is not so. And now does it suit at this moment? Not at all. It may be said, therefore, that this should be brought into conformity with natural law—a view which has been frequently urged in this journal.

A rumour has lately reached me that the Government is about to abolish these differences of penalties. Should this be so, our 32,890,000 brethren whom we so greatly love, will increase to 33,300,000, so that the plan seems excellent.*

Some are apt to say that, if the penalties are to be equalized, the taking away the rank and pensions of the *shidzoku* and *kadzoku* will disappear. This cannot be called unreasonable. Pensions are not of the nature of personal property, and can therefore be taken away. For the same reason they cannot be mortgaged; it is against law. Everything which is unreasonable must be treated as of unreason, and as the pensions of the *kadzoku* and *shidzoku* are not agreeable to reason, they are liable to be taken away. Think for yourselves. Did the *kadzoku* and *shidzoku* voluntarily come forward and say that they were willing to participate in equal rights with the people, or did the people urge this view on the Government? I cannot tell.

BRITISH CONSULAR TRADE REPORT FOR KANAGAWA FOR 1874.

BRITISH CONSULATE,
Kanagawa, 10th May, 1875.

SIR,—I have the honor to furnish you with a Report of the Trade of this Port for the year ended December 31st 1874, accompanied with the following Returns.

Enclosure 1.—Return of the Import Trade.
Enclosure 2.—Return of the Export Trade.
Enclosure 3.—Return of Shipping.
Enclosure 4.—Return of Export and Import of Treasure
Enclosure 5.—Return of the duties collected on Imports and Exports and Shipping dues.
Enclosure 6.—Return showing the number of British Residents and British Firms and the Residents and Firms of each Foreign Nationality.

I have framed these Returns as far as possible in the manner directed by you in your circular despatch to Her Majesty's Consuls in Japan of the 13th of January of this year. In both Import and Export tables those articles the value of which falls below $1,000 have been included, in the case of the former, under the respective headings Miscellaneous, Local or Miscellaneous Foreign produce, and in the case of the latter under the general heading Miscellaneous. The Miscellaneous Foreign Table also includes the values of articles unenumerated in the Customs returns except under such general heading as Sundries or Miscellaneous, and further includes the values of articles imported for Government use of which mention is made below. In the comparative tables I have given prominence to those articles detailed in your circular above referred to, and some of which did not appear in the comparative tables embodied in my last year's report. This occurs, however, only in the case of the Export Table, as for instance Tobacco, wax, dried fish etc. For purposes of comparison therefore I have given the export figures of these articles as appearing in the returns for 1873, and consequently the figures under the heading Export Miscellaneous given in the body of my report for 1873 necessarily undergo some slight reduction, for it was under this heading that those articles were included last year, which for the sake

* The higher nobility.
† Lower nobility.
‡ Farmers and merchants.

* The meaning of this is that the higher nobles, now too far raised above the masses to be claimed as brethren, will then become such.

Original from UNIVERSITY OF CALIFORNIA

of comparison are now distinctly enumerated. The sum total of the export figures for 1873 is of course in no way altered. I proceed to compare the trade of the past year 1874 with that of 1873. The figures for 1874 show as follows.

Imports	$16,716,298
Exports	12,578,573
Total	$29,294,871

being a decrease of $5,336,105 on the trade of 1873. The following are comparative tables for the two years :—

	1874.	1873.
Imports	$16,716,298	19,535,758
Exports	12,578,573	15,095,218
Totals	$29,294,871	34,630,976

or to particularize.

IMPORTS.

	1874.	1873.
Cotton manufactures	$7,092,252	6,913,961
Woollen do.	1,210,824	2,725,917
Mixed Cotton and Woollen do.	884,121	2,425,867
Metals	742,039	570,145
Arms and Ammunition	16,342	210,408
Miscellaneous foreign	4,069,790	4 514,698
Miscellaneous local...	2,700,930	2,174,762
Totals	$16,716,298	19,535,758

EXPORTS.

	1874.	1873.
Silk, raw	$5,295,190	7,050,656
Silk-worm egg cards	731,275	3,032,360
Tea	4,843,357	3,839,941
Copper	265,378	206,955
Cocoons	242,862	243,299
Lacquer, ware	164,955	124,738
Tobacco	31,660	60,840
Wax	2,579	1,920
Camphor	—	1,079
Coal	14,870	8,780

Rice	—	—
Miscellaneous	793,251	927,256
Totals	$12,578,573	15,095,218

In Imports.	$
Cotton manufactures exhibited an increase of...	178,291
Woollen „ „ a decrease of...	1,515,093
Mixed Cotton and Woollens a decrease of...	1,541,746
Arms and Ammunition ... a decrease of...	194,066
Metals ... ...an increase of...	171,894
Miscellaneous foreign ... ... a decrease of...	444,908
Miscellaneous local ... ...an increase of...	526,168

In Exports.	$
Silk exhibits a decrease of	1,755,466
Silk-worm egg, cards a decrease of	2,301,085
Tea an increase of	1,503,416
Copper an increase of	58,423
Cocoons a decrease of	437
Tobacco a decrease of	29,180
Coal an increase of	6,090
Dried fish an increase of	95,802
Miscellaneous a decrease of	134,005

The above figures show a diminution in the Import Trade for 1874 of $2,819,460, as compared with 1873, the Export Trade of the past year also falling below that of 1873 by $2,516,645. Viewing however the fact that the importation during the last two years of most goods, especially Woollens, has been largely in excess of the requirements of the port, I am not surprised at the marked decrease exhibited. In my summary for 1873 I drew attention to the very large importation of Cotton and Woollen Mixture, Flannel, and Cloth during 1872 which had considerably fallen off in the period then under review, and I find now that in these three articles alone, the decrease is $2,688,670, as will be seen by the following summary.

	1874.	1873.
Woollen and Cotton Mixtures	$592,001	2,172,694
Flannel	22,885	180,130
Cloth	86,668	1,037,400
Totals	$701,554	$3,390,224

Even with this diminished import I am informed that stocks of Cloth are still considerable and are almost unsaleable even at the ruinous price of 30 to 50 per cent. discount off the laid down cost here.

Shirtings show an increase of $540,794 and *T-Cloths* which did not appear separately in last year's Report figure to the amount of $93,479. This increase is to be accounted for by the low rates ruling in China which allowed these goods to be imported at times from thence with some little profit. The trade in this staple has, however, not been on the whole remunerative. *Cotton Yarn* shews a considerable increase, the quantity imported being over 16,000 peculs, or nearly 5,400 bales, in excess of last year. The low value in the home market has enabled this staple to be laid down at a much less cost than the previous year, and this fact coupled with a larger demand for a lower quality than has usually been imported has no doubt led to an increased consumption. Seeing how cheaply yarn can be worked up into fabrics exactly suitable to Japanese requirements, the trade must, I think be a gradually increasing one, so long as prices in the home market keep at a fairly low level. The business in cotton yarn has, I am led to suppose, shown on the whole a fairly profitable result. *Taffachelas* show a very small increase. This material is almost a fac-simile though considerably less durable, of a native manufacture. Its comparatively large importation some years ago was probably owing to the fact of the native manufacture being abandoned owing to the scarcity of cotton. The manufacture has now been resumed in the country, inferior foreign yarn being used instead of native grown cotton, and the gradual falling off in the importation of Taffachelas is thus to be accounted for. *Chintzes, Velvets,* and *Cambrics* show a decreased import, but this was the natural result of large importations in 1873. The variation in other articles is too small to call for any particular notice, with the exception of *Cotton singlets* and *drawers* which figured in 1873 to the amount of $508,146 against $169,202 in 1874. This was one of the many articles imported for the use of Japanese in the expectation of their adopting on a large scale western ideas as regards clothing. *Raw Cotton* which figured last year under the heading Cotton manufactures I have this year placed under its proper heading.

Miscellaneous local.—The import in 1873 amounted to $123,514 in 1874 to $311,496, a marked increase attributable, I believe, to the low prices ruling in China.

Woollens.—The statistics under this heading call for but little comment, and I see no reason to alter the opinion expressed last year that Japanese are not rich enough to adopt generally the more expensive woollen fabrics at such prices as would prove remunerative to foreigners. It will be noticed that the trade in *Mousseline de laine* (chiefly from France) keeps very steady. *Blankets* shew a falling off, the Import in 1873 amounting to $287,899 against $52,296 in 1874. This can only be accounted for from the fact of large imports in previous years having rendered the trade unprofitable, although, owing to the requirements for army purposes, better prices were realized at one time.

Metals.—The trade in these shows a slight increase.

Arms and Ammunition.—The import has dwindled down to the insignificant amount of $16,342.

Under the heading *Miscellaneous Foreign* there is a falling off of $444,908, and considering the losses that have been made on the class of goods coming under this denomination such falling off need not be a matter of surprise. I would draw attention, however to a few of the articles in this list such as, dyes, chemicals etc. and the uses to which they are put by Japanese, for the trade in these is said to be a growing one and to be fairly remunerative. *Potash.* This article is used in the manufacture of soap and glass and also in dyeing and bleaching works. A glass manufactory I believe exists in Yedo and is under foreign supervision. The import of potash amounted in 1873 to $4,097, in 1874 to $11,599. *Prussian Blue,* import in 1873 valued at $9,593, in 1874 at $4,452 is almost exclusively used for dyeing silk and cotton goods. *Dye Powders,* import in 1873 valued at $172,419, in 1874 at $67,501. Under this heading are probably meant

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

aniline dyes, derivatives from coal tar. Some of these are very high in price and are used by Japanese in dyeing silk piece goods. The price varies from $4 to $10 for Blue and for other colors and shades from $14 to $40. per catty. Preparations of indigo would also probably be included under this denomination. Powdered Indigo is used for dyeing silk and cotton goods the popular blue and averages about $40 per picul. *Quicksilver* is used in gold and silver refining and coining, as well as in the manufacture of mercurial preparations for medicinal purposes. The import of this in 1873 figured at $2,425, in 1874 at $10,344.

Drugs and Chemicals.—The trade in these has been very large during the past year, and one of value judging from the number of Japanese merchants engaged in it. Under this heading would be included musk, cinnabar, animals' horns, alum, and herbs of all kinds. To enumerate the drugs and chemicals of European manufacture or produce brought into this country would take up too much space, but the following are a few of the leading articles. *Iodide of Potassium* is very largely imported, something like 20,000 lbs. being brought into the country annually at an average price of $4 per lbs. *Quinine*: About 60,000 ozs. valued at $2 per oz. are imported annually. The quantity so imported is chiefly of French make. The many preparations from mercury, such as calomel etc. extracts of various kinds now in use amongst European nations, herbs, seeds, roots, leaves, barks, and bulky chemicals such as sodas, borax, ammonia, magnesia, chloride of lime, and corrosive acids are largely consumed by manufacturers and the medical profession.

Articles on Government account, $1,259,115. The Custom House Returns having exhibited these under a separate return I have simply taken the sum total, for, apart from the labour involved, there was little to gain by enumerating each of the articles and importing them article by article into the Import tables. They figure, as before stated, under the heading Miscellaneous Foreign, and consist for the most part of machinery, scientific instruments etc., the name of the department under which the articles are set in the return given by the Custom House suggesting their nature. The Railway Department figures for the largest amount, namely $593,931. Other items in the Import Tables call for no comment.

Reviewing the whole Import Trade for the past year it is difficult to arrive at a very correct conclusion as to whether it has been profitable or the reverse. There are many complaints, but at the same time there is good reason for supposing that those merchants who have managed their business prudently and avoided articles involving too much risk have, at any rate on their later ventures, certainly realized a small profit. Foreign merchants in Japan are, I think, at some disadvantage, at least so do many of them complain, in not having a system of drawbacks of duty on goods re-exported, as is the case in China, and are thus prevented from taking advantage of any rise in other Eastern markets, the payments of double duties being a burden too heavy for any goods to bear.

I proceed to review the business done in the staple articles of export.

Silk.—In 1874 the export of this staple amounted to 9,775 piculs 73 catties, valued at $5,295,190, against 11,869 piculs 48 catties, valued at $7,050,656, exported in 1873, a decrease of 2,093 piculs in quantity and of $1,756,466 in value. January 1874 opened with a dull market, the prices established in December 1873 no longer being compatible with the adverse news coming forward from Europe. A decline began early in February and continued until the middle of March, when a fall of about $40 per picul on the opening rates in January was established. Consequent on more encouraging advices from home a reaction took place and a large business was done which caused an advance in prices of about $20 to $30 per picul, the class known as Oshiu Silks being especially in demand. Shipments to the end of March from the 1st of January were about 3,370 bales. The improvement at home, however, being of short duration business here became much curtailed, and though Oshiu silk continued in fair request Hanks in general were neglected. By the end of April, prices had receded to within $10 of the lowest point reached in March. All through May and June, business was of the most limited character and prices further suffered a decline of $40 to 50. At the end of June, the close of the season dealers were offering mixed parcels of Maebashi silk at $425 to $475 per picul, equal to 16s. 6d. and 18s. 3d. per pound, without meeting however any attention from buyers. The export from the 1st of January to the 30th of June, reached about 5,132 bales. On the 24th of June new silk began to arrive in small lots, buyers were very cautious and the first purchases were made at the rate of $400 to $430 per picul, equal to 15s. 11d. to 17s. per lb. for mixed parcels. Not more than 50 bales were settled at these opening rates when shippers showed some eagerness to operate and prices were immediately raised to $450 and $465, for the same quality, which were further forced up to $480 and $490 by the middle of July. A serious defect now became apparent in Hank silks and generally a great want of cleanness in the new season's silks, which cannot but act prejudicially to the interests of this country and threatens shippers with serious losses. Late advices show that Japan Hank silk enter less and less into consumption in Europe. Manufactures who formerly made use of these largely are now discarding them in favor of medium and low Italian silk, which are abundant, obtainable at low cost, and are not so defective in cleanness as Japan silks. On the 1st of August prices stood as follows:—

Hanks good	No. 2	$510 to $530=19s. 5d. to 20s. 2d.	℔ lb
„	„ No. 2½	$485 to $500=18s. 7d. to 19s. 1d.	„
Medium	No. 3	$450 to $470=17s. 3d. to 18s. 0d.	„

but Japanese were reluctant sellers and buyers now showed little disposition to continue business at existing rates. The market then gave way slightly and buying became more general, which checked the downward tendency and left prices without any perceptible alteration on those given above, only a better class of Maebashi was on offer, Nos. 1 and 2 for which $535 to $550 equal to 20s. 3d. to 20s. 10d. was paid. Early in September the market was assisted by more favourable telegraphic advices from Europe, which induced a large business and a rise in prices of $10 to $20 per picul. This active demand continuing throughout September caused another advance of $15 to $20 in October at which large purchases were effected though buying was done by a few shippers only. Dealers now held out for still higher rates and buyers were forced to withdraw from the market. Settlements to the end of October, were about 5,300 bales of New Silk. The action of holders having restricted business, prices now began to give way and continued to do so until the end of the year when prices had receded to those current on the 1st of August. Shipments from 1st of July to the end of December amounted to 6,853 bales, making the total shipment for the year 11,935 bales or according to Custom House Returns 11,869 piculs. Several large holders refused to meet the decline mentioned above and have deposited their Silk with foreigners under advances. Disastrous as the year 1873 was to Silk shippers, scarcely less so can have been the year under review, particularly the first half. It is true that the cost of the new silk was apparently moderate, but with the exception of brief intervals of revival in Europe that have only served to mislead, the tendency of prices there has been continually downwards and the depreciation in value of Japan Silk in Europe at the end of the year is no less than 25 per cent. There has been a marked deficiency of coarse Oshiu, Hamatsuki and Echizen sorts, native consumption having greatly increased and large purchases of the above are made by natives in the market.

Silk-worm-Egg Cards.—The export of this commodity shews a marked decrease in value. The figures for 1874 are 1,334,625 cards valued at $73,275 against 1,409,537 cards valued at $3,032,360 exported in 1873, decrease of $2,301,085. As was the case in 1873, cards were retained in the interior until a late period of the season. The first arrivals did not make their appearance on the market until the middle of September, but shortly afterwards the whole quantity available for export was poured into the market. Before any purchases were effected it was already well known to buyers that a very large quantity of seed, estimated at 2,470,000 cards, had been produced, being much in excess of the requirements of Italy and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

France. From this quantity had to be deducted 600,000 cards required for native use which left 1,800,000 cards available for export. Italian buyers arrived here with very reduced orders compared with former years, consequent upon the favorable result given by reproduction seed in Italy, and orders from France had almost altogether ceased. Finding they held the market in their own hands, only very low offers were made, and first purchases commenced at the very low figure of 50 cents for the description of card known as Shinshius. The quality known as Oshiu Yonezawa, (the producing district) for which the highest prices are usually paid were held more firmly by Japanese for $1.50, but buyers still held themselves in reserve and refused to operate. Prices then fell to 25 to 55 cents, with the exception of favorite marks of Shiusliiu and Yonezawa for which 60 cents to $1 were paid. By the 10th of October settlements only amounted to 400,000 cards whilst the unsold stock was no less than 1,050,000 cards. Buyers still kept aloof, and the Japanese, seeing the hopeless position in which they were placed, resolved to destroy a portion of their stock with the view of making the remainder saleable. In this measure they were assisted by some of the leading native silkmen and bankers who agreed to pay from 15 to 22 cents for all cards up to a certain quantity brought to them for destruction. This was accomplished by burning which commenced on the 9th of October and continued almost daily until 400,000 cards had been destroyed. Much as such a proceeding may be deprecated from our point of view, the Japanese were in great straits, and the result shows that although their action had not the desired effect of raising prices for any length of time, it certainly caused business to be resumed, for during the subsequent fortnight 200,000, cards were settled at from 40 to 60 cent. Prices then again weakened and fell in November to 25 to 35 cents. Such a vast depreciation in the value of this article of export, let alone Silk, may well account for the depressed state of our Import Trade at present. The fact of the export being nearly equal to that of 1873 notwithstanding the scarcity of orders is to be accounted for. The low prices having induced speculation but it is known that large quantities so bought remain unsaleable in Italy and France. The production of Silk-worm eggs under the stimulus for export has, I am inclined to think, affected the production of raw Silk, although it is not apparent in statistics, as the export for several years past has not varied much from 14,000 Bales. It is, I believe, now generally admitted that there is much more ground under mulberry cultivation than formerly, and though this extension is perhaps entirely due to the export demand for seed, still, in most instances, a Japanese who makes the production of cards his chief industry will also to a small extent occupy himself with the reeling of Silk. This is evinced from the fact that hitherto non-silk producing districts are now sending Silk in small quantities to this market. The production should therefore increase instead of remaining stationary. Shinshiu, which has furnished the largest quantity of seed for export, shows the greatest falling off in the quality of its Silk, most strikingly apparent this season, and the same can be said of Maibashi. The good Silk of Shimonita and Tomioka of three years ago no longer exists. The general explanation given by the natives for the inferiority of this year's hank Silk when questioned on that point is "poor and light cocoons." Oshiu, which exports less Silk worm-eggs, still yields good silk and remains in favor in Europe while hanks are neglected. There is no reason to think that the low prices have caused the peasants to be careless in the matter of reeling, for the great demand has been and still is for clean Silk, and such has reached very full values when offered.

Tea.—Exported in 1874, 16,027,869 lbs. valued at $4,843,357, against 11,339,466 lbs. valued at $3,339,941 exported in 1873, increase of $1,503,416. The tea trade for the year 1874 opened with great activity and unprecedentedly early. The activity was due in a great measure to the telegraphic reports which were received at the close of December announcing the possibility of a reimposition of a duty of 15 cents per pound in the United States. This caused heavy speculative purchases under the impression that Teas invoiced and certified to at the United States Consulate here prior to the 31st of March would be exempt from duty. Musters of the news crop were exhibited at the close of April. In May the tea market was in full activity at apparently very satisfactory prices to producers, and teas were hurried forward by steamer to San Francisco, to New York viâ San Francisco, and other markets in the states, as fast as freight accommodation could be procured. This state of affairs continued until August when the export dating from January 1st had attained to fully 10,000,000 lbs., shewing a large increase as compared with shipments during the same period in 1873. This excess naturally affected the American market and buyers restricted operations, trade going on quietly for some time, but, on the receipt of better news by wire, activity returned and the export from August to December amounted to close on 6,800,000 lbs. The following are the figures derived from the United States statement of invoices registered at the American Consulate.

	lbs.
To San Francisco and Pacific Ports ...	4,411,242
Chicago and Western State Ports ...	630,000
New York, Boston, Philadelphia and Eastern States	... 11,975,074
Making a total export from Yokohama for the year 1874 of ...	... 17,016,316 lb.

The declared value of this taking a moderate rate, say $35 per picul for the natural leaf and adding 20 per cent. as charges incurred, would be $5,107,800. While the Custom House Returns put the export at 16,027,869 lbs. valued at $4,843,357. I obtain from a reliable source the figures as above, namely 17,016,316 lbs. valued at $5,107,800, the Chamber of Commerce return differing again from both in putting the export at 17,626,088 lbs. valued at $5,133,098. The discrepancies are, however, not so great as to characterize the returns given by the Custom House as unreliable. The general quality of the crop shows a marked improvement on former years. The very short period that elapses between picking the leaves and their being brought into the market ensures their arrival in a very satisfactory condition to undergo the process of refiring and packing for America. The use of coloring matter still obtains, but is much modified. The general result of the tea trade for the past year has been most satisfactory to the Japanese especially to the growers. Some tea merchants (Japanese) complain they are losers, having purchased the natural leaf at too high a price in the interior; but on the whole the country must have largely benefited by this staple. The area of Tea Plantations is rapidly increasing and the young shrubs planted three or four years ago are now coming on to full bearing. The total of this year's (1875) export is likely to show a marked increase on that of 1874.

Lacquer Ware.—The export of this, though not attaining to any very high figure, is a somewhat prominent feature in the export list after silk, tea, cocoons, copper, etc. In 1874 the value of the export was $164,955 as compared with $124,738 in 1873. The lacquer ware brought for export is as a rule that description into which a preparation of gold powder enters and known to Japanese as *maki-ye*, but as many articles that are of daily household use in Japan are of plain lacquered ware that is without ornament of any kind, the material of wood with a coating of plain lacquer or varnish, the industry, whether looked at as affecting the export trade or regarded as a prominent industry in the country and one giving employment to many hands, cannot fail to recommend itself to the attention of those interested in Japan and its productions. The ground work of lacquer consists in the sap of the *urushi* tree, the fruit of which produces the vegetable wax. Some notes on this were given in my report for last year. The Japanese distinguish between the male and female tree, the former bearing no fruit. The tree attains to a height of from 36 to 42 feet. In those parts of the country where the trade in lacquer, (I refer to the crude varnish and not the manufactured ware) is of any importance, the varnish is taken from the tree when it has attained to an age of from four to eight years. On attaining the latter full age the tree is cut down. Where the tree is cultivated for the sake of the wax, the sap is not extracted, and in Aidzu and Yonezawa

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

where the trees are specially reserved for wax they will be seen to attain to no inconsiderable height. The *urushi* (lacquer varnish tree) is cultivated in two ways either by sowings or by cuttings. In following the former the fruit of the tree is lightly pounded in a mortar so as to remove the rind from the seed These are then mixed up with wood ashes moistened with water, afterwards put into straw bags over which liquid manure is poured, and the bags are then left to soak in water until the close of winter. Just before the commencement of spring, on a day duly noted in the Japanese farmer's almanac, the seed is sown broadcast over the ground and slightly covered with earth. In respect to slips or cuttings, they are planted out in rows and thinned as soon as a leaf or two appears. Sowings are however preferred, as it is found very difficult to rear from cuttings. The amount of varnish obtainable from any one tree depends on the vigour of the tree and the quality of the soil. A good vigorous *urushi* will after four or five years growth have a stem of about six inches in diameter. The sap is generally drawn off on the tree attaining its fifth or sixth year of growth and this is done in the following manner. A lateral incision is made with a knife in the trunk of the tree and four days later the incision so made is punctured. The sap that exudes is then carefully removed with a small spatula and put into a wooden jar. One incision is made at a time, commencing from the root upwards, and the trees are taken in turn. This is continued until each tree exhibits a series of cuts all up the trunk. The tree is afterwards felled. The drawing of the sap is begun in the middle of summer and continues to about the month of November. The very first and last sap drawn is not considered of good quality. The best is that which is drawn off late in summer. From spring to summer the sap ascends in the tree and afterwards descends. The expert is therefore guided by this fact as to where the incision should be made, when the sap is descending in the trunk it is considered inferior. The bark of the larger sized trees being somewhat thick, the ordinary instrument in use sometimes fails to make the proper incision, in which case the bark is first removed prior to making the incision. The *Yama urushi* (wild varnish tree) grows plentifully, and in leaf and flower closely resembles the *urushi*, but it meets with little attention as its yield of sap is very small. There is also a species known as the *Tsuta urushi* or Ivy lacquer tree which attaches itself to trees after the fashion of ivy, but it yields even less sap than the wild lacquer tree. Lacquer is obtained largely in the eastern portion of the Empire, but to no great extent in the Western provinces. In the province of Echizen, at Yoshinô in Yamato, Aidzu, Yonezawa, Saijô and Yamagata in Dewa, Nambu, and Fukuoka in Oshiu all send lacquer of excellent quality, but Echizen has always held and continues to hold the foremost rank for this product as a staple, although the choicest quality comes from Yoshinô in Yamato, and in any part of the Empire where lacquer is obtainable the labour of Echizen men is said to be at a premium owing to their skill in extracting the sap. The market price of lacquer varnish is in Yokohama about $100 per picul (133⅓ lbs.) The wood of the *urushi* tree being exceptionally good it is applied to many uses, and notably to the making of floats for fishing nets.

Having thus giving a brief description of the manner in which the lacquer varnish is obtained, I proceed to a few remarks on the preparation of lacquer ware.

Japanese give the year 724 (A.D.) as the date when the art of lacquering was first discovered, but those amongst Japanese who have given attention to the subject fix the date at the year 889 or 900 (A.D.) It would appear to have attained to some perfection in the year 1290, for the name of a distinguished painter in lacquer who lived at the time is still handed down as the founder of a particular school of art in lacquer painting. From that time it developed until it attained to its present perfection. The following is a brief general description of the mode in which designs in lacquer are worked.

The first thing is to trace out on the thinnest of paper the required pattern or design, and the tracing is then gone over with a composition of lacquer varnish or vermilion, afterwards laid on whatever it is proposed to impart the design to, such as the facing of a cabinet or other piece of work and well rubbed over with a bamboo spatula. On the removal of the paper the material below will be seen to have received the outline. This is now gone over with a particular kind of soft lacquer varnish. When the industry is pursued in hot weather the varnish speedily dries, and consequently where the pattern is a good deal involved, such as one representing bunches of flowers or flocks of birds, a small portion only of the pattern is executed at one time, and the gold powder which enters largely into most of the lacquer ware for the foreign market is applied to each part as it is being executed. For this a large and very soft brush is used, and by its aid the gold powder is well rubbed in with the lacquer or varnish. The work is then left to dry for the space of about twenty-four hours, after which the pattern is lightly rubbed over with charcoal made from a particular wood, this process securing evenness of surface. The work is then rubbed with polishing powder and afterwards carefully wiped. The above description simply applies to the mere outlining on any given surface or ground work of figures of men, women, birds, flowers, etc. There still remains a good deal of finishing work, such as the tracing of leaves on trees, the petals of flowers, the wings of birds etc., and so on according to the particular subject in hand. Into all of these gold powder largely enters, the working in of which requires a light brush and skilful hand, so as to ensure an even mixture of the powder and varnish. After this has well dried, a particular kind of lacquer varnish known as *Yoshinô urushi* is rubbed in, and the whole then polished with horn dust. The polishing process is done with the finger and is continued until the gold glitter shows out well. A beautiful polish is said to be thus obtained. Briefly then, the designing on lacquer ware is done thus. Supposing the subject to be a flower, it is traced out on paper and imparted to the ground work of wood. Gold powder is then sprinkled over the work from out of a bamboo tube, well rubbed in with a brush, and then allowed to dry, afterwards polished and a coating of varnish applied. This is repeated several times until the work assumes a rust color. The veins or tracery of the leaves are now marked out with lacquer varnish. Before this dries, gold powder is again sprinkled over and then well rubbed in with a brush. When the surface has dried it is dubbed over with a piece of charcoal so as to tone down any irregularities. After this it is polished when the flower will appear in proper form.

Railway.—Yokohama to Yedo, 18 miles.

The Receipts for 1874 from passenger traffic were *yen* 405,421.50, say Mexican dollars $401,407, the number of passengers conveyed being 1,592,314. The goods traffic gives a return for the same period of *yen* 35,091, say, Mexican dollars $34,941, making with the amount derived from passengers a sum total of *yen* 440,512.30, equal to Mexican dollars $436,150. The following is a comparative statement of receipts for the two years 1873 and 1874, but it should be remembered that the goods traffic on the line only commenced towards the close of 1873.

	No. of passengers.	Receipts.	Goods.	Total.
1873.....	1,435,656	Yen 430,931	9,254	440,185
1874.....	1,592,314	„ 405,421	35,091	440,512

Exhibiting an increase of 156,658 in the number of passengers but a decrease of 25,510 *yen* in the receipts under this heading, attributable to a reduction of fares, the general return giving an increase of *yen* 327 in the total receipts. The line continues in good order, is admirably worked, and its earnings should be such as to afford satisfaction to the promoters of and to those who continue to watch over the undertaking.

Agriculture.—The export of rice, permitted by a Government notification dated July 15th 1873, was prohibited on the 1st of August 1874, but this prohibition has since been withdrawn by a notification taking effect from the 1st April last.

A valuable communication recently made to one of the local papers* here and headed "Agricultural progress in Japan" gives some very interesting information on the subject of which it treats, and from it I have gleaned a few of the following particulars. The annual rice produce of Japan is estimated at 30,000,000 *kokus* (a *koku* is

* Vide *Japan Weekly Mail*, 14th and 21st November, 1874.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

equal to 250 catties or 333 lbs.), 50 bushels to the acre is considered an average crop. Nine millions (9,000,000) of acres are said to be under tillage in the Empire supporting about 3½ souls to the acre. The Government has turned its attention to stock-farming, and is endeavouring to ascertain with experienced foreign aid what are the localities best adapted for stock farms and cattle runs. Particular enquiries, too, have been instituted in respect to soil and grasses. Experiments have proved that red and white clover, , and the rye family of grasses thrive wonderfully in Japan, and this, coupled with the statement that there is in the country sufficient pasture land to maintain 28,000,000 sheep, producing wool on an average of 5 lbs. per fleece, would apparently justify the Government in the attention given to the subject and to the (it is to be hoped) judicious outlay of money to procure information either by observation or experiment on these important subjects. Amongst the most interesting experiments are those that have been made at the farms of the colonization department in Yezo. At one of these forty acres of ground have been laid out with fruit trees and flowers. At a second, one hundred and forty acres have been planted with fruit trees, cereal crops, and grasses, and a third is used exclusively for pasture land, its area being about 75 acres. Experiments made on the third mentioned farm appear to have been exceptionally successful, more particularly with the Italian Rye-grass seed. This success cannot but be highly satisfactory to those interested in it, for if sheep rearing is to attain to any importance, grasses will have to be largely imported owing to the inferior quality of the natural herbage. Fruit trees and shrub fruits have thriven wonderfully on the first and second farms, both from seed and by grafting. The flavour of the fruit trees is pronounced as excellent, and it is said that the most promising trees are the seedlings grafted on indigenous stock.

Land (Building). The filling in of the Swamp under article 7 of the Convention of December 29th 1866, having been completed, and the site marked out in lots, the local Japanese authorities notfied that 40 out of the 77 lots appearing on the plan would be sold at public auction on the 1st of July 1874, at an upset price of $5.25 per *tsubo* (six feet square) of ground. The drainage works of the locality in its entirety being incomplete, those in connection with the 40 lots only proposed to be sold having been completed, the Consuls felt it incumbent on them to protest against the sale of any portion of the land so long as the entire drainage works were left unfinished. Consequent on this protest the notice of sale was withdrawn and the land remains unsold up to the present. There is, however, just now no great demand for building lots, and the Government will doubtless best consult its own interests in not offering any fresh land for sale, assuming of course that all necessary works in connection with the land, such as roads, drains etc. are complete, until assured that there is likely to be some competition amongst purchasers.

Public Gardens.—An opinion generally prevailing that the time had come when the Japanese Government might be called upon to lay out the site reserved for Public Gardens, in accordance with Article I. of the Convention dated the 29th of December 1866, and it being currently reported that the local authorities had received instruction to proceed with the work, a communication was addressed by the Consuls to the chief local Japanese official on the 25th of February 1874. In this his attention was drawn to the lapse of time since the Convention had been signed, and he was requested to inform the Consuls whether the laying out of the gardens was to be proceeded with, if so, on what plan; further, what arrangements were contemplated for the maintenance of the gardens when completed. A reply was received on the 6th of March to the effect that orders had been received to prepare plans and specifications and that more definite information could not at the moment be given. On the 13th of April a further communication was received, stating that instructions had been issued to commence the work of laying out at once on a plan agreed to between the Government and the Foreign Representatives. On the 14th of September it was notified that the gardens were approaching completion, but the planting out of trees and shrubs is still being carried on to this date. I understand that the Government authorized an expenditure of $12,500, of which amount $9,500 had been disbursed up to the close of November, although many of the trees contracted for and included in the $9,500 had not then been delivered. The balance of $3,000 should go a long way towards beautifying the gardens and relieving them of their present somewhat monotonous aspect. The cost of maintenance has been roughly estimated at $100 per mensem, of which sum one moiety would fall upon the foreign community, the other upon the Japanese town. When the time comes for settling how this sum is to be raised, it will be felt, I think, that the only way to obtain it will be by voluntary contribution, and I trust that some interest will be exhibited by the public in the maintenance of these gardens, for if their necessity is not felt to any great degree at the present moment, the forethought that secured a large open space for a public garden in the midst of what is likely to become a somewhat thickly inhabited quarter, will doubtless be duly appreciated.

Kerosene Oil, (storage).—On the 6th of March 1873, a despatch was received by the Consuls from the local Japanese Authorities proposing a site for the erection of storehouses in which to store Kerosene oil (the value of the import of which into Yokohama in 1874 amounted to $105,798; quantity 15,820 piculs. The communication intimated that a committee of Japanese merchants would be appointed to transact all business relating to the storage of oil, and that the charges should not exceed the lowest rates ruling for storage in foreign owned godowns. Further it was asked whether the storage on these proposed premises of oil and goods of an inflammable nature generally could be made compulsory on the foreign community. The proposal was communicated by the Consuls to the Chairman of the Chamber of Commerce, and the advice of the Chamber was solicited on this important matter. In due course the Chamber informed the Consuls that it considered the proposed arrangement a very necessary one, and that the site was well suited, provided there was good water communication with the foreign settlement and native town. It was suggested that the buildings should be as fire-proof and substantial as it was possible to make them. In a subsequent letter on the same subject the Chamber urged that the control of the store houses should be under the Government and not be given in to the hands of a private company, and that separate storage should be provided for oil stored by foreigners apart from that stored by Japanese. The Chamber fixed two cents of a Mexican dollar per case of ten gallons as a fair rate of charge per month. Towards the close of June 1873 the arrival in port of a quantity (some 20,000 gallons of Kerosene) and the storage of a considerable portion of it in the immediate neighbourhood of the foreign settlement, called forth a strong remonstrance from the different Fire Insurance Agencies, and due representations of the urgency of the case having been made, temporary warehouses remote from the settlement were provided, the question of the permanent premises having up till this remained in abeyance, owing partly to a reluctance on the side of the Japanese Authorities to meet the wishes of the Consuls in respect to the inadvisability of placing the control of the warehouses in the hands of any private company, and partly to a difference of opinion as to the mode in which the buildings should be constructed. On the 31st of August, 1874, the Consuls were notified that a warehouse had been constructed on the site originally proposed, and at the same time a draft of regulations applicable to the storage of Kerosene and other inflammables was submitted for consideration. These having been carefully gone through, certain amendments were suggested which it was understood would be accepted. Matters, however, came to a standstill owing to the accommodation (one storehouse only) being insufficient, and this too being considered a bad risk by the insurance offices, from the absence of any outside facing of tiles, bricks, or stone. In the matter of accommodation I should judge that the single warehouse would not hold more than 10,000 gallons, whereas space for certainly more than double that quantity is required. It is manifest that the diplomatic representatives cannot be urged to make the storage of Kerosene or other in-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

flammables on any particular spot compulsory, so long as the storage accommodation so provided is obviously insufficient. Additional warehouses on the same premises are now, however, in course of erection, and these, together with the one already erected, will be so constructed as to make them good risks. I trust therefore that before long the storage of Kerosene will be under proper regulations.

Gas.—In my Trade Report for the year 1872 I noticed the lighting of the native town with gas as an important feature in the record of the progress of this port, and I stated that arrangements for lighting the foreign settlement were approaching completion. In my report for the year 1873 I was silent on the subject of gas, for, unfortunately, our streets remained unlit until the close of 1874. Now that gas has been introduced into the foreign settlement a brief record of the circumstances connected with its introduction will not be out of place.

The lighting of the streets of the foreign settlement engaged the attention of some of our residents as far back as the close of 1872, and even previous to that, but from one cause or another any scheme proposed fell through notably because of differences in respect to mode of assessment. At a public meeting held on the 9th of January 1873 certain resolutions were submitted and passed. These were notably that in the absence of any other practicable scheme the community should take the expense of lighting upon themselves, that such expense would be in the nature of a voluntary tax, the tax to be paid by the tenants of property, and that the assessment for this tax should be made on the value of rental. A committee was then appointed to carry out the resolutions passed at the meeting which lost no time in communicating with Mr. Takashima Kaemon, the director of the gas comapany, but at the outset of their labours they met with a serious disappointment in respect to the lamp posts, the providing of which free of charge it was understood had been promised by the Government. The authorities, however, ultimately declined to carry out any such promise, alleging, I believe, that it had never been made. Under these circumstances the committee had to fall back upon the written undertaking of the director of the company to supply the posts on the understanding that a rental of one per cent per month should be paid, in addition to the price to be paid for the gas; but a demand of one and a half per cent per month, together with a guarantee of payment of a sum for lighting the streets, without regard to what could be collected from the community, brought matters to a stand still. Subsequently, however, Mr. Takashima and the committee met, and, after some discussion, the former promised to communicate his views by letter. In a few days a letter was received, its purport being that payments should be made six months in advance, such payments to consist of one per cent per month interest on the price of the lamp posts, and $4.45 per month for the gas to be consumed by each lamp per mensem. The committee met this with a counter proposal, namely, to pay one per cent per month on the price of the lamp posts, and to pay for the gas every three months in advance at the rate of $4.45 per lamp per month. Mr. Takashima's reply to this was, however, of such a nature as to make the task of the committee hopeless for the time, and they so reported to the community. The next move however came from Mr. Takashima himself, who re-opened the question with the committee, and at length an agreement was come to on the 31st of October. By this it was proposed that all who were willing to sign should be considered liable only for the amount payable on the basis of the assessment, namely, two per cent per month on the rental value of premises. It was agreed that payments to consist of two items, namely 66 cents, interest for three months in advance at the rate of one per cent per month on the twenty-two Mexican dollars, the prime cost of each lamp, and $13.35, three month's payment in advance at the rate of $4.45 per month for the gas supplied to each lamp. Further, it was agreed between the parties, that if at any time during the term (one year) of the agreement the aggregate subscriptions should be reduced as much as ten per cent on the whole amount payable by the community, it would be at the option of Mr. Takasima, after consultation with the committee representing the community, to declare himself to be no longer bound by the terms of the agreement. On the 24th of December 1874 the streets of the foreign settlement were lit for the first time, and those gentlemen who had laboured in the matter had the satisfaction of witnessing the practical result of their work. The settlement is at present lit with 100 lamps.

Police.—Robberies have, I regret to say, occurred in the settlement during the past year to an unprecedented extent, and the apparent impunity with which they were committed induced the public to come forward and to make strong representations to the proper authorities. A memorial was drawn up and sent in to the Consuls on the 18th of September. It dealt with the defective police arrangements of the settlement, the robberies of daily occurrence and the failure to detect the perpetrators. The memorialists urged that the matter should be brought to the notice of the local Japanese Authorities with a view to the rectification of the grievance. That the community had good grounds for taking action may be judged from the fact alone that the Superintendent of police informed me on the same day that the memorial was signed that complaints in respect to twenty-two separate acts of robbery in the foreign settlement had been reported at the police station during the month of August, and that up to the 18th of September robberies were being reported at the rate of nearly two-a-day. On the 18th of September I had in company with the Chairman and Vice-chairman of the Chamber of Commerce waited upon the Kenrei, the chief local Japanese official, with the view of urging upon his attention the necessity of remedial measures, and I then learned some particulars about the Japanese police force which may appropriately be given here. The force for the protection of the foreign settlement consisted, I was informed, of about 200 men, for whose maintenance the central Government annually voted $20,000. Consequent on the necessity of increasing the pay of the force it had just been reduced to 180 men. As these had to be distributed over twenty-six beats, namely thirteen in the business quarter of the settlement and fourteen on the bluff, and as a fair deduction had to be made for officers, for men in hospital, and for those absent on leave, it appeared at once that the force was insufficient to meet the demands made upon it, or that the best was not made of the men at the disposal of the authorities. To report to the memorial. This was duly communicated to the Government and strongly supported by the Consuls. I should mention, too, that a public meeting was held by the residents at which a committee of five, each representing a different nationality, was appointed to communicate with the Consuls on the subject of the robberies and report further to the public. The gentlemen composing the committee subsequently met the Consuls by appointment. From them they learnt that every exertion was being made in conjunction with the Kenrei to check the robberies and to improve the police force. On the 2nd of October the Consuls had the satisfaction of learning that the number of beats had been increased by fifteen. This, joined with the promise made on their urgent demand that receivers of stolen property would be dealt with more sharply than had hitherto been the case, and the lighting of the settlement with gas, a somewhat long deferred matter, has contributed materially to lessen the number of robberies.

Shipping.—Under the heading British Shipping (general) the entries show an increase of 15 ships and 22,009 tons as compared with 1873 and the clearances an increase of 6 ships and 16,134 tons. Mail Steamers, British, exhibit a slight increase in the tonnage in both entries and clearances. American shipping, general, exhibits in the entries an increase of 3 ships and 3,189 tons, in the clearances an increase of 1 ship and 2,132 tons. The mail steamers (American) show a decrease in the entries of 16 vessels and 23,561 tons, and in the clearances a decrease of 18 vessels and 27,600 tons. French shipping (general) exhibits an increase in the entries of 1 vessel and 1,016 tons, in the clearances a decrease of 1 vessel and 637 tons. Mail steamers (French) show a decrease in the entries of 1 vessel and 1,530 tons, in the clearances an increase of 1 vessel and 667 tons. German shipping exhibits an increase, the entries being 35 against 29 in 1873, increase of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

6, and the tonnage 19,294 against 12,607 increase of 6,687 tons. The clearances are 2 vessels and 3,960 tons in excess of those in 1873. The figures in respect to other foreign shipping do not call for special comment.

To summarize:—The increase in the entries comparing 1874 with 1873 is 7 vessels and 6,386 tons; in the clearances there is a decrease of 14 vessels and 7,164 tons. The prospect of a rupture with the Chinese Government in consequence of the action taken by the Japanese Government against the savage tribes inhabiting the southern portion of the Island of Formosa induced the Japanese Government to make several purchases of foreign steamers during the summer of last year to be used as transports. In this work the vessels so purchased were employed for a short time, but, a peaceful solution of the difficulty having been arrived at, the greater number have since been utilized as mail and cargo steamers trading between this and the coast ports and to Shanghai under the management of a Japanese Company. The purchases under this heading amounted to $1,127,300. This business being an exceptional one and not forming a portion of the staple trade, I have not included these figures in the Import Statistics in the body of the Report, but they will doubtless come under your attention when framing the general summary of the year's trade. If embodied in the Yokohama Returns the decrease in the Trade of the Port as compared with 1873 will not be so marked.

I have the honor to be,
Sir,
Your most obedient, humble servant,
(Signed) RUSSELL ROBERTSON.

SIR HARRY S. PARKES, K. C. B.
&c., &c., &c.

MESHIYA.

"JŌSHI, SHOCHIU, NAKAKUMI, NIGORIZAKE, MESHI" is the legend inscribed upon her paper window, and, in troth, a goodly allowance of sack it looks for such a trifle of bread. "The cream of the cask, spirits, the middle of the brew, muddy wine, eatables!" An island of solids in an ocean of drinkables; liquors innumerable and something to eat. Something? Why there's anything, everything. Subtle old hostess! It is the meat which is plentiful and the drink which lacks. Are not those two tubs in the kitchen your whole store of potables, and have you not been known to send to the squint-eyed tapster round the corner when your liquor refused to run, tilt ye never so much? And, after all, what better could you do than treat your customers to the "*saké* of three virtues"? Doth it matter a cash whose brand is on the vessel, so that it holds that royal fluid which is warranted to house and clothe the drinker thereof, not to mention the effect upon his spirits? Well! well! good Madam, we will extend our clemency and take no further cognizance of the fib upon your window, admitting the plea that your house is small and that you prefer your cellar at a distance, where the heat of fires and the steams and smells of cooking do not hang around the casks and spoil the flavor of the wine:—but, hark ye! we like our "*san toku shu*" well warmed.

She's an honest, hard-working old body, is the eating-house woman, and a fat one withal, as becometh a purveyor. Was it not humorously said "Who drives fat oxen should himself be fat," and, if so, why not a dispenser of good things well cooked? What more genuine certificate of the excellence of her viands could you have than her plump person? What a deal of wordy advertisement it saves! She has but to stand in the door-way when her work is slack and shew herself. "Anything fit to eat in your house my good woman?" "Why look at me, sir!" and the hungry traveller enters at once. She's like a German sausage belted round the middle, and quivers when she moves. Her house is but a poor one—(we're all poor in our village)—though it is none the less popular on that account. You pass through the kitchen as you enter. On your left you see a long copper boiler, fantastically shaped and polished like a mirror. Behind this stands the Hostess engaged in her culinary duties, and on the shelf behind her hand, plates and trays and lacquered bowls, while in the window may be seen a goodly store of fish, flat fish, round fish, sprats, sardines and, now and then, a royal *tai*. Lying about here and there, in proportion as the day has been a busy or a slack one, may be noticed a number of little tables some ten or twelve inches high, covered with the remnants of a meal and waiting to be washed and put aside for further use by the waiting girl,—a daughter of our hostess (she's a widow, poor soul). On the right hand of the entrance is the best parlour. If you dine in this you pay a little extra. There is no furniture in the room, but furniture is not required. There is somewhat of an air of elegance about this apartment. The mats are good and clean, and the walls have been plastered with blue-colored cement, in which particles of white sand have been mixed and which glisten in a sunbeam. Not that many sunbeams find their way into the room though, for it is darkened and has its light pleasantly tempered by being made to pass through leafy shrubs, which are cunningly planted by the end window. A glass toy suspended from the ceiling and which tinkles in the breeze conveys the idea to a tired and dusty traveller that though outside the winds are still, and all nature gasps and pants for breath, an errant zephyr has found its way into the room, and has taken up its abode there. On the palm tree pillar of the alcove, a quaint and curiously-shaped vase encased in wicker work, hangs from a crooked nail from whence projects a bunch of purple iris, whilst upon the wall of the recess itself a picture scroll representing a cluster of islands in an azure sea, is stretched, at foot of which a lump of quartz is standing in a porcelain dish. The better kind of customers dine here, and, when their meal is over, not unfrequently stretch themselves upon the mats in slumber, for it is a drowsy room—a sleepy hollow—where the gloom and the tinkle of the glass and the hum of insects dancing up and down outside amongst the trees are conducive to repose.

The poorer folks are content to eat their meals in the room which faces the entrance, if room it can be called. It is merely a raised platform, matted, and to all intents and purposes a portion of the kitchen. Here, having washed their feet, if off a journey, and mounted by a stepping stone, they wait their turn to be served. Each guest has a separate table brought to him, having its little load of fish and soy and pickled radish and what not, to be followed by bowls of rice according to capacity, whose contents are seen to disappear with marvellous rapidity, washed down by copious floods of tea, and be sure a pair of new deal chopsticks, too, are not forgotten. These are wrapped up neatly in a sheet of paper, which does duty for a table-napkin when the feast is over. There are generally many customers in this portion of the eating-house. Horse-boys, farmers and such like, and, when the pilgrims are in season, crowds of the latter, coming or going from or to, it may be, Fuji or Chusenji. On such occasions it is a lively scene; such laughing and chatting and smoking of tiny pipes and drinking of tea, with a hissing through the teeth, as never was heard before, while the hostess, enveloped in clouds of steam and lightly clad, is working double tides.

Who knows but that the new *obi* which her daughter wears upon a holiday, and the clean mats upon the best parlor floor, not to mention the pointing of the roof, all of which phenomena were noticeable last autumn, may have been the natural result of the popularity of and consequent increase in the customers of the eating-house? She is supposed to have money, is our Hostess. Certain it is that a well-known little Barber—who knows everybody's business—has been heard to say that "if Mrs. Barber were dead there's nobody he'd "sooner take to fill her place than the eating-house woman, "and wouldn't he treat his friends then—that's all"!

A NIGHT ENTERTAINMENT IN KIYÔTO.

A stranger walking through the streets of Kiyôto will hardly fail to observe a notice put up at various street corners with the words "Dancing in Gionmachi."

Our party had been in Kiyôto only a day, and, as our stay was limited, we were naturally anxious to see all that we could in the short time at our disposal. So one evening after we had returned from our sight-seeing, having gone through the Exhibition and seen some of the principal sights in this charming and interesting city, albeit rather tired, we felt ready for something more. But what was there to be done? "Kiyôto by night!" suggested one of the party—"Let us "take a stroll through the town and see what there is to be "seen." The novelty of the proposal made it acceptable, and as "Kiyôto by night" was echoed by all, forth we sallied for a stroll through the city, and thus it fell out that we were tempted to look in at the "Dancing in Gionmachi,"

The performance thus advertised has obtained the official sanction of the Kiyôto-Fu, the principal authority of that office having attended at a preliminary rehearsal to decide upon the programme, and carefully to lay down the rules necessary for the guidance of the entertainment, in order that strict decorum and propriety should be observed. The performance, moreover, is under the management of a company and the number of *geisha* or dancing girls and musicians employed amounts altogether to over five hundred. Of this number, however, one hundred and fifty are always absent, some being on service in Kiyôto itself, and others having gone to Tokiô and other parts of the country. The three hundred and fifty thus left are divided into seven bands or companies, one of which is on duty each night, and the members of these take it in turns to act as musicians or dancers.

Now for the entertainment itself.

A spacious hall, some sixty feet long by forty feet broad, is the scene of operations. The sides of this are fitted with sidewalks, and with däises, which, with the platform, are elevated above the main body of the building in which the Japanese audience sit, while at the back of the hall there is a raised seat for the accommodation of foreign visitors. The building is prettily lighted with Japanese lanterns, and foreign lamps suspended at different points from the ceiling lend a brilliancy to the scene.

At a given signal the curtains lining the platform and sidewalks are lifted, and disclose the performers dressed most gorgeously in long, sweeping, voluminous robes of a pearl-gray colour, which are secured by the most bewitching of scarlet *obis*,—but also dressed in their war paint, got up to kill, that is to say, according to the most correct Japanese notions touching female attire, with cheeks plastered over with white powder and lips tinged with *beni* and gold.

The musicians to the number of twenty-two sit on the däises, those on the right playing the *samisen*, while those on the left perform on the flute, the drum, the Japanese *tsutsumi* and the triangle, and at the extreme end of each dais sits a musical instructress marking the time and generally superintending the performance. The dancers, thirty-two in all, are drawn up on the platform.

The musicians strike up. Twang go the *samisens*, ably supported by the opposition *tsutsumi* and triangles, and further reinforced from time to time by the shrill screech of a flute, or varied by the bang of a drum, and with the first notes the dancers commence to move through the monotonous figures and dullest of dull posturizing peculiar to Japanese dancing everywhere throughout Japan. No need to describe it in detail. There was indeed little to describe. Moving in admirable time like all *geisha*, here shooting out an arm and there lifting a foot, now turning, now twisting, and anon circling round and threading in and out, the performance was wearisome in the extreme. Some little effectiveness was thrown into the close, when the dancers, forming into two files, moved, to what was almost an impressive air, solemnly and slowly down the sidewalks, and so out into the [illegible] beyond, the curtains falling on the musicians [illegible] their däises. The enough. We went away glad to have seen it, for, as a sight, it was curious enough, but as for appreciating the discordant sounds produced by the several instruments brought into use, this was impossible. To paraphrase Wordsworth's lines, we could in all truth have said:—

> A *samisen* with its discordantness,
> A *samisen* discordant was to us,
> And it was nothing more,

Correspondence.

NIPPON.

To the Editor of the *Japan Weekly Mail*.

Shiba, Yedo, 27th May, 1875.

Dear Sir,—In regard to the name of the island of Nippon, it seems to me a gross mistake to suppose that it is a question merely of scholarship in the Japanese language or one to be decided even by the present Japanese themselves. Even if they should find, as alleged, no need for any name at all for the island, (which is hardly conceivable), the same is by no means the case with the rest of the world. Foreigners at least must call the island by some name, and that name must be the one that is sanctioned by use.

Usus quem penes arbitrium est et jus et norma loquendi.

Now it is easy to prove that the name of Nippon (or variously spelled Nipon and Niphon or even Nifon) has been in use for a hundred and fifty years in Europe, and was said by Kaempfer to be the one in use by the Japanese at that time.

In the English translation of his book published in 1728, long after his death, he gives a dozen different Japanese names for the Empire besides Nipon, or more elegantly pronounced Nifon; and in describing the islands of the Empire (p. 60), says: "The first and largest is called *Nipon*, from the name of the whole Empire." His English translator says in the introduction, "The Japanese, in all their maps, represent their Empire as consisting of very many islands, great and small, the largest whereof, which is by them called *Nipon*," &c. The map of the Empire in the same book, avowedly copied from Japanese maps, gives the name of the island as Nipon, while a small map on the same sheet gives it as Niphon. The f, and probably the ph., in Kaempfer, is used for the sound that is at Yedo pronounced as h (as in Nihon bashi). In the German edition of Kaempfer, first published in 1777, the map bears the same spellings; and the text in speaking of the islands says: "Die grösste und vornehmste derselben hat den Namen des ganzen Reichs, Nipon." Perhaps the still older Jesuit map of China gives also the same name to the island as to the Empire.

To go back six hundred years, we read in Marco Polo: "Chipangu is an Island towards the east in the high seas, 1,500 miles distant from the Continent, and a very great Island it is." His editor, Col. Yule, mentions in a note: "The name Chipanga is used also by Rashiduddin." "Chipangu (as far at least as its two first syllables go)" was but an old or incorrect pronunciation of what is now pronounced Nippon.

There can be no question, then, as to the well established use of the name in foreign countries, if not in Japan itself. If modern Japanese choose to drop the name of the island altogether, and to change that of the Empire into Dai Nippon, (from a desire to imitate what they mistake for the pride or vain glory of Great Britain, not knowing that "Great" was used there to distinguish it from a smaller French province of the same name), their still imperfectly civilized disregard of the sacredness of names neither gives them the right nor the power to abolish or change those by which either the island or the empire is known in the English language.

Yours very truly,

BENJ. SMITH LYMAN.

The Missionary Question.

To the Editor of the *Japan Weekly Mail*.

Dear Sir,—We quite appreciate your superiority to the vulgar fault-finding with Missionary operations which is so

one who has been out in the Far East only a few years, learns to expect a periodic out-burst of Tom-Paine-ism from the class of writers to whom that style of discussion is congenial; and it has to be dealt with according to circumstances—sometimes by an emphatic silence, lest it should be fanned into notoriety by opposition; at others, by denial and defence, lest judgment should seem to go by default, or the uninformed be left to suppose that things are even as the anti mission people declare them to be.

We, therefore, as before remarked, appreciate highly such discussions of Missionary topics as are characterized by candour and courtesy.

But some of us who are personally and practically interested in seeing the good work done in the best way, are impressed with your undisguised and oft-repeated preference of the "ideal" and the methods of the Roman Catholic Missions. Of course, you must refer to something which is peculiar to, and distinctive of them; and we should be really glad to know what are those distinctive peculiarities which make them so respectable, while Protestants and their ways are so lightly esteemed. We feel at a loss on this point. We are constantly hearing this sort of disparaging comparison in general society, but have not yet found any one who would give us a distinct and reasonable statement of his grounds of preference. And we confess to be rather tired of hearing Protestant people—lovers of liberty, both civil and religious—persistently making reflections upon us and our ways, and lauding the character and method of those who differ from us *toto cœlo*—openly avowing that they dislike *toleration*, name and thing; and making it an article of faith that Christ's Kingdom *is* of this world, and that his Infallible Vicegerent upon earth is the Bishop of Rome, to whom they, and we all, owe an implicit obedience.

Now we shall really feel under an obligation, if you will employ your able pen in elucidating this matter, by furnishing an answer to the question, What are the characteristics of that "ideal of missionary life and work" for which you "do not affect to disguise your absolute preference."?

Very sincerely yours,

AN OLD MISSIONARY.

Yedo, 24th May, 1875.

Law & Police.

U. S. CONSULAR COURT.

Before Gen. VAN BUREN, U. S. Consul-General.

and Messrs. S. Mendelson and G. P. Spooner, Assessors.

May 26, 1875.

CHUISKI, owner of the Japanese junk *Kanke Maru*, and Takenouchi Kingwo, owner of her cargo v. the P. M. S. S. Co.'s steamer *Oregonian*.

This case, which was part heard on the 22nd and 24th March, was resumed this morning.

Mr. Wills of the Saibunsho, appeared by power of attorney for the plaintiffs, and Mr. Dickins for the defendants. The evidence for the plaintiffs was continued this morning.

Takegoro, warned to speak the truth, deposed: I was cook on board the *Kanke Maru*. I belong to the Miodo Ken, in the province of Awa, and am now living in Yokohama. I remember the night of the 18th February, 1873, when I was on board Chuiski's ship, below, cooking rice. I heard a noise as though the sail was coming down, and went on deck to see what was going on. I ran forward. At this time the steamer had come right down upon us. I shouted out. A collision took place, and I climbed up the mainmast and thence got on board the steamer, and prayed the men on board to save life in the junk. They did not render any assistance, but were going to throw me overboard, when some Japanese passengers came up on deck, rescued me, and took me below. The steamer proceeded on her voyage to Kobe. When she arrived there I got ashore with the assistance of the passengers. From Kobe I went to Hiogo, and there found a vessel which took me to Awa. After I arrived at my home I fell ill.

To Counsel for defendants: I am 19 years of age. Chuiski asked me to attend this trial on the 5th day of the 5th month, this year,—about three weeks ago. A long time elapsed between the date of the wreck of the junk and the occasion of my next seeing Chuiski. Being cook on board, I received no wages. I saw Chuiski last year, and the year before that. The people on the *Oregonian* who endeavoured to throw me overboard were foreigners. There were also Japanese on deck. Passengers hearing me cry came from below, and taking me by the sleeve led me down stairs. I did not see the junk when I was on board the steamer.

Sakedji affirmed: I belong to Hiesho, and am a farmer. I was about two *ri* from my home, in a small boat, at about 4 o'clock in the morning, when I heard cries for help. I went in the direction of the cries, and found a wreck, from which I picked up two people. I then heard other cries; went towards them, and saved a third person. The night was very cold, and the men were almost insensible. I made for the nearest point, and immediately reported the salvage to the officials, who made inquiry into the matter, and sent the two youngest of the three men with a searching party to look for the wreck. I went also, but found nothing.

To Counsel for defendants: It was yet dark when I picked up the men. I know Kinoi. It is a town of many inhabitants, and has plenty of junks, some of which leave there occasionally for other ports. When I found the wreck she was down by the head, the stern was out of the water, and the men were up to their waists in water, standing by the rail. There were about sixty or seventy fathoms of water where the wreck was.

To the Court: The distance between the wreck and where I landed the men was about seven *chô*. I did not see the steamer. I never saw the wrecked junk before that morning. I cannot speak certainly as to the length of the vessel.

Takanushi Koujoro affirmed: I am a sugar and dye dealer, carrying on business in the southern province. I have three establishments. I had freight on board the *Kanke Maru*. In January, 1873, I instructed my agent in the Oda ken to buy me some dye. He purchased 104 bundles. I sent some money for the purchase. Thirty tubs of white sugar were also brought by two dealers for me at the same time and at the same place as the dye was bought. Among other things I ordered were two obis, eight cotton quilts, and three overcoats of a peculiar kind, such as are only made in Awa. I also ordered two hundred pairs of while and one hundred pairs of blue cotton socks, and two hundred pairs of a thicker kind, and eighty pair of getas. These latter things were bought for business presents. The following is the cost price of the goods:—Dye, 5,373.75 yen; sugar, 270 70 yen; 2 obis, 9 yen; 3 awas, 9 yen; 8 quilts, 32 yen; 500 pairs socks, 80 yen; 80 pair getas, 20 yen. These goods, to the total value of 5,794 45 yen, were lost on board the *Kanke Maru*.

A receipt in full from the witness' agents for the money paid for the dye and sugar were put in evidence.

To Counsel for defendants: The captain of the junk he'd the bills of lading. The receipts produced were written out in my presence. The goods were bought through my agents, but on my paying the whole of the money the receipts were given to me. Each bundle of dye is supposed to weigh 20 kuwans. It is bought by the bundle, and is worth 68 50 yen for first class dye. The common kinds may be bought for 45 yen. Chuiski has not paid me for the goods lost, and I have not paid him his freight. I might have heard of the loss of the *Kanke Maru* on the 24th February. I did not fall sick at the time. I did not find out that the *Oregonian* was the steamer that ran down the junk, until I met one of the passengers by that vessel.

To the Court: I never saw the junk before I shipped my goods by her. At that time I was on board. She appeared to be in good condition, had one mast, and her carrying capacity was, I should say, about 100 koku.

This closed the case for the plaintiffs. At noon the Court adjourned till half past one.

After the adjournment Mr. Dickins proceeded to sum up for the defendants, who, he contended, had been subjected to three special hardships:—First, that common to all shipowners, their responsibility, and their liability to be mulcted in heavy damages for insufficient reasons; 2ndly, that the P. M. S. S. Co. has to navigate continually in narrow seas, where their vessels are always more or less liable to accident from passing junks; and 3rdly, the length of time which elapsed between the collision and the entering of the action. Owing to this delay,—accounted for in a manner eminently Japanese, one of the plaintiffs saying that his illness had prevented him entering the action sooner,—the learned counsel had principally to rely for the defence upon the evidence of the captain and chief officer of the *Oregonian*,—very good evidence of its kind, but not such as would have been brought forward alone, had not the lapse of time since the collision prevented the collection of other

Digitized by Google UNIVERSITY OF CALIFORNIA

testimony. The learned counsel then proceeded to review the details of the case, and endeavoured to show that the evidence for the defence had been borne out by the testimony of the junk, inasmuch as he did not appear to have taken proper precautions to keep out of the way of the steamer. The *Oregonian*, on the other hand, had, as was shown by the evidence of the captain and the chief officer, done her utmost to avoid the junk, which came into collision with her. Had the steamer kept on her course, the junk must have been struck amidships and sunk, whereas it had been shown that the junk struck the steamer in front of the paddle-box. Mr. Dickins referred at length to Holt's authority on the rule of the road, which he cited in support of the case of his clients. He also dwelt upon the fact that nothing had been brought forward to show that any attempt had been made by the captain of the junk to save her. On the subject of the amount of damages claimed, he contended that there was nothing before the Court but the statement of the owner of the cargo, and the receipts produced by him, which were unvouched for by the testimony of the persons from whom the goods were bought.

Mr. Wills replied briefly, to the effect that Japanese vessels in their own waters were not to be guided by a foreign "rule of the road," that the *Oregonian* was going fast; and that, as had been shown by the evidence of one of the witnesses for the defence, it was not uncommon for foreign vessels to run down junks.

The President having reminded the plaintiffs that they had made two important omissions in their evidence, namely, that they had not shown that it was necessary to abandon the junk at all, or that, when abandoned, any attempt had been made to salve her, reserved judgment.

His Honor would consult the assessors, and give judgment at as early a date as possible.

GERMANY AND ITALY.

(Pall Mall Gazette.)

It may now be taken as established that some kind of communication has passed between the German and Italian Governments with regard to the temporal status of the Pope. Probably the German Minister was ordered to point out, conversationally, the inconvenience sustained by Germany in not being able to demand redress for Papal outrages except from the Pope, or to inflict any direct injury upon the Pope when redress is refused. The Minister would then insinuate an inquiry whether, supposing a despatch framed in this sense to arrive from his chief, it would be of any use to hand it on to the Italian Government. In this way the temper of the latter could be ascertained as completely as if a despatch had actually been sent, while at the same time it would be literally true that the German Government had not sent one. It seems probable that in sounding the Italian Government upon the subject Prince Bismarck has addressed himself to two points—the want of any international character in the Italian law of guarantees and the inconvenience of that law considered as a simple act of municipal legislation. If Italy is to be subjected to pressure in reference to this law, it is plainly necessary to convince her that it is in her power to alter it if she will; and, according to a semi-official Berlin journal, Austria has been asked to assure the Italian Government that this is the case. It is not necessary to accept the statement of the journal in question that Austria has already declared that she does not consider Italy as in any way pledged to her by the law of the 13th of May, 1871, inasmuch as that law relates to a question of internal order with which foreign Powers have nothing to do. It is enough to suppose that this is what Prince Bismarck would like the Austrian Government to say, and that he has hinted, if not expressed, his wish at Vienna. Supposing that Austria consented to do what is asked of her, one of two things would happen: either France would take the same line, or, at all events, remain silent, in which case it would be pointed out to Italy that it is preposterous to attribute international sanction to a law all concern with which is repudiated openly or tacitly by the only Catholic Powers of any mark in Europe; or, France would maintain that the law of guarantees did bear an international value, in which case Prince Bismarck would be able to represent her as the one Power in Europe that espouses the cause of the Pope against Germany. It is easy to conceive that, under some circumstances, this last might be a very convenient line for the Prince to adopt. On the face of things, however, it is exceedingly improbable that Austria either has consented, or will consent, to interfere between Italy and the Pope. There is a close resemblance, it is true, between her ecclesiastical legislation and the Prussian May laws, but which ecclesiastical affairs are administered in the two countries is very different, and the Austrian Government has contrived to get its own way without provoking any overt resistance on the part of the bishops. Austria, therefore, has nothing to gain and something to lose by insulting the Pope, and it would be difficult to insult him more gratuitously than by trying to make his position at the Vatican worse than even the "Subalpine Government" has been content to leave it. Nor can it be any real advantage to a Catholic Power to see the Pope reduced to the rank of a subject of any other Power than itself. It may suit Prince Bismarck's present purpose to represent the unfettered publication of Encyclicals as an intolerable injury to the Government against whose acts they are directed. But under other circumstances he might be equally ready to show that no Government could endure to have the spiritual concerns of its subjects committed to the charge of an ecclesiastic who himself owes temporal allegiance to another Sovereign. The anxiety to represent Austria as sympathizing with Germany in this matter is probably suggested by the journey of the Emperor Francis Joseph. Just at the time when Germany has discovered that Italy does not see her way to taking part in the spiritual struggle in which Prince Bismarck would like to see all Europe involved, the Emperor of Austria makes an opportunity to pay a complimentary visit to Victoria Emmanuel. It may easily be that there was no connection between the two facts, but it was certain that the adversaries of the German Government would represent that there was, and Prince Bismarck may have tried to turn the tables on them by circulating, or rather allowing the Berlin newspapers to circulate, the not very probable views that the object of the visit is to concert common measures against the common enemy. It is possible, of course, that the repeated assertions of the German press may have more foundation than this, and even that the object of the Emperor's visit to Venice was to agree upon some joint action against the Pope; but if so the subjection of Austria to Germany must be very much more complete than there has yet been any reason to suppose.

The statement that the law of guarantees has no substantive international character is in itself true. At it stands, it is simply an act of the Italian Parliament. If the Pope had accepted the position thus secured to him, it might have had additional validity from some sort of recognition by the other Catholic Powers. But so long as the Holy See maintains its present attitude it merely embodies the principles on which the Italian Government proposes to govern its relations with the Pope, and the terms which it is ready to make with him whenever he chooses to open negotiations. But, though under these circumstances Italy may have the power to modify the provisions of the law, it by no means follows that it is in any way her interest to do so. Indeed, the very events out of which the present controversy has grown seem to yield an opposite lesson. The Pope has issued an encyclical letter in which he declares that certain laws passed by the Prussian Parliament are immoral, and consequently do not bind the consciences of Prussian Catholics. Prince Bismark finds that the Pope, in his present discrowned condition, is absolutely out of his reach. He is like a debtor who has gone to America and left no effects behind him. It is natural, perhaps, that Prince Bismarck should wish to saddle some more responsible person with the burden of the Pope's offences. For temporal purposes the Pope is a man of straw; whereas if he were an Italian subject Germany could apply to the Italian Government to restrain or punish his denunciations of Prussian law. But it must be a strangely innocent Government that can wish to be the object of such representations as Prince Bismarck would address to Italy, supposing that Italy were responsible for the Pope's acts. The Pope would be the most inconvenient subject that a Government could by possibility have. Even Prince Bismarck himself would wish to be rid of the charge. It is easy work imprisoning priests, and even bishops, but to imprison a Pope would be a different matter. Yet what other weapon could the Italian Government have if the law of guarantees were repealed and the Pope were deprived of his status as a Sovereign Prince? It would be of no avail to forbid him to issue Encyclicals, and no amount of ingenuity could prevent them from being taken out of Italy. The German Government does not find it an easy matter to prevent their importation into Germany, and to prevent their exportation from Italy would be still harder. A Government which can neither deter an offender from committing an offence nor make the commission of it physically impossible, is reduced to inflict punishment for punishment's sake, and Prince Bismarck would take care that this last obligation did not go unperformed. So long as the law of gua

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

rantees exists Italy is free from all embarrassment on this head. She has no more to do with the Pope's Encyclicals than if they were dated from Malta or Avignon. What can she gain from altering the law in the way Prince Bismarck desires that would in any way compensate her for the inconvenience to which she would subject herself? Nothing at all. The Pope has long ago exhausted his armoury against her, and nothing has come of it. Her King and all her principal statesman have been excommunicated, by implication if not by name, without the State suffering any perceptible harm. By simply refusing to accept the unacknowledged *modus vivendi*, in virtue of which the whole Italian episcopate put together give the Government less trouble than any one of the twelve Prussian bishops. The policy of Italian statesmen, from Cavour onwards, has been to avoid doing anything which looked like an infringement of the spiritual freedom of the clergy, either in their relations with Rome or in their relations with their own flocks. By the side of the contrary policy adopted by the German Government this makes Italy look quite like a nursing mother of the Church, and her Government has reaped the reward of its shrewdness in the gradual amelioration of the temper of the clergy towards the civil war. Co-operation in Prince Bismarck's schemes would involve the sacrifice of all that has been done to achieve this agreeable result.

A SPANISH PASSION PLAY.

(The Spectator.)

Round about Linares, the centre of the great lead mining district of Andalusia, and Baeza, the tranquil, isolated, old world cathedral town just outside its confines, and as calm and dignified as Linares is busy, bustling, and modern, the hot sun of Spain shone, last year at the beginning of Holy Week, with a scorching pitilessness which made even the light-hearted miners take a serious view of things. The crops of wheat and barley were as brown as sienna, the beans were drooping, and the wild flowers of the Campo, which should have carpeted the rocky earth with scarlet and blue and yellow, were mere nondescript, withered weeds. Said Mr. Hugh Rose's Manchegan servant to him, "If rain does not fall, Senor, in the Holy Week, God will send no rain at all," and went away despondent, to have a look at his little San Juan, his patron saint, who had a fine, new dress of crimson satin, with golden spangles, to be put on upon Easter Day. Said the beggars, when they asked "por Dios" a "very little alms," and saluted the 'puris-ima," "Bread is going from the poor." If Spanish peasants or Spanish miners (for whom the aspiration "A short life and a merry one" seems to have been invented) could ever be low-spirited, they might be said to have been so then, and the Monday and Tuesday of the last Lenten week passed heavily. On the Wednesday a "bando" came into operation, which interdicted under heavy penalties the sale of wine and spirituous liquor in the "Campo," and the entry of any coach, mule-cart, or public conveyance into the town, from mid day on Holy Wednesday until midnight on Holy Saturday. These wise precautions for public order and decency taken, a ceremonial commenced at the Church of San Francisco, in an anonymous mining town in the Linares district, which presents as strong a contrast to the arid and depressing physical features of the scene and the rude conditions of the life of the Black-Country population as can be conceived.

A crowd of 2,000 people are clustering round the doors of the church, in silence, at half-past six in the evening, when the municipal guards come up, and form in semicircular array, with drawn swords, their scarlet uniforms making a bright flash of colour. Inside the church, where only one side altar is lighted, a great number of men and women are collected, and round the lighted altar are grouped the images, each one larger than life, of Our Saviour, the Blessed Virgin, and the numerous saints who are to have their places in the first procession, which is to commence at sunset. The Governor and one of the alcaldes enter the church and all eyes are turned towards the setting sun When the golden line touches the horizon, the grand, mournful music of the "Dead March in "Saul'" is struck up by the brass band, stationed within the doors of the church, and eight men, barefooted, clad in long robes of sackcloth, girdled round the waist with a knotted cord of esparto-grass, each bearing a huge wax torch in his left hand, come down the church steps, bearing on their shoulders the image of "the Christ of us all," as the miners call the Saviour. The heads of these men are swathed in sackcloth in which small slits are made for eyeholes. The image of Christ is larger than life, and clad in a violet-velvet cloak, girdled; the legs are bare. He sits dejectedly, his head leaning on his left hand, tears flowing from his eyes, his right hand, raised, points over the crowd. The eight men carry him fifty yards, then place him on the ground; the people fall upon their knees, and a man, clothed in black, holding a long, black, draped trumpet, comes out of the church door, and blows three discordant blasts. The bearers shoulder the Christ, a long train of men, clothed like those in sackcloth, and called "humildes," or penitents—miners peasants, artisans, and gentlemen, who walk barefooted, purchase the penitential garb themselves, and pay for the privilege of joining in the procession—march forward with slow and solemn steps, and the church doors give egress to the other images, preceded by a banner of purple, on which is a beautifully painted picture of Christ fainting under the weight of his cross, his tears bedewing the ground. Saint Mary of Magdala comes next to the Saviour; she is clothed in a long, drab cloak, and her face is hidden in her hands. Each image with its bearers is followed by a dozen "humildes." The Virgin is splendidly clad in black velvet, with golden spangles, and St. John is partly robed in scarlet. St. Luke follows him, then a long train of "humildes." The band, playing mournful music, precedes the priests; then come more penitents, and the officers of the town, dressed in black, with bare, bended heads. Every shop is shut, every window is crowded, but silence reigns, as for two hours the procession moves through the rough streets of the mining town all cleared for it; and when, still attended by hundreds, it returns to the dark, solemn church, the crowd disperses in perfect order, and every one goes to his own home.

All through Holy Thursday, the fierce sun shone, the rainless wind blew, and in the evening the procession set forth again; but this time all the penitents wore black-calico gabardines, and high, peaked caps of the same material, and on every man's cap was thrown a crown of thorns, made of the wreathed twigs of the barberry-tree. They were all barefooted, and they carried lighted torches, and were followed by hundreds of children, of all classes, clad like them and carrying tapers. As the procession started, the blare of a trumpet and the rattle of a muffled kettle-drum were heard, and twelve men in buskins, short, buff-leather tunics, and with steel helmets, fell in just behind the image of the Saviour. "Who are those?" Mr. Rose asked of a Spanish pitman. "The soldiers who destroyed our Christ," was the answer. So, again, to the solemn music of the "Dead March" the procession went its way, "the lights showing wan and sickly against the sinking sun, the dark images standing out in bold relief against the steely-blue sky, the long line of the 'humildes' dividing the eager, orderly crowd." On the morning of Good Friday the cold was intense but there was no sign of rain. At five in the morning the church was crowded, and a multitude of people stood without. A preacher was enforcing the doctrine of the Atonement in short, pithy sentences, like proverbs. At 9.30 the procession came forth, and was again joined by the Roman soldiers. This time each penitent carried upon his shoulder a black-stained cross of wood, four feet long. When, after its solemn march it returned to the church, Mr. Rose beheld from a balcony above the great door the extraordinary and impressive ceremony of "selling the Lord." The Christ, crowned with thorns, and bleeding great drops of blood, was placed upon a raised platform in front of the doors All eyes were fixed upon him who was sold. The money was counted from one hand to another, and as the last piece was paid, and the Saviour's right hand went up slowly above the assembled crowd, as though in mute appeal against the treachery, a singular incident occurred. "From the lips of the four thousand of the assembled multitude rose up to Heaven the fierce, earnest shout, "Agua!" Agua This was the miners' united prayer for rain. Once more the Saviour raised his hand, once more went up to the steely sky, now growing blue and hot, the urgent cry, "Agua! agua!" At five o'clock that afternoon a slight shower fell, and as the procession of the evening wound its way through the mining town, the entire multitude cried aloud, "Agua, agua!" The Christ carried at the head was "the dead Lord," a fair, corpse-like figure, under a glass case. It was taken to the church and placed on a lofty tomb, guarded by two angels, and watched by the Roman soldiers The wind whistled shrilly around the ancient building, and the people dispersed slowly when the doors were closed; but the strangers, lingering long there, could hear the measured tramp of the Roman soldiers, keeping vigil over "the Christ of us all" throughout the "Watch night." The morning of Holy Saturday dawned, in clouds, and soon after day break the rain poured down in torrents. Then said the miners, with entire conviction, "The Lord brought it when he moved his hand."

At Baeza there are wealth and stateliness, and the processions of Holy Week are second only to those of Seville in grandeur. The awful solemnity, the picturesque beauty, and the startling strangeness of the scene to be beheld there on Good Friday must, we

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

imagine, surpass those even of the Passion Play at Ober Ammergau, because of the terrible reality of the place and the manner of it,—the centre of an immense square, thronged with thousands of people, and the actual processes of the execution, which are all gone through, to the accompaniment of the heartrending Passion music, in the face of the multitude, in bright hued dresses, standing in the full golden sunlight, hemmed in by the low-roofed houses, with the snow-capped ridge of the Sierra for their outer boundary. Through this brilliant crowd, all still and silent, comes a row of men two-deep, robed and hooded, and bearing large candles, and they clear a pathway for the first procession of the Condemned. The King of the Jews, delivered to the people, is borne by four penitents; the derisive robe of his mock royalty is rich claret colour, gorgeously embroidered in gold; a crown of thorns is pressed down upon his brow, and his hair (real, human hair) dabbled in blood, falls down over his shoulders. "He has fallen upon one hand from exhaustion, his head droops a little, his nostrils are slightly widened, as of one who pants for breath; mute reproof, utter weariness, uncomplaining suffering are all in the face."

The figure passes slowly up the square, severing the thronging populace, and is followed by one hundred Roman soldiers, marching two and-two, some mounted on fiery Andalusian chargers, some on foot. These are "the Centurion's Guard." The band steps to one side, the Roman soldiery form round the Condemned, the penitents once more clear a way, and Saint Veronica comes to make her lowly obeisance, and stooping down to wipe the sweat and dirt and blood from the Lord's face. As she does so, the handkerchief is rolled up by means of a spring, and another appears in her hands, with the image of Jesus upon it. Now comes the Virgin Mother, and the foreigner, looking out from a balcony upon the crushed-up crowd cannot discern one covered head or single standing figure. The image of the Virgin is a marvel of art. 'Her arms move, she wipes her eyes, her pale face is expressive of simple, sheer, unapproachable grief; and as the many bands play the most plaintive strains of Bach's Passion music, at the most wailing note she draws near, and puts her arms round the neck and across the breast of her fallen, fainting, and bleeding son." So the first procession of Holy Friday passes out of sight, amid an orderly eager crowd, and when it has vanished the prisoners, manacled indeed, but free in a sense, during the blessed hours walk about the city, and solicit alms. A little before nightfall, with the same crowds lights, and music, come the final scenes. Through the way cleared by the penitents comes the Saviour, and washes Peter's feet; the attitudes beautifully expressed, and the music exquisite. Then he comes, praying in the Garden of Gethsemane; a figure bowed with anguish amid real sobs, dexterously lighted. Again he is bound to a pillar, and the fearful scourging is represented with a realism almost too dreadful to be borne. Then he carries his cross, fainting, lacerated, weary beyond all telling. Night has fallen now; the crowds are denser, the Plaza is all dark; but in the centre are moving forms and the blaze of lighted candles. Profound silence reigns, so that the night-wind, blowing in fitful gusts from the mountains to the southward, can be distinctly heard. For the last time a way is cleared, for this:—

'Now the Christ was raised aloft, in that dim, silent, but teeming Plaza, nailed upon the cross,—a public spectacle, his dying figure barely lit up by the torch of a penitent or a ruthless soldier. Little, thin, red streams of blood flowed down from his nail-pierced hands, crossing each other at the wrist, and pursuing the armpit, and thence trickling down the sides, and soaking in gore the linen cloth at the waist. It was too frightfully real. The two thieves were on either side, and beyond them stretched the long line of penitents, whose lighted candles shed a fitful ray over the whole.' When the scene was finished, a troop of children with silver wings went by, carrying banners inscribed with the words (in Latin), "For our salvation he hath died." Then passed the Centurion's Guard, and the Virgin Mother with the dead Christ in her arms; and a hush of awe fell upon the crowd as the cleared space remained quite empty for a while. At ten o'clock a beautifully illuminated glass coffin was borne along the pathway, bordered by the kneeling crowd, and in it lay a figure, with pale, peaceful features, wrapped in a linen winding sheet. When Mary of Magdala, St. John and St. Veronica have followed the glass coffin, all is over, and the Plaza is speedily and noiselessly deserted. The "Watch" has begun, to be interrupted only when it shall be exchanged for the noisy congratulations and rejoicings of Easter Day.

REUTER'S TELEGRAMS.

(Supplied to N.-C. Daily News.)

LONDON, 15th May, 1875.

During the recent alarm with reference to affairs on the Continent, the English Government expressed to Germany a very decisive opinion respecting the maintenance of peace, and received a friendly and satisfactory reply.

France has thanked England for the friendly attitude assumed during the correspondence.

LONDON, 12th May, 1875.

A conspiracy to assassinate Bismark and Falk has been discovered.

London, 12th May, 1875.

The island of Saghalien has been ceded by Japan to Russia.

Shipping Intelligence.

ARRIVALS.

May 21, *James Paton*, British barque, Cotter, 305, from Nagasaki, Coal to P. M. S. S. Co.

May 23, *Sibir*, British gun boat, Captain St. John, from Hiogo.

May 24, *Niigata Maru*, Japanese steamer, Walker, 1,615, from Shanghai and ports, Mails and General, to Mitsu Bishi Co.

May 24, *Caroline*, German 3-mast schooner, Paulsen, 274, from Takow, Sugar, to Chinese.

May 24, *Ariel*, British barque, Fullarton, 373, from Nagasaki, Coal, to P. M. Co.

May 25, *Menzaleh*, French steamer, Pasqualini, 1,008, from Hongkong, Mails and General, to Messageries Maritimes.

May 25, *Rachel*, British barque, 283, Firth, from Taiwanfoo, Sugar, to Chinese.

May 26, *Mora*, British barque, Angel, 620, from Hiogo, Coal and Ballast, to J. C. Fraser & Co.

May 26, *Chrysalis*, H. M. corvette, Smith, 1,500, 17 guns, from Hongkong.

May 26, *Carl Ludwig*, German brig, Clausen, 235, from Taiwanfoo, Sugar, to F. Knobloch.

May 27 *Costa Rica*, American steamer, Connor, 1,917, from Shanghai and Ports, Mails and General to P. M. Co.

May 28 *Great Republic*, American steamer, Howard, 4,200, from San Francisco, Mails and General, to P. M. Co.

May 29, *Swo*, American gun-boat Commander C. S. McDougal, 1,0, from Kobe.

DEPARTURES.

May 23 *Hermann*, German brig, Peterson, 213, for Chefoo, Ballast, despatched by Captain.

May 23, *City of Tokio*, American steamer, Maury, 3,050, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

May 26, *Orissa*, British steamer, Edmonds, 1,120, for Hongkong, Mails and General, despatched by P. & O. Co.

May 28, *Indian Empire*, British barque, Baird, 520, for Chefoo, Ballast, despatched by Captain.

May 29, *Niigata Maru*, Japanese steamer, Walker, 1,615, for Shanghai and ports, Mails and General, despatched by M. B. Co.

May 29, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, Mails and General, despatched by P. M. S. S. Co.

PASSENGERS.

Per *City of Tokio*, for San Francisco.—General Capron and wife, Miss B. Cornwell, James Mackay, Capt. Morse, Thomas Barclay H. S. Webster, Major Cunliffe, R. G. Davenport, R. G. Bates, J. R. Bates, Revd J. B. Hartwell and wife, Dr. Lindall, Chas N. Nagel, Mr. H. Forbes, E. S. Cox, John D. V. Lamb, J. Lee Warner, Dr. Willis Mr. Komperman, H. Fincke, Mr. Norris, Mr. Keller G. H. Grant, T. Grant, R. Wilson, R. A. Hickson, James Jackson, A. Adamson, J. Silberman and wife, A. R. Wilson, A. C. Gibson R. D. Jackson, Revd C. T. Mills, Capt. Sewell, John Gill, Shichire Kurine, A. W. Banker, C. H. Warren, Mr. Schenck, Mrs Lucy Arnold, Dexter Arne, J. S. Wasson, E. Fischer, G. M. Dore, Mr. Thibaudier, Capt. Maury, Mr. J. H. Smith and child, Mrs. H. N. Manny and child, Mr. W. W. Battles and daughter, Mrs. Murray S. Day, Miss Rendolph, E. S. Hanbay W. S. Hall, G. T. James, T. L. Babcock, Mrs. Simmonds, Mr. Chadwick, Mr. Fraser, Mr. Margerison P. COMMERCIAL INTELLIGENCE.

YOKOHAMA, MAY 29TH, 1875.

IMPORTS.

Cotton Fabric and Yarns.—Business is still stagnant and in most cases prices exhibit a decline from those which ruled last week. We quote as follows:—

Grey Shirtings:—			
7 lbs	38½ yds. 39 in.	per pce.	$1.90 to $2.10
8 lbs.	38½ yds. 44 in.	„	2.20 to 2.40
8 lbs 4 to 8 lbs. 6	„ 39 in.	„	2.17½ to 2.55
9 lbs	„ 44 in.	„	2.65 to 2.85
Taffachelas Single		nom.	nominal
Yarn:—			
No 16 to 24		per picul	32.00 to 36.50
Reverse		nom.	nominal

White Shirtings,			
60 to 64 reed 40 yds. 36 in. nom.		per pce.	2.40 to 2.65
Turkey Reds 24 yds. 30 in. 2¼ lb.		per lb.	0.80 to 1.00
Black Velvets			8.25 to 9.25
English Drills 18 lb. 40 yds. 30 in.			3.25 to 3.40
No. 28 to 32		per picul	37.00 to 39.50
„ 38 to 42		„	42.00 to 46.00

Woollens continue dull of sale and no quotable change in our nominal rates may be reported. Certain colours of *Mousselines de Laine* alone are enquired for by the trade.

Plain Orleans	40—42 yds. 32 in.	6.25	to 7.75
Figured Orleans	29—30 yds. 31 in.	4.50	to 5.25
Italian Cloth	30 yds. 32 in.	0.25	to 0.36
Camlet Cords	29—30 yds. 32 in.	6.00	to 7.00
Camlets Aestd.	56—58 yds. 31 in.	18.50	to 19.00
Lastings Japan	22—30 yds. 32 in.	13.00	to 14.50
Plain Mousseline de Laine	30 yds. 30 in.	0.18	to 0.19½

Figured Mousseline de Laine	30 yds. 30 in.	0.23	to 0.28
Multicolored	30 yds. 30 in.	0.32	to 0.36
Cloth, all wool plain or fancy	48 in. to 52 in.	1.00	to 1.20
Presidents	54 in. to 56 in.	0.75	to 0.85
Pilots	54 in. to 56 in.	0.45	to 0.55
Union	54 in. to 56 in.	0.70	to 0.85
Blankets, scarlet & green 7 to 8 lbs.		per lb	0.45 to 0.48

Sugar.—Stocks have increased still further, and business is without activity. We continue previous quotations.

Sugar:—Formosa in bag	per picul	4.65	to 4.65
in Basket	„	4.45	to 4.55
China No. 1 Ping fah	„	8.40	to 8.50
„ No. 2 Ching-pak	„	7.40	to 7.80
„ No. 3 Ke-pak	„	6.60	to 7.10
„ No 4 Kook fah	„	5.80	to 6.20
China No 5 Kong-fun	per picul	5.00	to 5.50
„ No. 6 E-pak	„	4.80	to 4.80
Swatow	„	3.50	to 3.60
Dhiong	„	3.60	to 3.70
Japan Rice	„	3.25	to 3.30
Kerosine Oil	„	3.40	to 3.50

EXPORTS.

Silk.—Since the 21st instant, arrivals are 120 bales and deliveries about 200 piculs of *Hanks* and *Oshiu*. The stock becomes poorer every day, and our quotations for good Hanks are almost nominal. A fine parcel of the filature of Nihonmatsu (Iwashiro) is now on offer; $700 we hear is asked for it.

Hanks—

	per lb	per kilo.		per lb	per kilo.
Best (No. 1/2) 480 to 500	18s. 6d. to 19s.	2d. frs. 51 to 53	Medium No. 2	410 to 430 16s. 0d. to 16s. 3d.	frs. 44 to 45
Good (No. 2) 440 to 470	17s. 1d. to 18s.	2d. frs. 47 to 50	Common No. 3	380 to 400 15s. 0d. to 15s. 3d.	frs. 41 to 43

Tea.—Our market continues active for this staple produce, and settlements for the closing week amount to fully 4,500 piculs. Holders have made some concession, though insufficient to warrant a continuance of purchases in face of recent mail instructions from the American markets, which demand a still further reduction on under-quoted prices, if such advices are to guide operations for this season.

The general character of the crop is of fully average quality, and the reported frosts appear to have been confined to a very limited area.

To-days rates close as under, sellers being willing to meet purchasers of lines of any moment.

Medium	$32.00 to 34.00	Choice	46 to 50
Good Medium	35.00 to 37.00		
Fine	38.00 to 40.00		

Stocks are only moderate, and do not exceed 1,800 piculs new crop.

Two sailing craft are reported as having obtained full cargoes at rates which have not transpired but which are believed to be from £3 to £3. 5/, per ton of 40 cubic feet, New York.

EXCHANGE AND BULLION.

Exchange.—Since the departure of last U. S. Mail, business has been restricted to small settlements of Private Paper at quotations. Gold *yen* are again lower.

Rates close as follows:—

On London, Bank, 6 Months'	4s. 2¼d. to ⅜
„ „ Sight	4s. 1¾d.
„ „ Private, 6 months	4s. 2⅜d.
„ Paris, Bank Bills 6 months	5.19
„ „ Private	5.35
„ Shanghai Bank Bills on demand	72¼ to 72½
„ „ Private Bills 10 days sight	72¾
On Hongkong Bank Bills on demand	¼ per cent. pre.
„ „ Private Bills 10 ds. sight	¼ „ dit.
„ San Francisco Bank Bills on demand	Par to 100½
„ „ 30 days' sight Private	103
„ New York Bank Bills on demand	Par.
„ „ 30d. s. Private	103
Gold Yen	411¼
Kinsats	418

OVER 5,000 PATTERNS OF

Hanging Lamps	Factory Lamps
Table Lamps	Ship Lamps
Hall Lamps	Chandeliers
Church Lamps	Brackets
Billiard Lamps	Lanterns
Railway Lamps	Stoves

Fitted with our famous PARAGON BURNERS, which give a magnificent white and steady light, equal to 25, 20, 14 & 11 candles.

Our CLIMAX COOKING & PARAGON HEATING STOVES, in six sizes, will be found extremely useful in every household, being always ready for use, and saving time and money, coals, trouble of lighting fire, dust, and refuse.

Our HURRICANE LANTERNS are absolutely wind-proof and safe; simple in construction, and give a splendid white and steady light. They are the most serviceable Lanterns for use in Stables, Farms, Gardens, Boats, Cellars, &c.

Having been exclusively engaged in the production of Lamps for many years, the reputation which we have established for our manufactures in America, Australia, China, India, & all other Foreign Markets, enables us to satisfy the requirements of every buyer; our assortment being large & complete in every branch. For brilliancy of light, simplicity and durability of construction, our Lamps cannot be excelled; whilst the style, finish, & decorations are exquisite, & generally much admired. We therefore can confidently invite the attention of all Importers, & in recommending to you the above course, we point to our prospective mutual advantage. Catalogues, containing more than 1,000 Patterns sent free of charge.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

WHAT appears to us to be the error made by the *Japan Herald* in its article of the 4th inst. on the Financial Statement, in which it says that the public debt has increased during the year 1874 by *yen* 6,272,811, is this. The apparent increase is merely the reduction to a book-form of debts which do not appear as such in the schedule of the national debt, because they are only obligations for interest the principal yielding which is in the hands of the Government. Thus: the life pensions and hereditary incomes are charges on the revenue, and if they are bought up by the Government, a sum of from six to eight years' purchase must be paid for them. At the expiration of this period the revenue is freed from the charge and the lands which yield them are held by the Government unburdened. If we were actually to capitalize as among the debts of the Empire these hereditary incomes and life pensions which are now an annual charge on the revenue of about *yen* 20,000,000, it is clear that we should have to add *yen* 140,000,000 to the national debt. This is not done, neither is there any reason for doing it, because this charge is paid from lands which yield in rent more than the incomes for which they were surrendered. What the Government is doing gradually is this; it is paying certain sums, which represent but a few years purchase of property, in order to extinguish the charge which it is now compelled to pay for holding that property, and which, but for such scheme of extinction, it would have to go on paying for ever. It is clear that, even if it has to borrow money to do this—unless at a most exorbitant interest, which certainly is not the case here, as it is only paying 8 per cent,—it is a gainer by every dollar it invests in this manner. The charge on its annual revenue decreases year by year, while the revenue itself increases. It has merely charged itself with the principal representing an annual interest and brought it into the accounts; but, as a matter of fact, it has purchased, with the money so laid out, property which yields an excellent yearly rental and which will be its own in fee-simple and wholly unburdened within a few years. It has contracted a debt to buy the reversion to a perpetual income, and if it has done this at six or eight years purchase, it has not only done a wise thing, but in no sense can it be said to have increased its obligations. Rather, indeed, has it clearly contracted the sphere of these obligations.

In regard to the amount of bullion in the Reserve Fund, the *Herald* says that "it is only a trifle over the proceeds of the last loan." It would indeed be a bad prospect were the Reserve Fund only represented by so much borrowed bullion. But it is not so. The amount of the last loan, which was borrowed for the purpose of extinguishing the charges above referred to, already paid away in this direction, is a little over £1,600,000, so that only £800,000 of the loan remain in the Treasury as part of this reserve of bullion, and thus there are about *yen* 10,590,000 of unborrowed bullion in the hands of the Government. This is quite a different thing. We entirely agree that no false gloss should be put upon Japanese finance, but neither should its condition be misrepresented unfavorably.

Regarding the flow of bullion from the country, we have constantly mentioned the subject, and we may be certain that the Government is fully aware of the fact and desirous that it should cease. The cause, so far as we can judge, is that to which we have always attributed it, viz, an excess of paper currency, which always displaces gold, affects the exchanges, and forces the bullion away. The financial programme of the year contemplates the retirement of nine millions of this paper, and, as we said in our last issue, we trust nothing will interfere with the carrying out of this proposed measure, for the sound condition of the finances largely depends upon strenuous and persistent effort in this direction.

There is a great deal of theological controversy going on in the native newspapers, and it would be interesting to know what steps, if any, are being taken by the Christian missionaries in this country to counteract the effect of those essays which are directed against the doctrines of Christianity. There is an impression abroad among the Japanese that the tenets of this religion have a strong tendency to relax the tie between sovereign and subject and parent and child; and this impression is grounded upon certain passages in our Scriptures which, if taken by themselves, have undoubtedly the appearance of a tendency to undermine the ties of family upon which a great part of the weight of the whole fabric of society rests in this country. These passages will be found in an essay on this subject among our translations of this week, and they are used in no unfair spirit. But the writer who adduces them in support of the point he is anxious to prove, probably does not know that, for one such passage, ten may be adduced inculcating obedience to constituted authority, reverence for parents, and love for kindred. One of the great effects of the operation of Christ's religion upon the heart of man is to enlarge the sympathies and intensify the affections, and it can hardly be supposed that this will tend to destroy or even to weaken those affections which the ties of family produce naturally. The Founder of our faith foresaw that his doctrine would produce divisions in families *until it was generally accepted*, and this we take to be the meaning of the words incorporated into the essay referred to. That it has no such tendency, when once accepted, is clear from the constitution of European family life, in which the affections play at least as great a part as they do among the oriental nations. If Christ, when referring to himself, seemed to disregard the claims of family affection, it was because the work which his vast mission entailed upon him did not permit of that enjoyment which the cultivation of family affections affords. His mission was to humanity at large, and he was forced to deny himself in order that he might accomplish it. But he makes the relation between God

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and man that of father and child, and insisted that the love exhibited by the one should be reciprocated by the other Would he have done this had he undervalued this relationship? Surely, not. The tendency of his doctrine, too, was to extend the idea of brotherhood. It refused to narrow the affections to the mere sphere of family life, and, by increasing their volume he flooded this very family life with rich streams of emotion in which it has subsequently floated with far less danger than under the old system. He did not formulate a creed, but enjoined a life which men were bidden to follow. The accidental relations of family were merged by him into the essential relations of humanity, but a doctrine which has a tendency to inspire mutual love and to strengthen the common trust of society, never can be accused of weakening the ties of domestic life. When we take this teaching as a whole we find how easily it is reconcileable with the passages quoted in the translation before us, nor must we blame the zeal of a writer who thinks that society is endangered by certain doctrines for protesting against their claims. But a man must make himself acquainted with the real genius of Christ's religion before he can write satisfactorily about it, and this applies quite as much to the teachers as to the taught. Coleridge used to say that we had tried Christianity and it had failed; it was time to try the religion of Christ.

We must request the indulgence of our European readers for touching upon subjects which they can find treated far more exhaustively and ably elsewhere. These few words are addressed to the Japanese who are now occupied with this subject, and we trust they may do something towards removing a difficulty which seems to us to demand energetic measures on the part of those who are more specially interested in dispelling errors on this subject. A couple of hour's work with a concordance would enable any one of the Christian teachers in this country to put down all the passages in Scripture which bear upon the question of obedience to authority, obedience to parents and the special claims of domestic life. We shall be extremely glad to publish them if sent to us, and as they will be at once translated into the Japanese newspapers, they will immediately attain a far larger circulation than by any other means. We had rather not have asked for this assistance, for we think Handel was right when he cut short the emissary of the bishops who desired to put together the words for his "Messiah," by telling him he knew his Bible as well as they. But this is a question of enumeration, not selection; and the subject is not strictly within our province.

THERE is a question of serious importance being debated at present in the Education Department, viz., how far the education in the School of Foreign Languages should be general, or confined simply to the acquisition of the languages taught there. The correct solution of it will depend mainly upon another question, which is this:—Are youths to be educated in this school only, or drafted there for the purpose of learning these languages from other schools where they have had a general education? Presuming that one of the main objects of the above-named school is to provide a good staff of interpreters for the Government service—a matter of the greatest importance, and demanding a scheme of a very broad and comprehensive character—we cannot too strongly impress upon the authorities of the Education Department the necessity for making their interpreters men of good general acquirements and solid education. No man can translate really well who has not at least a fair knowledge of the subject-matter which it is his business to render from one language into another. Every branch of knowledge has its own special terminology and vocabulary. No man, for instance, could translate into his own language a treatise on astronomy as it should be translated, who did not understand the principles of that science. He could, of course, give something of a rendering of it, but when finished it would appear like an object seen through a telescope or microscope out of focus. It would present no clear ideas to the mind, and the knowledge obtained from it would be hazy and inaccurate. What astronomers themselves technically call 'the definition' would be bad. This word indeed itself supplies an illustration of the truth we would enforce. Imagine a translator engaged on such a treatise coming to this word, and rendering it by its ordinary meaning, viz explanation or description. What idea would the student of the treatise derive from the expression? Little, assuredly, if any whatever. Take such a word as 'resolution.' In its ordinary sense it means one thing; in mathematics it means quite another; in medicine again another; in legislation again another. Again, take such a word as 'economy' and see how variously it would have to be rendered into a foreign language according to the use made of it in the original. So with the words eccentric, affection, mode, cast, hand, form principle, point, order, involve, issue, lay, nature, necessity and, in fine, a thousand words which have several significations. And when such words are used in a technical or scientific sense, how is it possible they should be properly rendered except by men who thoroughly understand the special sense in which they are employed? Nor should it be forgotten that all languages contain words thus variously used.

It is certain that English is and must remain the dominant foreign language in Asia, but it must not be forgotten that in certain special branches of knowledge the Germans are certainly our masters, and the French at least our equals. The Japanese would hardly do well to cut themselves off from the advantages they might derive from acquiring such knowledge first hand, or from purchasing such special skill as these nations might place at their command. But to do this they must have interpreters or translators of thoroughly liberal education. It is clear, however, that they cannot have a German, French and English professor of each of the various sciences, so that the best plan would appear to be to give the necessary technical education in English, and then draft the young men so educated into the School of Foreign Languages to acquire the other tongue in which they were chiefly intended to occupy themselves subsequently. To provide a machinery by means of which this technical education can be given in each one of these separate languages would obviously involve an expense which the necessities of the case would not justify. Of course, all this might be simplified if the lectures could be given in the Japanese language. But even presuming that a body of native professors could be trained equal to such duties—which in the course of time there is nothing to prevent—still, the language itself will not for many generations permit of accurate scientific knowledge being conveyed in it. Whatever decision may be arrived at on this question, we trust that the main purpose of having a thoroughly well-educated staff of interpreters for the three chief European languages will be always kept prominently in view. The money it will cost will be repaid ten times over in the facility it will produce in the transaction of business, and, above all, in avoiding errors and misunderstandings, which are extremely expensive things.

WHAT is the Japanese Government going to do with the old British Legation on the Bluff? Some good arguments might be adduced for making it the residence of the Governor of Kanagawa, and one of the best is that this course would promote social intercourse between the Japanese and foreigners, nor can it be denied that this is a desirable thing. Such intercourse will always be somewhat stiff and formal until English becomes the *lingua franca* of Japan, or, at all events, of Japanese officials, for few foreigners will ever master Japanese sufficiently to express their thoughts in it fluently. But if we had a Governor here with a good knowledge of English (we write in entire ignorance of the extent to which the gentleman now occupying the post may possess this accomplishment), and he were placed in a position to cultivate this friendly intercourse, it seems fair to conclude that the good understanding which prevails theoretically between the Japanese and ourselves would be increased and made more real. The project involves some practical difficulties which will occur to every one, but they are by no means insuperable if met with tact, good sense and good feeling on both sides. In China such an idea would be ridiculous, but here it is far

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

otherwise. The native politeness of the Japanese—which is far greater than that of any European nation, except perhaps of the French and Spaniards—would be an excellent foundation for such intercourse, and with some slight concessions on both sides to national feelings, even if here and there they assume the form of prejudices, we see no good reason why it should not be successfully cultivated by the means we suggest. There need be no great expense attending it, though there is always a tendency to unnecessary profusion when entertainments are given by Asiatics to Europeans. They forget that domestic economy is reckoned a duty and even a virtue with us, and though vulgar pretension and the desire of display have played quite a large enough *rôle* in the history of the settlement, they are not held to be less the vulgar or unnecessary. The subject is at least worth consideration.

ALL recent travellers represent the traffic between Otz (this end of the Biwa Lake) and Kioto as enormous. A perpetual stream of wheeled vehicles, pack-horses and pedestrians, some free, some laden, flows along the road between the two places. When the line of railway from Osaka to Kioto is open, this traffic will certainly increase considerably, and there is actual danger of the road being choked, although it is one of the broadest in the country. The cost of carriage is such that, on a moderate computation, three-fourths of it would be saved were the traffic carried by rail, and it is probable that even at these rates the cost of the line could be repaid within five years—the time is estimated by competent authorities at far less than this. The Japanese ought by this time to have got over the heavy expense which first experiments always entail in whatever direction they are made, and this section of railway—it is not more than nine or ten miles—might be constructed far more cheaply in proportion than the two lines already completed. It is true that there are two ranges of hills over, or under, which the line must pass, but there is not one really formidable difficulty presented by the scheme. If the communication is left in its present state, it will be as if there were a railway from London to Manchester and no line from Manchester to Liverpool. Surely the Government ought not to hesitate about giving immediate orders for beginning *and finishing* this line with all possible despatch.

ON Thursday morning the lighthouse steamer *Thabor* having on board H.E. Okuma and Ito, *sangi*, General Saigo, Admiral Ito and other officers connected with the services, proceeded to Yokoska for the purpose of witnessing the trial of Mr. E. S. Boynton's torpedo boat, which, after several unavoidable postponements, had been arranged to take place on that day.

Mr. Boynton's boat is of small size, decked and rising but a few inches above the level of the water. She is provided with a pair of engines of adequate power to secure her a fair rate of speed and a chest for the storage of a sufficient reserve of steam to supply them for a reasonable distance. Her steering apparatus is controlled by a wire which serves also to regulate the speed and motion of her engines and, when disconnected for the purpose, to discharge the torpedo which she carries. The whole of these movements are effected by the operator who on this occasion regulated their action from a small steam launch by means of an electric battery and wire which connected her with the torpedo boat. We should add that the latter being so low as to be barely perceptible at the distance at which she may be required to operate, is furnished with moveable staves which respond to the movements of the steering apparatus and indicate to the person guiding her the direction of her submarine course.—The first portion of the trial consisted in exhibiting the steering arrangements and the influence of the operator in controlling them, and this was satisfactorily demonstrated. But in the practical portion of the trial—the destruction of a small raft against which it was intended to direct the deadly engine—this power was less discernible. For some little time the boat proceeded with directness for its goal, but as its distance from the controlling force increased, and its position became uncertain, the operator lost it from view, its aim became doubtful and after steering it in various quarters at hazard it was deemed advisable to abandon an experiment which from its circumstances forebad a successful issue.

There can be little doubt that Mr. Boynton's judgment was at fault in occupying too low a stand-point, and we do not doubt that the approaching trial at Shinagawa, to be made under more favourable conditions both in this respect and that of weather, will afford him a fairer opportunity of demonstrating the value of an invention which has so far evidenced much ingenuity and thought in its conception and detail.

Dr. Elmore, Chargé d'Affaires of the Republic of Peru entertained the members of the Japanese Ministry and the *Corps Diplomatique* at dinner on Saturday last, in celebration of the ratification of the treaties which had been exchanged between his Government and that of Japan. The Prime Minister, Iwakura, Okubo, Kido, Ito, Terashima and other *Sangi*, and the Representatives of the various Foreign Powers were present on the occasion. Among the toasts given were "To H.I.M. the Tenno and the prosperity of his Empire" (to which the Prime Minister responded, proposing the health of the President of the Peruvian Republic) and the health of the various Sovereigns and Heads of State of the Powers represented, to which Sir Harry S. Parkes replied. He thanked the Chargé d'Affaires of Peru for his graceful hospitality, and remarked that they viewed this latest accession to the Treaty Powers with much pleasure and satisfaction.

The Marines' band was present and performed a selection of music during the evening, which was brought to a close with a discharge of fireworks.

WE read in the *Nichi Nichi Shimbun*: The Government has issued orders that in view of the boisterous weather which prevails on the coasts of the island of Yezo all vessels which exceed 74 tons burthen shall in future be constructed in the European fashion.

Another notification, published by the same journal, announces that all native-owned vessels, built after the foreign model, are permitted to carry firearms for the protection of their crews and passengers.

A review of the Imperial troops by H. I. M. the Mikado took place in the neighbourhood of Narashino Hara on the 31st instant at an early hour. A small body of cavalry manœuvred and some excellent practice was made by the artillery. His Majesty returned to Yedo on the following day.

WE learn from the *Nichi Nichi Shimbun* that H. E. Kido has been appointed *Kaigi Cho*, or President of the Assembly of the officers of the various *ken* which will be held shortly.

We have received a letter signed 'An Old Missionary' on the subject of our article of last week, but it must be held over until our next issue, as it has reached us too late for insertion to-day.

We publish with sincere pleasure the following correspondence as authoritative evidence of what has been done by Dr. Willis for the promotion and application of medical science in the Kagoshima *ken*, and of the feelings entertained towards him by the local authorities. Dr. Willis, as will be seen, has gone home on leave, and it will afford his many friends both here and at home sincere pleasure to feel that the efforts he has made in this country have met with full appreciation. Few men have done more than he to bring about and consolidate that good understanding between the Japanese and foreigners the fruits of which we see in the wonderful change which has come over this country during the last ten years.

KAGOSHIMA, 20th *March* 1875.

SIR.—It may not be out of season for me to address to Your Excellency a few observations about matters medical on the eve of my departure for a holiday in Europe, after a residence in Japan of thirteen years, the last five of which have been spent in Kagoshima, as a teacher of medicine and Hospital doctor.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

In the first place I may mention that it is a source of the greatest satisfaction to me to know that my efforts to impart to my pupils some knowledge of European medicine have not been fruitless; and it is with equal satisfaction that I see evidence on all sides of me of growing belief on the part of the public of this province in the benefits to be derived from foreign medicine in the treatment of disease.

As far as possible, the plan of instruction which I have pursued has been to devote one day to teaching General Principles of Medicine. The next day the practical application of those principles has engaged attention. I believe that my pupils and my patients have alike benefited by this plan.

The majority of the diseases in this country appear to be quite as amenable to treatment as diseases of like description in Europe, nor does the result of operations appear to me to be less fortunate amongst Japanese than amongst Europeans.

At to the present time I find that the books of the hospital contain records of fifteen thousand patients treated either as in patients or out patients of the Charity. Besides this number some thousands of sick have been medically attended at their own houses. Amongst this large number of patients all the ordinary forms of disease and injury have been met with, and operations varying in magnitude from the removal of a finger to amputation of the thigh have been performed. The result has been that the good repute of the hospital, on the one hand as a place of medical instruction for pupils, and on the other hand as a place where valuable medical aid may be procured by the sick, has constantly increased.

In support of these assertions it may be mentioned that at present every room in the Hospital has its full complement of patients, whilst students from neighbouring Kens and Islands are amongst the one hundred and fifty pupils who are at present attending the school and Hospital. The most conclusive evidence, however, of the good repute in which the Institution is held is afforded by the recent establishment of branches of the Hospital in different districts of this Ken.

In this connection it may not be unworthy of mention that members of the hospital staff have been lent to establish institutions similar to the Kagoshima Hospital beyond the boundaries of this Ken, and that former pupils of the Kagoshima Hospital school now occupy advanced positions in the naval medical service of this country.

As bearing upon the question of public health, it is with great satisfaction I notice many important changes which have occurred in Kagoshima during the last five years. I believe that many of these changes are not mere innovations but represent permament improvements in the social condition of the community. One or two examples of such changes may here be cited. At the date of my arrival fresh beef formed no part of the food supply of the community. At present it may be obtained at moderate cost at all times and in any desired quantity. Similar remarks apply to cow's milk. The practice of building houses with an upper story has now become common, greatly to the benefit, I believe, of the health of the inmates. With good results too patent to require comment, much greater attention is now paid in Kagoshima to cleanliness than formerly, especially in the more crowded parts of the town.

Though much has been done of late to promote the health of this community, it is right to say that much yet remains to be done. And here I may be permitted to state that the question of good abundant water-supply and efficient drainage of towns is, from sanitary point of view, by far the most important question that can engage the attention of the authorities here and elsewhere in Japan.

It is trite to say, because it is so true, that in disease prevention is better than cure. But how much more is prevention better where cure is doubtful. In the towns of this country great numbers of persons die in the prime of life of fever, whilst the number of persons attacked who recover forms a large fraction of the entire population. The remedy for this and many other evils in the sanitary state of the towns of Japan is an abundant supply of good water and efficient drainage.

I will not fail during my absence in Europe and elsewhere to make enquiries about the best and cheapest means of water-supply and drainage of towns, to the end that on my return I may be able to offer some useful service about these all-important questions. Nor will my best efforts be wanting in conducting other useful enquiries during my absence. One enquiry especially as to the best treatment yet known of the deplorable disease of Leprosy, unhappily prevalent in Japan, will engage my most earnest attention.

The wish expressed by Your Excellency, by my colleagues and pupils, and by members of former patients for my speedy return to Kagoshima to resume my duties, I accept as the best evidence that imperfect as my efforts have been to discharge the duties entrusted to me they have not been altogether in vain.

It is a source of satisfaction to me to know that the efficiency and good repute of the hospital and school are secured during my absence by the appointment of my friend and pupil, Mr. Mitamura Hajime, to act in my stead.

In conclusion I avail myself of this opportunity to express the deep sense of obligation I am under to Your Excellency for the uniform courtesy and kindness with which you have at all times treated me. Nor must I omit to thank very sincerely and very cordially many colleagues and pupils for the friendly regard which they have shown me on so many occasions during the last five years.

With much respect,

(Signed.) W. WILLIS.

His Excellency,

OYAMA KAKUNOSUKE,

Governor of the Kagoshima Ken.

REPLY.

(*Translation.*)

Oyama Tsunayoshi, Prefect of Kagoshima in Japan, wishes to state that you, the English Physician Dr. Willis, having by command of the former Daimio been invited on the occasion of the fighting at Toba and Fushimi in the month of February 1868, to come to the quarters of the Satsuma men in the temple of Sokokuji at Kioto, attended to their wounds there, in consequence of which large numbers of them recovered. Afterwards in the northern campaign you were employed by the Government and followed the army to Echigo and various other places, where you constantly attended to the wounded on the field of battle and healed the sick. Your zealous efforts were unceasing, night and day, and could not be surpassed yet you never showed signs of being wearied. It is impossible to tell the number of those who from first to last you brought back from death to life and restored to being.

Again in the year (87) you were invited by the Prefect of Kagoshima to become Physician to the Hospital and Professor to the medical school. Since that time you have discharged your duties with zeal and your efforts in instructing the doctors and students have been untiring and you have not been satisfied with a mere formal course of lectures. Both the doctors and students have had implicit faith in you, and are now beginning to master the details of European medical scince. They are night and day carrying their inquiries to a more advanced point.

Your treatment of the patients in the hospital has been eminently successful. Those who have come there in *kangos* have gone away on foot: those who have entered with a halting pace have returned firm and erect. In the intervals of your hospital duties you visited the houses of the sick and attended upon them, and several hundreds of the soldiers who came back from Formosa suffering from malarious disease have been healed by you. You have indeed no reason to be ashamed to bear the honorable title of physician (lit. life controller).

In the first month of this year you asked for one year's leave of absence in order to return to England for a time, and although I and every one of us tried repeatedly to induce you to remain you could not be prevailed on to do so. I therefore beg to offer you on your departure as a contribution towards presents to friends at home a sum of 500 *rios* together with six other articles which I hope you will accept as a trifling parting gift.

I, Tsunayoshi, and all of us look forward to your return at the appointed time.

27th January 1875. Oyama Tsunayoshi, Kenrei of Kagoshima, bows himself twice before you.

To Dr. WILLIS,

Physician of the Kagoshima Hospital.

(From the Japan Mail Daily Advertiser.)

THE final heat of the four-oared boat race on Saturday afternoon was won by Mr. A. H. Dare's crew by about one length

---

THE *London and China Express* announces that Commander Charles Jones, R.N. has been appointed to take the place of Captain Douglas, Director of the Japanese Naval mission, upon his approaching retirement.

General Saigo has been appointed Vice-President of the Japanese Commission to the Centennary Exhibition at Philadelphia.

Owing, it is said, to the heavy losses which resulted from the overproduction of silk grain the growers of Sinchiu, Oshiu, &c., have resolved to limit the quantity to be raised to one-third of that produced last year.

A rumour is current, says the *Nichi Nichi Shimbun*, that a bad form of disease has broken out among the stock at the

Digitized by Google UNIVERSITY OF CALIFORNIA

Kaitakushi Farm in the environs of Yedo. It will therefore be closed for the present.

The *Hochi Shimbun* relates that a Japanese junk manned by 12 hands from the Yamaguchi *ken* was discovered in a sinking condition in mid-ocean by an American merchant ship. The crew were taken from her and carried to San Francisco.

A native named Shozaburo living at Yedo has been fined 3 *yen* and 75 *sens* in commutation of fifty days imprisonment for the offence of having failed to rescue his grand-step-mother (?) from a fire.

ANOTHER photographer has, it seem, been punished for offering for sale specimens of the *carte de visite* of the Mikado and his Empress. Referring to the report that the portraits of the Imperial couple had been forwarded to Italy in order that they should be copied in oil a writer in the *Hioron Shimbun* expresses a hope that due care may be taken to prevent their republication on the continent of Europe.

THE *Hochi Shimbun*, on the authority of private information from Osaka, states that the coinage of 5 *sen* pieces has amounted to 880,000 *yen* and of copper coinage to 550,000 *yen*, in all of a value of 1,430,000. On the other hand $1,366,000 of 1 *shu* (6.25 *sen*) notes of the paper emitted by the Daijokuan and Mimbusho are now in currency. There is thus, the writer thinks, a fair margin against over-issue in this particular instance.

The Cremation grounds at Senji, Yedo have once more come into use in consequence of the withdrawal of the prohibition of this mode of disposing of the dead.

The news of the complete cession of Saghalien to Russia appears to be doubted in certain Japanese circles, and is even disputed by some of the native newspapers; but we are amply assured of its authenticity.

The only question that now engages the attention of the Legation in St. Petersburgh is the decision of the *Maria Luz* case, which is understood to be somewhat delayed in consequence of the irregular—and, presumably, accidental—introduction of a number of documents on the Peruvian side of the argument which had not previously been submitted to the consideration of the Japanese Government. These are to be transmitted to Japan, according to present arrangements, duly examined, and returned to Russia, after which the result of the arbitration will be pronounced.

Kakichi Mitsukuri, a younger son of the late president of the Meiroku Society, of Yedo, has for the second time gained a high prize for scholarship in his class, consisting of some fifty students, in the High School of Hartford, Connecticut. The family is prominent in educational achievements wherever it appears. Its members hold positions of distinction in Japan, and a brother of the young laborer in America is the recognized head of Japanese students in England, having already secured a scholarship at Cambridge.

The *Hochi Shimbun* is responsible for the statement that the chief provincial branch of the Mitsui Bank at Kiôto has changed its designation to Mikoshi Noriyemon. Other and less important branch establishments have also, it states, dissolved their connection with the parent house, and this it attributes to their apprehension of being involved in the losses of the larger Banks.

A repetition of Mr. Craven's drama "Milky White" was given last evening at the Gaiety Theatre by the corps of amateurs. A marked improvement was visible in Mr. Toddles' impersonation of the character which gives its name to the piece. He avoided those misconceptions of the part which marked and somewhat marred his first performance of it, and succeeded in the second act in producing some of those effects which the author, in spite of the miserable *facetiæ* interspersed through scenes addressed to the higher emotions, undoubtedly intended to produce. *Madlle. Violini* made a good impression in the very difficult part she sustained —a part, indeed, so difficult that any success whatever achieved in it by a man, argues versatility and power of adaptation. The part of *Dick Dags* was played at least as well as on the occasion of the first performance, and that of the young surgeon with careful discrimination of the part he occupied in the piece. *Martha Sadripp* was also decidedly improved. The orchestra cannot be congratulated, and the performance was given to a thin house.

THE *Hochi Shimbun* observes that the officials of the Kiobusho (department of religion) who have been recently engaged in a newspaper controversy with two of the native journals have enquired whether they were at liberty to continue their services to the department. The question has been referred for adjudication to the Superior Court.

THE *Hioron Shimbun* remarks upon the eccentricity of some of the native provincial journals. One of these, issued at Nagasaki, has subjected itself to the censorate of the local authorities and may not be published until it has been submitted to the inspection of the Governor.

Fukuoka, who had received his appointment as *gikuan*, did not long exercise the functions of his office. The honorarium of 472 *yen* which he received on his resignation has been generously bestowed upon the poor of Yedo.

THE *Hochi Shimbun* notes the appointment of Terada of the Foreign Office to the vacant post of secretary to the Japanese Consulate, Hongkong.

THE Messageries Maritimes Steam-ship *Tanais* with European mails to the 25th April sailed from Hongkong on the evening of the 3rd instant, for this port.

THE *Choya Shimbun* publishes the following copy of a Memorial which has been submitted to the *Genro-in* by Takatzuji and eleven other *Kadzoku*:—

We recently submitted a memorial enquiring if those who had performed meritorious actions could claim admission to the rank of *Kadzoku*. But our memorial was returned with the remark that as the medals of honour had been struck there did not appear to be any necessity for taking this course.

Had the reply been to the effect that our memorial was unnecessary we should have had nothing further to urge upon the subject; but when we are told that such reply is unnecessary *because* medals have been prepared we are tempted to ask still further:—Have not these medals been suggested by the customs of the kingdoms of Europe where medals and titles are distributed to the meritorious? The following five titles, for example, are bestowed in England: Duke, Marquis, Earl, Viscount and Baron; again Baronet and Knight of the Garter. However, it would seem to us that medals may be granted and titles of nobility conferred as well, and we confess we do not understand the answer which we have received. But if, in reply to this enquiry, we are told that such rewards as titles are not deemed necessary in cases where medals are granted, the intentions of the Government will be more clear to us.

THE *Hochi Shimbun* relates that a parallel to the kidnapping which was lately reported at Kobe has just occurred in Yokohama, where a Japanese, from Yedo, has sold his child for four *yen*, in this case also to a Chinese. It is related that on his return to his house the unnatural father endeavoured to excuse his conduct to his wife. She has, however, placed the matter in the hands of the police.

We are informed that among the passengers by the *Capron Maru*, from Iturup to Hakodate, were four Americans, who were left on the island in the autumn of 1874 by the schooner *Otsego* of San Francisco. It is asserted that they were left at the north-east end of the island to hunt, and that the vessel was to call there for them within a specified time, which had expired. An investigation into the causes of their being found

Dr. Eldridge,
Surgeon in charge.

We hear that the trouble reported by our Tientsin correspondent, in Manchuria, is connected with the mines. The Government are perpetually endeavouring to repress an industry which they had better legalise. It is said that the Mandarin who has been deputed to arrange matters, is inclined to report in favour of this view.—*N.-C. Daily News.*

Very few musters of new silk have come down hitherto, so we are not able to report much upon them. What has been received however is said to be of good quality and colour, but, of rather full size—owing probably to hasty reeling. There will very likely be about three thousand bales down for the English mail of the 30th instant. which is certainly earlier than usual. Export is estimated at seventy-five to eighty thousand bales.—*Celestial Empire—Shanghai.*

A correspondent informs us that H. M. S. *Iron Duke* arrived at Suez on the 23rd March, and passed Port Said on the 31st. All on board at that time were well and in good spirits. They are expected to arrive in England on the 30th April.—*Celestial Empire.*

MR. CONSUL ROBERTSON'S REPORT FOR 1874.

THE relief afforded to H. M.'s Consul, and H. M.'s subjects, by the permanent establishment at this port of a branch of the Supreme Court of China and Japan, has left the former more time for the discharge of those duties which more strictly belong to the Consulate as an office charged with the care of mercantile interests, and it is fair to presume that we are partly indebted to this fact for the more extended reports which we have of late years seen from Mr. Robertson's pen. Each one has successively been his *cheval de bataille* for the year, nor will the most exacting judge deny that its proportions are worthy of the occasion. But, if we may project our metaphor into one more sentence, he is sometimes better mounted than at others, and with vivid recollections in our mind of the great interest of his Report for 1873, we are disposed to think that the one we published last week had not quite as much breeding, as its predecessor, had neither so strong a frame, so much muscle, nor so fine a coat. For, indeed, the Report for 1873, was specially admirable—we shall hardly be wrong in calling it the best report ever issued from any of H. M.'s Consulates in this country. Its topics were extremely varied and some of them new. The information it conveyed was alike fresh and interesting, and the concluding part of it especially was of great value in assisting an enquirer to form some trustworthy reply to the important enquiry, What has been the material effect upon the fortunes of this country of the intercourse opened up with foreigners by Lord Elgin's treaty? Truth to tell, the present Report has fallen somewhat into the old groove of a commercial record of the year, a valuable and excellent thing in itself, but hardly one which could not be supplied equally well from other sources. At the same time it must be admitted that the subjects treated belong naturally to the care and duties of the Consulate, and that the Report embraces a notice of matters of local importance which must have occupied much of the Consul's time and thoughts during the past year. Nor, to be just, must we forget that the range of subjects which come fairly within the scope of treatment in a report of this nature is not very large. The intellectual, religious, moral or political movements of the country are naturally excluded; its finance barely comes within range, unless proof could be adduced that its condition was prejudicial to foreign trade, while manners and customs, history, mythology and science are equally foreign; so that commercial movements, questions of prices, mercantile corporations, processes of manufacture and such kindred topics are the limits to which a consul is restricted in his yearly report. That these may be treated in a larger manner than was customary five years ago cannot be questioned, and in view of the fact that each of the ports has its special characteristics, the mass of valuable information upon various commercial questions which might yearly be gathered at and diffused from the various consulates in Japan is very considerable, though it cannot be denied that much has already been done in this direction. Indeed, in this very Report there is an interesting account of the processes employed in making the celebrated lacquer, an art exclusively Japanese, and one in which they have certainly attained absolute perfection—if indeed there be any finality in such matters.

Having said thus much, the Report under consideration must be left to tell its own story—would it were happier! But the year just past has left a black record of losses and and disappointments. Mr. Robertson thinks that those who have been very prudent and sagacious may have

come out with a little profit, and we hope it is so. But the days of the middle-men in the East—for this is the position to which the more purely mercantile career of old times has been reduced—will never again be more than days of hard work, scanty commissions, and small, divided profits. The manufacturers at home and the middlemen between them and the merchants will make money; and being at home it is worth twice as much to them as it would be here. But the only merchant who will make money here as it was made in old days, is he who will forsake the old fields and the old paths, and strike out into the new courses which his own enterprise and the necessities of those about him may suggest.

There is one subject touched upon in Mr. ROBERTSON's Report which we do not think has received quite as much attention as it deserves from the community; we allude to the maintenance of the Public Gardens. As matters stand at present we have two Gardens on our hands, those on the Bluff and those on the Swamp. To suppose that the community will maintain both, is to look more sanguinely both at its power and its disposition that we should at present be justified in doing. But the only grounds on which we can ask the Japanese Government to waive their claim to the past and future ground-rent of the Bluff Gardens is that we pledge ourselves to maintain them and throw them open for the future both to natives and foreigners. Is the community prepared to do this, and to maintain the Gardens on the swamp as well, the less picturesque but more valuable of two? The Bluff Gardens certainly are not without claims on our support, though they are little visited except by the Midsummer Fairies and the children of the Bluff residents —for whom, however, they are a very charming resort. But those on the Swamp are far more valuable. They have important bearings upon the sanitary future of the settlement, they are our only possible cricket and base-ball ground, and they afford great protection to both the native and foreign town in case of a great fire breaking out in either. MR. ROBERTSON thinks that the only manner in which the expense of maintenance can be met is by voluntary contribution, and he will be an ingenious man who can contrive any other. The musicians have survived so many forlorn hopes that possibly it might be handed over to them. Yet, more seriously, it certainly behoves the residents to take this matter into consideration and resolve that the fore thought shewn on their behalf shall find its proper complement in their determination to charge themselves with the support of the Gardens. But how much at every turn we miss the great desideratum of municipal institutions!

REUTER'S TELEGRAMS.

The following telegrams have been received during the course of this week.

London, 20th May, 1875.—The Colliery Strike in South Wales has virtually terminated.

FRANCE.

Yesterday, M. Dufaure introduced his Constitutional Bills, which were referred to a Committee.

BETTING ON THE DERBY.

LONDON, 18th May, 1875.

Dufaure has introduced the Constitutional Bills in the French Assembly and they are referred to a Committee.

SPIRIT OF THE NATIVE PRESS.

CHRISTIANITY.

(From the "Nisshin Shinjishi," No. 113, of May 27, 1875.)

In No. 106 of the newspaper issued from your office there has appeared a contributed article criticizing the memorial of Mr. Yamaguchi Ichiro. The disconnected and self-important statements therein contained are worthy both of hatred and of ridicule, and I am of opinion that in a few days time there will certainly appear some public comment thereon by Mr. Yamaguchi and persons of intelligence. Although, then, there is no need for me to put in a word in the matter, still, as I am connected with those following the profession of teaching, I am unable to disregard the matter, and so, making known my insignificant ideas, I make enquiries of Mr. Kingo, and beg for the distinguished comments of all learned persons.

Mr. Kingo says:—"Mr. Yamaguchi, without producing the slightest proof, wilfully lays upon the "religion of the Lord of Heaven this evil reputation, "&c." If you (Kingo) be desirous of obtaining those proofs, I will bring forward and show you one or two reliable proofs that have come under my own observation, —and do you give your careful attention thereto. In the account of the creation of the world, given in the old Testament, which is reverenced by the followers of Jesus as a golden precept and precious law, it is stated that Adam said, "My wife is bone of my bone, and flesh of my flesh, and therefore a man may separate from father and mother, but not separate from his wife." Again, in the 34th verse of the 10 chapter in the New Testament, it is said, "I come to stir up war; I am come to set a man at variance against his father, and the daughter against her mother, and the daughter-in-law against her mother-in-law," &c. In the 46th verse of the 12th chapter it is stated, that 'while Jesus was talking to the people, his mother and his brethren stood without, desiring to speak with him. Then some one told him of this, but Jesus answered and said, "Who is my mother? and who are my brethren? And he pointed out his disciples and said, these are my brother, and sister, and mother. (With regard to these words, he was desirous of obtaining the belief of his disciples, but knew not that he was on the contrary falling into insubordination and disobedience, a matter deserving of (*sic.*) ridicule!) Again, Rinetô said, "Love not your father and mother; love the Great Lord of Heaven; reverence not the Ruler of your country, reverence the Great Ruler of Heaven. The persons who worship the Lord of Heaven are born in the Church, while those who do not worship the Lord of Heaven, even though they be persons of intelligence, are cast into hell." What does Mr. Kingo, again, make of these words? Can the proverb of "stopping "one's ears when stealing a bell" have been spoken directly in regard to this? Ha! Ha!

In connection with this I have a friendly notice to give to the followers of Jesus throughout the country. Read well and with unprejudiced mind the "Bemmô" * of Mr. Yasui and the 3rd and 4th numbers of the *Sei yeki Shimbun*, which have lately been published in the country, and then, I beg of you, wake up from your misguided dream, and beware lest you become unfaithful and unfilial men!

ON CREMATION.

(Hôchi Shimbun" of May 26, 1875.)

The withdrawal of the prohibition on cremation was discussed in these columns yesterday, but not having exhausted all that we wish to say on the subject, we now wish to take up the question afresh and discuss it in all its different bearings.

Much discussion was carried on amongst the writers of the day concerning the prohibition of cremation, and the point as to what action the Government would take in this matter was watched by us with continual interest. Three years have elapsed since then and the prohibition is now withdrawn. The prohibition and the subsequent withdrawal of the same, whether they are good or whether they are bad, cannot as a matter of course both be up-

* Name of a pamphlet containing arguments against Christianity.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

held. If the previous prohibition was right, then the withdrawal of that prohibition to-day is wrong. If the withdrawal of to-day is right there the former prohibition was wrong. And if the present action of the Government be held to be right, then as they have merely corrected a former error and made what was wrong right, why they have not done any especially praiseworthy deed. If again their present action be wrong, as it consists only of having changed what was formerly right into wrong, they have not done anything particularly bad. With regard therefore to the steps taken by the Government, the doubt arises as to whether our Government have done their duty and acted in a proper and suitable manner, or whether they have not done their duty and have not acted in a suitable manner.

We will proceed to clear up this doubt. (As was briefly stated yesterday), our Government in regard to their action in this matter have beyond a doubt repaired an error and made what was wrong right, and in so doing they have done their duty and acted in a suitable manner.

There are writers who will say, "The conduct of the "Government is uncertain. In the morning an edict "is published; in the evening this is altered. It is "impossible to understand which is right." To this we reply, "The amendment in the evening of the edict of the morning proceeds from want of proper forethought on the part of Government officials.* Still the work of a government is after all just the same as the work of private individuals, and consequently one cannot say that there is not both what is good and what is bad. If the edict of the morning be wrong, to alter it in the evening is, to say the least, to repair an error very quickly. And so if this edict prohibiting cremation which was published on the morning of a certain day in the 7th month of the 6th year of Meiji had been altered in the evening of the same day, this would have been preferable to altering the edict after the lapse of two years. Therefore although "the amendment in the "evening of the edict of the morning" is undoubtedly not a good thing, yet if the "morning's edict" be bad, is not the "evening's amendment" a desirable thing?

The wisest and most enlightened Governments cannot avoid occasionally overstepping the bounds of their authority and meddling with the affairs of individuals. The prohibition against cremation is not a question affecting Government, but one which concerns individuals only. It is a question of sect. In prohibiting the practice of cremation, therefore, the Government overstepped the bounds of their authority. But in our opinion this prohibition was not issued by the Government with evil intention. We fear they must either have been influenced by old fashioned prejudice, or have become entangled in Chinese doctrines, or looking at the relations between parent and child have not been able to endure the idea of burning the bodies of those dearly beloved and cherished. The action of the Government was probably the result of some feeling of this sort. But this being an individual and personal matter, it is needless to explain that the Government should have abstained from meddling with it. How much more then when it is a matter affecting religion—a question of sect—does it become one which is outside of the jurisdiction of the Government?

Now this wrong has been corrected, and been made right. What should not have been prohibited was prohibited. It being understood that this prohibition should be withdrawn, it was withdrawn. Therefore this withdrawal is not a praiseworthy deed, is not a commendable act. The Government has simply done its duty and performed a proper action. With regard to this proper action, was it that the Government recognized their fault and corrected it, or was it an unconscious act on their part which occurred by accident, they being ignorant of their mistake. If it were simply the result of chance, why we should have nothing to say in the matter. But it was not merely the result of accident. It is beyond all doubt that this correction of their error was intentional, and advisedly done.

Ah, if the Government would only increase this readiness to repair wrong, and advancing one step further, abolish the giving of rewards for filial piety and conjugal fidelity! These, equally with the practice of cremation, are personal matters, questions which affect individuals only and not the Government. And if the prohibition against cremation be held to be bad, the practice of giving the rewards in question must likewise be held to be bad; the one being held to be good the other must be held to be good also. The one (*i. e.* the prohibition against cremation) has been condemned—the other (*i. e.* the system of rewarding filial piety &c.) must therefore be condemned likewise. The one has been withdrawn; the other must therefore be put a stop to in like manner.

What is the object which the Government have in view in rewarding filial piety and conjugal fidelity? We, not being gifted with supernatural powers, are not able to comprehend what it can be, but we fear that the intention of the Government is the same as in the case of the prohibition against cremation, namely either that they are influenced by old prejudices, or that they are entangled in some Chinese doctrine. Their action in this respect is assuredly not the effect of any sound principle or correct reasoning. (A brother writer, Mr. Sugiyama, has published his views on the subject of rewarding filial piety and conjugal fidelity). According to him, that these rewards should not be given in the name of the Government is a well understood fact. Notwithstanding this, however, the Japanese people have gradually fallen into false ideas and are unable to adhere to the right doctrine. The feeling prompting the Government to dispense these rewards being similar to that which finds expression in saying—"It will be inconvenient somehow or other if "there is no ground burial"* amounts in all probability to this—that they think if they cease to give rewards that filial piety will cease to be practised. This is highly absurd. If the Government withdrew the prohibition about cremation on the grounds that they have no right to interfere with personal questions—with matters affecting individuals,—then in all cases to which that principle extends they ought to observe the same course;—nay, not only "ought" they to do so but they "*must*" do so.

We feel it to be a pitiful fact that our countrymen are content to depend wholly and entirely, both mentally and physically, on the Government. This desire for the help of the Government on every possible occasion is valuing the Government higher than their own bodies. Why of their own accord make themselves of such little account and submit to be treated like birds and beasts?

The doctrine of the Resurrection.

(Hôshi Sôdan)

In the doctrines taught by the disciples of Christianity there are many strange and extraordinary passages, and among these the most extraordinary is that all the dead of past, present and future ages are to be judged at a final judgment when the end of the world arrives, and either to go to heaven or to hell. This extraordinary doctrine of the resurrection of the dead is the principal and most trusted foundation of Christianity and had its origin in the strange report of Christ's resurrection after his death, and if we enquire into the causes of the spread of Christianity we find that it is chiefly due to this strange report. We shall therefore address ourselves to this asserted resurrection of Christ and the doctrine of a general resurrection.

Death means just the contrary to life. When the living force has absolutely ceased death ensues. The living can die, but the dead cannot revive. Though there be some who seem to revive after being dead, this cannot really be termed restoration to life, because life was not actually extinct, though supposed to be so. Death is death, whether in the wise and virtuous or the ignorant and wicked. The setting sun will not rise from the western mountain, neither will the rising sun descend into the eastern seas.

When Christ was crucified, the disciples, thinking they had lost their precious Master, were oppressed with an overwhelming sorrow. But the governors and elders of Judæa, thinking that they had destroyed the root of a great evil, set their minds at ease. But, to the astonishment of everyone, a woman by the name of Mary

* As opposed to cremation.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Magdalene, who had been, as it was said, vexed by seven devils, an expression applied to a disease of the nerves which prevailed greatly in those days, suddenly became penetrated with an ardent delusion of the imagination and cried out "Behold, he has revived!" This one exclamation thundered through the world became the foundation-stone of Christianity, and, extraordinary to relate, moved the minds of millions of men. Christ thus acquired an unexpected glory, and Mary an unsought honour.

The reasons for believing that people once dead cannot revive, are overwhelming. But, arguing from this base, as Christ had risen, Mary said that doubtless he was a God, and her former love for her blessed Master heated her imagination into a strange ardour, and for above forty days she was consoled by this belief; but, on the ascension of Christ from the mount of Olives, the curtain fell. This served but to increase her love towards him, and though the parting was full of sorrow, it was a matchless opportunity. So extraordinary an event once believed could be constituted the foundation for any strange assertion which might afterwards be made.

If such extraordinary events happened at the time Christ was still unborn (just prior to his birth) and at his birth, how is it that his village and those who held the same faith as his parents did not believe in him? Christ himself said that it would be impossible for him to become a prophet in his own birthplace (Luke IX, 24.) in consideration of which it may be most certainly inferred that the stories of these subsequent events were added in the course of time. In an excess of light the powers of the eye are destroyed. There was nothing supernatural in Christ himself. He was born of Joseph and Mary, tradespeople of Nazareth, in Judæa, and was an ordinary man, ardent in his belief in God, and a moral philosopher. If it be asked why he was so firmly believed in by his later disciples, this is explained by the reports of his resurrection which became the leading article of belief in his religion. But all the accounts of it in the four gospels differ, and this would seem to imply the confession that the apostles were catching at a shadow. In writing of his appearance after his resurrection some say his form was seen, other that his voice was heard, others that some young personage was by his side, or that angels were near the stone close to the sepulchre, or that two angels placed themselves beside the body, one at the head, the other at the feet. It cannot be said who rolled away the stone, or who saw an angel rolling it away while the earth was shaken, or that Christ's shape was like that of one transfigured, or that his raiment was white as snow, or that he (the narrator) had a conversation with the watchers and another with the angels and others with Christ himself. It is unnecessary for us to say that this is the heaping of tales upon tales and wonders upon wonders. But the most curious of curious things is to be found in the 20th chapter of St. John. The passage referred to states that all the apostles believed that Christ had risen, except Thomas, who alone doubted and remained in this condition of mind until he had felt the wound in his Master's side and the prints of the nails in his hands. To disabuse his mind of this doubt the form came to Thomas alone. Oh! when all the other apostles had already believed, however doubting a man might be, it seems impossible that one whom Christ had dearly loved should not have been brought to a similar belief by seeing him and hearing his voice, and that he should still have demanded the evidence of his wounds. Does not this show that these stories were added one after another? But this is not all. In the 24th chapter of Matthew's gospel there is a passage which states that the chief priests and the Pharisees ordered that a strict watch should be set over the sepulchre, and that it should be sealed lest the disciples should carry away the body and say that he had risen. Oh! this is is like making the confession that they had told an untruth by saying an unnecessary thing and had gone too far into the matter.

After a careful and impartial investigation of the New Testament and meditation on the character of Christ, on the opinions of his disciples, and on the circumstances of those days, I have arrived at the conclusion that Christ's body was taken down from the cross on Friday evening, but that the disciples had not time to observe the proper formalities of burial on that evening, and, as the morrow was unfortunately the sabbath of the Jews, they put the body into a temporary grave near the execution ground, placing a stone over it and waiting until the day after the sabbath to give it more formal burial. The disciples, whose hearts were filled with sorrow, feared that they would come under the displeasure of the authorities for being in the same company with Christ, and hid themselves in their homes in Galilee. But, in the night, some of these disheartened disciples thought that, though the body was dead, they would bring it to their homes to console their native place, there being nothing else that they could do. Thus they came secretly and took away the body with them by night. The other disciples did not dream of this, and their being scattered accounts for it. The disciples who remained in Jerusalem full of anger, sorrow and love, passed the Saturday heavily and weeping, and on the Sunday morning proposed to bury the body without fail. But, before the morning sun had dawned, Mary Magdalene, who loved him more than all, went to the temporary grave and found that the stone had been removed. She thought this strange, and, looking into the grave, she found that the body was not there, and that only the grave-clothes remained. She wondered to herself what this might be, and, her mind becoming confused, the light of the imagined resurrection dawned upon her. A fire was kindled in her heart, not only at the thought of the loss of her beloved Master, but that she should have lost the opportunity of burying him. And as she thought "At least I should like to hear his voice or see his shadow," she heard in her ears the sound "I have risen." She was perfectly unaware that the body had already been taken to Galilee, and thus this dreaming idea came into her mind, and her deep love for her Master gave birth to the doctrine of the resurrection.

Oh, Mary! Mary! Thou art the heroine among heroines! Thy dream of kindled imagination hath become an everlasting thing, and thou hast gained a strange honour in the world! Thine is the foremost deed in Christianity. It is indeed deplorable that weak-minded Peter, John and others should have obscured thy deed almost to extinction!

Although some said that Christ's body was already in Galilee, the ardour of the apostles was such that they said he had risen from the dead and was now waiting there to see them. But the warmth of Mary's heart which inspired her thought and constituted sufficient proof to her of the fact which she asserted, caused many also to believe. And when they arrived in Galilee the light of the idea of resurrection (which had only dawned on her) shone fully, and the disciples who had brought the body thither could not say truly that they had removed it to Galilee, so they were compelled to say that Christ had risen. At the end of the 28th chapter of Matthew's gospel there is evidence of an attempt to conceal this. But by this time a discussion regarding the taking away of the body had arisen, and I think the disciples defeated the truth by their ardour and gained an everlasting victory for this delusion.

Part II.

There are many other doubts connected with the resurrection of Christ, but I do not deem it necessary to bring forward and indicate each one of them. I shall now therefore turn to the great and important statement about the general resurrection at the end of the world, when a final judgment of the actions of men will be made by Jesus Christ.

The resurrection of Christ is a historical question, but, as we have before stated, if we test the evidences of it by reason, it proves to be a wholly imaginary thing. The New Testament contains statements about a general resurrection, but as this is spoken of in the future that it *will* happen, it cannot be regarded in the light of a historical fact. We shall submit this statement to the analysis of reason, and shall show that it is also an imaginary thing.

All religions agree in teaching that according to the good or evil words and deeds of men their future happiness or misery will be determined. These good

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and evil deeds are not rewarded and punished by God alone; this is done also by men. But as the time when these deeds become known differs, some of them are rewarded or punished early and some late. Yet still, when a deed is done, the foundation of either a reward or a punishment is laid. But as God is everywhere and nothing is unknown to him, I do not think that he resembles man in discovering the good or evil of men's deeds, but that he knows them at the instant they are done, from which I should judge that the reward or punishment ought to be awarded immediately. Why should it be kept open until death?

The Buddhists say all evil deeds become concentrated by mutual attraction and become the parents of their own consequences without the assistance of gods or men, and as other religions teach that the recompense comes in the next world or the world after next, their views diverge widely on these points. There is a saying in Christiainty which is somewhat contrary to this, and a curious saying it is, viz, that rewards and punishments are neither awarded at the time of the deed, nor at the time of death, but that they await the final day of judgment, when the doers of them shall either ascend to heaven or descend to hell. But when this judgment day is to be is wholly unknown. It is said that it may come in a thousand or ten thousand years, and it is clear from the Bible that the ancient Jews daily expected the world to come to an end, so that we may not think any great delay will attend it. The Roman Catholics teach that it might even occur to-day, so that this adds force to our argument. But, be this as it may, as it is said that the world was made from a void it must in the end to return to its voidness. (Men received life at the same time as other living things, so that it seems devoid of reason to say that the former have eternal life and the latter have it not.) It is said that at the last day the world will shake and fall to pieces, and will be melted and destroyed by an extreme of heat, and that all its inhabitants from the creation downwards will appear as they lived on this earth and receive a final judgment. Although the flesh and bones have decayed in the process of time, they will be reconstituted as before, for the deeds done in the body were done both by body and soul, and thus both are required for judgment, so that they must appear as they appeared on the earth. Now, the body of a man is composed of fourte n elements, and when it disappears these elements are separated and depart, and I wonder whether it can be known whether such and such elements belonged to such and such persons. I asked one of the Christian clergy whether the lame, the blind, and the deaf are to appear for judgment exactly as they formerly appeared upon this earth, and he replied that they will appear as ordinary people and their age will be about thirty-three. He said too that at the coming of Christ, he would ride upon the clouds with trumpets blowing before him, and that after being judged all the good will ascend to heaven to enjoy eternal happiness with him, while all the evil will descend into hell with the Devil to bear eternal suffering, and that our present life was very short compared with the life in the world which is to come.

I asked what would become of our souls from the time of our death to the time of our resurrection. But upon this no certain answer was obtainable. Some have replied to my question by saying that they would go under the earth, and others that they would be transported to some distant place, and that according to their virtues or vices during life they would be happy or miserable. We doubt if there be a statement as curious as this to be found anywhere; and it is impossible to suppose that any one possessed with reason could believe such things. The acceptance of them by learned men is as if the pock-marks of a woman should appear as dimples to her lover. A recent writer in your columns has said that there is no difference between believing this and old men and women believing in idols of wood, or stone or animals, and I entirely agree with him. If God knows when either good or evil deeds are done, why does he not reward or punish them at once and not wait until the end of the world? When two people love each other, they are desirous of becoming united as soon as possible, and this is consonant with the laws of nature. And therefore if God loves men and men love God, why should they not be [illegible] as soon as possible, instead of waiting for thousands and tens of thousands of years, wasting precious time in vain. It is true that the final judgment is an important thing, but if it is going to take place after the world has been destroyed and turned into nothing, would not this be like a theatrical performance without spectators? If people are to come forward to be finally judged with their bodies and souls, why not send them to heaven or hell as they are, without dying at all. I asked a foreign clergyman whether it would not be difficult to reconstruct these bodies once more after they were dead, but he replied "No! not at all; the power of God is so great that he could turn a piece of grass or wood into a body in an instant." But, certainly, with such power as that he could make people ascend to heaven or descend to hell without dying. Why should he wait until the last day to cast the Devil into hell, instead of doing so before, so that his loving children should not be turned away from the right path? To this I do not think there can be any answer.

The Study of Dead Languages.

(Hochi Shimbun.)

Words are used for expressing thoughts and letters for writing words. A language may be more or less pure; it is sufficient if it answers the purposes of the place and time at which it is used. The study of an ancient or foreign language should be pursued as an adjunct to practical education, but at present the younger generation do not observe a correct order in their studies, and are pursuing the study of ancient or foreign languages for their own sakes, which appears to us very pernicious. But this is not the worst. Whatever be the country, the clergy always cling to some ancient language. This love of antiquity is a fault inherent in them, but among all their loves there is none so absurd as the liking for ancient languages. The Brahmins of India revere Sanscrit, and declare that as it was created by Brahma it is adorable. We have heard that the language of India has undergone changes, but the reverence for it in its most ancient form has not ceased, and the Brahmins think it sinful to print Sanscrit, and when they write it they do so with styles on palm-leaves, the few printed Sanscrit books which we now see having been printed by foreigners, Europeans or Americans, and not by the Hindoos. When the clergy of the *Himitz ha* (mysterious sect of Buddhists) teach Sanscrit, they separate themselves from the world for the sacred rights of the holy fire, which they may have derived from the sun-worship of the Persians, though nothing remains of it but the lower forms of its rites. Our Shingakusha (Shinto clergy) and Wagakusha (Japanese archæologists) say that Japan is a "word country,"* a saying directed against the Chinese, apparently in ignorance of the fact that there is not a country in the world which has not words. From this we can infer what ignorant people they are. They study dead languages and are now trying to bring them into vogue, not caring whether they are understood or not, so that all words of prayer and praise are offered up in them. It has lately been the fashion to deify those who have died in modern times, and prayers and praises are offered up to them in languages long since dead and buried, and therefore not only incomprehensible to the worshippers, but actually also to those to whom the prayers are addressed!

A Wagakusha by the name of Hirata has published a work on the letters of Japan, and states that the characters existed at the time of our mythology, and some of his scholars say that they are desirous of writing our ancient history with the *Jin-dai-moji* (letters of the mythological ages). Truly, there is much ridiculous ignorance in the world.

If we look at Christianity we find that both the old and new Testaments which were originally written in Hebrew and Greek, were, in the early ages, translated into Latin. The obstinate clergy of the Roman Catholic religion will not permit these to be translated into any other language from Latin, and say that Latin is a good

* In contra distinction to originally with an ideographical system of writing like that of China.—[Ed. J. W. M.]

Digitized by Google UNIVERSITY OF CALIFORNIA

and holy language, and that it was by the power of the Almighty that the Scriptures were translated into that language. They do not permit them to be read in a common-place way, though it is impossible to know whether this is the dictate of folly or cunning. The Protestants at first translated them into German, and then translations into English were also made, since when they have been translated into many languages and all are permitted to read them. We have recently seen some portions which have been translated into our own tongue, though we do not know by whom, but as the Roman Catholics do not permit of their being translated, we presume it has been done by the Protestants. Greatly to our astonishment they are composed in our language in the same fashion as the prayers and praises of the Shintôists. Does every one become ignorant who comes out to an ignorant country? This cannot always be so, for some of the books which we know to have been published by the Greek and Roman Catholic churchmen are written in our modern tongue. It seems to us to be killing the living Bible to translate it into a dead language. The Buddhist book of Shaka's doctrines was not composed in Sanscrit. Shaka preached in Pali, a language which was universally used by the people of Makata. Shaka did not write himself. It was his disciples who compiled the sayings of their master after his death. These books then came from farther India through Thibet into China, and were translated into these several languages, and the reason why we did not ourselves translate them when they came here is that we read and understood Chinese writings. Although we use the Chinese mode of writing, still our respective grammars differ so widely that it cannot be read currently. The nouns and adjectives may be read according to the Chinese pronunciation, but verbs and adverbs must be pronounced in our own language, and this has become our mode of reading Chinese. But the Buddhists read it straight without any such accommodation, and the consequence is that neither reader nor hearer understand a word of the passage which is being read. This is quite different to what is usually done by the Japanese. Young Buddhist scholars will continue reading for many years *without* knowing in the least what they have been reading. If the Buddhists have no time to translate these books into our tongue, they should teach the reading of Chinese according to the customary method, and their scholars would not only make some progress, but also acquire some interest in their studies. But if they *must* keep to an ancient language and nothing else, it would be better for them to go to India and acquire the real books and read them. *Namu ami dabutz* is according to the pronunciation of the Sanscrit. And it is not only the Buddhists who use such old words, for in the old and New Testaments, which have been translated into many languages, we have the words Jehovah, Amen &c, which remain the same, so that if there are any words for which equivalents cannot be found, there is no absolute necessity for finding them. Judging from the foregoing, we think that should the Shintôists be desirous of using some old words a mixture of a few of them only would be sufficient.

ASIATIC SOCIETY OF JAPAN.

The regular May meeting of the Society was held on Monday the 31st ult. at 8.30 P.M. at the Grand Hotel, Dr. Brown in the Chair.

The Minutes of the last meeting were approved, and it was announced that the following gentlemen had been elected Ordinary Members of the Society since the last General Meeting: Rev. C. F. Warren, Messrs. A. J. Van Casteel, G. J. Rockwell and John Farmer.

The following donations had also been received:—A Comparative Vocabulary of the Chinese Corean and Japanese Languages, Proceedings of the American Oriental Society and of the American Philological Association, &c.

Mr. Dallas then read his paper entitled "Notes collected in the Okitama *ken* with an itinerary of the roads leading to it."

On its conclusion Dr. Brown said:—In Japan we have no Nineveh or Babylon to disentomb, no Jerusalem to uncover of its superincumbent débris, in order to identify its ancient topography, no Ilium that was, to bring to light, after the oblivion of ages, nor ancient ruins of any kind whatever to interest the antiquary. The materials of which all structures have been built in this country have been so perishable that we have but to scratch the surface of the soil, or penetrate a few inches or, at most a few feet, below it to lay bare all the structural antiquities it contains. Hence the antiquarian who confines his researches to this country is in danger of being disappointed, not because the country is not old enough, but because it is so old that its perishable monuments have crumbled to dust. All are turned to mould. The Asiatic Society is therefore indebted to those who, despite the want of such monuments as might furnish them with themes for papers to contribute to our Transactions, are willing to put themselves to the trouble of giving us the results of their careful observations upon things that lie, as it were, upon the surface. These things are not seen without travel, nor understood without inquiry, nor is every one who does see them ready to take such note of them as is requisite to furnish the basis of valuable communications to the public. Even itineraries, in the present exclusion of foreigners from the interior of the country, are valuable, and especially carefully prepared statistics like those contained in Mr. Dallas's paper on the Akitama Ken. I have much pleasure in saying that the Asiatic Society are under obligations to him for this contribution to their information respecting a part of the country to which few of us have had access.

After some further conversation on the subject of the paper the meeting terminated.

Law & Police.

H. B. M's CONSULAR COURT.

May 29, 1875.

Before H. S. WILKINSON, Esq., Acting Consul.

Robert William Hutchinson, master of the British steamer *Calabar*, appeared in answer to a summons on a charge of shipping two men in his vessel contrary to the provisions of the Merchant Shipping Act. The captain was summoned for ten o'clock, but owing to the heavy weather was not able to get ashore before a quarter to noon, when the case was remanded until 2 p.m.

Before the adjournment, a conversation took place between the Acting-Consul and the captain on the subject of the victualling of some Bengalese, a portion of the crew, who refused to eat the ship's provisions. The Consul recommended that the captain should settle this affair himself with the men.

At 2 p.m. the Court re-assembled, when his Honor read section 157 of the Merchant Shipping Act, under which Capt. Hutchinson was charged.

John H. Dare, chief officer of the S. S. *Cabalar* was sworn, and deposed: I know the two China boys in Court. One was in my own service, and I believe that the other attended on the engineers. My own boy came on board in Hongkong, where he was sent to me by some one on shore. I first saw the other boy on board, the night on which we left Hongkong, when the engineer had missed his watch. Both boys came up in the *Calabar* from Hongkong to Yokohama. I cannot say whether the names of these boys are on the ship's articles (produced). They might be there without my knowing it. I do not know their names. The Chinamen on board have three names a day on the average. The boy Atuk is the one who was charged with attempting to steal the chief engineer's gold watch. I had sent on shore for a servant to a place where it was usual to hire them. The proprietor sent me off two or three boys who did not suit me. When we got to sea I found the boy Ayeh on board, and employed him. I had seen him on board before then. There was no agreement between us. It is customary to take boys on trial in Hongkong. In the case of officers doing so, the captain need not know anything about it. I brought no boy from Singapore, as I could not get one there. When the watch was lost in Hongkong, I threatened the boy to hoist the police flag, and the watch was then recovered. The anchor was short at the time. When the watch was recovered I took no further notice of the boy. I did not think it necessary to trouble the captain on the subject. I am in general charge of the ship. I had no conversation with Capt. Hutchinson at any time

about these boys until after our arrival in port here, when I told him that my boy had robbed me of some money ($60). He then told me that it would be advisable to prosecute my servant. I cannot say whether the captain saw him during the voyage. The boy was useless to me, being the greater part of the time sick in his room. It is quite usual for officers on vessels from China to carry private servants. The engineers on board the *Calatar* had their own cook, inscribed on the articles. They are paid so much money, "and find themselves." They also have their private boys. Generally, on vessels from China each officer finds his own servant. I had no authority, but that of custom, to take my private servant on board. If I were prosecuted for so doing I should plead ignorance and custom. I have done the same thing for ten years, with the knowledge of the English and American Consuls at Foochow, Shanghai, Amoy, and elsewhere, the shipping masters at Hongkong and Singapore, and the English Consuls at Honolulu and San Francisco. I have asked the shipping master at Hongkong whether it was necessary to bring a private servant to the office to engage him-and he told me "No." The shipping master in Singapore also stated there is no necessity to put private servants on the articles, unless they are paid by the ship. The custom in Singapore, in forty-nine out of fifty steamers from China, is that the private servants are not on the articles. I remember an instance when the servants of the chief engineer of the *Rainbow* steamer summoned him for wages, and the Harbour Master would not allow the claim because the boy was not on the articles. I know two companies of steamers, in which I was myself employed as mate, in four vessels of one company and one of another, in which I had to take the articles from the shipping office to the vessel, and in none of these vessels were private servants entered on the articles. I conclude that Atuk was in the engineers' employ because I saw him waiting on their mess. (The witness here entered upon a long explanation of the duties of the boys and cooks on board, and the way they are paid.) The officers' boys are useless for the ship's purposes, though they may be very necessary to their masters. I did not consider that the Captain would be angry with me for employing a private servant, if he knew it. I gave it no consideration whatever. I acted as it is customary to act on vessels in the Chinese ports. In Yokohama, when I charged the boys before the captain with stealing he did not know who they were, and asked who brought them on board. I did not exactly know who were on the articles, not having had charge of them, but I believe there were no other men on board not on the articles but the two now in question. (The witness appeared rather inclined to fence with the questions put to him, and at the close of his examination was rebuked by the Acting-Consul.)

To Captain Hutchinson: The ship lay in Hongkong two and a half miles from the shore, and in a very inconvenient position for quick despatch. The vessel went to Hongkong to coal, to discharge passengers, and to get extra firemen. All despatch was used to those ends. You did not authorise me to receive any men on board except on the last day of our stay, when you told me to take six Chinese sailors and six Chinese firemen on board.

To the Court: When I charged the men with stealing before the Captain, he ordered me to take them ashore and lay a complaint against them. He asked me who they were, and I told him. As I am not acquainted here, and do not know the customs, I made a mistake, and instead of bringing them here took them to the Japanese gaol. The stevedore on board told me that was the proper place to take them. I may have told you on a previous occasion that I took them to the Japanese gaol because they were not English subjects. The captain did not tell me where to take them to beyond ordering me to take them on shore.

Atuk, cautioned, deposed through an interpreter, as follows: I was head mess steward to three men on board the *Calabar*, which vessel joined in Hongkong in the service of the second engineer. I did not go to the shipping office there, nor did I sign either of the papers produced (the ship's articles). Ayeh and I were engaged at $18 per month between us. I took Ayeh with me to help me. He came on board at the same time as I did, and did not sign the articles. On the voyage from Hongkong we worked all the way as mess-room stewards. I remember the chief officer bringing me and the other boy ashore. The captain first tied our tails together. We were taken to the Japanese gaol, where I remained six days (five days English), going in on Friday and being brought out to appear here on Wednesday.

To Captain Hutchinson: I did not see you when I came on board. The ship had left before I saw you. I did not know who was captain, and I had no agreement with you.

Ayeh, also cautioned, [illegible] by the Officer of the *Calabar*. I am now serving a term in the prison here. A Portuguese in Hongkong took me on board, where I was handed over to the chief officer. The Portuguese told me I should have $8 a month. On the passage up from Hongkong I worked as boy for the chief officer, who when we arrived here took me to the Japanese Gaol from the ship, with my hands in irons. The other man who was brought ashore with me was not ironed. I stayed five days in the Japanese Gaol, after which I was brought here, and then sent to another prison, where I see no man and do not know who has charge of me. The man in Court (Constable Hodges) took me there. A European gives me chow.

To Captain Hutchinson: I did not see you when I was engaged.

This closed the case against the captain, and the Acting-Consul read to him the section from the Act, to the effect that the onus of proof that the men were properly engaged rested with the captain, and that it was not for the Crown to prove that they were improperly engaged. His Honor mentioned this, so that in case the captain made his ignorance of their engagement his defence, he might not be taken by surprise at the decision it might be the duty of the Court to arrive at.

Captain Hutchinson, in defence, submitted that the section under which he was charged did not apply to his case, as had been shown by the men's own testimony and that of the officers. He had no knowledge whatever of the men being on board. He had neither seen them on shore nor on board, and he emphatically denied all cognisance of their engagement, or the fact of their being on board the *Calabar*.

His Honour, in giving judgment, said that he found that the two men were employed on board a ship of which Captain Hutchinson was master, and that their names were not upon the articles. He then called attention to the 157th section, and read read section 759, which defines the manner, place, and time in which men shall be engaged on board ship. The defendant, said his Honour, admitted that these men were not engaged according to the provisions of the act, but held that they were engaged under special circumstances. As his Honour understood him, he (the captain) denied that the men were seamen in the ordinary sense of the act. But his Honour ruled that they were seamen, and that it was undoubtedly the intention of the act that men employed as these were should be upon the articles. The act was framed to meet such a case as this. Through the men not having been on the articles serious consequences have happened. The chief officer committed the error of taking them to the Saibansho instead of to the Consulate, and but for the good sense of the Japanese officials much more serious results might have occurred. His Honour then referred to the evidence of the chief officer, who, he said, had stated that large numbers of men were employed in the same way as these had been, and while he did not believe that the officials in the places mentioned by that witness connived at a contravention of the Act, he still believed that the custom complained of did exist, and that it should be put an end to. Commenting lightly upon the apparent fact that had the captain used more diligence he would have known that he had men on board not on the ship's articles, and having questioned whether if even he had known he would have entered them thereon, to which the captain said that he did not himself know whether he would have done so or not, his Honor concluded by saying that he considered a contravention of the Act had been committed; but that the case would be met by a nominal penalty. The master would be fined $1 and costs in one case only.

Captain Hutchinson gave notice of appeal.

May 31, 1875.

R McLeod, an engineer unemployed, and H. C. Hansen, a seamen of the British ship *James Paton*, were charged with being drunk and incapable in the public street last night.

These cases were set for 11 a.m., and were not heard until a quarter before 12. The police were in attendance punctually with their prisoners. The reporters were there, but the Bench was, as is frequently the case, unpunctual.

McLeod, who is said to be a well informed man, and well qualified in his profession, has been already convicted five times for drunkenness, and was warned by the Bench that a continuance of his misconduct must lead to his deportation. He pleaded that he never did any harm to any one. He was reminded that he was doing a great deal of harm to himself, and was sentenced to fourteen days' imprisonment.

Hansen admitted the charge brought against him, and was fined $1 and costs, or 48 hours imprisonment.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 1872. 12m.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

Aug. 1, 26 ins.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, JUNE 5TH, 1875.

IMPORTS.

Cotton Fabric and Yarns.—The import market continues inactive and without improvement and rates have still a downward tendency. We quote:

Grey Shirtings:—				White Shirtings:—	
7 lbs.	38½ yds. 39 in.	per pce.	$1.90 to $2.10	60 to 64 reed 40 yds. 35 in. nom.	per pce. 2.40 to 2.65
8 lbs.	38½ yds. 44 in.	„	2.20 to 2.40	Turkey Reds 24 yds. 30 in. 2¼—3 lb.	per lb. 0.80 to 1.00
8 lbs. 4 to 8 lbs.	6 „ 39 in.	„	2.17½ to 2.55	Black Velvets	8.25 to 9.25
9 lbs.	„ 44 in.	„	2.62½ to 2.85	English Drills 15 lb. 40 yds, 30 in.	3.25 to 3.40

Yarn:—

No 16 to 24	per picul	32.00 to 36.00		No. 32	per picul 37.00 to 39.50
Reverse	nom.	nominal		„ 38 to 42	„ 42.00 to 45.00

Woollens.—There is no change in values, the market continuing dull and inanimate.

Plain Orleans	40—42 yds. 32 in.	6.25 to 7.75		Figured Mousseline de Laine	30 yds. 30 in. 0.25 to 0.28
Figured Orleans	29—30 yds. 31 in.	4.50 to 5.25		Multicolored „	30 yds. 30 in. 0.32 to 0.36
Italian Cloth	30 yds 32 in.	0.25 to 0.36		Cloth, all wool plain or fancy	48 in. to 52 in. 1.00 to 1.30
Camlet Cords	29—30 yds. 32 in.	6.00 to 7.00		Presidents	54 in. to 56 in. 0.75 to 0.85
Camlets Asstd.	56—58 yds. 31 in.	18.50 to 19.00		Pilots	54 in. to 56 in. 0.45 to 0.55
Lastings Japan	22—30 yds. 32 in.	13.00 to 14.50		Union	54 in. to 56 in. 0.70 to 0.85
Plain Mousseline de Laine	30 yds. 30 in.	0.18 to 0.19½		Blankets, scarlet & green 7 to 8 lbs.	per lb. 0.45 to 0.48

Nominal.

Sugar.—Stocks continue heavy and business is sluggish in the extreme.

Sugar:—Formosa in bag	per picul	4.55 to 4.70		China No 5 Kong-fun	per picul 5.25 to 5.75
in Basket	„	4.50 to 4.60		„ No. 6 E-pak	„ 4.50 to 4.90
China No. 1 Ping fah	„	8.00 to 8.20		Swatow	„ 3.40 to 3.50
„ No. 2 Ching-pak	„	7.30 to 7.80		Daitong	„ 3.50 to 3.60
„ No. 3 Ke-pak	„	6.70 to 7.25		Japan Rice	„ 3.25 to 3.30
„ No. 4 Kook fah	„	5.80 to 6.50		Kerosine Oil	„ 3.40 to 3.50

EXPORTS.

Silk.—Since the 22nd ulto., arrivals are 175 bales, and deliveries 435 piculs. The stock is fast decreasing and its composition is such as to render it very difficult to make accurate quotations. It may be said, however, that whilst best Oshiu are still held at $550 to $570 prices for Hanks have further receed. We may quote Hanks, No. 2½, $400 to $430, and No. 3, $350 to $380.

Tea.—A large and important business has been transacted in this staple during the past week, settlements amounting to the large total of 5,400 piculs.

Prices are rather easier and buyers accordingly have invested freely, but the general tone of American advices still indicates the necessity for a further decline in order to meet quotations from the home markets.

The general quality of the crop, so far, has been good, and a full export can be confidently relied on.

To-days prices rule as under.

Medium	$32.00 to 34.00	Finest	$40 to 43
Good Medium	34.50 to 36.00	Choice	45 upwards.
Fine	37.00 to 39.00		

EXCHANGE AND BULLION.

Exchange.—A fair business continues to be done in Private Paper at unaltered quotations, but there have been scarcely any transaction in Bank Bills.

Gold Yen have been somewhat neglected, while *Satz* have been largely dealt in touching 412.65, but are again easier.

Rates close as follows:—

On London, Bank, 6 Months'	4s. 2¼d. to ⅜	On Hongkong Bank Bills on demand	⅛ per cent. pre.
„ „ Sight	4s 1¾d.	„ „ Private Bills 10 ds. sight	⅛ „ dist.
„ „ Private, 6 months	4s. 2⅛d.	„ San Francisco Bank Bills on demand	Par to 100½

NORTON'S PATENT "ABYSSINIAN" TUBE WELLS.

THESE celebrated Tube Wells, of which many thousands are in use throughout the world, are the most rapid, simple, and economical means of obtaining water, from the wants of a cottage to supplies of upwards of a million gallons a day. In use at Bass's, Allsopp's and other large Breweries.

Full printed directions are furnished with the Driving Tackle, which any ordinary workman can manage. The average time required to drive a Well is *one to six hours.*

LE GRAND & SUTCLIFF,

Proprietors of Letters Patent,

3, Talbot Court, Gracechurch Street, and Magdala Works, Bunhill Row,

LONDON.

March 27, 1875. 12m, 1f.

June 5, 1875. 12ms.

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d, 10d., 1s., 1s. 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s, 1s. 3d, and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s, and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s, 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s, 15s, and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,
30, Cornhill, and 5, Serle-street.

GEORGE FLETCHER & Co.,

BETTS STREET, ST. GEORGE'S EAST, LONDON,
AND
MASSON WORKS, DERBY.

Established over Thirty years as
MAKERS OF EVERY DESCRIPTION OF MACHINERY FOR SUGAR PLANTATIONS AND REFINERIES,
and well known all over the world.
Also the ORIGINAL PATENTEES of the MULTITUBULAR BOILERS FOR THE COPPER WALL.

- Multitubular and other Steam Boilers.
- Condensing and High Pressure Steam Engines.
- Donkey Engines.
- Distillery Engines.
- Air-pump Engines.
- Wrought Iron Waterwheels.
- Horizontal and Vertical Sugar Mills of every description, with suitable gearing.
- Cane-juice Pumps.
- Tubular and other steam Clarifiers.
- Sugar Pans, Coolers, &c.
- Granulating Pans of every description.
- Cattle Pumps.
- Vacuum Pans with all their accessories.
- Centrifugal Sugar Machine.
- All kinds of Apparatus for reburning Animal Charcoal.
- Copper Rum Still for steam or fire.
- Light Rails, Axles, and Wheels for Megass.
- Dippers and Cranes.
- Improved Feed Injectors (Fletcher's).
- Cane Punts.
- Draining Machinery, with scoop wheels or centrifugal pumps.
- Cast and Wrought Iron Tanks.

Also small Plants (clarifiers and Sugar Boilers extra) to make 2½ tons per day of 12 hours, for £770.

Yokohama, March 21, 1874. tf

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 24.] YOKOHAMA, SATURDAY, JUNE 12, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

We very sincerely trust that the native press will show that it can use with wisdom and discretion the large measure of freedom granted to it by the Government—a far greater measure than ever was permitted to an oriental people, except in the case of our own subjects in India. If this is abused and made the instrument of circulating seditious writing, evil, either to the press or the people, must come of it. Let abuses or corruption or mis-government by all means be attacked, and let men speak their minds honestly and fearlessly. But when calls of a seditious and rebellious character are made on the people, the laws against such acts should be enforced, at least after proper warning. The Government has shewn its strength and its liberality of opinion in granting this freedom; but it would show weakness were it to permit a manifest abuse of it. If it is part of the mission of the press in Japan to urge the liberties of the people, it is also part of this mission to teach the people how to use and enjoy them properly. No Government will connive at acts which undermine its authority. So far as foreigners may judge from the laws which regulate the press, and from observation of its actual proceedings, the sphere of action accorded to it is amply large enough to permit of its urging and eventually bringing about all necessary reforms. This is its province, and a wise and progressive government will look upon it as a valuable ally, provided it moves prudently within this sphere. But the extension of its own liberties, and of those of the people whom it should represent and lead, will assuredly depend upon its wisdom, and be prevented by its excesses.

A writer in the *Hochi Shimbun* makes a great lament about the burdens "borne by us people"—the incomes and pensions paid the nobles and samurai, the paper currency—(if he had more sense he would see that this saved the whole expense of a metallic currency, which is, of course, so much gold and silver, purchased by labour, but used only for the purpose of facilitating exchanges), the foreign debt &c., &c. He wants the command of the grain and the money, and summons "the boys of Japan" to urge on the movement, *it matters not where*. Five years ago his head would have been in a basket by this time had he used such language. This is not the use to make of freedom. This is pure unmitigated Jack Cade-ism—(we refer our native Shakespereans to Richard II.) All this is pothouse and tavern talk—very well for men who frequent these haunts and common enough every where—nowhere more so than in England—but not fit for respectable journals which have a great deal of serious and important work to do. We earnestly hope the press of Japan will remain above this kind of writing. It certainly has been so hitherto.

A short time ago we took occasion to express a hope that the Japanese Government would embrace the opportunity afforded by the publication of their Financial Statement, to announce how much of the last loan contracted in England had been expended on the objects for which the money was borrowed. The information, as our readers are aware, was afforded in the columns of this journal on the 29th inst., and we only refer to the matter again in order to enforce, by a quotation from a leading English paper, the doctrine we sought to establish, viz, that money borrowed for a certain purpose is applicable to that purpose alone.

In treating of the Honduras Loan, the *Saturday Review* of the 17th April says "The question is not whether the bondholders had a right to expect a safe return from a highly speculative investment, *but whether they had a right to expect that money subscribed for a particular purpose should be strictly applied to that purpose and to no other.*"

The robberies and attempts at robbery during the past week have been very discomfiting, and the police seem unable to cope with them. Of course the matter will be represented to the local authorities in a strong light, but a couple of mounted European constables should go the rounds of the settlement once or twice between 9 p.m., and sunrise. The nights are now short, and this plan could easily be carrried out with an extra man or two on the staff—even if it require this.

AN entertainment was given on Thursday night at the Temperance Hall which was largely attended by the crews of the men-of-war in harbour. The band of the *Challenger* performed during the evening, and a selection of vocal music was given by a party of amateurs. Mr. G. Pauncefort also gave some recitations which afforded great amusement to the visitors.

We have been requested to state that a Royal Arch Chapter will be consecrated at the Masonic Lodge at half-past four on Monday afternoon next.

As we go to press H. M. S. *Audacious*, bearing the flag of Rear Admiral Ryder, is announced as coming into harbour.

(From the Japan Mail Daily Advertiser.)

A party of Chinese officials arrived here on last Sunday by the *Kanagawa-Maru*, with the view of visiting the various mines in this country.

A second meeting for the purpose of considering the best means of educating the numerous blind in this country was held at the residence of Dr. Hall in Tsukidji. After a lengthened conference it was resolved to procure from America the necessary works printed in raised letters for that purpose.

WE annex the results of the half-yearly shooting match of the Swiss Rifle Association. The first Bull's eye in the morning was made by Mr. Triulzi; the last by Mr. Brennwald.

THE two attempts at robbery which were made on Monday night afford another illustration of the helpless attitude of the native constables, to whom, it is understood, the care of the Bluff is solely entrusted, in the presence of crime.

The attempt to enter Mr. Smith's premises at No. 145, occurred between 8 and 9 o'clock in the evening. Mr. Alfred Smith attracted by a noise in a neighbouring thicket ran to the spot to ascertain the cause. He unexpectedly confronted an armed man who struck him, fortunately at too great a distance to inflict more than a slight wound. Having done this he fled, pursued by Mr. Smith who had the mortification to see him escape over a fence in which he was assisted by a confederate. They were pursued, but succeeded in making good their escape.

At a later hour three men partially disguised entered the *momban's* cottage on Lot 9, occupied by Mr. R. M. Brown. They tied up the *momban* and his rifled his house, threatening to kill him if he resisted or raised an alarm, and having removed his few effects discussed the propriety of attacking his master's house. This they did not deem wise, however. As they were leaving the *momban* observed that their arms were only wooden clubs.

The police have been engaged in endeavouring to track the robbers but without effect.

The *Hochi Shimbun* says that a speculator has engaged the services of some 25 *geishas* (singing and dancing girls) in Yedo who will shortly proceed to Melbourne. The remuneration is said to be one thousand *yen:* the half of this being paid in advance and the remainder upon the accomplishment of their engagement.

THE *Hochi Shimbun* gives an account of a meeting of about one hundred physicians at the Tokiwa Gakko in Yedo. The meeting was held with the view of promoting the objects of their profession.

A few nights since about a hundred of the prisoners confined in the new Yetchigaya gaol in Yedo made an attempt at escape in which they nearly succeeded. A more stringent prison discipline would appear to be necessary.

THE native newspapers give no account of the results of the practise upon the iron plates which the Government imported from Europe for experimental purposes. One incident alone is recorded: a gun was so badly pointed that the ball in place of touching the target, struck, and severely damaged, the roof of a house.

Experiments of this sort would seem to be utterly superfluous. The largest guns in the world are tested almost weekly at Shoeburyness upon armour plates of ever-increasing thickness. It is hardly necessary to import plates from Europe to arrive at results which a perusal of the *Times* will at any time afford.

MR. Arinori Mori has been appointed Vice-Minister for Foreign Affairs, the post formerly held by Mr. Uyeno, now Japanese Minister in London.

THE French and German Departments are now excluded from the Kai Sei Gakkô. Hereafter the English language only is be employed in technical and scientific studies.

THE scholars selected from the Kai Sei Gakkô to be sent to America to complete their education—about twelve—will start in the middle of July, the leaders in classes of Law, Mathematics and Engineering science.

ACCORDING to the *Hochi Shimbun* the British and Belgian Ministers were to be honoured with an interview by H. I. Majesty yesterday.

THE following particulars, relating to the practise of medicine in this country, are given by the *Nisshin Shinjisshi*. There are in the Empire

1 Government Hospital.
21 Public Hospitals (assisted by Government grants in aid).
29 Private Hospitals.
23,015 Physicians practising according to the eastern science.
5,247 „ „ western „
5,205 Apothecaries.
361 Mineral Springs.
944 Patent Medicines in use.

The Steam-ship *Taiyu-Maru* which has been presented by the government to Loo Choo will leave on the 11th instant, stopping on her way at Osaka and Kagoshima.

From the *Eiri Shimbun* we learn that thirty shots were fired at the cannon practise on the armour plates on Monday last. Of these 16 struck and 4 pierced the targets.

Messrs. Honno and Kondo, Japanese Secretaries of the Imperial Legation in London, returned from England on the 8th instant.

WE have the authority of the *Hochi Shimbun* for the statement that the *Sumida Maru* and *Hiogo Maru*, steamships belonging to the Mitsubishi Company, have been appointed to sail for San Francisco with exhibits for the Centennary Exposition at Washington on or the about 15th instant.

A telegram from London dated 1st instant contains the intelligence that General Grant has declined nomination for the third term of his Presidency.

THE investigation into the alleged case of criminal assault upon a Japanese young woman is continued before H. B. M. Vice-Consul at Yedo. The evidence of the girl's parents and of a Japanese physician were taken on Thursday; that of yesterday has not yet reached us.

H. E. Iwakura proceeded on the 9th instant, to Atami in Idzu for the purpose of using the hot medicated springs.

THE NARA EXHIBITION.

THE town of Nara in the province of Yamato lies nearly due East of Osaka, and is about as far from Osaka as the latter is from Kobe. Nara was the residence of the Mikados from A.D. 708 until A.D. 782. Shortly after this date the imperial residence was fixed at Kiyoto where it has since remained down to our own times. Seven sovereigns reigned at Nara of whom four were females. Their rule with some slight interruptions was a prosperous and glorious one, distinguished by the cultivation of the arts, literature and religion. In the reign of the Empress Gemmio Tenno (A.D. 708 to 715) copper was first found in Japan. In the year 711 the Kojiki or ancient history of Japan was first published. In 713 a book called Fotoki was written containing a description of all the provinces, cities, mountains, rivers, valleys and plains, plants, trees, birds and quadrupeds of Japan.

In 718 under the succeeding Empress a collection of laws in ten volumes was made, and shortly after another history of Japan in fifty volumes was composed. The Mikado Shomu Tenno (A.D. 724 to 748) among other things founded a medical dispensary; he had relations with China and in his 8th year two Buddhist priests arrived, one from southern India, the other from Siam. About the 15th year of his reign a colossal statue of Buddha, of copper overlaid with gold was erected at Sitaraki in the province of Omi, by the exertions of a priest named Kioghi, who went over the whole kingdom to collect funds for the purpose. In the year 745 this statue was transported to Nara, and is the famous Dai-butz which exists there to this day. It is 53 feet high, being 3 feet higher than the better known Dai-butz at Kamakura. It was cast in a number of pieces,* and it will thus be readily understood how such a colossus could be transported from Sitaraki to Nara. Little of the gilding is now anywhere visible. The head also of the statue is of more modern date than the rest. The temple having been burnt in the 16th century, the head was so injured that it required to be replaced. The present face is much coarser and sterner than that of the Kamakura Daibutz, and is probably not an exact reproduction of the original one. The religion of Buddha was making great progress in Japan at this time. In 746 died a priest named Gen-bo who had brought from China 5,000 volumes of Buddhist books and many images. In 749 an imperial edict was issued forbidding the slaughter of any animals in Japan. Poetry was also much cultivated, and some compositions of this class are still extant.

The last sovereign of the seven, Kwonin Tenno, died in 782, and his successor determined to remove the seat of Government to another place. It was some time before a locality was permanently fixed upon, and the transfer to Kiyoto did not take place till 794.

Previously to the Court quitting Nara, an immense wooden magazine had been erected there in which the Imperial furniture and property of all kinds was deposited.

This building exists to the present day in complete integrity. It is made of massive timbers laid horizontally, being raised from the ground upon pillars of solid trunks of trees, eight or ten feet high. It is said to have been examined every 61st year since its building, that is, at the beginning of each cycle, and repaired when necessary. What is more astonishing is that the objects deposited there by the Mikados have been kept in perfect safety from the 8th century down to the present time, having escaped the danger of fire, robbery and turbulent times, those destructive agencies which in no other part of the world probably have ever allowed any building of importance, much less a wooden one, to remain intact for so long a period. Some fresh objects have in the course of centuries been added to the original collection, but those which belong to the first deposit are all named in an inventory made in the 8th century, which was deposited with them, and they can thus be identified and distinguished from recent additions.

This being the age of exhibitions and popular instruction, it came into the head of some antiquary that it was time to bring to light the long-hidden treasures of the Nara repository. Hence the Nara Exhibition—which has been visited by many foreigners during the present summer, although we suspect that very few have had any idea of the extraordinary character of the objects exposed to their view. We have, it is true, in Europe marvellous collections of the antiquities of all ages which have been brought together piecemeal. The genuineness and exact date of some of these objects can be ascertained, but how many of them are damaged and mutilated from the vicissitudes they have undergone, and of how many is the history and origin more or less open to question. What would the antiquarians of Europe say if an ancient building containing the household furniture and effects of Charlemagne, with a catalogue of the same made under that monarch's immediate direction, † were now to be opened for the first time and the contents announced to be on view, all in fine preservation! But of such a kind is the exhibition now offered to the eyes of Japanese antiquaries.

The temple of Daibutz affords a convenient *locale* for the display of these curiosities. The objects brought from the royal magazine are arrayed in the area immediately round the great statue, on each side and behind it. In the outer galleries or cloisters which form the exterior of the temple is a still more extensive collection of antiquities contributed by various temples or by private possessors. To some of these objects a still higher antiquity is attributed than that of the contents of the Nara magazine, and the very remarkable character of several which we have inspected induces us to believe that this belief is well founded, although we do not know exactly what external evidence of their age exists.

Amongst the curiosities belonging to the Nara Mikados of the 8th century may be mentioned, screens, pictures, books, sculptures, masks, of which there is a very large collection, pottery and glass, copper bowls and dishes, spoons, soap (!) in large round cakes the size of quoits, tortoiseshell back-scratchers, beads and ornaments, bells, weapons and utensils of various kinds, dresses, hats and nondescript articles. Probably the larger part of these things are of foreign origin and principally Chinese. The 8th century was the middle period of the great Tang dynasty (A.D. 620-907) and the books and pictures here collected are a rich field for the study of Chinese art and literature during that time. Some pottery which we saw struck us as more likely to be Indian or Persian than Chinese. A jug or ewer of white glass about a foot high excited some incredulity as an object of the 8th century, We were told by one informant that it was not to be found in the original inventory, while another antiquary who is engaged in studying the collection assured us that it is there. A specimen of Chinese writing paper was remarkable for

* It has been somewhat recklessly stated that the statue is of [illegible] and that no junctions can be seen. Very slight attention

† Charlemagne is said to have been so particular that he had an exact register furnished him even of the number of eggs which the hens laid upon his property.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the freshness of its appearance—smooth and unstained, it might have been just produced from the mill. The miscellaneous collection in the outer cloisters embraces objects of various ages, from some alleged to be 1500 years old down to those of the time of Taiko-sama. The most antique of these curiosities are certain bronzes which have an Indian character and some statuettes of clay (?) which remind one of Greek work more than anything else. Some wooden statues, of nondescript physiognomy, may perhaps be Corean. We saw one picture ascribed to a celebrated Corean artist, of remarkable merit. The best pictures on the whole are those attributed to Chinese artists or copies from such. The Japanese are great lovers of autographs, and there were many specimens of this class of relic—notably writings by Yoritomo, Taikosama and Iyeyasu. It would be impossible from two days cursory inspection of the Nara exhibition to give more than the faintest idea of the value and curiosity of its contents. It is evident that here are the materials for the study of Indian, Chinese and Japanese antiquity such as are not likely to be congregated any where else, and it is satisfactory to know that Japanese antiquaries of high attainments are engaged in cataloguing and describing the collection. Photographs of a good many of the objects may be obtained at the very moderate price of three *sen* a piece. One wing of the building is devoted to modern productions and curios which are for sale. The productions of Nara itself are not very numerous. Little grotesque wooden images and small-toothed combs seem to be the most sought after. We saw the process of forming earthen pots on the wheel going on, and likewise the unwinding of the silk-cocoons, examples of local industries. The town of Nara is beautifully situated at the foot of a range of hills, from the summit of some of which the grandest views of the province of Yamato and of the one adjoining it may be obtained. The place is celebrated for the tame deer which belong to one of the temples, and which until a few years ago used to range the town and take food from the hands of all who chose to feed them. They are now confined by palings to a limited space in the magnificent forest or park which skirts the hill. Little wooden images of these deer are the popular toy of the place, and on the road from Osaka to Nara one rarely meets a traveller from the opposite direction without two or three of them slung to his belt, a reminiscence of his visit to Nara. Here also is a Shinto shrine, said to be second in antiquity and importance only to that at Isé. In a building not far from this shrine and probably connected with it we witnessed a posture-dance performed as a species of religious ceremony. The performers were three young girls handsomely dressed, but perhaps less showily than the ordinary *geysha*. Their movements were of a very solemn kind, and their use of the sistrum or rattle, recalled the Egyptian priestesses of Isis, of whose performances this instrument was the unfailing accompaniment. Three priests—one playing a flute, another a drum, and the third chanting with his voice, and occasionally beating time on the two simple bits of wood, accompanied the dancers. We were informed that performances of this kind are paid for by devout persons much as masses are paid for by Catholics. There are eight dancers or priestesses attached to the temple. They are the daughters of priests or of respectable inhabitants, and we presume the office is considered a highly honourable one.

The town and neighbourhood of Nara abound with antiquities. Among them are the tombs of early Mikados, generally little more than mounds covered with trees, which are fenced round and preserved with great care. Many old temples also exist hereabouts. Discoveries of antiquities are frequently made in digging, but an unfortunate idea exists among the country people that it is unlucky to preserve objects thus found and they are usually destroyed.

There are two roads from Osaka and Nara. By one of them which skirts the mountains, the traveller may go the whole way in a jinriksha. By the other which goes a short cut over the mountains, he must be content to walk or climb ten or twelve miles, while his jinriksha is carried on the shoulders of his coolies, but he will be rewarded by many splendid prospects.

One adventurous Japanese has opened an hotel at Nara for foreigners, or at least has written the word hotel over the porch of a small dwelling house, and made some attempt at providing eatables agreeable to foreign taste. But the traveller must not expect to find the magnificent hotel accommodation which is now to be had at Kiyoto.

THE SILK TRADE OF JAPAN.

IT has been our constant endeavour to gather and publish the best and most trustworthy information on every subject concerning the welfare of this country. Pity it is that when the press has to treat important questions touching most closely on the interests of Japan, we are so sadly deficient in the means of spreading among the natives both the intelligence we would wish to convey, and the advice we would offer. As the pursuit, so is the diffusion of knowledge surrounded with difficulties, no where more so than in this country, for a variety of reasons so easily understood as not to require their being enumerated here.

That which has given rise to the foregoing remarks is the report we have just heard of the intention of a well known class of dealers in some of the provinces of the interior to produce and bring again this season to Yokohama an extravagantly large quantity of Silkworm eggs for shipment to Europe. It is, we are told, intended to make altogether this year as much as 1,700,000 cards, of which 850,000 would be reserved for the production of this country, and the rest would be sold for shipment abroad.

Truly, if such a report is to be believed, or is at all near to the truth, we have laboured in vain, and all our endeavours to caution all those who are interested in the Silk trade of Japan have been fruitlessly thrown away. Vain also has been the lesson given last year to the dealers in Silkworms' eggs by the burning of their cards, vain the losses they have had to bear in consequence.

But we will not despair yet of the possibility of throwing light on the subject, in order that those who are about committing so grievous a mistake, may pause before it is too late to retrace their steps. We entreat the native press at large to assist us in the effort, as well as the native dealers in Silk, and generally all those who have at heart the welfare of the industry of Japan, to raise their voices in unison with our own, to cause the truth to be heard and proclaimed loudly.

For several years past, say, six or seven years at least, we have heard it repeated, even unto sickening, that Japan Silk was degenerating every season, and that if it continued in the same way, it would soon cease to be used by foreign consumers. Various and numerous were the recommendations made to the reelers for improving again the quality of the Silk; model filatures were built at a heavy expense by the Imperial Government, as well as by public companies and private individuals.

But in spite of all this, the greater portion of the produce of this country has continued to become worse and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

worse to this day; and it has finally come to this point, that many manufacturers and throwsters in Europe, who were, until not more than a year ago, in the habit of using large quantities of Japan Silk, have now completely discarded it and turn their attention to the products of other countries, especially of China.

Prices of Japan Silk at home and here have fallen considerably, not only in consequence of the reduction from which all descriptions of Silk are suffering, but also perhaps proportionately more than other kinds, owing to the above-mentioned deterioration, and the growing competitionof French, Italian, and other products. Losses among the native dealers are undoubtedly enormous; they are equally heavy on the part of the foreign shippers, thus showing the identity of the interests of both parties in the matter.

Under such painful circumstances it behoves us to look out in earnest for the real cause of the degeneracy of Japan Silk. In our deliberate opinion, it lies not in the indolence or the carelessness of the Japanese reelers; not in the want of care or system in the selection and sorting of the cocoons; not in the frauds which are now and have always been, to our knowledge, practised on the foreign buyer; not even in the remissness of the latter, who ought to have been looking with a sharper eye at the faults of the Silk which was offered to them, and should have rejected it when unfit for the purposes of the foreign manufacturers. The cause lies mainly, if not solely, *in t e exaggerated exportqtion of Japanese Silkworm's eg;s which has been suffered to go on for the last ten yeurs.* Year after year a large portion, not to say the largest portion, of the best seed of Japan has been sold for shipment to Italy, France and other countries. There would not have been much harm done, if the dealers, whilst they were selling their best seed at a considerable advantage to themselves, had reserved a full proportion for the use of the native cultivators. Such however was not the case. The foreign buyers at Yokohama were outbidding the Japanese country people too far to allow the latter a chance of successfully competing with them.

It has been proved by careful inquiries both official and private, that many provinces of this Empire which were, say until ten or fifteen years ago, in the habit of drawing their seed from the best districts, namely, Sinchiu and Yonezawa, have been obliged, since the excessive rise of prices, or the gradual exhaustion of the original sources, to use inferior kinds of seeds' or seed from other districts.

The decline in the quality became consequently a matter of course. It is worthy of remark that the first complaints which came from the European consumers about the quality of Japan silk being no longer up to its primitive standard, were uttered in or about 1868, that is, three or four years after the export of Silkworms' eggs had already assumed a considerable development. Very few people, if any, at that time, thought of the evil consequences that were lurking under the surface of the newly established branch of business. It was, however, well known in Europe, that in all countries where "*grainaje*," that is, the making of Silkworms eggs, had been undertaken on a large scale for the chief purpose of distant trade, the excess of artificial production had, after a certain time, invariably resulted in a gradual weakening, and finally in the complete exhaustion, of the breeds of worms thus operated on. Bucharest, Nooka, Roumelia, Persia, the Caucasus, &c., &c., were successively visited by *graineurs* in search of Silkworms' eggs and abandoned by them for other more productive or unexplored fields.

This country at last had its turn of their visits. Nowhere, we believe, had the *graineurs* found so extensive a stage of operations, and never were they so successful. It is not questioned that the seed from Japan brought back to life the silk industry of France, Italy, and other parts of the western world. But it must not be imagined that the success thus achieved has been without a counterpart. Could Japan hope to escape scathless from the law of nature we have referred to above? On the contrary, we see that very soon after the business in Silkworm's eggs for shipment had acquired activity, the Silk reeled in this country fell below its previous standard, showing a lack of good seed or good cocoons, or at any rate an insufficient quantity of good seed. What would happen if the finest, the handsomest, the most robust and best formed children were during many years taken out of the country, by scores of thousands, never to return any more, leaving only the weakly, the mis-shapen, the ugly or the sickly ones, to perpetuate the human race of this realm? We confess we do not see the difference that exists in this case between the race of men and the breed of silkworms.

For ten years past the best kinds of seed from all parts of the interior have been shipped away, in quantities very much beyond what would have been required for the use of this country on the former, or even on an enlarged basis. Can it be expected that such an inflation has been accomplished without corresponding bad results? Certainly not; the result has come with unfailing certainty; it appeared light at first, but it has acquired intensity year after year, and now it is, we trust, patent to all intelligent observers. That result is the degeneracy of a great portion of the breeds of Silkworms of Japan, and it cannot but go on increasing until a heroic remedy is adopted, *the cessation of card making beyond the actual requirements of this country, and of this country only.*

Our readers will now be able to understand our astonishment on hearing that it was intended this season to produce in Japan what we cannot help calling an extravagant quantity of cards. Very possibly the country dealers are not aware of the disastrous results to the foreign buyers of the cards that were sold here last autum, moderate as the cost of them then was; nor are they probably aware that the reproductions of European seed are going on as prosperously and as successfully as ever they did before the breaking out of the disease, and that consequently no more, or, at any rate, very few more cards of Japanese Silkworm's eggs will be wanted henceforward for France or Italy.

If the native dealers in Silk-worms' Eggs are obstinately bent upon making a fresh batch for shipment, let them at least limit themselves to what we call a reasonable quantity, say two hundred thousand cards at the most.

Should there be a certain number of foreign *graineurs* here next September, they will not be disappointed; and the native dealers, not having too much on their hands, will be able to support their prices better and sell their wares at a greater advantage.

On the other hand a considerable reduction of seed made will give rest to the now overburdened production. The cessation of exports will afford the Silk growers in many districts an opportunity of again supplying themselves with the best kinds they had been compelled to forego, and the quality of the Silk reeled therefrom will improve again gradually. We do n t conceal it from our readers that it may be a somewhat long time before things can be brought round again to a healthy state. But we trust that there are still in the interior sufficient quantities of good seed which will only require care, attention and perseverance on the part of the educators. What was done in France

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and Italy during upwards of twenty years to regenerate the Silk-worms which the disease had carried away, can also be accomplished in this country. Fortunately for Japan, it is yet far from being a question of the extinction of its fine breeds of worms, as it was in Europe; it is only a question of husbanding the splendid resources which are left in the country, whereas a continuance of the reckless shipments of the last ten years cannot fail to bring its richest industry to a ruinous end.

We shall only add a few words in conclusion Starting from the basis which is now ackowledged by all the foreign consumers, viz, the general deterioration of Japan Silk, it appears to us obvious that the first thing to be done, is to think of regenerating the quality of the prime material. It is as clear as noonday that with bad cocoons no good Silk can be produced. The former standard quality of Japan cocoons having been allowed to deteriorate, effectual means must be at once adopted of bringing it back to its primitive state of excellence. It were useless to introduce new and improved machinery for reeling, or to propose more accurate methods of sorting, indifferent cocoons. We shall merely say to the cultivators: Try to get a better quality of cocoons than you have had lately, and you will gradually improve again the quality of your Silk. For ten years past the seed of your best breeds of worms has been sold for shipment out of the country, leaving only second or third rate qualities. Keep henceforward all you possibly can of the best seed for your own use. Charity begins at home. Never mind what some people may have to say against this. The foreign buyers of Silkworm's eggs have had their turn out of you long enough and ought to be well satisfied. Take care now of yourselves ere it be too late.

RAILWAY CONTROL.

A VERY important translation will be found elsewhere in our columns to-day, bearing upon the whole future of railway enterprise in this country, and the subject is too important to be passed over without special notice. Much of the future welfare of Japan, and, indirectly, of every foreigner interested in its prosperity, is bound up in this question, and any erroneous views of it taken at this early stage of its history, cannot but act prejudicially upon this welfare and these interests. Whether we view railways in regard to the general influence they exert upon commerce, or their beneficial effect in promoting the introduction of improvements in machinery and manufactures, and, generally, in promoting the intellectual progress of nations, few subjects afford more abundant matter for the examination and reflection. Whether Japan is yet quite ripe for railway enterprise on an extended scale may be open to some doubt; though the question hardly presses just at present. It may be urged, however, that she posesses thirty millions of a very intelligent people within a compact territory, a fertile soil, a fine climate, and some few trunk roads along which this population is sufficiently densely massed. Her great want appears to be subsidiary roads to these trunks; but the question of making them appears now to be earnestly engaging the attention of the Government. The time, therefore, cannot be far distant when railway extension in Japan will become a vital question. The whole country is eager for it; success has attended it so far, setting aside for a moment the *fact that the lines already* made have been extremely expensive; and, under discreet management, it would certainly largely promote the development of the resources of the Empire. But by what means can this management best be secured? The issue to be determined is whether railways shall be constructed by and remain in the hands of the Government, or whether they shall, at least after construction, pass into the hands of private native companies, whether composed of the nobles or others.

Now, if we look abroad for instruction on this question, we shall find that both methods have been resorted to according to the genius and special characteristics of the nations which have had to deal with it. In the case of our own race, with its impatience of restraint and marvellous good sense when freed from restraint, all railway enterprise has been the result of private combination and organization, and among the Americans it has been so likewise, whether with worse or better results than in our case is not here the question. Of course there is controlling legislation in both cases, in order, on the one hand, to protect the public whose lives and property are entrusted to the railway companies as carriers, and, on the other, to protect the shareholders. But, beyond this, the Governments of the two countries stand aloof from all control of railway matters. On the continent of Europe, however, it has been quite the reverse. There, in most cases, the collective nation, represented by its Government, is either the actual owner or the chief controller of all railways. The railway officials are Government servants, as much as the clerks in public departments or the officers or men of the army and navy, and many weighty arguments may be adduced for a preference of this system even among the freest nations not only accustomed to control, but quite capable of controlling, their own affairs. Indeed, the question was raised and very fully discussed last year in England, whether the Government should not take possession of and assume the active control over all the railways hitherto constructed, just as it had bought all the telegraphs. The question is shelved for the present, and it is possible that the proposed plan may never be carried out. But it is often necessary, with nations as with individuals, to humour a special idiosyncracy, and to forego certain changes which may be excellent in themselves but unadvisable in certain cases. "The second best remedy is the best if the patient likes it best" is a very old and a very wise rule in medicine, and in the case of a nation with such a set and fixed idiosyncracy as that of the English, the system at present pursued in regard to railways may possibly be the best. But there are not wanting men of the clearest insight and largest views who think that the transfer of the railways from private corporations to the hands of the Government would be in the highest degree desirable and advantageous. They say that private interest is the sole incentive in private management, and that when this clashes with the public good the latter goes to the wall. But they carry the question higher still, and say that as the roads of a country are made by and the property of the Government, so ought the railways to be. The public highways—for this is what they really become—ought not to be in the hands of corporations. They are among the prerogatives of the State and should be controlled by the State alone. And there certainly is force in this view. The railway companies in America have acquired enormous power, and the fatal facility with which Congress is manipulated in the lobby has enabled them to do pretty much what they choose in the legislature. On the continent of Europe this view, reinforced by others which it is unnecessary to repeat here, has been largely accepted as sound, with the results stated above.

The question is greatly narrowed in this country, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

rather resolves itself into this one: Could a private company be trusted with the management of a line of railway? Could a number of men be found who would sufficiently master the details of railway management, and feel that sense of responsibility without which railway management can only end in terrible disaster? For many of the less important duties connected with railways it would be easy to find thousands of perfectly efficient men. But with regard to the higher duties, we are entirely satisfied that there are not enough of such men, and that any attempt at purely Japanese management would bring a railway to ruin in a month. It is a common belief that when a line is once constructed it will almost work of itself. But what the public sees is but a very small part of the work of the line, and what it does not see is by far the more important part of the work. Mistakes in railway management are enormously expensive, without taking into account the horrors of loss of life and limb. Even on this little local line the amount of labour, time and money expended on the mere care of the permanent way and the rolling stock is beyond the belief of any one who has not enquired into the facts, and we are satisfied that this can only be done by an expensive staff which a Government alone will keep up. When we have had an engineering school at work for another five years, and larger views of duty and responsibility have taken thorough possession of the Japanese mind, there may be, doubtless will be, many young men fit to be entrusted with responsible work on the various lines which we may expect will then be at work in the country. When sufficiently tested let them be placed upon these. But if the Government is wise it will keep its lines in its own hands. It hazards the very existence of railway enterprise in this country and its own reputation the day it parts with that control.

SPIRIT OF THE JAPANESE PRESS.

On Railway Schemes.

(*"Tokiô Nichi Nichi Shimbun" of 2nd, June* 1875.)

The question under deliberation of the intention on the part of the *Kuazoku* to construct a Railway from Tôkiô to Awomori with their own capital has formed a fruitful subject for discussion since the spring of this year. Lately, however, the deliberations underwent a change, and a discussion was raised having for its subject the desirability of purchasing the already completed Railway between Shimbashi and Yokohama. This latter question has moreover been much treated of in the various newspapers, and has attracted considerable attention throughout the country. We have therefore made enquiries as to the cause of this change of plan, and consider that a clear statement of all the circumstances of the case is of importance.

According to the information that we have been able to collect, with regard to this plan of constructing a Railway from Tôkiô to Awomori a petition was presented last year to the Government on the subject by a number of *Kuazoku* all of the rank which entitled them to a seat in the "*Jakkô-no-ma*,"* and they received orders from the Government in reply to their representation, enjoining them to make application after they had established the system and rules on which the understanding was to be conducted. A delay then occurred, and this year (the 8th year of Meiji) having arrived, the original plan was materially altered and enlarged, and all the *Kuazoku* who were the originators of the scheme met in the *Yashiki* of Tokugawa Yoshikatsu in Kayachô, Asakusa, and held their first deliberations. The original intention was to make this new Railway as far as the town of Utsunomiya in the province of Shimotsuké, but it was subsequently decided to extend the line to Fukushima in Iwashiro. The period for construction was fixed at ten years, and, with regard to the capital required, it was settled that each was to pay a certain portion of his income according to the sum that was deficient after he had parted with his ready money, and it was decided to guarantee the amount required for the working expenses during the period fixed.

The second conference took place in the Yashiki of Ikéda Akimasa in Yokoâmichô, Honjô, when ten years were fixed as the period for the construction of the Railway, from Tokiô to Fukushima, and the probable cost of the work was estimated at *yen* 7,500,000. With regard to these expenses it was arranged that their incomes should be given as security, and that they should add to these the ready money which they possessed—and thus that the originators of the scheme should supply one half or one third of the total sum required; and it was decided that a copy of the agreement should be forwarded to the Government in a (second) petition; that the money should be collected by shares, and that the commencement of the undertaking should depend upon the amount of funds so collected.

On the 16th day of the 4th month the third conference was held in the 1st National Bank, and in pursuance of the subject of the former deliberations the question of the addition to the capital being discussed, it was found that but a very small addition to the capital had been made, and therefore, there being no help for it, it was decided to petition the Government for leave to construct the Railway on the strength of the amount subscribed by the originators of the scheme, and to form a place for the collection of the capital required, after permission had been obtained, by the public sale of Railway shares, to make the execution of the work depend upon the account of money collected; and in the event of the requisite sum not being collected, to revert to the original intention and restrict the work to Utsunomiya. The previous enthusiasm appeared to have vanished and a movement to have set in in the opposite direction. It may be conjectured that though the various *Kuazoku* were all considerably eager to give up their property and their incomes for the sake of this railway, yet that they were ignorant of accounts, unacquainted with the true position of affairs, and, moreover, that their money matters were entrusted, as is usual, to their retainers—and so that their enthusiasm sank of its own accord from a high pitch to a low ebb.

On the 23rd day of the 4th month the fourth conference took place at the 1st National Bank. Prior to this, Shigékadzu, the manager of this Bank, had at the request of the *Kuazoku* attended every one of the meetings, and on this particular day Inouye Kori came to the room where they were assembled, and, turning to the various *Kuazoku* who had met there, addressed them, saying that he considered it would be advisable for them to alter their plan for constructing this railway, and to purchase instead from the Government the already completed railway between Shimbashi and Yokohama. This he recommended in a friendly manner. The principal points in favour of his proposal were:—

1.—"This construction of a new railway between Tôkiô "and Fukushima, viewed as a measure of political economy "affecting the whole country, would probably be an im-"mense gain to Japan, but it cannot be said that it would "would be a source of profit to the company. Calculating "the necessary expenses of its construction, though these "have been estimated at *yen* 7,500,000, it would be im-"possible, in point of fact, to execute the work with "a less outlay than *yen* 10,000,000. Thus the plan "would (at the very outset) be upset in meeting the "expenditure.

2.—"To establish a system for multiplying the products "of the provinces of Rokuchiu, Rokuzen, Mutsu and Ango "—and so gradually and by degrees to promote the civili-"zation of those provinces, is for the Government to do—"and is not a matter to be undertaken by a Railway "Company. As long as the Government do not do their "duty properly in respect to these provinces, even if a "Railway be completed, the company will not profit there-"by. And even if money be collected by the sale of the

* Chamber in the Palace where these nobles would sit on state occasions.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

"shares in question—there will not be many who will "invest in them.

3.—"Looking at the above considerations, it will be seen "that the question of constructing a Railway is not a "valuable idea in the interests of this company. Again, "to fix the period of construction of the railway to Utsimo- "miya at the long term of ten years is an absurdly round- "about way of procedure.

4.—"Therefore to abandon the plan of constructing a "new railway, and to purchase the railway between Shim- "bashi and Yokohama which has been completed by the "Government—is the fitting course for this company to "pursue."

The various individuals who were assembled in the room after having heard the above address, all, without exception, approved of thus changing the plan of the Company, and it was decided that the *Kuazoku* whose names are given below should pay a sum of *yen* 253,100, which would in ten years time amount to *yen* 2,531,000. The names of these individuals are Tokugawa Yoshikatsu, Tokugawa Yoshinobu, Date Muneki, Daté Munénori, Ikéda Tesutomo, Ikéda Yoshinori, Mori Motonori, Ikéda Akimasa, Ikéda Shigemasa, Kamei Koreaki, Ikéda Norihiro, Hachisuka Shigeyoshi, Yamanouchi Toyonori, Matsudaira Yoritoshi, Omura Sumishiro, Matsudaira Shigeyoshi, Maida Yoshiyasu, Hisamatsu Katsunari, Ii Nawonori.

On the 6th of the 5th month a fifth conference was held at the 1st National Bank, when Shibusawa Shigekadzu was informed (by the others) that he had been elected by general vote to be their representive and agent in the matter. Before accepting this trust Shibusawa presented three points for their consideration:—

1.—"The cost of the Shimbashi and Yokohama Rail- "way, making an approximate calculation including the "probable cost of future repairs to the line, bridges &c. "will be about *yen* 3,000,000. It is therefore essential "that this sum be collected by the Company.

2.—"If these *yen* 3,000,000 be not paid at the very "latest within seven years the Government will not consent "to sell the Railway. Therefore every year *yen* 430,000 "must be raised by this Company.

3.—"The Government shall allow suitable interest on "the money to be paid in the said yearly instalments. "When seven years have elapsed, and the full sum has "been paid up, if the clear profit on the Railway amounts "to 8 per cent. per annum then the Railway shall † be "bought from the Government."

He then explained his views to them and said that if the Company were not prepared to assent to the chief points which he had named, it would be useless for him to undertake to be their representative and agent; and that the choice of a representative should be made anew after a decision had been arrived at on the above points. It was further agreed that Shibusawa should inform all of the originators (of the first scheme) by letter of the details (of his proposal) and after they had all decided in their minds what they would do, that the sixth conference should take place.

Shibusawa thereupon lost no time in drawing up a draft of the Railway Company Agreement, and a statement of the principal points on which the formation of the Company rested, and sent these to the *Kuazoku* who had originated the previous scheme, and it is said that in consequence of this it was decided to hold the sixth conference yesterday, the 1st of the 6th month. We have been unable as yet to ascertain whether the meeting did take place on the day in question, or (if so) what decision was arrived at, but we are making every effort to collect information, and when we are in possession of the facts we hope to lay them before our readers at once with an expression of our opinion subjoined.

The *Tokio Nichi Nichi Shimbun* has the following upon the subject of railway schemes:—

'With regard to the affair of the Railway Conference of the *Kuazoku*, we gave a short review of it in our issue of the 2nd instant.

We have since heard on prosecuting our enquiries that the various *Kuazoku*, the promoters of the original scheme, held their sixth conference on the 1st instant at the 1st National Bank, and that it was there resolved that application should be made to the Government for the purchase of the already completed Railway between Shinbashi and Yokohama; that the price to be paid for the Railway should be estimated at *yen* 3,000,000 to be paid to the Government within seven years; that this sum of *yen* 3,000,000 should be provided by the *Kuazoku* forming the Company, who should guarantee the payment of the money by giving their incomes as security for the same; and that up to the date of the handing over of the Railway, Government should pay the yearly interest;—and that it was further decided that an agreement for the formation of the company should be drawn up, to which the seals of all should be affixed, and that Shibusawa Shigékatsu, the manager of the 1st National Bank, should be invested anew with powers, as Representative and Agent of the Company, and should be entrusted with the management of the application to the Government and of all other matters; that the Representative-and-Agent should then immediately address an application on behalf of the *Kuazoku* composing the Company for the purchase of the Railway to the Ministers of Finance, Public-works, and the Interior, respectively; and that the *Kuazoku* forming the Company should publicly petition the Shô-in in a collective letter on the subject of the purchase of the Railway.'

In commenting upon the above, the writer says that 'in judging of the original scheme for the construction of a Railway to Awomori, it was a common opinion that though the *Kuazoku* who were the originators might lose by the execution of the scheme, it would certainly be of great advantage to the country, and therefore it must be approved. This view is a mistaken one. For the money that the *Kuazoku* have by their incomes is not given to them in order that they may lavish it on the country, but for the maintenance of themselves. It is quite out of all reason therefore that they should expend it for the sake of the people and suffer loss thereby. It is a matter for congratulation in any case that the Awomori scheme has been forsaken for the more profitable undertaking of purchasing the Shimbashi-Yokohama Railway. The construction of a Railway is a difficult enterprise, and if from one cause or another the execution has fallen through and the works had had to be abandoned, it would indeed have been a matter for regret, and one which would have caused infinite trouble and complications.

The Government, morover, can, owing to their having greater resources at hand, construct a Railway with much greater facility than any Company organised for such an object; and if they accept the offer of *Yen* 3,000,000, they can with this sum build another Railway, by which time some other company may be ready to take it off their hands on similar terms, and thus the Railway *System* way be satisfactorily extended throughout the country.

Independently, however, of the above considerations, much hangs on the proposed operations of the Company in question. There was not long ago a regular mania for forming companies of all kinds which have nearly all shared then same fate and come to grief at one time or another. Consequently a false reaction has set in in the contrary direction, and so if this Company succeed and prosper, its success will probably encourage others to follow the good example thus set and tend to dispel the prevailing mistaken ideas on the subject of Companies.'

† Thus the Company reserve to themselves the right to draw back from the transaction at the last moment. For if at the expiration of the seven years after the *yen* 3,000,000 have been paid up, they find that the Railway is not paying a profit of 8 per cent. per annum, the Company will receive their money back from the Government.

"How many Masters* are there in the Japanese Government?"

(Hochi Shimbun, June 8th, 1875.)

By Kuwôtô Sanshô—one of a Company of Tea-drinkers.

The present Government which exercises jurisdiction over us common people, who are imbued with the Japanese spirit, is a collection of despotic masters. And at the present time the property, small as it is, of us common people which constitutes the capital of the country is sad-

* Used in a sense approaching "despot."

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

dled with a greviously weighty and burdensome encumbrance. Is not this sad? But if we say it is a distressing fact that the spirit and the capital of this our great Eastern Empire, Japan, which has ever from earliest times borne the name of 'the country of men of education and learning," are surely ebbing away—becoming like the ice of the Eastern sea,—the men of education and learning in our country will rise up indignant, and will startle us by thundering into our ears the epithet of "audacious and lawless rascals."

We were born under the Government, we have grown and increased under the Government, we have been educated under the Government, and how then shall we whose bodies have been steeped, so to speak, in obligations and kindnessess on the part of the Government of no light nature and extending over such a long space of time, how shall we confront the Government and make use of such disrespectful language as this? Stay! the reason of our holding such language is this. We are of opinion that a Government which squanders the money of Japan and wastes the spirit of its people is an evil to the country, and thus we find ourselves forced to confront the Government of Japan and make use of inimical language

Amongst the views held by Soyéjima and the Ex-Sangi the following appears:—

"At the present time the authority of Government "does not rest with the Emperor—nor does it rest with "the people. It is solely confined to Government offi- "cials; and though one cannot say that the Emperor is "not reverenced, still the influence exercised by him "and the reverence in which he is held are dying "out. Though we cannot assert that the people are "not protected, yet it has come to this that Government "edicts without number are issued in the morning "only to be revoked in the evening, and that the adminis- "tration of the Government and the dispensation of justice "are conducted according to individual will and caprice. "The influences of love and hatred are respectively "brought to bear upon the distribution of rewards and "punishments; The presentation of petitions is obstruct- "ed; and the grievances of the people do not obtain a "hearing &c., &c." These must be termed excellent views.

Unfortunately, on the ground that the memorial of the Ex Sangi contained profitless arguments, the writers in the *Meir kushi* criticised it, but they only attacked the style and could not find fault with the views expressed, because those views exactly coincide with the present situation. Come let us examine it. The different public departments and offices have independent Heads, and the constituents of the *Fu* and over 70 Ken for the most part look up with respect to despotic rulers. And, with regard to these masters, the Government has no punishment to inflict on them, and they have no occasion to fear retirement from their duties, except it be by their own special request (for the masters † to punish and the masters to be punished have exactly equal power). If offices be changed and rewards be given the handiwork of what master (*s*) is this?

That *Genrôin* (of which we hear so much) was originally established with the view of restricting the power of these masters, but, judging from present aspects, it appears to us that it cannot be denied that the ranks of these masters have been swelled.

Well then, this being the case, is our Government to be considered a government of nobles? No! these masters have not retinues of retainers (though probably plenty of concubines), and consequently they cannot be called "nobles" as yet. Then who look after the masters?—H'm! Ah! We have it. (Nobody looks after them, but the matter is simply explained thus). They have an agreement amongst themselves, a mutual accommodation system,‡ small and insignificant as a seed which has been kept shrouded from the light, covered up in darkness. 'Tis but a trival matter this agreement, but we feel a misgiving lest hereafter if this agreement should not create§ dissensions, and this association not become dismembered, these confederates should increase their power and lest they, combining their action, this agreement of theirs should come to be a question of ‖gold and silver (though doubtless paper money would serve to unite them closely enough).

Therefore it is that Mr. Kato Hiroyuki is desirous of correcting this evil by increasing the power of the Emperor, while the supporters of the measure for the creation of a "Deliberative Assembly chosen by the People" are anxious to remove this evil by extending the rights of the people. These two policies differ one from the other, but the end in view in each case is the same, being in fact the resisting of this evil, and the restriction of the power of the officials entrusted with the government of the country. We earnestly desire that these views may quickly acquire a footing throughout the country, and that thereby the number of masters may be reduced. How much of the spirit of the country is there which is not trodden underfoot by the despotism of the officials?

Moreover, upon this property of us people, small as it is, there are weighted burdens which we instinctively dread, one heaped up on the top of another. We invite your consideration on this point. The *yen* 100,000,000 of paper money are a "drag" or burden upon us people; the *yen* 19,484,911 of allowances (to *Kuazoku* and *Shizoku*) are a burden upon us people; the *yen* 15,300,000 of foreign debt are a burden upon us people; the *yen* 29,634,775 of home debt are a burden upon us people; more than half of the salaries of the higher officials are salaries paid for eating and drinking and the keeping of concubines, which is a burden upon us people; four-fifths of the salaries of the lower officials are salaries paid for yawning, which is a burden upon us people; and nine-tenths of the salaries of foreign employés is the price paid for their honours' beards, and this is a burden upon us people! Such are the grievous loads with which the property of us people is saddled—property which is earned by the sweat of our brows and hard toil, and such are the profitless objects upon which it is expended!

Although we will not go so far as to assert with the Chinese saying that this is "oppressing—nay more—robbing the people," yet with regard to this injury done to the property of us people, which forms our present theme of discussion, some time ago we made a great outcry in the matter and petitioned the "Tôkiô Debating Club" on the subject of a scheme for placing the power touching money and grain in the hands of the people. The Tôkiô Debating Club paid no attention to this, and consequently Goskoshi ¶ attacked the Tôkiô Debating club on several occasions, but these attacks gave no concern to the club, a circumstance which proves that they do not attend to their business. The fact that in these times of daily progress the officials (of that club) do not attend to their business is a subject for deep anxiety. Since the question of the establishment of a Deliberative Assembly chosen by the people first arose, one decisive forcible protest (in its behalf) were of more avail than the noisy querulous and useless agitation that has been raised on this subject. Come, gentlemen of Tôkiô, will you not move in the question? Come, boys of Japan, will you not urge on the movement (it matters not where)?

The distribution of rewards and punishments and the appointment and dismissal of officials, these are matters in which the Government have great power. At present the officials decide these at their pleasure. The power concerning money and grain is a great trust vested in the Government. The officials do with this as they like. Therefore it appears to us that they have been made our* masters.

Ah! pity that there should be so many masters in Japan! Is this what a constitutional Government is?†

† Meaning that all the officials are in the same category—and all alike make mistakes for which they should be punished.

‡ *i. e.* Concealed carefully from the eye of the public.

§ The word revolution in *Kana* accompanies the Chinese character, but "dissension," private feuds, is evidently the meaning intended to be conveyed.

‖ The idea is evidently this that when these masters hold the country in their hands, then bribery and corruption will reign paramount everywhere.

¶ A prominent writer on the staff of the paper.

* The word "Sovereign" is given as the translation of "*Kunshai*. "*Kunshin*" is used in that sense when speaking of the sovereigns of many countries, but here it evidently should be translated "master."

† Or, better perhaps, "A Constitutional Government, is it such a thing as this?"

NOTES COLLECTED IN THE OKITAMA KEN, WITH AN ITINERARY OF THE ROAD LEADING TO IT.

By Charles H. Dallas, Esq.

Read before the Asiatic Society of Japan on the 31st May, 1875.

The Okitama Ken, better known by the name of its chief town Yonezawa, is situated in the mountainous country due north of Tôkiô at a distance by road of 84 *ri*. A list of the stations and their distances will be found at the end of this paper. The principal road to it follows the Ôshiu kaidô as far as the important town of Fukushima. It is this town of Fukushima, 72 *ri* from Tôkiô, that was fixed upon as the provisional terminus of the railway that certain *kuwazoku* wished to construct to Awomori. As this scheme, though postponed, is probably not definitely abandoned, an itinerary of the Ôshiu kaidô as far as Fukushima may have some claim to interest at the present moment; but before going over it in detail, it may be convenient to sketch briefly the physical geography of the country through which it passes.

The principal chain of mountains comes down from Awomori in nearly a straight line to a point about 30 *ri* north of Tôkiô, and then turning towards the west, and keeping that distance as radius and with Tôkiô for a centre, describes a circular arc to Fuji-san. This chain is the watershed of the country and throws out a series of spurs which serve as guides to the various rivers. On the way to Fukushima one finds four principal channels. From the corner made by the turn of the mountain chain comes towards the east a ridge of inconsiderable height which forms the northern boundary of the plain in which Tôkiô is situated. On its crest, if it deserves the name, is the town of Utsunomiya 28 *ri* from Tôkiô. The Ôshiu kaidô traverses the plain as far as Utsunomiya, and then continues towards the north, parallel to and at a short distance from the eastern base of the principal chain of mountains.

The country between Tôkiô and Utsunomiya is drained principally by the Sumita gawa and the Tone gawa; by the former and one branch of the latter into the Bay of Yedo, and by its remaining branch into the Pacific.

Only 3 *ri* beyond Utsunomiya is the Kinu gawa, which, pent up for many miles inside the principal range of mountains, breaks through them at the turn, and though checked by the ridge already mentioned, soon rounds it and continues a southerly course for some miles further before uniting with the Tone gawa and striking east to the Pacific, which is reached at Chôshi. In the latter part of its course it receives several affluents.

Proceeding towards the north the next eastern spur shutting in the Kinu gawa is only five *ri* further. The hill, between the towns of Ujiye and Kitsuregawa, by which the Ôshiu kaidô climbs over it is called Yagorô Saka. Past Kitsuregawa flows a river of the same name almost due east to the Pacific. It unites with four streams, that separated each by a short spur of hills come from the central mountains, to form the Naka gawa, which thus carries off all the water between Yagorô Saka and the mass of hills called Ni-ju-san Saka between Koyebori and Ashino.

North of these twenty-three hills and taking its rise in the mountains at the south of Aidzu is the Abukuma gawa, which crosses the Ôshiu kaidô at the large castle-town of Shirakawa, 50 *ri* from Tôkiô, and then turning towards the north only reaches the Pacific at Arahama in the Bay of Sendai. In its northern course its principal affluents are the Shakado gawa the Nami gawa and the Su kawa, all of which cross the Ôshiu kaidô in their eastward descent from the central mountains. They are separated from one another by abrupt and precipitous hills over which the Ôshiu kaidô toils laboriously, apparently scorning to go round them. It is in the corner made by the junction of the Su kawa and Abukuma gawa that Fukushima is situated.

Taking now the western side of the central range, it will be sufficient to say that at the southern extremity of the straight line the turn seems to produce an enormous knot, in the southern portion of which lie ensconced the far-famed temples of Nikkô. Travelling northward through this knot and mounting to its source the bed of the Kinu gawa, one arrives at the water-shed whence rise the rivers flowing towards Niigata; and descending towards the north, the first level land reached after 30 *ri* of mountain climbing is the plain of Wakamatzu or Aidzu, with its lake and outlet to the west.

North of this plain there comes from the principal chain a spur, or rather cross-chain, which starting from between the great mountains of Adzuma and Bandai-san, just opposite to Fukushima, extends first westerly and then scatters towards the North-west. A few *ri* further one branch nearly unites with the main line, thus inclosing the Okitama Ken, and then again diverges to the west to give space to the magnificent plain of Yamagata, which is the northern limit of my own travels. This western cross chain is of great breadth, the road from Yonezawa to Niigata being known as the Ju-san Tôge. Certainly of the thirteen three are only small hills, but four or five are formidable passes.

Having said thus much on the nature of the country let us follow the Ôshiu kaidô, which leaving Tôkiô by the suburb of Senji, stretches to the north till it reaches the banks of the Tone gawa at a small station town called Kurihashi, distant 14½ *ri* from the Nihon Bashi. All along this part of the road the villages and station towns succeed each other at such short intervals as almost to make a continuous line; none however appear to be of any special importance, Kasukabe 10 *ri* from Tokio being the principal. The plain is fertile and carefully cultivated, producing rice, wheat, barley and vegetables; a few miles beyond Senji however is a little grass land that seems to be waste. The black alder and the weeping willow are common trees, and wood-pigeons are to be seen in great numbers.

Approaching Kurihashi along a causeway or bund built to confine the river, one has a magnificent view of the Nikkô mountains. The Tone gawa is crossed by a ferry, and when full is 600 yards across. When the water is low the channel is on the Kurihashi side, leaving the northern half of the bed exposed. In July 1872 in swimming across it from the northern side when it was at its highest, I found three feet of water on the shallowest part in the centre, while the stream was dashing down the deep channel with a swiftness that was almost dangerous.

Crossing the ferry one finds on the northern bank the town of Nakata, and from here the character of the road changes. An almost continuous avenue of Cryptomeria shades it all the way to Utsunomiya. The ground is higher and gradually rises. One sees little rice, but plenty of wheat, barley and vegetables, with large tracts of grass land that would apparently furnish excellent pasturage. A short distance from Nakata is the castle-town of Koga which seems a busy place. The *shiro* was of great extent, but the work of destruction has been done so thoroughly, that the neglected moats, crossed by bridges dangerously rotten, only shut in a wilderness of rank grass that has obliterated all traces of the daimio's mansion.

The road all the way from Tôkiô to Utsunomiya is fairly passable for carriages and for a short time a public conveyance plied between the lattter place and Nakata. There is generally plenty of width, but along the avenues the road is often hemmed in by high banks, which keep in the water, while the stately trees keep out the sun, so that in wet weather and for long afterwards, travelling, whether on foot, on horseback, or on wheels, is disagreeable, difficult and slow.

Utsunomiya is a very large and important town, built on moderately high ground. It was the seat of a daimio of 70,000 *Koku* whose castle has been turned into barracks. There is an old temple standing on the edge of an almost perpendicular bluff which commands a fine view to the north-east. The city seems an important centre of trade, there are numerous *tôbutsuya* well supplied with Bass's beer, or at least beer with Bass's labels, common claret and champagne, Kerosene lamps, slop clothing, slates and stationery.

At Utsunomiya the tourists to Nikkô leave the Ôshiu kaidô, and turning to the north-west reach their destination by a good road of 9 *ri* along superb avenues of Cryptomeria. From Imaichi, 2 *ri* before one reaches Nikkô, there is a most exquisitely picturesque but

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

difficult route up the course of the Kinu gawa due north to Wakamatsu and so to Yonezawa, which seems almost as unknown to Japanese as to foreigners.

Following the Ôshiu kaidô, 3 *ri* beyond Utsunomiya is the small town of Shirasawa, where one crosses the the Kinu gawa. The river divides 3 *ri* above the town, and reunites its branches 1 *ri* below it, thus inclosing a long narrow sandy island thickly covered with small trees and brushwood. On the left or farther bank of the northern branch is the town of Akutsu 1 *ri* from Shirasawa.

Akutsu is not a regular station-town, and the traveller from the south passes through it without stopping; but it is an important forwarding place for travellers and goods coming to Tôkiô from the north, as there is communication by flat bottomed boats down the Kinu gawa, 13 *ri* to a small village called Kubota; whence 7 *ri* of level ground lead to Sakai a town on the Tone gawa, by which boats drop down the stream to Tôkiô in about sixteen hours. All the goods traffic and nearly all the passengers go by this route. There is an *Ura-kaidô* from the Aidzu country by which produce reaches Akutsu, but it is reported to be impassable for travellers.

From Akutsu after crossing one small hill, a level road bordered by rice fields leads through Ujiye to the foot of Yagorô Saka, known to the jinrikisha coolies as the worst hill this side of Sendai. On the other side of the hill is the castle-town of Kitsuregawa, with its river famous for eels and a fish called *ayu*, which is esteemed a great delicacy. The town has the historical interest of having been the seat of the Ashikaga family.

From Kitsuregawa to Sakuyama is a hilly road over high wild gorse-covered moorland, with occasional plantations of young beeches.

From Sakuyama to Ôtawara the road is level through several villages with gardens and rice-fields. A handsome avenue leads into Ôtawara from whence there is a cross-road to Imaichi, distant about 13 *ri* to the south-west.

Ôtawara was the seat of a daimiô of 30,000 *koku*, but was burnt in the war and has never been wholly rebuilt. The *honjin* however is one of the best on the road. The town is chiefly remarkable for the immense number of pack horses always standing in the streets, which would seem to point out some special activity of trade, but I am told that it possesses no particular *meibutsu*.

The northern gate of Ôtawara is washed by a small river, from which a level country extends to the Nasu kawa, on the south bank of which is Nabekake, a large town now almost entirely destroyed by fire. The banks of the Nasu kawa are perpendicular cliffs, with the upper edges most picturesquely wooded. On the north bank exactly opposite to Nabekake is the station town of Koyebori.

Between Koyebori and Ashino are the *Ni-ju-san saka*, twenty-three hills of corduroy roads. In very clear weather Fuji-san may be seen from the top of the second hill, which is therefore known as *Fuji-mi saka*.

Ashino is in a long valley surrounded by wooded hills, over which more corduroy roads lead to Shirasaka. Between Ashino and Shirasaka is the boundary separating the provinces of Shimotzuke and Ôshiu.

More hills, and a long stretch of magnificent moorland bring the traveller to Shirakawa, a fine large castle-town with an air of prosperity about it, such as one sees at Utsunomiya, Sukagawa, Koriyama, Nihon matsu and Fukushima. The *honjin* has been converted into a hospital, and a conspicuous object in the principal street is the telegraph office. In the castle is a small temple dedicated to Jimmu Tennô. Shirakawa was the seat of a daimiô of 110,000 *koku*, and played a prominent part in the civil war. It was occupied by each of the contending parties, and appears to have been exceedingly lucky in having only slightly suffered from fire. Leaving the town one crosses the Abukuma zawa, and a short distance beyond, on a hillside sloping to the road, is a burial-ground of the southern men who fell in the war. The tombstones and inscriptions are kept in good order, and many a traveller alights from pack-horse *kago* or *jinrikisha* to pause and pay a tribute of respect to the memory of the gallant dead. Round this same hill winds to the left the road to Wakamatsu.

Between Shirakawa and Yabuki the country is mostly moorland. Yabuki was a large town totally burnt in the war and only partially rebuilt. From here to Sukagawa the road is very beautiful, through woods and over undulating grassland.

Sukagawa on the banks of the Shakado gawa is one of the richest and best kept towns on the road. After the conversion of *han* into *ken* it became the seat of the Shichojo or branch agency of the Fukushima ken, but this has recently been abolished. It has a hospital built in foreign style, attended by Japanese doctors who have studied in Tôkiô. Numbers of mulberry trees are to be seen in the neighbourhood, and the practice is adopted here of cutting the trunk short off just above the ground and keeping the shoots tightly tied together. The stage to Koriyama is the longest on the journey 3 *ri* 9 *cho*. There are three or four villages, and one stone quarry on the way. The last *ri* or so leading into Koriyama is over a carefully made wide road, the first piece of real carriage road that one sees after leaving Tôkiô.

Koriyama is a large flourishing place, and its townsmen have the reputation of being wealthy. In the outskirts some branch of silk manufacture is actively carried on in almost every house.

Between Motomiya and Nihon Matsu are some valleys of rice-land separated by hills crossed by a horrible corduroy road. The lofty mountain of Daki rears its double peak from the range on the left.

Nihon Matsu is a large town extending up and down the sides of an exceedingly steep hill. It was a castle-town the seat of a daimiô of 110,000 *koku*. It is the chief town of the Shinobu Kôri, one of the principal silk producing districts of Ôshiu, and has a silk-reeling factory with machinery copied in wood from that used at Tomioka, and worked by water-power. It is also noted for a kind of sweetmeat called *yôkan*.

From Nihon Matsu through Hachonome to Fukushima is all up and down terrible hills. At the end of February this year there was a foot of snow on the road nearly the whole way. A short distance before reaching Fukushima one emerges from a muddy village on to an excellent piece of road which leads to a causeway forming the approach to a magnificent bridge over the Su kawa said to be 250 yards in length.

Fukushima is the chief town of the Ken to which it gives its name, and was the seat of a daimiô of 70,000 *koku*. The *shiro* has been dismantled, but the moats and banks are kept in good order. Fukushima is a great centre of the Silk trade, and is the head quarters during the season of the Tôkiô silk buyers. Yanagawa in the Date Kôri and Nihon Matsu are the two chief silk producing places in the Ken, which is also noted for the excellence of its dried *kaki* (persimmons). The town is well lighted with kerosene lamps, and has a telegraph office. The Ken authorities are paying attention to the great want of Japan, the making of roads. In conjunction with the Yamagata Ken a waggon road is being constructed to connect the two places, and a large portion in the latter Ken is already completed. A proposition was made to the Okitama Ken to make a road between Yonezawa and Fukushima, the Fukushima people offering to pay 50,000 Yen, if the Yonezawa people would pay the same sum; but the latter do not like parting with their money. There is some talk of all that portion of the Ôshiu kaidô which is in the Fukushima Ken being put into proper repair; but it seems doubtful whether it would not be better to abandon it and make a new road; for as the Abukuma gawa finds it way from Shirakawa to Fukushima, it is reasonable to suppose that it would be possible by following its course to make a nearly level road, instead of as now crossing all the spurs that strike out from the grand central range. Some portions of the upper waters of the Abukuma gawa are navigable for small boats, but near Nihon Matsu there are dangerous rapids. From Fukushima there is a good deal of traffic by it to Arakawa on the Bay of Sendai, 13 *ri* from the sea port of Ishibashi on the opposite side of the Bay.

In all the towns here named is to be found excellent accommodation for travellers and exceedingly cheap, except indeed at some places south of Utsunomiya where the innkeepers have learnt to demand a special rate for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

foreigners. The charge for supper, bath, bed and breakfast is three quarters of a bu in the very best hotels. In villages it is even less: at Kubota, on the Kinugawa, there was a notice posted up announcing that, in consequence of the high price of provisions the innkeepers had made an agreement to fix the price of first-class accomodation at 15 *sen*!

As a means of communication the Ôshiu kaidô is not to be commended, the portion north of the Kinu gawa being in such bad order as to be only not absolutely impassable for carriages; but one must not leave it without saying something of the scenery through which it passes The blue mountains, along which one travels for days yet seeming always to see the same, are somewhat monotonous, yet with the distant hills in the east, the wood, the water and the undulating ground, combine to form a picture or rather a panorama, which is nearly always beautiful and possesses exquisite 'bits.'

Still this is not the route to be chosen by the lover of scenery. To the road or rather track from Imaichi to Wakamatsu must be accorded the palm in this respect. The bold mountains, wooded from the peak to the torrent at their base, with almost tropical exuberance of foliage, trees growing out of a few inches of earth, plants seemingly springing from the very boulders, the dashing water and the varied tints give a fresh picture every mile, and every picture a gem.

From Fukushima the traveller to Yonezawa turns off to the north-west to cross the central range by the pass of Itaya over a ridge of the Adzuma mountain. The pass in about 2,500 feet above the sea. The first 2½ *ri* are over level road to a village called Niwasaka, and from there the climbing commences. First up a mountain 1 500 feet above Niwasaka to the village of Su-momodaira, then down again to the borders of a torrent at the point where it divides into two streams, that almost encircle the mountain and flow out past Fukushima; then up an ascent densely wooded, and down again to the same torrent immediately under Itaya. The climbing so far is all unnecessary: it would be easy to trace a level road, that with all its windings would not measure more than the present one; and it would be easier still to establish water communication. The banks of the gorge, at the bottom of which the stream passes, rise perpendicularly to a considerable height before commencing to slope upwards to the mountain-tops, so that there would be no difficulty in throwing a dam across a narrow part of each stream just before its issue to the plain, and raising the water, of which there is abundance, to any desired height between the stone walls that nature has provided for it. Crossing this torrent, a zigzag ascent leads to the village of Itaya enclosed by a thick belt of pine trees. Grassy slopes bring one to the summit of the pass, from which there is a rapid descent through a picturesque glen to Osawa, 3½ *ri* from the town of Yonezawa. The whole distance from Fukushima is 12 *ri*, the 6 *ri* in the centre being difficult climbing. The road is an excellent specimen of military engineering in the olden time, – it succeeds in rendering travelling as difficult as may be without making it absolutely impossible.

The plain of Yonezawa, about 12 *ri* long and varying in breadth from 5 to 17 *ri*, is perfectly flat, and the lofty mountains by which it is hemmed in appear in the distance to rise perpendicularly from its sides. From the centre of the plain no break whatever is visible through this mountain wall, but on the north a tortuous gorge with only a moderate ascent communicates with the plain of Yamagata, and on the north-west is the outlet of the Matsu kawa, a large river that rises from Adzuma yama in the south-east, flows past the town, traverses the whole extent of the plain, forces its way though the mountains and eventually reaches the Sea of Japan at Sakata. Just before leaving the plain it becomes navigable for small boats, but the upper part is too shallow and irregular. No attempt is made to guide or confine the water; and nearly every year the floods carry away all the bridges. The chief summits of the surrounding mountains are Adzuma, Kabuto yama, so called from its resemblance to a helmet, Iide san, and Asahi yama. The famous mountain Gas-san in Mogami may be seen in very clear weather breaking through the northern horizon. It is stated that the snow never quite disappears from Iide san, and the phrase "*Iide san no yuki wa kiyetara*" is used as the local equivalent for the Greek Kalends.

The plain thus enclosed does not all belong to the Okitama Ken, a portion called Yashiro Go on the right bank of the Matsu kawa was taken from the late daimiô after the war, and is now included in the Yamagata Ken. The whole plain forms the Okitama Kôri, the southern division of Uzen, and is about midway between the Pacific and the Sea of Japan, the town of Yonezawa being 36 *ri* from Niigata, and 32 *ri* from Sendai. Just 16 *ri* to the south is the famous town of Wakamatsu, and 12½ *ri* to the north is Yamagata.

Yonezawa itself is a large town of not very prepossessing appearance situat d near the south-eastern extremity of the plain. The houses are all thatched, and have no verandahs. The streets are narrow, rough, unpaved and altogether uncared for. Water from the numerous mountain-streams is led along the centre of almost every street in open conduits, which with the addition of two or three wells supply the people with water for all purposes. The late governor put up kerosene lamps, but the people demolished them, as they considered the lighting of the streets an unnecessary expense. The *shiro* is immense, and as all the houses within its ramparts have large gardens separated by hedges, it presents the appearance of an enormous village. There is no attempt at fortification except the usual three moats. The inner one inclosed the mansion of the daimiô and a temple sacred to the memory of Uyesugi Kenshin his ancestor,—a mighty warrior of the 16th century. The mansion has been razed to the ground, but the temple remains, and a great festival is held on the date corresponding with the 13th day of the 3rd month of the old calendar. The streets or roads in the *shiro* were formerly very broad, but three years ago the then governor allowed the residents to take in a quarter, and in some instances a third, on each side. This was after the conversion of *Han* into *Ken*, and was intended as some sort of alleviation to the *kerai* in their distressed circumstances. Some idea of the severity with which the changes pressed on the upper classes may be gathered from the fact that the principal retainers, especially those few families from whom the Karô was selected, have pulled down their old mansions in order to grow rice on their sites, and are now living in the out-buildings of their *yashiki*. One family whose revenue was 1,600 *koku* now receives a pittance of 40 bags—about 18 *koku*. The upper class of *samurai* did not draw an allowance of rice from the daimiô's treasury, but received it direct from the farmers as rent of the land. As this right, though ostensibly the salary of a sinecure office, was handed down from father to son, the *samurai* were virtually owners of their land, and the manner in which they acquiesced in the surrender of their revenues to the central government reflects the highest honour on their patriotism. It has been the fashion with many foreigners to bestow a great deal of commiseration on the farmers or, as they may be more accurately styled, farm-labourers. It is probably true that the government does exact from them a higher rent than that with which the former owners were satisfied, but the change of ownership does not affect them to any perceptible fraction of the extent to which it affects their betters. In an old and thickly populated country unskilled labour at a healthy occupation cannot be expected to earn more than will provide the rude necessaries of life, and these the field labourers certainly possess, if the healthy sturdy appearance of themselves and their children may be taken as a criterion.

The climate presents a striking example of the modifications produced by the physical conformation of the country. In winter although snow to the depth of five or six feet lies on the ground from early in December till late in March, yet owing to the protection afforded by the surrounding mountains, the cold is not by any means so trying as that experienced at Tôkiô during the prevalence of the northerly winds. The heat in summer is about equal to that of Tôkiô.

There are several hot springs in the district, those of Onogawa, Akayu and Go-hiki being the most noted. I believe that they all contain more or less iron and sulphur. I have some bottles of the different waters which I shall be happy to place at the disposal of any gentleman who

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

may desire to analyse them. Their medicinal properties are held in high estimation, each spring being considered a specific for some particular disease. The waters at Gohiki are under the special protection of whoever in the Japanese mythology may correspond to the goddess Lucina.

The soil is exceedingly fertile: rice is produced in such quantities as to allow of a large export to the west coast, whence a good deal is said to be forwarded to Hakodate. Wheat, barley and the ordinary potato, carrot and turnip of Europe are grown. Persimmons, grapes, walnuts and chestnuts abound, and last year an attempt was made on a very small scale to make wine. The result was not very successful, but sufficiently so to encourage a repetition of the experiment. Lastly and most important of all the mulberry flourishes all over the district and attains its highest perfection in the north-west corner, where are the villages of Arato, Miya and Kô-ide celebrated for their silkworms' eggs. Silk worms' eggs are made throughout the Ken, but those of Shimo-nagai the northwestern portion are considered the best.

A table of statistics published last August states that the amount of ground under cultivation exclusive of garden ground is 24,206 *chô* yielding a total production of 295,671 *koku* of which 88,564 *koku* or rather less than one-third are paid into the Ken treasury. The value of this is set down at 195,293 *yen*, so that roughly speaking there are 60,000 acres of cultivated ground paying for rent and taxes an average amount of 13 shillings per acre. The money value of the land is estimated at 2,786,238 *yen* equivalent to 384 *mon* per *tsubo* or £9.5 per acre. The house and garden ground measures 1,498,787 *tsubo* or about one-forty-eighth of the farm land. Its value is estimated at 159,010 *yen* equivalent to 1060 *mon* per *tsubo*. The amount levied on it is only at the rate of about one-third of that on the farm land, though its value is estimated at nearly three times that of the latter.

The population belonging to the Ken numbers 159,716 divided as follows:—

	Males.	*Females.*	*Total.*
Shizoku and their families...	13,150	13,584	26,834
Priests and their families....	742	318	1,060
Nuns	...	12	12
Heimin (plebeians).....	67,230	64,680	131,910
	81,122	78,594	159,716

Of this number 528 persons have emigrated to other districts, and 975 others have immigrated, so that the total number living in the Ken is 160,163. No information is given about age, nor, so far as I am aware, have the statistics of births and deaths been published.

Public instruction is carried on under the supervision of a council of officers chosen by the governor. There is one middle school with an English and a Chinese department, and 212 lower schools with 217 teachers attended by 3,950 boys and 642 girls.

The annual revenue of the Ken amounts to 236,027 *yen*, derived from the following sources:—

	Koku.	*Yen.*
Arable land—in kind.....	88,564.227	= 195,293.162
Arable land belonging to private proprietors,—in kind....	3.632	= 8.157
Arable land belonging to private proprietors,—in money	—	553.859
Surcharge to meet sundry particular expenses in kind	3,454.047	7,616.877
House and Garden land—in money.....	—	1,590.103
Sundry taxes.....	—	2,812.511
		233,187.268
Licenses for local purposes.....		2,840.274
Grand Total.....		*Yen* 236,027.542

The expenditure is not given in detail: the total amount is set down at 34,255 *koku* of rice and 31,563 *yen* in money. Besides this there is the Government grant of 29,238 *yen* distributed as follows:—

Salaries of officials.....	*yen*	19,068
Sundry current expenses.....	„	2,050
Reserve-fund.....	„	5,850
Police.....	„	2,030
Two Superintendents of Silk and Silk-worms' eggs.....	„	240
	yen	29,238

The officials number 69; one of the 5th class, one of the 7th, 48 from the 8th to the 15th, and 19 below the 15th.

Statistics of the produce of the Ken and given under no less than 75 heads, of which I can here only cite some of the more important figures. The number of young mulberry trees is a million and a half. The quantity of leaf 69,046,668 lbs. The weight of Cocoons 1,800,000 lbs. Of Silk 88,176 lbs. Of Pierced Cocoons 231,400 lbs. The Silk-worms-eggs numbered 199,981 Cards; last year there were upwards of 230,000.

Of Silk piece goods there were manufactured 14,000 double pieces (*hiki*) the length of the single piece (*tan*) being 28½ feet.

Of lacquer gum there was collected 3,608 lbs. and of lacquer ware there was made 110 horse-loads (one horse-load is 40 *kuamme*=333⅓ lbs.) The lacquer ware is all made for the Yokohama market.

The Ken produces 346,775 lbs. of Tobacco, chiefly exported to Echigo, its flavour being stronger than is liked in Tôkiô.

Saké is an important article of export; 13,751 *koku* are brewed, most of which is sent to Sakata.

The mountain sides are well wooded, the quantity of timber felled is given at 46,880 loads of Cedar and 16,489 loads of Pine.

Pen-making is one of the industries of the district the number manufactured is returned as 3,102,500 pairs. Of candles there were made 62,598 lbs. and of pomatum 130,670 lbs. Indigo was produced to the extent of 188,808 lbs. and the flax crop yielded 579,891 lbs.

The prices quoted in the table of statistics sufficiently illustrate the difficulty of communication. In the outlying valley of Oguni the value of best rice is stated to be *yen* 1.33 per koku, while at Yonezawa distant only 10 *ri* it is *yen* 2.24. In the carrying traffic over the mountains bulls are used instead of packhorses. The cheapest communication is in winter when the snow allows the passage of little *sleds* drawn by men.

In conclusion I must apologize for the crude form in which, fearing to trespass too much on the time of the meeting, I have presented these statistics.

DAI BUTSU.

The following is a short historical record of the image of Daibutsu belonging to the temple Shô jô senji, in the village of Fukazawa, near Kamakura, in the province of Sagami.

On the sacred ground dedicated to Dai Butsu in the village of Fukazawa, Kamakura, in Sagami, stood at first the Boundary Temple of Adzuma[1] which was erected during the cycle called Tenbiyô (A.D. 727-68) in obedience to the order of the wise sovereign Shômu Kôtei by his reverence Giôgi.

From of old it has been handed down that the ship which bore from China the complete set of the Buddhist canon[2] having put in at Sanzô no ura of Kanazawa, the Mikado Shômu Kôtei caused this temple Shô jô senji to be erected, and ordered the two priests Giôgi and Rôben to copy and make offering to the temple of the 600 sacred books called Dai hannya Kiyô.

At the same time the three holy images of Shaka, Yakushi and Kuamuon were constituted the presiding deities—each being 16 feet in height. This, then, became the border temple of Adzuma. The place where the three images stood was called the Inner Temple, and was situated in that portion now used as a rice field at the N. E. corner of the grounds. Within the outer gate is the rivulet called Minasegawa or Minanose gawa, crossed by the bridge named Gejô-bashi or also Jizô-bashi.

Later on during the period Rekinin (A. D. 1237) the image of Dai Butsu was constructed. This came about as follows.

At the time of the defeat of the Heike, in the period called Jijô (A. D. 1176-9), the temple of Dai Butsu at Nara having been destroyed, the priests Shinjô and Jiugen received Imperial

1. Adzuma—more commonly Kuanto.
2. Called Issai Kiyô.

orders to collect contributions throughout the empire and to restore the sacred edifice. Then was the Udaisho Yoritomo summoned to quarter the temple during the festivities, and, as though it had been foreordained, he took with him his wife and the young lord, who were attended upon by the maid Itano. While worshipping at the splendid edifice, Yoritomo conceived the deep desire that he might in his own eastern home erect an image of the Eternal Buddha.

After the lapse of many years the attendant Itano—by what strange predestination?—carried out this earnest wish. She made offerings at the *miya* of Hachiman at Kamakura, and prayed, saying, "Oh that I may be able to erect this image—the heart's desire of my lord!" and continued without ceasing to invoke success. From this time she took leave of her mistress Kita no Kata, and repairing to the Boundary temple at Fukazawa, constructed by its side a mean hut, and assumed the appearance of a beggar. Her time was spent in selling the *Shikimi* plant gathered in the mountains of Idzu, and in reeling cotton the proceeds of which she laid by towards the construction of the image, and, placing the money thus collected in a cave in the rocks behind her hut, invoked the blessing of Hachiman upon her efforts: when, wonderful to relate, ever and anon a bright light was seen to shine forth from the rock, and a purple cloud to shed itself abroad in the heavens.

The fame of this, being noised abroad, became known to Kita no Kata, who hastened to send for the maid and questioned her upon the matter. Then was she greatly overjoyed to think that her late lord's wish should be carried out, and joining her prayers with those of her servant she fervently prayed that they might fashion and establish within the grounds of Hachiman daijin an enduring and infinite image of Dai Butsu, which should be placed on Yuigahama and be as a protection to the country and the homes of the people. The Shôgun Yoritsune, sympathising with their endeavours, also rendered assisteance. After the manner in which the inauguration of the Nara image was conducted, he appointed the learned priest Jôkô—the pupil of Chôgen—to superintend the collection of subscriptions and to make the scheme known throughout the land. At length during the period Rekinin a wooden statue of the great Buddha measuring 80 feet in circumference, together with a large temple, were completed, and inaugurated with great ceremony.

With the lapse of time the winds and rain had their effect upon these structures, and they fell into a state of ruin. Seeing this, Itano again besought divine aid, and prayed that this time she might be enabled to erect a bronze image. She further applied to the ruling Shôgun Yoritsugu (5th of the Minamôto dynasty) who caused her appeal for aid to be made public. Then, once again, Heaven as it were lending assistance, a full subscription was obtained, and in the time of Munetaka Shinwô a bronze image of the Eternal Buddha, 50 feet in height was successfully completed. Now again were built, far surpassing in splendour those formerly erected, a temple, a gate of the Niwô, and the smaller two storied buildings—in short, they were the most magnificent in the whole of Kuanto. With reference hereto Chikayuki has said in his notes of a journey through Kuanto!—

"There is an image of the Eternal Buddha at Yui no Ura "which reaches midway to the heavens, and shines superbly "in the rays of the full moon, and the surrounding temples "absorb a mighty space." Then in the 4th year of Meiwo (1495) in the autumnal season a tidal wave swept in upon Yui no Ura, by which the temple and surrounding buildings were carried away. From this time there was no one to take on himself the reinstatement of the buildings and nought remained of them but their foundations. Henceforward during a period of over 200 years, sad to relate, there was not so much as a branch of pine offerd up. The precious image became but a dwelling for sparrows, and the holy place, which was to have been as a protection to the lands and the homes of the people, but a habitation for the fox and the hare.

Nevertheless, in course of time there arose the priest Yuten who had long in his heart cherished the hope of re-erecting the temple. At that period there dwelt at Asakusa in Yedo a certain pious *samurai* named Nojima Taiyu, who, heartily admiring the zeal of Yuten, subscribed a sum of money by means of which the temple grounds were reopened, the weeds were removed, and a small building erected. Furthermore prayers were said, flowers offered, and incense burnt before the holy image. Therefore is Yuten remembered with reverence as the restorer of the sacred ground. At the same time great assistance was rendered by his Reverence Sensatsu of the temple of the Tenshô zan, and Yuten, rejoicing at the prospect of the fulfilment of his heart's desire, applied to Government that Sensatsu might have charge both of the temple of Dai Butsu and his own, *Kômiyoji*. Donations were also received towards repairs; but of the temples which had succumbed to the elements not a vestige remained. No hand had repaired these for several hundred years, and even the statue itself was full of holes. How must the pious grieve at the recital!

I who have been since the year Kiyohô (A.D. 1720) Director of this temple, have not ceased for a moment to lament this, and long that I might again repair the image and restore the temples to their pristine magnificence; and I now offer up thanks that I have received sanction from Government to collect from all classes in this neighbourhood subscriptions towards this object.

At the time when Dai Butsu at Nara (near Kiyotô) was erected, Shômu kotei published the following edict:—

"We are the preserver of the wealth of the lands. We are "also the preserver of the strength of the land. With the "possession of these two powers it is not difficult for us to "construct this image. But we have formed another intention. "We would hereby solicit aid from all our people within the "four seas. Were such aid but the most trivial, yet shall it "be as though each had himself erected it not for our benefit "alone. It is our wish that this be published abroad through-"out the country."

I would beg that all people would carefully read this honorable appeal, and to-day, as of old, aid me in this my desire. Then indeed would the above wise exhortation have served its purpose, and the donor may assure himself of happiness in the world to come.—KUWANKÉ SHAMÔN, (Guardian of subscription.)

The following are the measurements in English of the three chief images of Buddha in this country as given by the *Hiogo News*.

	Wooden Bust of Daibutsu, Kioto.	Bronze Statue of Daibutsu, Nara.	Bronze Statue of Daibutsu, Kamakura
Height of figure.....	69ft. 0in.	53ft. 6in.	50ft. 0in.
Length of face.....	31ft. 0in.	16ft. 0in.	8ft. 6in.

THE OCCIDENTAL & ORIENTAL STEAM-SHIP COMPANY.

THE "*OCEANIC*."

The Steam-ship *Oceanic*, the pioneer vessel of this Company's monthly line of packets to San Francisco, arrived in port on the night of the 10th instant, after a passage of unexampled rapidity of 4 days and 23 hours steaming time from Hongkong.

The *Oceanic* was built some four years since for the "White Star" line of Liverpool and New York packets, by Messrs. Harland & Wolff, of Belfast, her engines being supplied from the celebrated works of Messrs. Maudslay, Sons & Field of Lambeth. She is 440 feet in length, 24 feet width of beam and 31 feet depth of hold and is fitted with four engines, working on the compound principle, of the nominal power of 550 horses. Her accommodation when in the Atlantic trade provided for 150 saloon and 1,300 steerage passengers, and 4,000 tons of loading, but in view of the conditions of the trans-pacific trade it has been deemed advisable to abridge, to some extent, the space allotted to first-class passengers, so that her existing arrangements are sufficient only for the accommodation of 80 chief-cabin passengers, the room thus taken being added to her cargo space.

Viewed externally the extreme length of the *Oceanic* can hardly be appreciated by the spectator while it has the effect of dwarfing to the eye her four masts, destined to carry sail whenever it can be with profit and effect best employed. The lines of her hull are very fine. On entering the vessel, however, the great merits of her construction are at once apparent. Built with a view to encounter the tempestuous winter gales of the North Atlantic every means within the builder's art has been employed to add to her strength and power of endurance. Her frame, greatly exceeds the limits of strength prescribed by Lloyd's rules, while her three decks, which run the entire ship's length, are of stout iron sheathed with an upper skin of planking. Seven heavy bulk heads divide her into eight water-tight compartments and the engines, which experience has by so many and bitter lessons taught the necessity of guarding with jealous care, are well protected from above by iron combings which run along each side of the deck. Her rudder, worked by steam power, is steered in a deck-house in the fore part by ingenious mechanism, while in the event of accident she is supplied with a powerful double-wheel which can be put in gear instantaneously, being worked by the ordinary manual power. A convenient hurricane, or promenade deck, covers nearly two-thirds of her length, and a "tur-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

tle's back" at her bows protects her upper deck from the seas that board her in heavy weather. In addition to the steam winches with which each hatchway is furnished she is fitted with a winch for heaving her anchor and a small engine for supplying the numerous baths, closets and lavatories with water.

Nor have the arrangements for the comfort and convenience of passengers been less studied than strength and endurance in her construction. Her saloon is placed forward of amidships, at that point where oscillation is least sensible, and occupies the full width of the ship. It is luxuriously fitted with couches, lounges, &c., and a piano, an excellent library and two open fireplaces contribute to its completeness. Close at hand is an elegantly fitted ladies saloon, and, running forward on either side, the first-class cabins. On the deck level a roomy saloon furnishes the smoker and the lounger with a comfortable resort in bad weather or rain and adds an attraction to a numerous class of passengers whose tastes in this respect are seldom studied by ship-builders. There is little to add except that the subsidiary arrangements have been made on an adequate scale and with a view to the comfort of passengers. Electric bells are placed within easy reach in the saloons and cabins, and the culinary and washing arrangements are all that a traveller is likely to require or in reason to hope for.

The *Oceanic* is commanded by Captain J. W. Jennings who is well known in Eastern waters and who has, for some years past, been in command of steamers of the "White Star" line. She made her outward passage from Liverpool to Hong Kong in 32 steaming days, the fastest passage on record, and there is therefore fair reason to hope that her trip to San Francisco, in the high latitudes in which it is proposed to take her, may be accomplished within the short time promised, or fifteen days from port to port.

Should a passage of this unparalleled speed be attainable—and it is confidently anticipated by the Commander of the vessel—we may fairly augur for the newly initiated Company a career of popularity with shippers and the travelling public which will ere long place it in the highest position in the carrying trade in which it has engaged with such fair and promising prospects.

CANOE SAILING RACE.

(Communicated.)

A start was at length made yesterday for this race, but the result showed that the Commodore was amply justified in the previous postponement, and it would indeed have been better had he again postponed it yesterday. There was a fresh breeze from the South, which rendered it quite impossible for the smaller craft to beat to windward in the rough sea they had to contend with outside, and there was thus literally no race at all. We would suggest that in future the canoes be divided into two classes and that separate races be organized for them.

Shortly after the time appointed, viz, 5 p.m., eleven canoes came to the post, and a good start was made for most of them, The "*Sea Serpent*," "*Club Law*," and "*City of Tôkiô*," fouled each other and were sometime behind the rest before they got fairly under weigh. The "*City of Peking*," took the lead, closely followed by the "*Jiggy Jiggy Maru*," the rest led by the "*Inadzuma Maru*," pretty well together. It was a free run out to the "*Charybdis*," and there should have been no accidents, but, off the "*Montcalm*," the "*Jiggy Jiggy Maru*," suddenly appeared bottom up and her Captain was rescued by a boat from the "*Montcalm*." The "*City of Peking*," was the first to round the "*Charybdis*," some distance ahead of the "*Inadzuma Maru*," the second; but when it came to the beating, the "*City of Tôkiô*," soon shewed up with them and from this time it was simply a race between the two 'cities' as the "*Inadzuma Maru*," which was doing well, carried away the step of the mast, and was consequently obliged to lower sail and abandon the contest.

It was now a dead beat for about a mile, the "*City of Tôkiô*" tacked out to sea and the "*City of Peking*" in shore, and although the former forereached considerably on the latter, there was, when they met near the stake boat, very little between them. The "*City of Tôkiô*," was the first to round about 150 yards ahead of the "*City of Peking*," and carried a fresh breeze up to the flag boat. The "*City of Peking*," on rounding, seemed to lose the wind considerably but came in a good second about two minutes later.

No other boat but "*Club Law*" competed the course, and she was about half an hour behind. Our sporting doctor in the "*Sea Serpent*" was well to the fore till rounding the "*Charybdis*," but after several attempts to put his ship about abandoned the task as hopeless.

The "*Vagabond*," a small low canoe, made a very good fight for it. In ordinary weather she will show up well: she did not abandon the struggle until long after the others of her class had yielded.

Correspondence.

THE MISSIONARY IDEAL.

To the Editor of the "*Japan Weekly Mail*."

Dear Sir,

It is quite difficult to refrain from touching on the many incidental subjects suggested by your article of last Saturday's date, on the "Missionary Ideal;" and more difficult still to be silent concerning the satisfactory testimony to the general usefulness of Protestant Missions which you quote from Lord Lawrence, Lord Napier and Sir Bartle Frere, adding your own, after a twenty-years' observation of the progress of affairs, out here in the Far East. If my object had been to elicit a valuable tribute to the average usefulness and respectability of Protestant Missionaries, as a body, I should consider myself to have succeeded perfectly, and should contentedly remain silent on the whole subject.

But what I aimed at was to ascertain, if possible, wherein the "ideal" of the Roman Catholic Missions was considered to be so superior to our own; and on this point (to which I shall endeavour to confine my remarks) your explanation, as I understand it, amounts to this:—

"The Romish system, *quâ* system, is incomparably better than our own, and chiefly for the following reasons:—

"The Protestant system (1) involves a marked and wide departure from that prescribed by *Christ;* (2) it tends to repress enthusiasm; (3) it is a system which simply sets Christ's instructions at defiance.

Those instructions you state as follows;—

Christ demanded that they [the apostles, as such, or all his disciples?] were (*a*) to renounce houses and lands, and father and mother and wife and children; (*b*) having put hand to the plough, they were not to look back; (*c*) they were to let the dead bury their dead, while they went and preached the gospel; (*d*) they were not so much as to have the holes of foxes nor the nests of birds for their dwelling places; (*e*) they were to start on their errand without scrip, or coat, or shoes, and (*f*) to shake the dust from their feet against those cities which refused to receive them."

"For such enthusiasm and self-renunciation," you consider, "the Romish system provides; while our system "quenches both. We get neither, and thus the force of "Christ's personal example is lost."

Now the difficulty of replying satisfactorily to the above is that it plunges us into a discussion as to the true force and application of the several passages quoted:—whether they are addressed to all disciples, as such; or (which alone is germane to the subject before us) whether they give the outline of a Missionary system, "*quâ* system," which was designed for all time, and all circumstances.

Such a discussion could hardly be carried on satisfactorily in the pages of a newspaper; though I am perfectly willing to enter on it, if you feel disposed to open your columns for the purpose. I should have to commence by calling attention to the fact that most of the specific directions you have quoted were given by our Saviour when the twelve (and afterwards the seventy) were "sent, two and two, before his face, into every city and "place whither he himself would come"——on which occasion he added—"*Go not* into the way of the gentiles, "and into any city of the Samaritans, enter *ye not*: but

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"go rather to the lost sheep of the house of Israel." In other words, they were sent, at the time, as brethren to brethren. But when, just prior to the delivering of his great commission, that they should "go into all the world, and preach the gospel to every creature," Christ gave them what might be called "instructions" as to the *manner* of carrying out this work, his words were:—"When I sent you without purse and scrip and shoes, lacked ye anything? And they answered nothing. Then said he unto them. *But now* he that hath a purse let him take it, and likewise his scrip; and he that hath no sword, let him sell his garment and buy one." Let it be observed that these were our Lord's *final* instructions, and that they had reference to what we now call Missionary work. We should have to take similar exception to your application of every one of the passages quoted.

It is necessary, therefore, to keep to our single point—the alleged excellence of the Roman Catholic "ideal," as compared with the Protestant, which last, it is assumed, gives no scope to enthusiasm, such as that of the Benedictines and Franciscans. To which we should reply that the Moravians and the Methodists are as truly and as efficiently "enthusiastic" as any Romish order that can be named; and that their Missionary work is just as good. It may be, and we are afraid Macaulay has shewn that it is, the peculiar short-coming of the Church of England, that her rulers do not know how to deal with those who think (to use St. Paul's words) that "it is good "to be zealously affected always in a good thing;" so that if the averment be, that the general state of the English Church is one of apathetic unconcern as to Missions, we must sorrowfully admit the unhappy fact; but at the same time, we claim that whatever enthusiasm does exist within its borders is found among the Missionary people, both those who go forth and those who sustain them; and while the rank and file (so to-speak) may be men of quiet, steady, unobtrusive character, suited to the work they have to do, and doing that work effectively, their *leaders* have not been wanting in that sort of enthusiasm which accomplishes great results, though not perhaps with as much picturesqueness as if they wore medioval garments and had taken a vow of personal poverty. Martin, Carey, Williams, Duff, Bingham, Selwyn, Patteson—these are names belonging to the present generation which will bear comparison with those of note among the later Dominicans, Jesuits and Lazarists of the R. C. Church, as well as the earlier Benedictines and Franciscans. And what we should really be glad to know is, what are those methods—common to all these orders, so that it might fairly be called the "Roman Catholic system of Missionary life and work"—those methods what put to shame Herubuth, and Basle, and Islington and Andover and Canterbury.

We do not believe any such superiority can be shewn; unless superiority be held to *consist* in being a monk, and holding property in common, and obeying implicitly the orders of a general. These things, without doubt, tend to effectiveness of operation as in an army; but that they better accomplish the true end of Christian Missions we do not admit for a moment.

We have our own ideas as to the cause of that hallucination which is commonly met with on the point now before us; but we purposely abstain from all side issues, and from all lines of remark that might give pain to our Roman Catholic friends—especially the Missionaries themselves,—being sincerely desirous to avoid every thing that might alienate from us any Christian man who bears that honored name.

The sum of the whole matter is this: if there are things to be learned, methods to be imitated, by us, which we can adopt consistently with those principles which make us what we are, as Protestants, let us so learn and imitate. We profess ourselves willing to be taught by those who have attained to a perception of excellencies not possessed by ourselves; and if they will only tell us plainly what are the characteristic features of that "more excellent way" they will be entitled to our thanks, and it will be our greater fault if we do not improve upon our previous methods.

Meanwhile, however, we [illegible] understood as holding that judged of by [illegible] by the individual

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

character of converts, the R. C. Missions have nothing to boast of, to the disparagement of what has been accomplished by Protestants; and we claim to be not unacquainted with the subject, or with the facts which go to substantiate this last statement.

Very truly your's,

AN OLD MISSIONARY.

Yedo, June 9, 1875.

CHRISTIANITY—DOMESTIC RELATIONS.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yedo, June 7, 1875.

SIR,—I have read with much interest the translation, in your last issue, of an article from the *Nisshin Shinjishi* in which the writer accuses Christianity of being subversive in its teaching of the social and family relations. The mistake into which this writer has fallen is that of severing some passages of the Bible from their context and thus forcing upon them a meaning which they were never intended to bear. The teaching of Christianity is the exact opposite of what he states it to be. Take for example St. Paul's Epistle to the Ephesians, where he dwells at some length upon the duties of children and servants. He tells the former to obey their parents, to honour their fathers and mothers, that it may be well with them. And again "Servants," he says, "be obedient to them that are your masters according to the flesh, with fear and trembling, in singleness of your heart, as unto Christ; not with eye-service as men pleasers, but as servants of Christ, doing the will of God from the heart."

Christ did indeed say that he came to send a fire on the earth—that he came not to send peace but a sword. He foresaw that his teaching would revolutionize the world, that, like a magnet, it would draw and gather round it multitudes of those who loved truth better than anything else in the world. That men who were true men, loving earnestness and hating shams, when once they came to believe that he was the truth and that he taught the truth, would leave all and come to him. And so in this way households would be divided, for some members would be willing to give up all for Christ, and some would not, and thus in history Christ's words have been again and again all too literally fulfilled. But to lay these miseries to the charge of Christianity, is as if one would quarel with the surgeon's knife because in removing the diseased part it caused pain. The knife is innocent, the misery is caused by the disease. And Christianity is innocent; the misery is caused by the battle of darkness against light, of spiritual laziness and falsehood against earnestness and the love of truth. That battle and that trial by which households are divided, must go on while the world shall last, not only in religion, taking the word in its popular sense, but in every intellectual pursuit in which the soul of man can be brought face to face with truth. For whenever a man has revealed to him in his inner heart a new truth, and that truth requires his action, he will, if he be a true man—true to himself and true to God, follow that light to whithersoever it may lead—through pain and shame and the loss of friends he will take up his cross and follow on. They who do this *are* the true friends of Christ. Before all else they are his brother and sister and mother.

But now, seeing that this is the Christian teaching, it seems to me a shameful thing that Christ should be accused of setting at nought and disannulling that most sacred tie which exists between parents and children. In a hundred thousand churches throughout the world, Sunday by Sunday, the assembled worshippers are told, as divine law revealed by God and for ever binding upon man, that they shall honor their fathers and their mothers. And is it not recorded in the history of Jesus, that in his last agony, when nailed upon the cross, one of his last thoughts was for his mother, whom he commended to the care of that disciple who he knew was the gentlest and most loving of all his followers?

Finally, if writers like the one in the *Nisshin Shinjishi*, would only make a fair and impartial examination of what Christianity really does teach on these and kindred subjects,

England, where Christianity has had the freest course and the fairest play, the reciprocal relationships of family life have developed into a perfection not only above the practice, but beyond the imagination, of the non-Christian nations.

I remain, Sir,
Yours &c,
A. C. S.

GUNTER'S CHAIN.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

June 6th, 1875.

DEAR SIR.—May I ask through the medium of your valuable paper—for what reason the Japanese Government have permitted the use of the Gunter chain in a great portion of their survey work?

The Gunter chain was invented for the use of English landowners and engineers, being a compromise between the acre and the mile—the advantages of which are obvious.

Now Japan has neither acres, or miles—although it may be urged that 11 *ken* equal 1 chain.

Because English surveyors are employed, is it a reason that this country should be burdened with a system totally unsuited for its requirements? As far as I can learn these surveyors would gladly use the 100 ft. chain, now extensively adopted in our colonies. The Government being closely allied to the native *shaku* would probably render its introduction easier than the métre, but the latter has the advantage of probably becoming the much desired universal standard.

These little matters may be of slight import to the Government, who, indeed, have more weighty affairs to attend to. I nevertheless hope that a timely warning from your able pen would not be without effect on the public, and that our old friend Gunter will be forced to return home and to look out for a quiet retreat to which he can retire, when his more modern rival gains the day.

I remain, dear Sir,
Yours faithfully,
C. N. K.

REUTER'S TELEGRAMS.

London, 1st June, 1875.

Captain Boyton started from Cape Grisnez and reached Dover in 24 hours. He was only slightly distressed.

The strike of the miners in South Wales has terminated by the men accepting a reduction of 12½ per cent.

The Prince of Wales, General Fitzgerald, and the Marquis of Tweedale have been gazetted Field Marshals.

The Plymouth and Aberdare iron companies have suspended payment, involving some minor failures.

W. H. Alexander, Esq., is appointed a member of the Executive Council; and Henry Lowcock, Esq., a member of the Legislative Council, Hongkong.

President Grant declines re-nomination for the Presidentship.

The King and Queen of Sweden are on a visit to Berlin.

In the House of Lords, Earl Derby, replying to Earl Russell, said that Germany had recently declared that she might be forced to strike the first blow in consequence of France increasing her armaments but the intervention of England and Russia had averted all danger of hostilities.

London, 26th May, 1875.

The Peninsular & Oriental Steam Navigation Company is unable to pay an interim dividend, owing to decrease in the receipts.

THE DERBY.

Galopin	...First.

A London telegram dated May 10, says:—The Duke of Buckingham has accepted the Governorship of Madras.—The flying squadron will escort the Prince of Wales to India.—The *Caledonian*, homeward bound from Bombay, went ashore near Cape Gaeto with her hold full of water. The crew were saved.

Shipping Intelligence.

ARRIVALS.

June 6, *Oregonian*, American steamer, Harris, 1,914, from Shanghai, General, to P. M. S. S. Co.

June 6, *Kanagawa Maru*, Japanese steamer, Roper, 1,325, from Shanghai, General, to Mitsu Bishi Co.

June 6, *John McKean*, British schooner, Christenson, 194, from Niigata, Coal and Rice, to Hudson, Malcolm & Co.

June 6, *Challenger*, H.M. ship, Captain Thompson, 1 800, from Kobe.

June 7, *City of Peking*, American steamer, Morse, from San Francisco, Mails and General, to P. M. S. S. Co.

June 8, *Gaucho*, British barque, Crayton, 379, from Nagasaki, Coal, to E. C. Kirby & Co.

June 9, *China*, American steamer, Cobb, 3,880, from Hongkong, Mails and General, to P. M. S. S. Co.

June 10 *Tanais*, French steamer, Nondedeu, 1,726, from Hongkong, Mails and General, to M. M. Co.

June 11, *Oceanic*, British steamer, Jennings, 3707, from Hongkong, General, to P. M. S. .S Co.

June 11, *Otto*, German brig, Adamsen, 231, from Taiwanfoo, Sugar, to Smith, Baker & Co.

June 11, *Bombay*, British steamer, Davies, 1,325, from Hongkong, Mails and General, to P. M. S. S. Co.

June 12th, *Golden Age*, American steamer, Coy, from Shanghai, General, to P. M. S. S. Co.

DEPARTURES.

June 7, *Costa Rica*, American steamer, Connor, 1,917, for Shanghai and way ports, Mails and General, despatched by P. M. S. S. Co.

June 7, *Monocacy*, U.S. gun-boat, Captain Kantz, for Kobe.

June 8, *City of Peking*, American steamer, Morse, 5,050, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

June 9, *Malacca*, British steamer, Bernard, 1,698, for Hongkong, Mails and General, despatched by P. & O. Co.

June 11, *China*, American steamer, Cobb, 3,880, for San Francisco, Mails and General, despatched by P M. S. S. Co.

June 12th, *Kanagawa Maru*, Japanese steamer. Roper, 749 tons, for Shanghai and Ports, General, despatched by M. B. S. S. Co.

June 12th, *Oregonian*, American steamer, for Shanghai and Ports, General, despatched by P. M. S. S. Co.

PASSENGERS.

Per Japanese Steamer *Kanagawa Maru*, from Shanghai—Mrs. Pond and infant, Uchido, Sue Tai Foo, Lee Chong Kon, Lee Nee Sye, Lue E Sye, Karl Kreger, and Mr. Grover. From Nagasaki—H. E. Miyegawa, H. E. Uyemura, Oka, Iwahi, Kykee, Yoshka, Newo, Ogawa, F. Baretta, Bosma, and 2 Japanese ladies. From Hiogo.—E. Lowenstain, Ikeda, Susiyama, Notohara and Wife, Yamagigawa, Takahama, Watanabe, Dr. Haashaus and 2 Japanese, 96 in the steerage.

Per *Oregonian* from Shanghai.—Madame Henry, Madame Fitz Hewig and child, Miss Remusat, Mr. and Mrs. J. McMillan, G. Bisset, 1 Chinese child and servant, F. Jones, Mr. and Mrs. Temane, T. Moller, Kobayashi, 13 Japanese, Mr. Tryee, Mrs. R. Walsh and child, E. Paul, H. Winnimer, H. Blass, Mr. and Mrs. Staples, R. Lilly, Mrs. Hall son and infant, and R. McArthur. For America—Miss Knowlton, Mr. and Mrs. Vaughan and C. J. Childrews.

REPORTS.

The *John McKean* reports strong southerly gales throughout, had much difficulty in getting along the East Coast, especially from Cape Inaboyé to port

The *City of Peking* reports: Left San Francisco at 12.5 p.m May 15, 1875. Nothing of interest transpired. Had strong head winds and rough sea all the distance.

The *Gaucho* reports light variable winds and pleasant weather throughout.

The *China* report fine weather throughout.

The *Oceanic* reports: light southerly winds and pleasant weather throughout the passage.

The *Otto* reports pleasant weather and light wind till off the Kii channel on the 8th, when they experienced a very heavy westerly gale.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabric and Yarns.—There is but little change to report in our import market. There has been a slight increase in the demand for goods, but, notwithstanding this, no improvement in prices, which show in most cases a lower tendency, can be quoted. We quote:

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.90 to $2.10	60 to 64 reed 40 yds. 35 in. nom.	per pce.	2.40 to 2.65
8 lbs.	38½ yds.	44 in.	„	2.20 to 2.40	Turkey Reds 24 yds. 30 in. 2¼—3 lb.	per lb.	0.75 to 0.97½
8 lbs. 4 to 8 lbs.	6 „	39 in.	„	2.17½ to 2.55	Black Velvets		8.25 to 9.24
9 lbs.	„	44 in.	„	2.62½ to 2.85	English Drills 15 lb. 40 yds, 30 in.		3.25 to 3.40

Yarn:—

No 16 to 24	per picul	32.00 to 36.00			No. 28 to 32	per picul	37.00 to 39.50
Reverse	nom.	nominal			„ 38 to 42	„	42.00 to 45.00

Woollens.—As usual at this season the business in Woollens is restricted and prices are merely nominal. Sales of plain *Mousselines de laine* have been made, but at low rates.

Plain Orleans	40—42 yds.	32 in.	6.25 to 7.75		Figured Mousseline de Laine	30 yds.	30 in. 0.25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.50 to 5.25		Multicolored „	30 yds.	30 in. 0.32 to 0.36
Italian Cloth	30 yds.	32 in.	0.25 to 0.36		Cloth, all wool plain or fancy	48 in. to 52	in. 1.00 to 1.30
Camlet Cords	29—30 yds.	32 in.	6.00 to 7.00		Presidents	54 in. to 56	in. 0.75 to 0.85
Camlets Asstd.	56—58 yds.	31 in	18.50 to 19.00		Pilots	54 in. to 56	in. 0.45 to 0.55
Lastings Japan	22—30 yds.	32 in.	13.00 to 14.50		Union	54 in. to 56	in. 0.70 to 0.85
Plain Mousseline de Laine	30 yds.	30 in.	0.18 to 0.19½		Blankets, scarlet & green 7 to 8 lbs.	per lb.	0.45 to 0.48

Nominal.

Iron.—There have been some transactions since the issue of our last report, but importations have continued heavy and the market closes with a weak tendency. We quote:

Iron flat and round	per picul	$3.80 to $4.40			Iron hoop	per picul	4.50 to 4.75
„ nail rod assorted	„	3.80 to 4.30			„ pig	„	$2.10 to 2.25
„ small size	„	4.20 to 4.40					

Sugar.—Transactions in Sugar during the past fortnight have been of an unimportant character. The market closes somewhat better for Formosa descriptions, rates for China Sugar being easier.

Sugar:—Formosa in bag	per picul	4.55 to 4.70			China No. 5 Kong-fun	per picul	5.25 to 5.75
in Basket	„	4.50 to 4.60			„ No. 6 E-pak	„	4.50 to 4.90
China No. 1 Ping fah	„	8.00 to 8.20			Swatow	„	3.40 to 3.50
„ No. 2 Ching-pak	„	7.30 to 7.80			Daitong	„	3.50 to 3.60
„ No. 3 Ke-pak	„	6.70 to 7.25			Japan Rice	„	3.25 to 3.30
„ No. 4 Kook-fah	„	5.80 to 6.50			Kerosine Oil	per case	3.40 to 3.50

EXPORTS.

Silk.—Since the 22nd ultimo settlements are 325 bales of *Hanks* and 75 of *Oshiu*. As the season is drawing to its close supplies are falling off, good assortments become scarcer every day, and owing to the difference of opinion among sellers as regards the prospect of the coming season, prices are extremely irregular. The unsold stock is reduced to 300 bales.

The shipments of the fortnight are 333 bales making the total export to date 11,517 bales against 14,417 last year for the corresponding period.

Intelligence in reference to the probable production of silk-worms' eggs is as yet very conflicting.

		At Exchange 4s. 2¾ in London.	*At Exchange 5.34 at 6 m.s. in Lyons.*			*At Exchange 4s. 2¾ in London.*	*At Exchange 5.34 at 6 m.s. in Lyons.*
Hanks—					Oshiu—		
Medium No 2½	400 to 420	15s. 8d. to 16s. 5d.	frs. 43 to 45		Best	530 to 5 0	20s. 3d. to 21s. 5d. frs 56 to 59
Common No. 3	360 to 380	14s. 4d. to 15s. 0d.	frs 39 to 41		Good	490 to 510	18s. 9d. to 19s. 6d. frs. 52 to 54
Inferior	330 to 350	13s. 4d. to 14s. 0d.	frs. 36 to 38		Medium ...	460 to 480	17s. 9d. to 18s. 6d. frs. 49 to 51

Tea.—Since our last issue for the American mail of 22nd ultimo, our tea market has shewn great activity, prices, however, ruling at times somewhat irregular, owing to anxiety on the part of sellers combined with the general cautious tenor of instructions from New York and the consequent restricted action of some of our buyers here. Settlements, however, amount to the large total of piculs 13,200 for the period, embracing all classes over common grades.

To-day's rates are a little firmer than ruled at the commencement of the week and read as under:

Good Common		$28.00 to 31.00			Fine		$38.00 to 41.00
Medium		32.00 to 35.00			Finest		42.00 to 45.00
Good Medium		35.50 to 37.00			Choice		47.00 to 50.00

Arrivals are pouring in freely, but no large accumulation of stocks is likely to ensue for some fair period.

The *Stillman B. Allen*, fully engaged and nearly half full, will have early despatch, to be followed by the *Annie Braginton* and *Mora*, all for New York. The *Walton* came up here from Kobe to fill up for the same port, rate of freight £3 per 40 cubic feet.

EXCHANGE AND BULLION.

Exchange.—During the past fortnight there have been considerable settlements of private paper at 4/2¾ and fair sales of Bank Bills at 4/2⅞ for 6 m/s.; at the close, however, some first class credits found buyers for immediate delivery at a shade under quotations.

Gold Yen have been somewhat neglected, while *Satz* have been largely dealt in, touching 412.65, but are again easier.

Rates close as follows:—

On London, Bank, 6 Months'	4s. 2⅞d.	On Hongkong Bank Bills on demand	⅛ per cent. pre.
„ „ Sight	4s. 1¼d. to ⅜	„ „ Private Bills 10 ds. sight	⅛ „ dist.
„ „ Private, 6 months	4s. 2⅜d.	„ San Francisco Bank Bills on demand	100½
„ Paris, Bank Bills 6 months	5.20	30 days' sight Private	103
„ „ Private	5.35	„ New York Bank Bills on demand	Par.
„ Shanghai Bank Bills on demand	72½	30d. s. Private	103
„ „ Private Bills 10 days sight	72¾	Gold Yen	411½
		Kinsatz	413½

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 25.] YOKOHAMA, SATURDAY, JUNE 19, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATHS.

At Yamato Yashiki, Tokiyo, at the residence of Henry B. Joyner, Esq., of consumption, MARY R. STEVENS, the beloved wife of Captain George R. Stevens, *Ly-ee-moon*, aged 34.

On the 18th June, at the Yokohama General Hospital, WILLIAM CHESHIRE, aged 44 years.

Notes of the Week.

THE *Nichi Nichi Shimbun* gives the following text of H. M. the Mikado's address to the nation on the occasion of the approaching opening of the meeting of the provincial authorities.

In accordance with the oaths We took upon ascending Our Imperial Throne, We now summon to their deliberations the representatives of Our subjects.

It is Our wish that they should amply discuss and determine upon such new measures as may be thought necessary for the welfare of the people, and thus facilitate the administration of our domestic concerns, and further, that Government and Governed may be of one mind, and that the voice of the latter may thus find access to Ourselves.

It is hoped that all men may feel a due sense of the duties they owe to the State, and that the chief magistrates of cities and provinces will maturely consider and weigh well such projects as may be submitted to them for promoting the welfare and advancement of Our Empire. The deliberations of the Assembly shall be guided by the rules made for its constitution and such bye laws as are now made known.

Adds, the accomplice of Swabey and Cantelli in the robbery of the Comptoir d'Escompte, has been tried, found guilty on all the counts of the indictment, and sentenced to two years' imprisonment. The general impression is that he has got off lightly, and we share in it. But it will be remembered that one year of imprisonment in this country counts, according to the comments of the Chief Judge upon the Order in Council, for three years at home. We shall venture to disagree with his Lordship on this point. Something might be said for one year here being held as the equivalent of two years at home, though we doubt if even this could be established were every point carefully weighed on both sides. To three years we very distinctly demur, and think the matter of so much importance that we would ask the Chief Judge to give this matter fresh consideration. Undoubtedly, however, the estimate holds good for China.

IT is as we feared it would be. The Government feels uneasy at what we have not hesitated to call, at least in one instance, the license of the Press, and has interfered, though, to what extent we do not know. We only hope it will act with due discretion in this matter, and rather, if necessary, make a short judicious rider or two to the Press-laws already promulgated, than change them. The Government is quite committed to the idea of a great freedom being permitted to the Press, and to go back upon this would look extremely ill, both in the eyes of its own people and those of foreigners. It would appear as if the freedom had been granted in pure imitation of the ways of foreigners, but that the consequences of the concession were wholly unforeseen. Nothing could be worse than this.

But we certainly think that some man of high independent character and real ability, whose outlook upon the present condition of affairs is sound and thoroughly trustworthy, should address, in the most convenient manner, all those who are now engaged in this new enterprise in this country, and show them how great are their responsibilities, and how vast for good or evil the power is which is growing under their hands. This might be of great service at this moment, and give a tone, purpose and moderation to the Press which will be marked and lasting. At the same time the Government may be assured of this, that men will go to the utmost of the tether admitted by the law when their feelings or passions are aroused, and this may occur at any time. For this the law should provide.

THE Russian arbitration in the *Maria Luz* case has been determined by a decision which is completely in favour of Japan.

THE long promised burlesque "The Babes in the Wood" was given by the amateurs at the Gaiety Theatre yesterday evening, to the fullest house of the season. As a second performance is advertised for next week, we withhold such remarks as we may have to make on the piece, which, we may meanwhile say, was very well played.

(From the Japan Mail Daily Advertiser.)

On Saturday night the auction premises of Messrs. Mitchell, Cope & Co., No. 95, were entered by burglars who succeeded in forcing the bolt and in removing sufficient of the inner door to permit their entrance. Although property to the amount of some $2,000, and of a sufficiently portable nature was within their reach, the thieves contented themselves with abstracting from the safe (which had by chance been left unlocked) a small cash-box containing a few dollars, some jewellery of the value of about $250 and some private documents of value only to their owners. Mr. Mitchell left his office at about four in the afternoon, and not having his safe key cautioned his boy to see to the security of the premises. Some coolies employed by the firm would, however, seem to have overhead the remark and there is little room for doubt that the hope of securing the contents of the cash-box—frequently of a considerable amount—incited some of them to the robbery, which would seem to have been cleverly executed. The suspected men have all been arrested and are in the hands of the police.

FROM the *Hochi Shimbun* we learn that Imperial Notification No. 68, issued on the 31st ultimo, provides for the carrying of fire arms by foreign shaped merchant vessels, for use in case of attack by pirates. The rules are as follows:

1.—With the exception of vessels belonging to the Imperial Navy, all foreign shaped vessels belonging to Sho, Shi, Fu and Ken, or to private people, can carry two guns of a diameter at

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the muzzle not exceeding 5 in., and thirty small-arms. The above number can be reduced according to the tonnage at the convenience of the working of the ship.

2.—The allowance of cartridges is fifty per large gun and one hundred per small gun.

3.—The Sho and Shi are to apply to the Sei-in, the Fu and Ken to the Home Office, and private merchants to their local authorities for permission for their vessels to carry arms. In the latter case, the local authorities will report to the Home Office.

4.—The Sei-in and Home Office will notify the Admiralty Office of any such permissions granted.

5.—Notice is to be given as above of all arms on board vessels when they are purchased. All purchases of ammunition are to be made according to Notification No. 21, issued during the first month of the fifth year of Meiji (February, 1872).—*Hiogo News.*

According to the *Nichi Nichi Shimbun* the value of the articles of silk, embroidery, lacquer, porcelain, bronzes, &c., contributed to the Melbourne Exhibition does not exceed 13,339 *yen*. Fourteen native merchants have also proceeded to Melbourne.

MESSRS. C. A. Fletcher & Co. sold the brigantine *John McKean* on Saturday morning for $6,750.

THE following intimation may be read over a hair dresser's shop in a leading thoroughfare in Yedo:—

Hieb haar, was man von Deutsch lehren.

The recently announced decision to close the German branch of the Kaisei gakko gives little reason to hope for a remedy to this courageous but exceedingly free use of the language in question.

Archibald King, charged before H. B. M.'s Vice-Consul, Yedo, and a board of Assessors, upon a charge of criminal assault upon a Japanese woman, was sentenced yesterday to six month's imprisonment. Notice of appeal against this decision was given by the prisoner's Counsel and he has been released on bail.

It is understood that the Assessors, not considering the charge fully substantiated, desired to give the prisoner the benefit of their doubt, but the Vice-Consul, exercising the power with which he is invested, decided the case in the above manner.

A Shipment of rice, we learn from the *Nichi Nichi Shimbun*, is about to be made to San Francisco in one of the steamers of the Mitsubishi Company.

The *Eiri Shimbun* gives the intelligence that the Mitsubishi Company is about to issue a newspaper.

The *Eiri Shimbun* says that the united Christian Missionaries of Osaka have determined to issue a newspaper printed in the vernacular tongue.

It has been proposed by the Foreign Office, says the *Nisshin Shinjishi*, to render the particulars of passports more minute as to the destination and objects of their bearers. This has, however, been opposed by H. B. M.'s Minister. It is understood that a meeting of the *Corps Diplomatique* was held at the British Legation on this subject. The result is not known.

The greater number of officials who are to represent the *Kens* have arrived in the Capital. A preliminary meeting, we learn from the *Nisshin Shinjisshi*, has been held at the house of Mr. Takashima in Kobikicho, Yedo.

THE M.M. Steamer *Volga* was to leave Hongkong for Yokohama yesterday evening with the mail from Europe of the 9th May.

A large party, embracing their Excellencies Sanjo, the Prime Minister, Kido, and Terashima, Minister for Foreign Affairs, several members of the Diplomatic body and a great number of the residents both of Yedo and Yokohama, accepted yesterday the hospitable invitation of Captain Thomson or the officers of H. M. S. *Challenger*, which left her anchorage at about 2 o'clock for a cruise in the Bay. The processes of dredging and deep-sea-sounding were obligingly explained by Professor Wyville Thomson, F. R. S. and music and dancing lent their attractions to the entertainment.

A steamer named *Kchomaru* which sailed from Nagasaki for a Russian port on the 7th of May returned to Hakodate on the 14th instant.

The usual fireworks which celebrate the "opening" of the Sumida River will, it is understood, not take place this year.

The old French Hospital, 9, Bund, was sold yesterday, by Messrs. Bourne & Co. for $9,100.

Our announcement that the decision of Russia in the *Maria Luz* case was wholly in favour of Japan was made upon the best authority and may be implicitly depended upon.

H. M. The Mikado, whose intention to visit Yezo we mentioned a few days since, will leave for that island about the middle of next month. H. M. will remain for a short time at both Hakodate and Sapporo.

The Heads of the Naval Department intend to send six young men, selected from the students, to England with a view to perfecting them in the science of naval warfare and tactics.

AN overflowing audience witnessed the representation of the burlesque the 'Babes in the Wood' at the Gaiety Theatre last night. We have only to record the complete success which this, the final performance of the present season, deservedly met with.

The Printing Office of the *Japan Mail* was entered last night for the second time during the past three months. Nothing has been as yet missed, but it is hardly to be supposed that the robbers selected the midnight hour for the purpose of making a merely ceremonious visit.

H. I. Majesty The Mikado has issued a decree calling together the delegates of the people. We will give the text in our weekly edition.

REGINA V. KING.

THE trial of ARCHIBALD KING, before H. M. VICE-CONSUL at Yedo, for a criminal assault upon a Japanese girl has very naturally and properly led to a great deal of discussion, both as to the course of procedure and the justice of the sentence. It has also given rise to a good deal of misapprehension, and we may do some service by showing where this lies.

It has been objected that, in view of our having a branch of the Supreme Court of China and Japan here, presided over by a properly qualified Judge, it is not reasonable that a British subject should be arraigned before a Vice-Consul who has had no professional legal training, and who is assisted only by Assessors whose conclusions he can set aside, and be deprived of the privilege which, although much worshipped as a fetish, is perhaps more dearly prized by Englishmen than any other, namely, that of being tried by a jury. It has also been objected that the sentence passed upon KING, viz,: six months imprisonment, is neither 'one thing nor the other': monstrous if any doubt should exist with regard to his guilt, and yet almost indicative of some doubt; and far too light if he was really guilty.

In regard to the first objection, it must be answered that, as the Order in Council at present stands, the Vice-Consul at Yedo has full powers to deal with the case, and is specially enjoined by the comments of the Chief Judge of the Supreme Court upon that Order not to invoke the assistance of the Supreme Court in cases where the powers vested in him seem adequate to the ends of justice. Mr. DOHMEN, conceiving—and, as we think, rightly—that his powers were adequate to these ends, accepted the responsibility imposed on him by his position, and tried the case himself with three assessors. He has, indeed, as may be inferred from what we have said, the power of invoking the assistance of the Judge of the local branch of the Supreme Court; but he would have to justify his request by showing *primâ facie* that his own powers of punishment were inadequate to meet the justice of the case, and this he obviously did not feel. His duty was to proceed on the rules laid down for his guidance, and he discharged this duty.

On the other hand, we attach great weight to the objections which may be urged against those rules, and the trial in question has amply illustrated them. In the case before us we find a man indicted for one of the gravest offences known to the law; one which is even now in aggravated cases punished with penal servitude for life; one which it is easy to make and may be difficult to disprove, but which, if not disproved, entails severe punishment and social ruin. It is an exceptionally heinous crime, being base, cowardly and irreparable, the union of brutal lust and violence; and the law regards it with proportionate severity. The tribunal before which it is tried can hardly under these circumstances be too formally and solemnly constituted. Whether these requisites are best secured by a trial by jury is a question to which we shall refer by and by; confining ourselves for the moment to the question of the Court before which the case actually was brought. Now, what was the tribunal in the case before us? (We shall speak as if totally ignorant of the Judge or those he summoned to assist him.) The Judge was a subordinate officer of H. M.'s Consulate and not a professional lawyer, and his Assessors were three residents in the city, men who are not put on oath in discharging their duties; on whom attendance at the Court is not before the close of the proceedings, though he recorded an opinion upon them, omitting, however, to give his reasons for this opinion. But, can this be called a satisfactory tribunal to try such a case as this? We reply unhesitatingly, certainly not. Waiving now our ignorance, previously assumed, of the character of the Vice-Consul, we happen to know, and think it right to say, that in our opinion no more patient, conscientious or upright man exists in Her Majesty's service in this country. But this has nothing to do with the question. We might easily have had a man of wholly different character and mind, and we wish to guard our fellow subjects against the possibilities to which a Court thus constituted might expose any one of us. Mr. DOHMEN cannot be blamed for not having invoked the assistance of the Judge of the local branch of the Supreme Court. He performed a most unpleasant and unpopular task from which he might easily have shrunk, and he did so from a sense of duty which is in itself much of a guarantee for his character. On the termination of the case the Assessors, to a man, disagreed with the Vice-Consul, who sentenced KING to six month's imprisonment, and from whose decision there is no appeal, except so far as a mitigation or remission of the sentence may be applied for to H. M. Minister, as holding the Queen's prerogative of mercy, or the Chief Judge of the Supreme Court at Shanghai.

It is monstrous to contend that this mode of procedure gives to an Englishman the rights to which he is entitled by English law, rights which he inherits equally with his name or his property, and which no Court and no King can rightfully take from him. We expressly refrain from discussing the question of KING's innocence or guilt, as an appeal has been made in the proper quarter by his Counsel on his behalf. We also refuse to consider in this place whether a trial by jury is best fitted to secure justice in a case of this kind. Our sole plea here is that the Order in Council is responsible for a mode of procedure which has resulted in this case, and may at any time result, in a deplorable miscarriage of the forms of justice, (we do not say of justice) and deprives Englishmen of a highly prized right to which they are entitled by the laws of England. We claim that this is not a proper machinery by which to try a case of this nature, and that the dissatisfaction felt among all classes of Englishmen in this settlement at the method of proceeding in the case is natural and proper. We quite admit that the Order in Council has to provide for small settlements at outports, as well as large settlements like Yokohama, and that it is impossible to have branches of the Supreme Court at every port. But we claim that, with a branch of the Supreme Court at Yokohama, a case of such gravity as that under consideration should never be tried by a Vice-Consul with assessors only. It should be tried by the local Judge of the Supreme Court and by him alone.

We now come to the grave question whether, in a case of this nature, a trial by jury would be more likely to result in perfect justice being done to one of an alien race, say, to a Japanese, as in this case, than by any other form of proceeding. The question indeed, is a purely speculative one, for although the absurdities inseparable from the jury system have been pointed out a thousand times, we can look forward to no period at which the right will ever be abandoned by Englishmen. True that the dangers against which it guarded us have long disappeared, and that it is responsible for anomalies, whether as acquittals or convictions, which have a thousand times set com-

so completely bound up with our national feeling, it has played such a vast part in our history, and is so completely an article of our national faith, that, for all practical purposes, we may consider it as immovably fixed as the site of London itself. For ourselves, while setting as high a value as any Englishmen upon it as a right; while fully believing that it has had much to do with making the English character the fearless, honest and sturdy character which it undoubtedly is; and while feeling that it is a source of extraordinary yet quite legitimate pride to us as a nation, we have the gravest doubts whether it is not responsible for a great deal of injustice, and specially so in cases like that which has just been tried at Yedo. A writer in the *Herald* of the 16th inst. expresses himself tolerably certain of KING's guilt (we are only repeating matter already made public) but he very naively closes his letter with an equally definite opinion that a jury would have acquitted him. We have a strong belief that in this latter opinion he is perfectly correct;—of the other opinion we cannot consider ourselves free to speak. The Assessors in this case, as we have said, acquitted KING unanimously, and, on the presumption that he was really guilty, he will be punished in virtue alone of the inflexibility of the VICE-CONSUL. But we have seen such lamentable parodies of justice in British courts in this country, that a mere anomaly of this kind, to which we impute no miscarriage of justice, has even less effect upon us than perhaps it should have.

The fact that Mr. DOHMEN convicted the prisoner, in spite of the opinion of the Assessors, is to us ample proof that he felt assured, beyond all possible doubt, of his guilt, and thus disposes of any suspicion that the apparent lightness of the sentence is indicative of any misgiving in Mr. DOHMEN's mind in regard to KING's guilt.

In regard to the punishment awarded to KING we think we shall dispel some misapprehension in regard to its leniency by stating, that in the comments of the Chief Judge on the Order in Council before alluded to, it is laid down that the hardship of imprisonment in China or Japan is perhaps three times as great as in England, so that a sentence of one year's detention or servitude here represents the equivalent of three years at home. The law of England applicable to the case is as follows:

> Whoever shall be convicted of the crime of rape shall be guilty of felony, and being convicted thereof shall be liable at the discretion of the Court to be kept in penal servitude for life, or for any time not less than three years, or to be imprisoned for any term not exceeding two years with or without hard labour.

It will be seen that a very wide discretion is here given to the Court, and the attendant circumstances are of the utmost importance in guiding this discretion.

The wide questions opened up by this case are not of easy settlement. They go down to the very foundations of morals, and bear even upon what it would be idle to ignore as the transitional condition of religious opinion in which we have been plunged during the last twenty years. We shall not discuss these questions; time, space and the requisite ability to do so in any exhaustive manner equally fail us. But, speaking generally, it is imposible to doubt, or too greatly to lament, that the contact of our own civilization and moral code with one so different as that of the Japanese, has had a most injurious effect here upon one of the great departments of our own ethical system as reduced to practice. The Japanese code partly explains this, and must be pleaded by any just critic in extenuation of common custom. Chastity is not held as a fundamental virtue among the Japanese, nor is the violation

Digitized by Google

middle class—at least before marriage, a serious social disqualification in subsequent life. Parents derive money to which no serious dishonour attaches from the sale of what with us constitutes their children's honour, and as our law looks practically to the question of the actual damage done by crimes like that imputed to KING to the social standing of the individual, it will not regard infractions of this particular branch of the code in the same light as among ourselves. Not the less, however, are we pursuaded that man's moral nature is a tissue which cannot be torn in one place without the rent affecting the integrity of the whole. We are persuaded that the virtues which TACITUS recognised among the German women, and which Christianity has enforced and consecrated among our own women, are those on which the surest foundations of society are laid, and which have the most ennobling reflex action upon the individual character. One has only to come to this country to see how difficult the upward march of society becomes under a code like our own, inoculated with the *virus* of a lower code. In no point does the foreigner appear so odious to the Japanese, or does he reflect the totality of the foreign character so badly, as on this question. He misconstrues differences of national customs into the non-existence of moral restraint, and too often gives the rein, among people of whose views, habits and morals he has but a small acquaintance, to a feeling of license which renders him inexpressibly obnoxious to the natives and to those of his countrymen whose views impose a greater restraint upon their own conduct.

These remarks have been made in an analytical and not a didactic mood. It is not our province to touch this question beyond the bounds inseparable from the case under consideration, and every man must recognize in himself a thousand deplored failings to warn him that his moral stature must be far higher than any to which we can lay claim before he sits in judgment on his brother in matters of this nature. But it is important that the Japanese should know something of the light in which foreigners see these questions relatively to our international relations and our views upon the administration of justice; and hence, partly, these words, which we would willingly have been spared the writing.

The Foochow Market Report of the 28th May says:—The new season's Pehlings began to arrive in quantity on the 14th instant, and about 15,000 boxes, costing Tls. 31 *a* Tls. 33½, and consisting principally of contract chops, were sent forward by the English mail leaving Hongkong on the 22nd instant. The earlier settlements shew an advance upon last year's opening rates of about two taels, and since then about 54,000 boxes have been settled at at Tls. 24 *a* Tls. 37, which owing to the competition among buyers shew a further advance of from two to three taels. Generally the teas are inferior in make to last year's, though about equal in cup. About 100,000 chests of country teas have been placed on the market, the quality of which is generally considered to be decidedly inferior to last year's crop, those from some districts appearing to have suffered from the unfavourable weather which has prevailed during the picking.—The steamers *Glenfinlas*, *Braemar Castle*, and *State of Virginia* are the only vessels now on the berth for London, and have been circulated to load at £4,10 per 40 cubic feet. Expected, for London, steamers *Montgomeryshire*, *Agamemnon*, *Statesman*, and *City of Baltimore*; sailing vessels, *Nyassa*, *Thermopylae*, and *Black Prince*; for Australia—*Nautilus* and *J. H. Jessen*.—*N.-C. Daily News.*

SPIRIT OF THE JAPANESE PRESS.

[NOTES OF A DISCUSSION WHICH TOOK PLACE ON THE 1ST MAY AT THE *Meiroku* SOCIETY.]

Mr. Kato said: "There are two different ways in which men acquire liberty; one is by winning it themselves; the other is by getting it as a gift from others. The first comes when men are zealous for freedom and act without waiting for the commands of their government. Being determined to have their liberties, they struggle to obtain and retain them, and then the diffusion of this spirit and the acts which come of it will be felt even by the government, despotism will disappear and more liberal institutions will take its place. Others are weak and servile and their rulers will behave haughtily towards them. Such people, however, know only how to obey, and though there may be among them some who possess the spirit of freedom, such concessions as are made to them come of the free grace of the government, and their value is unappreciated by those who receive them. The government will give or withhold such liberties at its own convenience, and people are glad to have them and sorry to lose them, but the government is the be-all and end-all of the question. In the reign of King John of England it was said that he was the servant of the Pope of Rome and paid tribute to him. The nobles banded themselves together and passed a law called Magna Charta, and from that time the liberties of the people of England were established. The Japanese Empire is altogether different, as the people have been accustomed to an absolute monarchy for the past two thousand five hundred years, and at the time when Commodore Perry came over he brought with him the first germs of our liberty. Since that time we have associated with foreigners, we have met them in battle at Kagoshima and Shimonoseki, and our country-men have gone over to their country. But the idea that these people are like the people of England, that they will keep pace with the advance of the Government, or that a House of Commons can be constituted out of such a material, is like a proposal to teach the deaf music or the blind dancing. Therefore, I say, rather than institute a House of Commons to govern such people as these, let the *Sanghi* decide everything and even rule the people with a rod of iron. And my reason for this view is as follows. There is in the nature of man a recoiling power, and should a people be excessively oppressed, there will arise among them a disposition to rise against this oppression. While this recoiling power in the people is weak, they know and feel nothing about liberty, but when they are greatly oppressed they will begin to think about their liberties, and then is the time to institute assemblies of the people. Our present condition is notoriously different from this, and the Government says to the people "You have your liberties and we do not oppress you," while the prostrate people answer "Yes, yes;" but they do not know what liberty is. Again, the Government might attempt to teach them this, but it is impossible that they should understand it, and for these reasons I think that the institution of a House of Commons will not in the least avail this nation.

Mr. Fukuzawa replied: "By means of what chronometer have you measured and determined whether the time is too early or too late for the institution of a House of Commons? If it be urged that it is too early, I should do no injustice in saying that the abolition of the Daimios and the conversion of the daimiates into *ken* was also too early. Results are the only true tests of the wisdom of such measures. The conversion of the *han* into *ken* and the abolition of the daimios was one and the same thing and constituted the gates through which the people walked into the fair palace of their liberties. Had there been no such gates, how could they have entered the chambers which contain these liberties? Let it be by the order of the *Sanghi* or the will of the Government that these gates are opened, and the people will be sure to throng through them. Observe and judge for yourself whether the people do not know more about their liberties to-day than they did previously to the abolition of the daimiates and the conversion of the *han* into *ken* just four years ago. I am of opinion that the 14th July 1871 *han*, and that this very day this year is the appropriate time for the creation of representative institutions. Had not the *ken* been constituted four years ago I do not think that the dawning light of liberty would be visible among us to-day. Therefore it is my belief that the consequences of the changes I advocate would as surely come about as the consequences I have spoken of."

Mr. Kato replied: "Indeed, it is not so. On the contrary, the creation of the *ken* and the abolition of the *han* had not their origin in any feeling with regard to liberty. They arose from the strength of the maxim 'Fidelity to the Emperor,' and had we left the *han* as they were, no hindrance would have been opposed to the rise of a spirit of liberty in the people. The sense of liberty has its origin in the recoiling power of which I have spoken, and this power again is the fruit of oppression. The oppression by the daimio during our old feudal system was excessive, and this recoiling power, which is the sense of liberty, must in the nature of things have arisen on this account. It is for this reason that I have said that even without the abolition of the *han* there would have been a marked the advance of the liberties of the people."

Mr. Fukuzawa replied: "That cannot be so. 'Fidelity to the Emperor' was a sentiment which existed prior to the abolition of the *han*, and was dying out before that time. The conversion of the *han* was caused by the *Shidzoku*, who had previously determined that greater rights must be conceded to the people. For this they worked zealously, and the civil war which ensued overthrew the Tycoon's Government. Two years after this the daimiates were abolished, and again two years after this the *han* were converted into *ken*. Are not the *Shidzoku* part of the Japanese people? If so, the overthrow of the Tycoon and the abolition of the daimiates were accomplished by the power of the zeal of the people in their desire to acquire their liberties. You praise the English nobles for forcing King John to sign Magna Charta, and say that the liberties conferred by this charter were not granted by the sovereign but were extorted by the people. But our liberties were also extorted by the *Shidzoku*. We did not receive them either from the Tycoon or the daimios, and thus the circumstances are analogous with those under which Magna Charta was gained. For the same reasons, representative institutions should be created. The spirit of liberty was conceived at the signing of our first foreign treaty and was born at the time of our revolution. From that time it commenced to grow, and at the period of the abolition of the daimiates it began to walk.* Should it still continue to grow it will eventually become true liberty. The establishment of representative institutions will but aid this growth, and thus it is not so premature that you need feel thus anxious about it."

Mr. Mori said:—"I rejoiced indeed at the time of the abolition of the *han* and the creation of the *ken*. But I cannot now feel as I felt then, for this recoiling power of the people has become so weak that it has almost disappeared. A man from Satsuma becomes the governor of Kaga, and a man from Choshiu becomes the governor of Oshiu. But these men, not being natives of the provinces they are appointed to govern, take no sufficient pains to acquaint themselves with the state of affairs of the provinces they are thus sent to govern. I judge therefore that the power of the people to-day is weaker than it was during the time of the daimios, and in proof of ti I adduce this fact that the people of a province cannot choose their governor from among the natives of that province, but rest contentedly under the rule of a man who comes from another province. This seems to me like a person living in a house submitting to have his house-keeping affairs controlled by his neighbour. Surely this cannot be called independence! I am a man of Satsuma, and I would not permit a man of any other province to rule over me. I would take him down† and have a man of Satsuma put in his place. The government of a province can only be accomplished with success by a native of that province. But

* This is a sad infraction of the law of rhetoric which insists that that a metaphor should not degrade its subject. [ED. *J. W. M.*]

† We have allowed the original expression of our rough translation to stand here, in some doubt as to the exact value of the

if the people obey men from other provinces who are appointed to rule over them, it cannot be said that they understand their rights, and thus I infer that the abolition of the *han* and the creation of the *ken* came too soon.",

The above is the substance of a discussion which took place on the 1st May in the *Meiroku* Society between Messrs. Kato, Fukuzawa, and Mori. I have published it with a view to securing for it a general diffusion, and should either one of those three gentlemen discover any errors in it, I hope they will do me the favoor to correct them,

KOYAMA.

THE PRESS LAWS.

We lately heard a very important rumour, viz, that Notification No 352, issued by the Government on the 16th October 1873, containing the laws regulating the Press, is to be changed. If this is so, why should they be changed, and what kind of a change is it to be? We presume it is because these laws have not been observed Now, in regard to these laws, Articles I to X are right and proper and consonant with natural law, but Articles X to XV present many impediments to newspapers. At any time when newspapers may be brought into court, should such a thing happen, we could say that we thought that these Articles meant so and so, because they are susceptible of many constructions. But if very narrowly tried, the editors of some of the newspapers will hardly escape the charge of having overstepped these laws, and though the newspapers are very haughty in their writing, they are also at times so careless that some people are not wholly unjust when they say that the editors are rather rash than bold. Should the question be referred to some thoroughly impartial person he would probably say that the newspapers overstepped the law without knowing it. This is not said from any fear, but we would ask any such impartial person, "Have our free discussions done injury or good to the people?"

It may sound egotistical, but we think they have been far more beneficial than injurious, and the reason that the Government has not censured the newspapers, even when overstepping the bounds of law, is that it recognises that it is wrong to repress public opinion. Although the laws are stringent, the newspapers have discussed matters very boldly without paying much heed to them, and, considering how much freedom they have obtained in so short a space of time, they have greatly conduced to the interests of the people. To curtail this freedom now might be a trifling thing to the editors of the papers, but it would be closing a road which the welfare of the people demands should be kept open. Some say that the present laws are too severe and cannot be observed, so that if any change is contemplated it may be in the direction of making them easier, in order that they may the better be observed.

But as human thought is free, so there should be no hindrance to its free expression. Others say that there has been a good deal of personal attack, not to say slander, in the newspapers, so that this must be changed, for such things can only be permitted in the highest condition of national enlightenment and among people of very high character. But if this can only be done in countries of the highest enlightenment, these countries do not exist in Europe or America, and when are *we* to arrive at such a condition of enlightenment? Slander and personal attacks are certainly not confined to the newspapers, they are the staple of the talk of society. The Government should therefore make a law to punish those who talk thus, and then, should the editors publish such matter, they will undergo punishment without a murmur. All our fear lies in the profound injury that will be done to the people should this freedom be taken away. We can only hope that the rumour was false, and that anything like slander is to be suppressed, but that the freedom of the press is to remain as before.*

* The special cleverness of this article is of an entirely oriental character, and it deserves some little study and analysis [illegible] count. Here and there the idea underlying the [illegible] very clear,—a fact quite obvious to us while reducin[illegible] tion from its first to its present form. It would b[illegible]

THE SAME.

(Choya Shimbun.)

One of our eloquent fraternity, the Editor of the *Nichi Nichi Shimbun*, has lately enlightened us upon some changes which, it is supposed, are to be made in the Press-laws. We also have made some enquiries into this matter, and it does not seem to be untrue. We have also heard that several of the newspapers are very anxious about this, but we cannot imagine any such cause for anxiety. And why not? Because there is nothing in the whole country to which greater interest now attaches than to the newspapers, and as there are many of our officials who act wisely, why should the laws be changed? They, surely, will do nothing which will prove an impediment to the knowledge of the people. Should the officials by mistake make any very severe regulations, we shall, within the permitted limits, discuss the affairs of the Government, foreign affairs, the promotion of the rights of the people, the opinions of our correspondents, and, in fact, everything that tends to promote the welfare of the country. But beyond the limit permitted us, though we many be tried before the courts with the greatest rigour and be fined, or even lose our precious head, we should care nothing. Although the officers of the *kadzoku*, agents of merchants, soldiers, *geyshas*, and even foreigners who have come and argued with and rebuked us, and asked who wrote such and such a letter and the like, still, as we fully relied upon the freedom granted to the Press by the Government, and cared nothing for the displeasure of many which we incur, and knowing that we have used our freedom only for the public good, we should ask our readers whether such action will be for the advantage of the people?†

THE FREEDOM OF THE PRESS.

The amount of freedom enjoyed by a people will be proportioned to the enlightenment of its Government The thoughts of men are free and they may pray to Heaven and act uprightly; Satan himself cannot prevent this; but should there be any outward expression given to such thoughts the ruling power forbids it and makes laws to punish it. Such government, however, is utterly barbarous and need not be spoken about. But laws instituted for the punishment of these acts are worthy of semi-civilized countries, though it is done in countries which claim to be civilized. England and America are really free as regards the doings and sayings of men. In France and other countries there are laws which compel published matter to be first submitted to examination. I am of opinion that French statesmen excite the minds of the people very greatly, and the difficulty of allaying this excitement is such that published matter has to be submitted to examination. Napoleon III. resorted to these means with much craft, but for all this he had to submit to the Prussians and died in England. This necessitated a change in the form of government, and thus it cannot be pleaded that this repression of opinion was good even in France. I think that the frequent changes in the forms of government in France have arisen from the people being deprived of their rights. Now, our Japan is becoming enlightened, although we do not possess a tenth part of the enlightenment of France, and there is much discussion among men who are political observers; but this consists often of mere flatteries of the Government, or is said to please the officials. These, therefore, may be permitted without anxiety. Although the arguments of French writers excite the minds of the people unduly, still, if they are repressed, an overthrow of the government is rendered probable. Even these therefore should be permitted. And again, should we speak ill of the Government without just cause for doing so, or slander or vilify others, the laws provided for this can be put in action. Although there are laws of a censorate, the quantity of matter published every year is so large that it would be impossible to have a minute examination of the whole of it, and, even if possible, it would entail an immense deal of trouble on the officials. I entreat that if the Government is

† There is some irony as well as humour in this article, but like

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

desirous of opposing no obstacles to the progress of the peopleit will permit an entire freedom of press.

The evils of Torture.

(Hochi Shimbun)

Lately, in the town of Iwamura (in which the branch *kencho* of the Nagano *ken* is placed), in the province of Shinshiu, three robbers entered the house of a wealthy merchant, and, after killing the master and his servant, were making their way out. The *banto*, returning home from the transaction of some business, saw them trying to get away, and, becoming alarmed, fled as fast as he could back along the road he had previously travelled. The robbers also, fearing detection, ran off along the same road. The *banto* made all possible speed, fearing that the robbers were in chase and intended his life. There being no side road he noiselessly climbed up a pine-tree on the road side. The robbers halted under the tree, and the *banto*, thinking they had seen and intended to follow him, was in great fear. But this soon left him when the robbers began to count the stolen money, after dividing which they parted and each went on his way. The *banto* returned home in great haste and found the women tied up and the two dead bodies in the house. He immediately gave the alarm and told the circumstances to the authorities and the people of the neighbourhood. The officials came and examined the place, and, being suspicious at the late return of the *bantô*, arrested and put him in prison where he underwent severe tortures after trial by Saitô, the chief magistrate of the branch *Kenchô*.

Although the *bantô* knew the names of the robbers, having overheard them while up in the pine-tree, he so dreaded more severe tortures that he would not expose them. But at last, he said that, being nearly dead, he would explain the whole matter if one thing were granted him, viz, that he might speak with the magistrate Saitô alone in some other place. This request was granted, and being taken to another place where Saitô and he were left alone, the prisoner said in a low voice. "My voice has nearly gone by reason of the severe tortures I have for some time daily undergone. Permit me to come closer to you." He then explained, with great difficulty, what had happened on the day of the robbery, and said that the very detectives who had examined his master's house on the day of the robbery, and who were then torturing him, were the very men who had committed the deed, and that the reason for his not saying this before was the dread that he would be tortured the more intolerably. "I am now nearly dead," added he," and can no longer expect to live. The explanation I have given to you is the true one." He was then closely questioned again in regard to the circumstances, but only repeated more minutely what he had previously said. Saitô left the prisoner for a while where he was, and after consultation with some of the other officials, had the three detectives arrested. Their respective homes were searched and far more money was found in them than could reasonably have been expected. When put to the torture, they confessed their guilt and have been removed to the chief *Kenchô* of the *Ken*.

The Common Measure of three Religions.

(Meiroku Zashi.)

Buddhism is based on Brahminism, and Sakya Mouni developed its doctrines and made them more perfect. Christianity is based upon Judaism, which Christ developed and made more perfect. The doctrines of Confucius were based upon those of Gio and Shun *, which Confucius made more perfect. Before the coming of these three sages many years elapsed and many great men arose upon the earth, but not until the arrival of those personages were these doctrines reformed. Since that time many centuries have passed and many great men have existed, but none of these doctrines have been changed. Are they then so pure that they are not susceptible of further change and reformation?

Tengai† answered and said: Human knowledge has been greatly extended of late, many things are now far better understood than in the days of those sages, and when we now analyse their words and deeds we discover errors and delusions in them. The reason for this is the mistiness which beclouded the human mind in those days. But the doctrines of those three sages on human duties can never be changed, and why so? Because Sakya Mouni taught compassion, Jesus Christ love, and Confucius benevolence, and these various sages made these virtues the foundations of human duties. Before the appearance of these sages many wise men had existed who knew the efficacy and virtue of these words, but not one of them taught them as the duties of men. The virtue of the Creator is indeed great, but the only words in which to express it are those three. Words such as obedience, faith, truth, courage, honesty, are all necessary in relation to the human race, but there is not one among them by which we can express the virtue of God. These sages determined on these words which all have about the same meaning.

Sakya Mouni said "In heaven and earth I am the most honourable," and he seems to have regarded the works of the Creator as his own. Christ said that he was the son of God, and that he loved both God and men. Confucius said "I honour Heaven and exercise benevolence towards men." The sayings and doings of these respective personages therefore differed.

Tengai again replied and said: Any one may say that he is the most honourable upon earth, or the son, or grandson, of God. But whatever he may be, we are the same. All on this earth are sons of God and brethren, so that we should be industrious and love and comfort one another, and should act in such a manner as to please God our Creator. Then, indeed, would the world be that which we may hope for in paradise.

* Ancient Emperors of China.
† A fictitious interlocutor.

Foolish patriotism.

The Empire is rapidly changing, and new Japan is very different from old Japan. We have discovered that our swords, which we thought the best in the world, are perfectly useless against the guns of men-of-war, and thus even our war discipline is changed. Our Emperor, whom we deemed a God and who thought himself one, is now discovered to be no such thing, for we know that this is contrary to the laws of nature, and he is now lessening the distance between him and ourselves and has come much closer to us. Surely the present condition of affairs can not be called despotic. But in times of transition like the present, there are some obstinate people called Wagakusha (Japanese antiquarians) and Shingakusha (Shinto clergy) who are incessantly crying that this is God's country. Some may take this for an exaltation of the country, but, on the contrary, it merely brings it into contempt. We must introduce everything which can profit and advance the country, quite independently of where it comes from. When we have an enlightened and just administration, when we have contracted virtuous habits, when education is in a high state, when we are wealthy and able to resist the enemy, then we need not be ashamed of appearing before the world. But the incessant laudation of the country and the boast that it is divine, and that the lineages of our great families are very long and so on, is all stuff, and only serves to show the world what fools we have been not to have done much more during all this time, and to give it a good chance of laughing at us. In ancient times we were in truth nothing but savages dwelling in a corner of the remote orient, and there is no reason for us to be ashamed of this. But let us do all in our power to improve and advance in the future, so that we need not be ashamed to appear before the world, and no longer depend for our reputation on this sort of claim to divine favour.

Education in Kagoshima.

The maxims written up in the schools at Kagoshima are as follows:—

"We continue on the same road and fulfill righteousness: for this purpose we privately assemble here and are willing to lay down our lives in this cause."

"Honour the Ruler and have compassion on the people. These are the foundations of education, and although

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

it may cost labour and pains to establish them, we must not begrudge them in the discharge of our duty."

A man, (says the editor), who has recently returned from Kagoshima informs us that the schools and military training establishments are in a very prosperous condition, and in Kagoshima there are two such schools where 2,000 strong young men are being trained; and in every town there is a school. There is one school called the reward-school, the scholars of which are composed of officers either of the army or men who fought in the last civil war, and there are French instructors hired to teach them. The schools in the towns and townships are all connected with those of Kagoshima and there are 30,000 lusty scholars in the province.

Boyai says the maxims are very short and are neither despotic nor democratic, but are as full of tact as the orders of the commander-in-chief.

Takai says—"I cannot understand that is meant by these labours and struggles. We are at peace now and have no struggles. The maxims of great men are hard to understand."

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Names of Japan.

Historical, Poetical and Colloquial.

Oyashima no kuni (Country of the eight great islands); from the legend of the eight islands produced by Isanagi and Isanami.

Shiki Shima (outspread islands); from the fact of their being spread out like the flag lines on a garden.

Isojirojima (cliff fortress island); from the resemblacne of the cliffs of the coast to a castellated fortress.

Nichi iki (country of the sun); from the sun rising at its east. *Ni to* (nest of the sun); for the same reason.

Toyoashi-wara-chi wo-aki-midzuho no kuni (fertile sweet flag plain, fifteen hundred ages, prosperous country.)

Onokorojima (consolidated drop); from the story of the *amanosakahoko*—heaven suspended sword—being thrust into the depths of chaos by Isanagi and the dripping particles forming into islands.

Toyohara nakatzukuni (between heaven and earth); or coming into existence and suspended between the *in* and *yó*, male and female principles of Chinese philosophy.

Nansen bushiu (southern country of brave warriors).

Fuso koku. Fuso is the name of a tree that is said to petrify, and therefore the fitting emblem of a country that in the process of ages has become solidified and durable. *Yomogiya shima* (artemisia island) an allusion to the straight and upward growth of that plant and emblematic of the lofty aspirations of the people.

Tamagaki no uchitsu kuni—the country within the boundaries.

Uragusu no kuni—(country of peaceful shores); from the absence of foreign enemies.

Kwashiboku Kitaru no kuni (country ruled by a slender sword); from the smallnesss of the sharp swords in comparison with the unwieldy arms of the warriors of the main land of Asia.

Hodzuma no kuni (beautiful country).

Toyoakitsu (happy dragon fly shaped); from the shape of the group of islands as they appeared on the old maps in form similar to a dragon fly.

Kishi koku (the princesses country); from Tenshoku having been the common ancestress of the nation.

Oyamato no kuni (land of great gentleness); in allusion to the great courtesy and kindness of heart of the people.

Wa Koku—or the above altered by the elision of the character Ô (great) and read by the Chinese sound or Koye.

Dai Nihon Koku (great sun source country); as being the source from which the sun was seen to rise daily by the ancient inhabitants of the south-western provinces.

Nihon, or the same abbreviated, from which we learn the common Nifon. The usual term Japan would seem to be derived from the Chinese pronounciation *Jipun* which was modified by the early travellers.

On koku (honourable country); is a newly coined name, used by the natives of late years which furnishes a remarkable instance of a departure from the language of self-abasement which the Japanese employ in allusion to themselves.

Many of these names are rarely used and a few only are to be met with in poetical or literary compositions. *Yamato* is frequently employed in this sense.

Mythological and Legendary.

In addition to the *kami* mentioned *ante* p.8 *et seq.* under the heading Japanese Cosmogony and Ise 93 Religion, there numerous others with whose names legends are associated and who are intimately connected with the more recent legendary lore of the ancient traces of Japan. They are as follows.

Ame no minaka nushi no kami, who existed before the creation.

Takami musubi no kami is the *kamurogi no mikoto* of the *Sinto Harai* (prayers).

Kami musubi no kami is the *kamuromi no mikoto* of the *Hasai.*

Soanô no mikoto, who had been banished to distant lands, found that his evil reputation had preceded him and he could not induce people to give him a lodging and he became an outcast from the habitations of man. At length he found his way to the country of Idzumo and at a place called Hino-kawa-kami, passing through the forest he heard a voice as of one weeping in great distress. Approaching, he saw a young woman who was crying bitterly and with her an old man and woman, who informed *Sozano* that she was the chosen victim for that year's annual sacrifice to *Yamada no orochi*, the eight-headed serpent. He offered to protect her if they would give her to him in the event of his being victorious to which they all agreed. He then placed eight large tubs full of *saké*, and, on an elevation, waited the serpent's approach. When the monster came for his victim he smelt the *saké* and plunging each of his heads into one of the tubs, he swallowed up the whole of it and was soon helplessly intoxicated, when he fell an easy prey to *Sosano*, who claimed and took the girl to be his wife. When dividing the monster his sword was unable to cut through the tail, and splitting it open he found in it a wonderful sword *Murakumo no ken*, so called from the habitation of the serpent being among the ever-clouded heights.

Ten shoko dai jin lived for 200,000 years. The second in succession *Amano oshi-homi-no-mikoto* who was created from the breath of *Sosano*, and was bestowed by Tenshoko with an existence of 300,000 years.

The third was *Ninigino Mikoto*, the son of *Oshi homi*, and his mother was *Taka musubi*. He was given the daughter of Oyama Zumi no kami, Konohana saku yahime—'the blooming tree.' Charge was given him of Ashiwara-nakatz-kuni (Nipon) by Tenshoku and an existence of 310,000 years. As emblems of his office he had charge of the sacred crystal, *Tama*, mirror, *yada no okagami* and sword, *ken*. These are the three sacred emblems of office still attached to the Mikado.

The fourth Hikohohodemi-no-mikoto, son of the foregoing pair. He had an elder brother Honosussori-no-mikoto, who went fishing while his brother went hunting on the mountains where he was successful while the elder could not succed in catching fish. They changed places, with the result of both being unable to obtain game or fish. But a large fish had carried away the line and hook from the younger, at which his brother was much enraged. He then made a basket full of hooks and offered them instead of the one lost. But this did not appease his brother's anger, and he betook himself to the beach where he was found in great grief and tribulation by Shiwo-tsutsuno no okina, the old god of the tides, who, when he heard the tale told by the younger brother offered to assist him, and, making a basket in which he placed him, sent him afloat on the waves to search for the missing articles, without which, fearing his brother's wrath, he durst not return. He sank to the depths of the ocean to *Riu Gin*, the dragon's sanctuary. Before the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

gateway was a lake over which spread the branches of a mighty *katsura-no-ki* (an allusion to the moon) on which he rested. Presently a beautiful woman came forth bearing a crystal vase and going to the well for water, on the surface of which she saw the reflection of Hohodemi perched in the branches above. She flew back and told her father she had seen the reflection of an amazingly beautiful being in the water, and that she looked up and had seen theliving original in the branches of the tree over the well. Riu Jin, her father, declared it must be a son of the gods, and that they must shew him every attention, and invited him to partake of their hospitality. Wada zumi's (wide-spread seas) daughter Toyotama hime (peerless) called to Hohoemi and invited him to enter and he told his story. The host promised his assistance and offered his guest a home till the lost fishing tackle was forthcoming. A message was sent to all the fish of the seas charging them to search for it, and, when found, to bring the hook and line. In the mean time a mutual love had grown up between the young people, and, with the consent of the *hime's* father, the pair were united.

Three years passed swiftly and happily away with the young couple, but, at length *Hohodemi* longed to visit his own land, and begged that exertions might be renewed to find the still missiong hook and line. Toyahama had not favoured the search, fearing to lose her lover.

All the fish in the ocean were ordered to assemble, but the *akame* (red-body) (the *Tai*) was not present, having sent in excuse a plea of sickness from an injury to the mouth. Upon searching the *akame*, the missing hook was found in its mouth. Hohodemi, possessed of the article the loss of which had caused his brother's anger, wished to return to appease him, and received as a parting gift from Wadazumi the two jewels that control the ebbing and flowing of the tides. Toyotamahime being *enceinte* he was told she must go to his country for the birth of her child, and he should prepare a place by the sea-shore to receive her for that purpose, the roof of which must be of the wings of the cormorant. He was then started off on the back of a crocodile and arrived safely, and immediately presented the recovered hook to his brother, though even this did not appease his rage. Then, taking in his hands the jewel of the flowing tides, he ordered them to rise, and his brother was driven from point to point as the floods rose upon him, till he was fain to entreat his younger brother's pardon, promising to be his slave ever more if saved from drowning. The tides were then ordered to their usual place, and the building to receive Toyohama was begun; but ere the roofing of wings was completed she arrived upon the spot bringing with her her younger sister. She announced that her time of travail had come, and enjoined Hohohemi not to look upon her in her trouble; but he, in his anxiety for her disregarded her injunction and had the mortification to behold her changed to the form of a huge crocodile, which turned and disappeared in the sea leaving her sister Tama-yori-hime and the child Ugaya-fuki-awasezu-no-mikoto—he that was born under the unfinished roof of cormorant's wings, wrapped in grass,—upon the sea shore. Henceforth the sea became inaccessible to man on account of the sin of Hokodemi, who however lived for 637,892 years.

The fifth from Tensho was Ugaya and Tamayori became his wife and bore him four sons: he lived 836,042 years. This was the first death—*hodzuru*—the term still used on the decease of a Mikado. His remains were enterred at Wagashirayama in the country of Huga.

A Hongkong paper hears that a telegram has been received by a leading firm in the colony, announcing that the Foochow tea-market was opened last Saturday by the settlement of 40,000 chests at prices ranging about Tls. 2 higher than those of the same period last year. It seems thus from all accounts that the opening prices for teas at all ports are in advance of last season, although it is only in the case of teas for the Russian market that such extreme figures have been paid. Silk-inspectors on the other hand seem more cautious, and the quotations for the few hundred bales that have been settled hitherto are so little encouraging to dealers that hasty orders have been sent up-country to stop all further purchase.—*Celestial Empire.*

A JAPANESE SERMON.

(*Shingaku dowa*: 8th Book, 1st Section.)

Shoretsu of Kan when on his deathbed thus spoke to his successor:—

"That which is evil, be it but small—do not:
"That which is good, be it but small—fail not to do."

These words, my good friends, are found in the section called Kagen of the Shogaku (1) which is so well known to all of you. They are indeed blessed words, and well suited to be our text this evening.

Shoretsu, Emperor of Kan, is identical with the Gentoku, who during the period of the Three Countries (in China) (2) was ruler of the province of Shoku.

The foregoing are the words which he addressed to Taishisen, his successor, in his last directions. His meaning was—when you are assured that an action is bad, should it be never so slight a matter, on no account carry it out. And again, knowing an action to be, though a trivial, a good one, on no account neglect such.

These words are short, but they contain an invaluable teaching. The silly and ignorant one knows a great sin to be evil, but thinks nought of a minor one, and, though aware it is wrong, yet, thinks he, "what can a small affair like this signify?"; and of a trivial though good act he says "this is not worth the doing," and does it not. "If I'm to perform a good action, let it be something worth doing"—and so he goes on, always meaning to do some very great thing; but there is nothing between heaven and earth which begins by being great. Every thing has but a small beginning, and goes on gradually enlarging. This is the universal law. The tree which has become a stay for the house was not from the first as stout as that. A plant at first no thicker than a hair of one's beard goes on developing little by little, until it attains to such a size that it can be used as an upright. Your body or mine again has not been large like this from the commencement. From a puny infant we have gone on growing and fattening until we are as we see ourselves.

"Search for the source of the Yoshino gawa
"The rainbeads from the hop—the dew
"From the mountain grass."

Should you seek out the source of the stream there whose waters run behind us,—although but the dew drops from the pine branch or the rain drops from the grass on the mountain side, yet does it finally buoy up those boats and rafts we see floating on its bosom.

There was a verse of poetry written in praise of Kanshin of Kan which says:—

"The waters of the valley anon become an ocean,
"Yet have they wimpled awhile beneath the tree leaves.

Kanshin was a man of the greatest forbearance. While still but of low estate some rough fellows of the streets one day, thinking to insult him, stopped him on the way. "Step out and fight me if you'r able," cried one.—"If "you are afraid and won't, you shall crawl through my "legs." Thought Kanshin, "I am one having a great pur-"pose at heart; how can I therefore debase myself by en-"gaging such a silly creature as this?" And looking quietly at the man for a little, he deliberately crawled through his outspread legs. The bystanders who witnessed this, one and all struck their hands together and burst into laughter. But he who was laughed at became in the end *Daimio* of the great province of Sei (in China) and attained to the rank of *Shogun*. Those who made merry at his expense continued day-labourers to the end of their days: and this is the interpretation of the foregoing verse. The great sea which floats those large ships began but as drops from the mountain side meandering beneath the trees. A small beginning and gradual increase is the law for everything.

Pray observe the words of Yeki suspended there on the wall "*Riso Kempiyo itaru.*" The meaning here conveyed is,—Ice though firm and hard as a rock has not been always so. It was at first but limpid water. Then, being frozen, it became snow or ice. Where this snow or ice is trodden under foot again falls snow or hail, and so on until it attains a hardness equal to rock and not to be broken. Now what was implied here was this: It is

(1) *Shogaku*—the simple Chinese Classics with which children commence their study of that branch.
(2) Viz *Gi*, *Go*, and *Shoku*.

Original from UNIVERSITY OF CALIFORNIA

just the same with the heart of man. Each one of us was born into the world a sweet little infant. Even Ishikawa Goyemon was once a dear little innocent and went through the usual dandle, slap and coddle process. Then, at what stage we cannot say, the demon self-love got possession of his heart, and he became the felon he was. He began with that "this is a trivial affair—every one does it," and so on from small to great till he ended with the boiling cauldron on Shichijōgahara. It was just with such a result as this in view that Shoretsu said "Though that "evil be small, that do not thou; though that good be a "little, fail not thou to do it." "Be ever watching thyself" was the purport of these honorable dying words. There's an old song that says.

"Tis a trifle—the way of the world."
Says the heart whose ending is trouble.

The fire which breaks out and burns up all Yedo may have its origin in the ash from a pipe. A smoker knocks out his ash on the mats. "Hullo! you've dropped your ash"—says one sitting by—"if you don't look out we shall have a fire." "Pooh that's some tobacco ash—that's not a fire" is the rejoinder. Then the mat catches—"See there now: the mat's caught—I tell you we'll have a fire"—says the first. "Oh! that's the mat burning, that's no fire," says our smoker. "There now, the board's alight, quick and put it out, or we'll be burnt out"—but there he coolly sits the while,the flame leaping to the posts and thence to the roof, but still it's "Pooh that's the roof burning, that's no fire." "Then what do you call a fire?"—says the other. "Why of course—the firemen turning out with their ensigns and ladders and a man flying about on a horse; that's what I call a fire."

When the flames have burst through the roof, and the bells and alarum drums vibrate on every side, then he recognises that to be a fire which at the beginning, when but the ash from a pipe, he might have put out with the point of his finger.

Chôkichi's father or master calls "See, Chôkichi, do this"; and if he says "*hai hai*", and does it with all his heart, it is well. But perchance "another message, I suppose" he grumbles and returns no reply. At this the old gentleman reiterates a testy—"Chôkichi, Chôkichi yo" and then it's an angry "what is it now?" These are but the budding peccadillos of the monster who slays his master or the parricide who is pilloried three days on Nipon-bashi,"* and bound to the two cross beams in the form of the letter *dai* (大), perishes miserably by crucifixion. It is just a parallel case to the tobacco ash, and that careless 'it's a trifle—a trifle' is at the root of it all. In the words of the song written on the saying 'negligence is the great foe.'

"The self approving heart of a fool is a devil's haunt."

* * * * * * * * * *

All the wickedness that exists has its germ in these off-hand boasts "There's no fear of me—I'm all right" and such like.

Children in particular must be on their guard; must be careful not to do that which, being bad, they hide from the eyes of men; must be assured that a bad thing is truly bad. In the musical drama representing the death of Ishikawa Goyemon, Goyemon says "after all, lying is the the thief's beginning." The schoolboy who diligently applies himself to the copy his master writes for him has nought to dread or feel ashamed of, but plods on regardless of aught but his lesson. On the other hand here's one drawing doll's heads and horses, and peeping about right and left to see if the master or some one isn't about. "All right—no one's looking"—so away goes the copy-book, and down he squats drawing priests, horses and such like. To be doing his copy and no one looking on would indeed be a loss in his opinion; so there he idles away, chewing the end of his pen, or scrawling some nonsense or other. There now, let him do this and he's bound to tell a lie. "Here comes the master" and with a start, he flips away his drawing, and is hard at it *i, ro, ha, ni, ho, he, to*—as loud as he can bawl. "Have you learnt the lesson I gave you"? says the teacher. "Yes, sir," answers he with a lie. This is the thief's beginning. Hence the words of Ishikawa Goyemon.

As in the saying "Lies are the offspring of evil deeds"—the boy, who knows it to be wrong to draw priests and horses at such a time, and peeps about to see whether his master is looking, is learning the thief's alphabet—and in such wise are lies begotten of mischief. Let young folks particularly have a care. Let them take care how they cook their masters' accounts to square their gambling debts or the bills they have run up at immoral haunts. Let one but do this kind of thing and by and bye his fingers get busy. From filching what is his master's, or what belongs to his parents, he comes to stealing from his neighbours, and first comes one confederate, and now another, now a third, then a fourth, and so on, branch by branch and leaf by leaf, till he can't turn back—like pushing a hand-cart up a hill—his heart in front and the cart hanging heavily behind.

Such a course of conduct puts one in mind of the monkeys stealing bamboo shoots. The monkeys do that sort of thing in my province. These creatures are very silly with all their apparent smartness. One steals softly up and singling a huge sprout which he can't pull up himself, calls to the rest, holding fast to it the while, for all the world like one shouldering the holy paper about—shaking it backwards and forwards from left to right and from right to left with might and main. That now is clever of the monkey. In this way he loosens it till it gives way at length with a loud snap. This report brings out the watchmen at once, and the rascal, knowing this very well and imagining that as long as he doesn't hear the noise he is in no danger, he shakes away at the sprout as before described and stops his ears when it seems about to break.

"This is very smart of me. When the shoot gives way all the other monkeys will get killed. If one only does as I'm doing there's no noise. What idiots they are!"

Is it not an extraordinary thing now that human beings even act like this, stopping their ears and crying "I'm wide awake. This won't be found out. An affair like this is of small consequence" and so forth?

Well, at the sound of the bamboos the watchmen say "there are the monkeys" and sally forth club in hand—when behold one with his paws clapped close to his ears. The men come softly from behind—"You take those monkeys over there and I'll take this big fellow here" says one of them. But the animal, having his ears hard stopped, neither hears what is said, nor knows that anyone is near at hand, and never dreams of the impending blow.

While you are congratulating yourself that no one knows, Heaven and the gods know everything, and misfortune is at your elbow. Evil deeds are not to be concealed, and so it is with the wicked actions of the fool who hides his guilt. Heaven sees all, both what is done in the dark and what is done at noon-day. Hence, then, the words of Shoretsu, "However trivial, do no evil: A good action, however small, leave not undone." Continue these little but meritorious actions, and they become a great good. Continue to do evil, a little here a little there, and by and by your evil doings become so numerous as to utterly confound the five relations. (3)

What says the song?:—

"Self restraint our daily words
"Howe'er so short should guard
"From morn to eve."

A misfortune may have its origin in a word. Take as an example the way a husband calls to his wife. Should he summon her with a pleasant "here, good wife," she will reply with a soft "*Ai, ai.*" Now take the reverse of that.

Husband:—"What are you pottering at there?" Just stir about a bit, will you.? These short days too!

Wife:—"I know the days are short and that's just it: if anyone comes to the door I've got to answer, and the washing to look after besides. I hav'nt got five or six hands to do all that, have I?"

Husband:—"Are you going to give your husband any of your ill chat?"

* Niponbashi; this is the bridge of that name in Kiyoto, not to be confounded with the Nihonbashi in Yedo.

(3) Japanese, *Gorin no majiwari, i. e.* the five human relations of parents and child, master and servant, husband and wife, brother to brother and man to man.

Wife:—"Well, what are you doing, hugging that fire-box all day, instead of lending me a hand now and then?"

Husband:—"What's that now? Look here, I am not an ox, I'll have you know. You're not going to put a rope through *my* snout (sic.) and lug me all over the place. You don't do that with human beings"—and so they go on, a fine strapping young fellow and a sweet-looking young girl, a rival to Bentensama in very beauty, by turns now red now green with passion.

Husband:—"It would be but a small matter though one killed a useless hussey like you outright."

Wife:—"Oh just please kill me now—do kill me. You didn't pick me off a dunghill, though, for all that. I've got a good stout father and elder brother to take care of me. See there, just you kill me now."

Husband:—"Oh! I'll soon do that."

Such a hubbub!

> "Hard words are like the breeze which sweeps
> "The pendant dewdrop from its parent blade of grass."

They are not the great things in this life which call for our watchful care;—they are the small affairs—the so called trifling matters—the "yeses" and "noes", the questions and answers in our daily home life. Peace in a household is the joyous music in the dancing cars of the gods in the region of heaven.

ASIATIC SOCIETY OF JAPAN.

THE following is a *verbatim* report of the Address delivered by Professor Wyville Thomson, F.R.S., at the Meeting of the Asiatic Society on the evening of last Monday.

Revd. S. Brown, D.D., President of the Society, occupied the Chair.

Dr. Brown observed: Ladies and Gentlemen, a year ago last May the appetite of some of us for news of recent discovery at the bottom of the sea was whetted by a paper read before this Society and since published in its Transactions, from the pen of Captain Bellew, of the U.S. ship *Tuscarora*, in which he stated that the deepest reliable sounding as yet recorded had been made by H. M. S *Challenger* near the islands of St. Thomas and Bermuda, where a depth of 23,250 feet was found. Since that time the few and brief, but relishable, reports which have reached us on the *Challenger* in her exploration of the Southern Pacific, have only tended to intensify our wish that she would come this way, and visit these waters in her cruise of scientific research. Ladies and gentlemen, you will all bear witness to the truth of what I am now about to say—that for months and months and day by day the Bay of Yedo, with its large arm extending out towards the Pacific, has been keenly scanned by those who were anxiously waiting to see H. M. S. *Challenger*. But for a long time she did not come, and when at last she came she was met with a warm welcome in the hearts of this community—to which the Asiatic Society would have given public expression if it had been possible for them to do so (Hear! Hear!); and as the time is drawing near in which the *Challenger* must go away, we began to be afraid that we should be left as ignorant as ever of the great secrets which she has extorted from the deep and reticent sea; but I am glad to say to-night that the learned gentleman who is here present and is about to address you, has consented, at the instigation of the Asiatic Society, to come here to-night and to give us some of those answers which he has extracted from the depths of the ocean. I know very well that you must be impatient of every unnecessary word that delays you, and therefore I at once introduce to you Professor Thomson, F. R. S., chief of the staff of scientific gentlemen attached to H. M. S. *Challenger*. (Applause).

Professor Thomson: Mr. Chairman, Ladies and Gentlemen; in response to the kind invitation of the Asiatic Society, I will try this evening to give you a sketch of what we are doing, but I am afraid it must be very imperfect, because the field which we have to go over is extremely wide, and I have not had very much time to think over putting anything like a lecture into form. Some of the blame of this is attributable to your own kindness and some to the place itself. It can scarcely be expected that men in a spot like this, where everything is so singularly beautiful and wonderful in all respects, can sit down to write a prosy lecture when they are gathering all the fresh impressions they possibly can in so short a time; under these circumstances, you will, I am sure, take a *viva voce* explanation of what we are doing so far as we can do it.

It will perhaps be as well before I commence a sketch of our proceedings to say a few words as to what led to the expedition.

Of late years, a great amount of interest has been concentrated upon the bottom of sea. Telegraph cables have been laid in all directions, and so a region which up to within the last few years has lain absolutely unexplored, and was therefore totally unknown, became subject to the uses of the human race. Thus the various conditions of that region, became important. In various large commercial speculations it became necessary that its conditions should be thoroughly ascertained. In the first place it was necessary that the nature of the bottom of the sea should be known, because we are running it over in all directions with these cables of strong wire encased in guttapercha or various defending substances. Again it became necessary we should know if the various materials thus employed would affect the insulation of the wires, or if there were any animals below which might gnaw through the protecting material and expose the wire; if there were substances which might eat into the gutta percha, gradually reach the wire, and admit the water. That one point was extremely important, because in various places we find the bottom much less suited to the laying of telegraph cable than in others; and another is, that we find telegraphic messages can be sent through the cables very much quicker in cold water than in warm, therefore the temperature of the bottom of the ocean also became a question. It had long been a matter of importance toscientific men, but suddenly it became acommercial object of moment and this being the case it was necessary it should be thoroughly worked out at once—that the conditions and the bottom of the ocean should be known, where were the best plateaus, where the deepest ravines, and where the highest ledges were to be found. This was one aspect of the case.

Another which is raised is this.—it had been suspected by many scientific men that our geological formations were not quite so definite and sharp as we had been in the habit of representing. We found that they had a knack of sliding one into another—instead of one form being cut off from another sharply,—so that all the intermediate grades might be found. When we came to apply this to certain other facts found by dredging, it began to be suspected that very deep recesses might still be receiving some of that formation which has been going on to the present period from what we are in the habit of calling the secondary. This was an interesting point, because we might hope to procure some of the old fossil forms still remaining alive or some of their descendants,—not much altered from them; but showing some natural intermediate gradations from that period to the present. Certain observations seemed to point that way and that was the reason why some of us urged on the Government and the Royal Society the desirability of sending out an expedition to see what really was at the bottom of the sea and at the same time find out the practical work in relation to telegraphy. Six years ago Dr. Carpenter and I made an excursion to the north of the Atlantic with the *Lightning* and *Porcupine*. When doing so, we found things very different to what we had been led to expect from the later text-books—that instead of animals being confined to about 300 fathoms, they existed in large numbers to a very great depth. I then found them down at 2,400 fathoms,-and since then at a much greater depth. The old hypotheses were completely upset and a wide new field for work opened. About the same time the Americans took up the same line of observation and very great advances were made by the Coast Survey of the United States. Probably no survey in the world has been more accurate, probably none so accurate as that survey. In fact, some of the scientific members of that survey pushed their researches beyond what was absolutely necessary for survey purposes on parts of the State of Florida and the Atlantic, and thus pursued a series of investigations most valuable in their

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

character. I can hardly say they anticipate ours, but they achieved results equal to ours on the Western side, while we were going on with ours on the Eastern. I'm rusty now, because I have been away from England two years and a half, and though one can get a good deal of information one should be perfectly sure he has the whole, and so it is possible various things may have been anticipated. Since we started Captain Belknap has sent me an extraordinary series of soundings, which none of us have the slightest doubt of being absolutely correct, which give depths with which we were previously unacquainted. We have now come to depths of the Atlantic, so carefully taken and accurately recorded, as to be very high achievements in hydrography.

I think perhaps as my time is limited, it will be my best plan to give a general notion of what we are expected to do, and try if possible to explain how it is done.

The way in which we are intended and expected to investigate the condition of the great oceans is by running sections across them. The position of the ship is accurately determined on her arrival at each of the indicated stations on each section, then the position of the dredge, also the point of observation, that is to say, the depth. Then we want an example of the specimens at the bottom so that we may know of what it consists, at that point; then we want to get some water up from the bottom to determine its chemical composition and its specific gravity, and the amount of salt it contains. Then we want to ascertain the temperature at that particular point and at various distances on the way down; in other words, the temperature of the various zones of water at various distances from the bottom. We then want to determine what animals are living upon the surface,—the fauna of a particular region. Of course, from that we can to a certain extent reason whence these animals have come. Perhaps it will be as well to run through one section very rapidly so as to give you a kind of idea of the various observations made. These sections were intended to run several times across the Ocean so as to give an idea of both its surface and its bottom at various points. They run down into the Antarctic regions as far as we could possibly go, then upwards by Australia and the Fiji islands up to China, whence we come down to New Guinea, and then across from New Guinea to Japan, taking what is called "the deep sea section" of the sea. Leaving one of these points we reach another station a day or two after, where observations are taken, then we start again. Where we want to get an observation very closely, we stop a day or so. Taking the observations always occupies us a whole day at each section, the distance between station and station being something like 200 miles, probably a little below it.

Although a most interesting series of stations is that from the Admiralty Island to Japan, that was the last section which we have taken. The diagram will serve to show you the working of several things connected with the expedition, and as a set of pegs to hang a few remarks upon. After leaving the Admiralty Islands, where we had been for some little time, desirable on account of its being a place very little visited, we sounded a very short distance from the islands in 1,100 fathoms. The nature of the bottom was peculiar. It consisted of a substance with which we are now tolerably well acquainted—what is called globugerinar ooze. This is a lime formation which has been formed very generally over a very large part of the ocean. It is very peculiar in its character. It consists almost entirely of shells of extremely minute animals—so small as, that though visible to the naked eye, to be very little more. They consist of a number of rounded chambers, one sticking to the other as it were; one of considerable size, the next smaller and so on. The shells consist of carbonate of lime and are intimately perforated with a number of minute holes. It is in this condition that we find them when the sounding-lead brings them up from the surface layer, which appears to be composed almost wholly of these shells; usually the next below is broken a good deal; the next below still more and becoming gray in tint, or a little discoloured by decay. A little further down—perhaps a couple of inches—we find that they become quite shapeless—amorphous—and consist just of pieces of the broken shells. This is not exceptional. It is occurring over a very large part of the ocean, in fact almost everywhere where the depth is between 800 and 1,100 fathoms. Thus we can imagine the enormous extent of this peculiar formation, which is almost identical with chalk. If we take chalk, rub it down a little with a brush and put it under a microscope, and take globugerinar-ooze in the same manner you can scarcely tell the difference between them. Hence the idea is that the English chalk which has been forming from old periods is simply the result of the process now going on to-day in the depths of the ocean. This ooze consists of globugerinar shells to the extent of about one-half, pulvigulina is mixed with them which makes up one-quarter, and the rest consists of siliceous shells of different character, such as rabularia and polysistina, minute gelatinous creatures which live on the surface of the sea in countless multitudes, whose skeletons sink down to the bottom and get mixed with the globugerinar ooze. Besides these is found a layer of very fine powdery matter between them, which when examined under the microscope appears to be very minute particles, which, however, are of perfectly definite shape. These are called cocolyths. They are very like shirt studs. There is rather a wide base, then a little short neck, and then a smaller piece behind. Others which are named bucklespheres are found in enormous quantities at the bottom, together with what are called randoliths, having minute particles of calcareous matter forming a kind of armature above them.

This is a very important matter, because these shells are being accumulated over millions of square miles, producing millions of tons yearly of new chalk, which will presently be the successor of the old. One of our great objects was to ascertain how the chalk was formed and where its creations came from. Now we find they are living and dying and depositing their skeletons in the bed of the sea. One result of the observations made during this expedition is that we find that these animals forming this deposit do not live at the bottom, but at the top, though some live through the whole depth. The conditions of the sea are such that it seems to us scarcely conceivable that any animal can live under such prodigious pressure, and yet the most delicate, frail, organisms are now found living at the greatest depth of the ocean, the reason that the frail masses of jelly can exist, whatever pressure is put upon them, being that its force is exerted in equal directions. The pressure is perfectly equal and they don't feel it. In some of our deeper soundings it is four tons to the square inch, which is a force really inconceivable. It is something like the pressure which would be exerted on a man if he had on his body a hundred loaded railway trains. Still these delicate things don't feel it, because they are supported within and without in all directions and are therefore perfectly free. These chambered shells are what we find in English chalk, and there is no doubt that the chalk forming at the present day is being entirely composed by the animals existent at the bottom of the sea. (Applause). The globugerinæ with which we were now so familiar, as the great builders of limestone, are a smooth kind of rude shell, found near the surface. Round the borders of each of their chambers is a kind of frill which covered the whole. From the edges of this frill there come out spines, four or five times the diameter of the shell, which come to an extremely delicate point and surround the shell in all directions. A second chamber is above the first, attached to it, so that spines can be sent out in every direction, making a regular fur. This forms a beautiful object in the microscope, the calcareous spikules crossing each other in every direction. Then on the inside you have little lumps of living matter, consisting of very transparent jelly, which you can see moving, if you look at it very closely. Leave it perfectly quiet for a while and gradually this jelly comes to the border and among the roots of the spines. You see this perfectly well; because each is a little globule of bright orange. Then after a while you see the little bright particle of gelatinous matter—which is a protoplasm—run away to the very top of the spine. Then it turns at the top and comes down on the other side. So you have all over the surface of these fine living spines an active living matter roaming about them and absorbing their nutriment from the sea. If we are using, say, a watch-glass to contain the specimen under examination, give a tap to the glass and down runs the protoplasm along the spine, and gets into its chamber again. This gives man a most

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wonderful idea of the action of the extremely lowly organised life in its lowest phases; but still living, viable matter capable of performing all the animal functions. All the others are and do very much the same thing. Some are like delicate discs, others delicately formed translucent silicious globules. These are the polysistinæ which are very little known because they are mostly confined to places where there is warm water upon the surface. We have not one of them upon the coast of England and Scotland. You require to come out 60 or 70 miles till you reach some part of the Gulf Stream and then you get myriads. I was perfectly amazed when first I met them in the Gulf Stream living in such numbers. These are living on the surface and their remains are falling down and making fresh material below. Then there are cocolyths and cocospheres. I have scarcely time to say anything about them, and indeed, we know very little. It was supposed that they belonged to the bottom, but our observations tend to show that these and others such as the pathydies live on the surface, because we perpetually find them in the stomachs of surface animals, which we look on as a kind of museum, where we go to get specimens in any amount. They collect such things as the *salpæ* and *musæ* for us, and we get them there.

Passing the Admiralty Island toward Japan, we came to the first station (referring to a sectional diagram) where at 1,100 fathoms we found this globugerinar ooze. Hence we went northward, intending to call at some of the Caroline islands and some of the Marian group; but as our time was very limited and our stock of coal still more so, we were not particulary anxious about them, as it was a deep sea section, and we had taken these constantly to the westward of the Admiralty Island. This is the station I am now referring to, which is quite near the Admiralty Island. At the next station we found slightly different conditions existent. It is one on the section between Papua and Japan. It is multiplied 25 times in vertical height, that is, these hollows at the bottom of the sea are 25 times deeper than they ought to be, compared with the length of the section. It would be perfectly impossible to represent it truly so as to be visible to you all. At the second station we found a rather different nature of bottom—red clay, a very fine sediment, consisting almost entirely of silicate of alumina and iron, the material of which clay is made. At station III gray ooze was brought up. At station IV we had globugerinar ooze, at V red clay again. Then it continues red clay again. Then it continues red clay till we get near Japan, when we again come to the gray ooze.

We know that the greater part of our geological formations, are more or less clays. They were at first—at all events some of them have been converted into shales, some into slates, and some into clay—slates, mica, and their last stage of metamorphosis, granite. These are the materials of granite, and with some attention now we can decide as a general rule that from these sedimentary beds, under certain conditions rock is produced, which has the same constitution as granite. It therefore becomes extremely interesting and important to know how the clays are formed. The general impression was that clay was formed by the wearing away gradually of previously existing rocks, the materials of which were allowed to sink to the bottom and there formed clay: But there must be and is another way. They are being formed to such an enormous extent over the surface of the earth that we are inclined to suspect that this is the way in which it is done.

We believe that chalk is formed of accumulated animals; we believe that coal is formed of accumulated plants; and we *did* believe clay was formed of disintegrated rocks. But now we find our idea somewhat rudely shaken; we find the globugerinar ooze is universal, or nearly so, from something like 600 or 800 fathoms to a depth of 1,500 to 2,000. After you pass that point, it begins to get reddish, and when you come to analyse it you find there is less chalk in it than before, but more clay. A little further on, there is less and less, till, when you get from 2,000 to 3,000 fathoms you find the mud contains no calcareous matter at all; but an extremely red deposit of silicate of alumina and iron, which as I said before, is producing this red clay. Thus, when you come to look at the whole ocean you find there are millions and millions of square mile being covered with this clay, the formation which appears to give rise to some thing like the shale and slate which we use so largely for roofing purposes.

Now the question arises—"What has become of the globugerinæ? What has become of the calcareous formation?" The answer to this is not yet thoroughly worked out; but it appears to me to be almost undoubted. It seems that when the water is so extremely deep, every particle of every one of these shells has to sink down four miles before it gets to its resting place at the bottom of the sea. It is not very heavy, and it takes a considerable time to settle to the bottom stratum, which, we have every reason to believe, contains a little more carbonic acid than the upper. The conclusion we have come to is this. The shells as they sink down through the water become gradually dissolved, both the animal matter and the shell. On examination, besides calcareous matter, there are some little traces of alumina and iron, with one or two other materials, finally resulting in a kind of ash. This fine material sinks to the bottom and there produces the red clay. First we have the calcareous sediment, then the sediment from the animals living near the surface or somewhere between the surface and the great depths, where instead of being composed of the entire shell, it consists only of the ultimate ash of the shells and the inorganic matter which has combined with the tissues, decomposed. At first the idea was that a prodigious time must be taken to dissolve these away wholly and leave but a little particle of ash, which should yet rear up rocks of greater bulk and strength than any other rocks whatever; but we may expect to come presently to this point: that all rocks whatever, with the exception of a few accidental ones,—such as some gravels and conglomerates, which have evidently been produced by the breaking up of older rocks—have passed through the organic period, and been built up by the deposition of animal matter. (Applause)

The next point I shall refer to is this sounding, 4575 fathoms in depth, taken between the Carolines and the Ladrones. I do so on account of the sediment there presenting a curious difference in composition. There we get the red clay passing along shallow water, so pure that no one ever supposed there was any great change till this point was reached, where there seems to be a kind of hole between the two groups of islands and there is another between here and America. I have no doubt this is a continuation of the extreme depth extending over the North Pacific. At this place you would have said this was the red deposit You will remember I said the water in the intermediate depths contained globugerinæ and creatures with silicious shells which, having their carbonate of lime taken away, formed the red clay. Now when we came to these extreme depths of all, the formation consisted almost entirely of silicious shells, instead of either calcareous or of the red clay. It looks extremely difficult to conceive how this could be; but if you think for a moment it is tolerably simple. The globugerinæ are living on the surface, therefore they ought to go to the bottom if nothing interrupts them, and become ooze. But something does interrupt them, and this, as I said before, is the carbonic acid. But they do not only live upon the surface; but all the way down for four and a half and nearly six miles, these creatures are living and dying and leaving their skeletons to sink. Now, at such enormous depths their numbers completely overbalance the red clay, and hence at these extreme depths we find a preponderance of these creatures, and have another formation taking place; which, probably by the gradual percolation of water, becomes what we in England call chertz or quartz rock and quartzite. Thus the minute shells are first dissolved into a gelatinous mass, and then into solid quartz. With the key this gives to geologists I am sure we shall know, after we have had time to generalise our facts, where the different formations of the earth have come from and where they have been produced. In the older formations we find the remains of several groups of animals, and we find in the later a great number of animals living, which are more nearly allied to the older forms than those which we find living at the present day. For instance at various points we found very large numbers of Encolites, which make a large

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

part of mountain limestone. These are supposed to be extinct. We have found large members of families which we believed to be absolutely extinct. We did not find the same forms exactly, but forms nearly related to them which have descended from those forms with certain modifications. This is one result we expected, but we have not made it out so perfectly as I had anticipated. I thought we should find a great number of fossils living in the depths of the sea—a great number of the representatives of the lost fossil kinds. We have not. The animals which we have found are as a rule very closely related to them—so much so as to show their direct descent.

Another point had been the determination of the temperature of water at the bottom at different depths. We find that the water of the oceans of the world is in perpetual movement, either towards or from the colder regions: wherever you find a change of temperature in the water you are examining you may depend it is a part of a current, and you can generally tell where it comes from. You find a gradual change of temperature, but it is exceedingly slow, so that you can trace its change and ascertain whether it comes from N. or S. or from what direction. All over the world climates are migrating. Water is being warmed at one place and bearing its warmth to another portion of the world. Its movements are on a very large scale and sometimes difficult to trace, large areas having to be gone over repeatedly. In the Atlantic you have a very great depth, with very hot water at the equator, propelled along by the trade winds. At America it splits—part going on as the Gulf Stream and part as the Brazil current. Here is a chart of the world. The reason our climate in England is much hotter than it ought to be, is that this stream passes up into the Arctic sea, melting the ice and changing the climate as far as the North Cape in Norway, which ought to be very much colder than it is now. But this is all surface-work. All these changes of climate appear to be due to the belt of trade winds, which drive the water before them. Besides, there is a great circulation going on in the ocean, the cause of which is yet, perhaps, not thoroughly understood. It certainly does not depend upon temperature, it does not depend upon expansion by the sun's heat. All these causes are mixed up. All depends on something very much heavier,—what this is is not exactly ascertained. My own belief is that the barometer is very much lower upon the land in the Antarctic seas, an ice continent, than any where else, and the fall of rain must be greater in consequence. Evaporation takes place in the northern hemisphere; whilst to a great degree the fall occurs in the southern. The cold water is then forced northward from the southern Pacific into the Atlantic. At all events we have found out that the deep portion of water in all these great basins comes from the Antarctic Regions; that it wells up past the equator into the top of the Gulf stream, passing the coast of Ireland up to the coast of Greenland. And this great movement of water is an extraordinarily important fact.

When we left England we took a run along the coast, then crossed the Atlantic, through which a section was taken. The way in which this is done I have already roughly indicated. In the first place we have to reach the bottom. This is done with Bailey's Sounding Machine, which we have found most effective in every way and see no reason whatever to condemn. We have used a hemp line. Captain Belknap used a pianoforte wire. I have not the least doubt this has many advantages. I think a considerable amount of time might be gained, because it offers less resistance to the current and of course occupies less space, and is in many respects more manageable. However, when we started from England, this wire had only been tried once. We had only one sounding in the Bay of Biscay with the old sounding line, which we found to answer well. I had been some years at sea, and my colleagues are all sailors, so we had great sympathy with hemp. In fact I always had an idea if we used wire, and it gave way under the tremendous strain, the consequences might be extremely disagreeable, and as we used a number of very valuable instruments, I wished to get them up again. I think wire will come into use. It would be desirable if you were not using expensive instruments, as you can get the depth with greater rapidity and probably greater accuracy. I use hemp myself, because then I am pretty sure if things go down they will come back again.

The next thing is to get the temperature. This is done by a registering thermometer—Sykes'—we only use one slight modification. The bulb is annexed to another. The part between the two bulbs is spirit of wine and water or spirit of wine in a bell of air. This is so extremely compressible that when the pressure reaches a certain point the bell of air gives way at once, but the inner bulb is not affected at all. There is a general misconception about a "protected thermometer."

It is supposed that the thermometer is protected from being broken. It is not; it is protected from error. This one in my hand was sent down 4,500 fathoms. It came up in fragments. This one has stood a pressure of something like *six tons to the square inch*, a remarkable thing for glass to resist that crushing power. These register the bottom pressure. A line is sent down with thermometers attached at various intervals, and by these we ascertain that the temperature gradually decreases from the surface. In the Antarctic however we found there was a colder layer on the surface, below which the thermometer reached its maximum, and then again below reached its minimum, when of course it could do no more. When brought up it registered the minimum exactly. Then we had another thermometer which registers in an extraordinary way when it reaches the bottom, which I think may hereafter become a valuable instrument.

I have already mentioned the relations which the fauna of the depths appear to bear to some of the older formations—not quite so close as we expected, but still very near. The number of new species we have got is perfectly enormous. After getting some 600 fathoms or so, almost everything is new. We have sent home a prodigious number of undescribed character. The whole of the invertebrated classes are represented at all depths till we get to the red clay region, and there it seems life is very scarce, though there may be widely distributed life that we do not yet know of. After 600 fathoms the various representatives of animal life are blind. They have no eyes, because there is no light. The fishes also have no eyes, except some which occasionally frequent the upper regions. They are subject to great pressure but have no air in them, and are very much affected in appearance by coming up. When I get them out of the intermediate depth, often the eyes are blown out of their heads by the expansion of air contained in the cells of the spinal column and at the base of the brain. The air below occupies no space at all and expands enormously at the surface.

There is one point I would just like to mention as illustrating the enormously wide distribution of animals, namely:—that when you get down to a certain depth around the shores of England and Europe, the creatures there found are exceedingly like those of Japan, but when we get down to a great depth these animals are entirely different; and yet those animals resemble each other most closely which go back farthest in time.

We have done little or nothing with the land. Our object has been simply to determine the condition of the depths of the sea: animals have been collected, and every where observations have been made in furtherance of our object. We have seen Nature in many of her aspects, under her blazing tropical sun, and amidst Antarctic ice-floes, but I think we may say that no aspect she has presented has been so agreeable as that which we have last enjoyed. After having seen many parts of the world, I think we all agree that in many respects Japan is more beautiful than the charming spots we have hitherto visited. And now, ladies and gentlemen, I have only to thank you for the kind attention you have bestowed on this imperfect sketch of our proceedings. (Applause.)

A cordial vote of thanks concluded the proceedings.

The latest advices from India are said to be to the effect that Colonel Browne may very shortly be expected here. We sincerely hope that this may soon prove true, and that his arrival may be the signal for prompt and energetic action in the Manwyne affair. We also see that the British resident at Bhamo has been recalled to Mandalay, the capital of Upper Burmah; a step which may have some political significance. —*Celestial Empire.*

Correspondence.

YEDO CRIMINAL COURT.

To the Editor of the "Japan Weekly Mail."

Dear Sir.—Foreign residents in this part of Japan have been reading with some curiosity the reports of the strange case of criminal assault under recent examination at the British Vice-Consular Court in Yedo. This curiosity has culminated into surprise at the extraordinary conclusion of the case—the conviction—the sentence—the appeal of the prisoner—and his subsequent release on bail.

People ask themselves how is it that a British subject can be arraigned on a serious criminal charge before an inferior tribunal presided over by a non-professional magistrate and denied the right of a jury of his countrymen. Where or what is Her Britannic Majesty's so-called Supreme Court of Japan—what are its duties and within what limits is its jurisdiction?

We were all of us under the conviction that trial by jury was a Briton's right, and we had hoped that with the extension to Japan of a Supreme Court of judicature, presided over by a regularly appointed Judge selected from the body of "Counsel learned in the law," our personal rights were so far guarded from the invasion of unlearned judgments and from the old hap-hazard proceedings incidental to the crude temporary arrangements adopted in the infancy of the Foreign Settlement. The present case has given a rude shock to our feelings of security, and has made us anxious that steps should be taken without delay to remedy such a grievance.

I have no hesitation in appealing to the Press for their powerful support in the matter, and I have little doubt that there will be no hesitation on your part in urging upon those concerned such measures as may be necessary to prevent the recurrence of such an "untoward event."

As for the released prisoner, convicted by the presiding Consul, acquitted by the conjoint Assessors, and now on bail pending an appeal to Shanghai, I need say nothing, believing his case to be in safe hands, but the long and anxious suspense cannot fail to make his anything but a bed of roses.

Yours truly,

BRITISH SUBJECT.

PROFESSOR THOMSON'S LECTURE.

To the Editor of the *Japan Weekly Mail.*

June 15th, 1875.

Sir.—In your excellent resumé of Prof. Wyville Thomson's lecture of last night I miss one point which seems to me to be of no secondary importance.

If I am not mistaken, the learned lecturer stated that at the lowest depths of all, there was yet an ash,—"ultimate ash"—from the "globugerinar" shells, consisting of silica in a viscous state. To this origin would be assigned quartz rock. As to how this further decomposition of the silicate of alumina is effected, and the alumina withdrawn, I did not gather. Indeed one could only feel while Prof. Thomson was sketching for us outlines of the wonderful researches in which he has been engaged, a feeling of profound desire to hear ten times more from him.

One difficulty in the new theory concerning the formation of clay presents itself to my mind, viz: If it be a question of the depth of the bed of the ocean, whether these globugerinar creatures after death produce a débris which we know as chalk,—or give rise to an ash which we know as clay, or to an ultimate ash which forms quartz rocks, ought we not to find in the geological formations of the past, *somewhere or other*, some stratum which having been formed upon a sloping bed of the ocean, is chalk in one place, then gradually merges into clay and, further on, finally into quartz rock?

As far as I am aware, no geological formation is more distinctly defined and more sharply separated than the chalk formation, and the same may be said of the Oolitic beds and carboniferous limestone.

Possibly a discussion of these points may tend to prolong the interest which has been excited amongst us by the visit of H.M.S. *Challenger*.

I am, Sir,

Law & Police.

H. B. M.'S CONSULAR COURT.

Before H. S. Wilkinson, Esq., Acting Consul.

June 14, 1875.

John Wilson was charged on remand with assaulting two Japanese men, a woman, and a policeman, whilst drunk.

Prisoner said he knew nothing about the affair.

On Friday last evidence was given by the two men and the constable, the woman being too much hurt to appear, to the effect that prisoner came into the *sake* house of one of the complainants and called for some *sake*, which was refused. He then assaulted the proprietor of the house and the other man and woman who happened to be in at the time. The woman, prisoner struck over the head with a stick, wounding her. Prisoner then left, and on a constable attempting to arrest him, he assaulted him also. The prisoner was drunk and violent at the time.

F. White, consulate of the Court, sworn, deposed that he had been to see the woman with Dr. Wheeler. She was wounded in the head. The skin was broken to the extent of an inch. Dr. Wheeler dressed the wound, and said it would heal in a few days.

The Japanese interpreter of the Court stated that he had accompanied White, and had seen the wound. Dr. Wheeler dressed it.

Prisoner said he had no witnesses to call. He knew nothing about the affair.

His Honour sentenced him to four week's imprisonment with hard labour, and to pay $10 50, the costs of medical attendance on the woman, or in default to be imprisoned another week.

THE ROBBERY AT THE COMPTOIR D'ESCOMPTE DE PARIS.

Before His Honor C. W. Goodwin Esq., Assistant Judge.

June 17, 1875.

Regina *vs.* Adds.

Charles Adds was indicted on seven counts, the substance of which are as follows:—

1. Accessory before the fact of larceny of $5,984.42, by Swaby and Cantelli, on the 3rd April, 1874.

2. With receiving the same money knowing it to have been stolen.

3. Accessory before the fact to a larceny by Swaby and Cantelli of $3,050 on the 8th of the same month.

4. With receiving the same money knowing it to have been stolen.

5. Accessory before the fact to larceny by Swaby and Cantelli of $2,050 on the 9th April.

6. Receiving the same money knowing it to have been stolen.

7. This count charged that Swaby and Cantelli on the 3rd April, and at divers times not exceeding three, within six months from that date embezzled from the Comptoir d'Escompte de Paris $11.084,92, and that Charles Adds, by receiving the said money, and therewith purchasing the ship *Iris*, and by harboring and maintaining the said Swaby and Cantelli on board said ship, and assisting them to escape therein and therewith, did, well knowing that the said Swaby and Cantelli had committed the felony and embezzlement aforesaid, harbor and maintain the said Swaby and Cantelli, and thereby become accessory to the fact.

The following were sworn in as jurors; Messrs. G. Whitfield, C. J. Frischling, A. Winstanley, C. Powis and J. Martin.

The Court was densely crowded.

Mr. F. W. Marks, with whom was Mr. Litchfield, appeared for the prosecution; Mr. G. P. Ness, barrister-at-law, conducted the defence.

The prisoner pleaded not guilty.

The Jury having been sworn and charged.

Mr. Ness applied that the indictment be quashed under Archbold 7, which provides that only one charge should be preferred in any one count of the indictment. The seventh count contains no less than four specific charges.

Mr. Marks opposed the application, and denied that there was more than one charge. The charging part of the count accused the prisoner of being accessory after the fact. The rest was explanatory.

After a desultory argument, His Honour over-ruled the application, on the ground that it should have been made before the Jury were sworn.

Mr. Marks, in opening the case for the prosecution, proceeded to explain the indictment, in which there were six distinct charges

in embezzling $12,000 from the Comptoir d'Escompte de Paris The sum actually embezzled was considerably more, reaching as much as $70,000; but the prisoner could only be proceeded against for the first named sum. Three other counts charged him with receiving the money embezzled, well knowing it to have been stolen. There was a seventh count, necessary to complete the indictment, charging the prisoner with aiding the escape of the embezzlers. It would either be possible to convict the prisoner on some of the counts, or on all of them; or he might be convicted of some, and acquitted on others. The circumstances of the case were very peculiar, and the learned counsel proceeded to detail them. We need not follow him through his account of the case, the events of which are fresh in the minds of the public. He would prove that Adds had been connected with the robbery, and would show that he was a man without means and without profession.

F. A. White, Consular constable, sworn, said, that on the 19th of April he received three warrants from this Court,—one for the arrest of Swaby, one for the arrest of the prisoner, and one for that of Captain Withers. Shortly afterwards he received one for Cantelli's arrest from the Italian Consul. The witness then detailed the circumstances of his pursuit of the *Iris* in a steam launch, accompanied by a naval officer and six man-of-war's men. The first person he saw on board as he approached the vessel was Adds, who was looking at the pursuers through a binocular. He repeated the evidence which we gave at length on the occasion of the preliminary investigation as to his boarding the vessel, the condition in which he found the two suicides, his arrest of the prisoner, and subsequent proceedings. Adds, when brought back to Yokohama, treated the subject with indifference.

During the course of the examination of this witness, some lively passages occurred between the counsel for the prosecution and that for the defence. The former wished to elicit what the witness knew of the prisoner's antecedents, and the latter demurred to any such questions being asked. The Court ultimately decided that the information might be elicited.

Witness continued: Prisoner was once a storekeeper, a livery-stable keeper, and at one time in the lemonade business. I do not know that he was ever a ship-broker. On the 14th April he came to the Consulate wishing to see the Consul. He wanted a ship registered in his name, and asked for a form of provisional certificate. I had none at the time in the office. He returned a day or two afterwards, I asked him in whose name the papers were to be made out. I then had the papers, and I asked him in whose name the register was to be made out. He said that he would have to see the other people (the owners) first He produced the papers of the former owners I think the vessel's certificate was an American one. He did not tell me at first who was to be the captain, but on the 16th he came to me and told me Withers was to be the captain. On his instruction I had the papers made out. Articles were taken out for the ship. I have seen the prisoner's hand-writing on many occasions. I think the paper produced is in the prisoner's hand-writing [Ship's articles for China, Japan, the Pacific Ocean, and Islands thereof.] I searched the prisoner before he left the ship, and found on him some money and papers. The paper produced is one of those I found. [A letter from Mr. Knobloch stating terms of the sale of the *Iris*] I also found these. [Bank pass-book, a letter from Mr. Withers accepting mastership of the *Iris* under certain conditions, and a bank cheque-book.] The letter from Withers was found on Adds' person. The other things were found in a cash-box on his portmanteau, the keys of which were on his person.

At ten minutes past noon the Court adjourned until 1.45 p.m.

When the Court reassembled.

E. G Vouillemont was sworn, and deposed that he was manager of the Yokohama Bank Agency of the Comptoir d'Escompte de Paris The rest of his evidence was little more than a repetition of that already given by him and reported by us in our account of the preliminary investigation into the charge which resulted in the committal of Adds for complicity in the embezzlements of Swaby and Cantelli. The witness explained the method in which the culprits had managed their defalcations, to the total of $67,775. A copy of Adds' account with the Bank was produced, sworn to by the witness. The first item to the credit of the account was dated the 3rd March 1875, and should have been 3rd April, and was for a sum of $5,984.92. As explained before, this was an equivalent for a draft of $6,000 on London taken out by Cantelli on the 19th March for Adds' from the Comptoir d'Escompte, and not forwarded but accepted by the Bank as a deposit to the account of the latter. The draft produced is the one in question, the endorsement is Adds' signature. The next item to Cantelli's credit is $1,200. Cantelli altered the paying slip from $200 to $1,200. The next entry of $3,050 was explained in a similar way, Cantelli sending a credit slip for $50 to the comprador and subsequently altered it by putting 30 before the 50. $2,050 was the next sum passed to Adds' credit, in the same way, only $50 having been paid in. The sums drawn were by cheques as follows for $400, $5,000, $6,200, $200 and $484.92 being the balance to the very last cent of Add's account. All the cheques produced bear his signature. When witness asked Cantelli who was Adds, he was informed that he was a ship-broker.

Cross examined.—It is not possible that Adds could have paid in the full amounts with which he was credited and that the cashier could have detained part of the money himself. The money is paid to the Compradore, after the slip has been filled in by the Cashier. I never saw Adds before the inquest on Swaby, and of course never saw him sign his name. I observe that the signatures on the cheques bearing Add's name differ.

Ferdinand Knoblauch, sworn:—I was charterer and consignee of the Iris. I also acted as agent for the captain. She came into port on the 2nd April. Adds came to my office a few days after and asked if the vessel was for sale. I referred the question to the captain who had power to sell The first price asked was, I believe, $12,000. Adds ultimately agreed to purchase for $11,000, and the transfer was completed at the German Consulate where I saw Adds pay the money. He paid $10,800 in bank notes, which with $200 he had deposited the day before made up the amount. He asked me if the vessel could be transferred to the German flag, and I referred him to the Consul.

John Wynn, a master mariner, whose evidence was taken in full at the first examination, was next sworn, and deposed as to his previous knowledge of the prisoner and his having visited the witness at his house in Yedo to consult him about the purchase of a vessel. This evidence was only a repetition of what we have before published as to the attempt of the prisoner to purchase the *Sarah*, his subsequent proceedings in the purchase of the *Iris*, the witness taking command of the latter vessel, and throwing up the command through having suspicions as to the object of the proposed voyage.

Cross-examined: Before this affair I had no business to think ill of the prisoner. I did not think there was anything peculiar in his wishing to buy a ship, not even when I heard that the expedition was to be a secret one. One reason why I did not accept the command of the vessel to go was that the terms of the agreement did not suit me. It was not the real cause. It was one of the reasons. The actual reason was that I had suspicions that all was not right, considering the secret nature of the preparations, and afterwards my hearing that Adds was always with Cantelli and Swaby. I first began to suspect that there was something wrong in the nature of the voyage three days before the vessel sailed. My suspicions were not sufficiently defined for me to mention them to Withers.

E. L. B. McMahon, an old friend and school-fellow of deceased Swaby, was next examined, and explained, as in his previous examination, the relative position of his house, which Swaby shared, and Adds', which was a little above it, and rented by him from the witness. When Adds left, the rent was 2½ months in arrear. He gave no notice of his intention to terminate his agreement. This witness' evidence also differed in nothing from that he previously gave. Adds took the house for 12 months from the the 1st October last, so that six months of the lease were unexpired.

Cross-examined: I saw Adds in my house talking to Swaby on two occasions in the early morning between the 12th and 24th April. I believe those occasions were on the 15th and 17th. I have occasion to remember the date approximately, because I told Mr. Swaby that I thought he was too intimate with Adds, and further, because the latter used to eat and drink refreshments which I had to pay for. I went to the store where certain things had been bought for me and consumed in my house. They were Hakodate herrings. I knew nothing against the prisoner's character.

Re-examined: I do not know that the prisoner failed in business. I have known him in business on the Bund and elsewhere. I do not know that he succeeded. I might have lent him $10 if he asked me. I do not know that I should have expected it back again.

No more witnesses having been called, at the request of the counsel for the prosecution, the evidence of Charles Adds, as given at the inquest on Swaby, was read by the Court.

Mr. Marks then proceeded to sum up. Referring to Adds' evidence, he drew attention to his statements that the ship was to be his on arriving in Manilla, and that $11,000 had been advanced him by Cantelli in two instalments, and that Cantelli had given him a cheque-book. The learned counsel thought that the time had

Digitized by Google Original from University of California

gone by when the counsel for the Crown need come forward like Titus Oates to take every advantage of the position of the prisoner. It was sufficient for the counsel for the Crown to sum up the evidence they brought forward: in some cases it was not necessary to sum up at all. For himself he had no wish to blacken the atrocity of the crime committed by the prisoner. It was sufficient to say that he had been for months an accomplice in a scheme of robbery. The evidence was so fresh that it was not necessary for him to recapitulate the evidence of this witness or that. The jury had heard the evidence and the statement of Adds, and, in addition, had been shown the pass book, cheque book, and documents found on Adds. There were one or two points in the evidence he wished to call attention to. First—Captain Wynn, in his cross-examination, had been a little bit bullied about having suspicions and not making them known. He was not, the learned counsel contended, bound to state his suspicions, and was justified in making any excuse to get out of an unpleasant engagement. Then, as to Adds denying, in reply to Wynn's question, that an Italian and an Englishman were going away with him, this showed that Adds had cognizance of the robbery. Mr. Knobloch had shown how anxious Adds was that the ship's flag should be transferred. It was fortunate that it had not been transferred. The prisoner knew that there were English gunboats in harbour; and if the flag had been transferred it was probable that neither Swaby nor Cantelli, nor Adds, nor the *Iris* would ever have been heard of again. Mr. MacMahon's evidence, too, was of more value, than it appeared. Adds had run away, leaving his lease unexpired, his rent unpaid, and not only that, but his furniture and effects—he a man who had been shown to have no means and no profession.

Mr. G. P. Ness, for the defence, contended that the affair of the embezzlement had created such an impression on the public mind that those hearing it must guard against any impression it might have made on their feelings. He would not insist on this, had not the counsel for the prosecution appealed to the feelings of the Court and come before them with a written speech, in which he painted the prisoner in the blackest colors. It was the business of the public prosecutor to prove the guilt of the prisoner. He (the counsel for defence) could not prove his innocence. Of the only three persons who could have proved it, two were dead, and the third—the prisoner himself—had his tongue tied. Notwithstanding the length of the indictment, the charge was very short. The prosecution had to prove, first—that the embezzlement had actually taken place, then the complicity of the prisoner in the frauds, and that he had received the money so obtained, knowing how it had been come by. This had not been done. Nothing had been adduced in evidence to establish that the accused was anything but an honest, if a duped, agent. No evidence had been brought forward to show that any conversation had taken place between Cantelli and Adds on the subject of the money which the later alleged he had the authority of the former to draw for; nor had anything been proved as to any conversation between him, Swaby, and Cantelli on the other subjects brought forward in the indictment.

After a brief and impartial charge from His Honour, the Jury retired to deliberate, and returned into Court at the expiration of twenty minutes with a verdict of "Guilty on all the counts of the indictment."

His Honor, having expressed his complete concurrence in the verdict, sentenced the prisoner to two years' imprisonment, with hard labour.

GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq, Consul, assisted by Messrs. MAMMELSDORFF and GRAUERT, Assessors.

June 16th, 1875.

SIMON, EVERS & Co. *vs.* G. DAU, Master of the ship *Mathilde*.

Mr. Montague Kirkwood appeared for the defendant.

This was a claim for $2,825.31, for loss alleged by the plaintiffs to have been sustained by them through damage to pilot cloth and felt, consigned to them, and being part of the cargo per the *Mathilde*, which arrived here in March last. The pleadings went to show that the damages arose from the fumes of chloride of lime, packed in casks. It appeared that the casks were stowed close to the packages of pilot cloth and felt, and that some of them burst during the voyage. The contention of the plaintiffs was that the master and ship were liable for the damage sustained, which arose from careless stowing and want of proper precautions.

Mr. Kirkwood opposed this view on the following ground:—The ship was chartered early last by Messrs. Kaltenburg and Schmidt not the captain's. The goods were clearly badly stowed, and the chloride of lime should not have been put so near goods liable to be injured by it. Still the captain had a right to carry chloride of lime, as it does not come under the category of "dangerous goods." If it were dangerous goods, its character as well as its nature should have been explained by the shippers. The bills of lading contained the clause, "weight, measure, and contents unknown, and not answerable for breakage, leakage, damage and loss." The learned counsel contended from all these reasons that the captain was not liable, and that the action had been brought against the wrong parties.

Judgment in the case will be delivered on Saturday next, the 19th inst.

H. B. M.'s CONSULAR COURT, YEDO.

REGINA V. KING.

Subjoined we give the verdict at full length:—

The Vice-Consul addressing the prisoner said:

Archibald King,—a great responsibility is thrown upon me in having to deliver a verdict in this difficult and deplorable case. I feel this responsibility all the more as there is no appeal from my decision, and as the assessors have arrived at conclusions different from my own. The assessors desire your acquittal. Were I merely to consult my private feelings, I should not hesitate to meet their wishes; but, as a magistrate, I have a duty to perform, which does not admit of an appeal to my natural inclinations; and it is my profound conviction that you are guilty of the charge brought against you.

This is the second offence of this nature that has come before me since March. It is high time that such acts of violence be put a stop to; therefore an example must be made.

Looking, however, to all the circumstances of the case, and taking into consideration your good antecedents, which have been testified to at the trial; and bearing in mind also that the object of the law is not so much vengeance on yourself as to deter others from the commission of a similar crime, I shall be lenient with you, and exercise my discretionary power in your favour to the utmost extent consistent with the object which the law has in view.

While in one sense my responsibility is materially increased by the dissent of the assessors, it affords me on the other hand some relief to know that if I err in my judgment, Section 77 of the Order in Council enables you, in consequence of this dissent, to apply for a mitigation or remission of the sentence.

Archibald King, I convict you of the charge of rape on the girl Kô, and sentence you to six months' imprisonment.

MARTIN DOHMEN,
Vice Consul, *Ex Officio* Judge.

The reason why we dissent from the verdict is, that we are not thoroughly convinced the accused committed the crime, and therefore, we wish to give him the benefit of the doubt,

FREDK. W. SUTTON,
HERBERT ST. GEORGE, } Assessors.

NOTE.—The other assessor, Mr. Dallas, had left the Court before the conclusion of the proceedings; he, likewise, desired acquital, but gave no reason for his opinion.

Shipping Intelligence.

ARRIVALS.

June 12th, *Golden Age*, American steamer, Coy, from Shanghai, General, to P. M. S. S. Co.

June 14, *Audacious*, H.B M.S. Capt. Collum, 330, from Hongkong via Inland Sea.

June 14, *Tokio Maru*, Japanese steamer, Dunn, 2119, from Shanghai and ports, General, to Mitsu Bishi Co.

June 14, *Hants County*, British barque, Cochrane, 641 from New York, General, Kerosene, to Order.

June 15, *Cheviot*, British steamer, Walt, 764, from Shanghai, General, to Kniffler & Co.

June 15, *Kearsarge*, U.S. Sloop of War, Capt. Lewis, 1,500, from Kobe.

June 16, *Oxfordshire*, British steamer, Jones, 1,228, from London via Hongkong, General, to E. Fischer & Co.

June 17, *Nevada*, American steamer, Williams, 2,145, from Shanghai and ports, Mails and General, to P. M. S. S. Co.

June 17, *Thomas A. Goddard*, American barque, Smith, 682, from New York, Kerosene, to C. & J. Trading Co.

DEPARTURES.

June 13, *Oceanic*, British steamer, Jennings, 3,707, for San Francisco, General, despatched by P. M. S. S. Co.

June 15, *Africa*, British steamer, Gallilee, 1,810, for Kobe, Gene-

June 19, *Tokio Maru*, Japanese steamer, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.
June 19, *Golden Age*, American steamer, Conner, for Shanghai and ports, Mails and General, despatched by P. M. S. S. Co.

PASSENGERS.

Per M. B. S. S. Co. *Tokio Maru*, from Shanghai, &c.:—Mrs. Antisell, Mr. and Mrs. Knoop, Mrs. C. Bade, Hon. Mr. Monitera, C. Wagner, R. Wyper, J. H. Hunt, Miss Antisell, Mr. and Mrs Albera, Mr. and Mrs. G. Clarke, Captain Will, Penn, Dittmer, Ton, and Steinmetz, and 59 Japanese in the Cabin, 216 Japanese, 7 Chinese, and 2 Europeans in the Steerage.

Per O. & O. Steamer *Oceanic*, for San Francisco.—Messrs Sekisame, Ishi, F. C. Owen, S. S. Staples wife and servant, Emil Mouny, Take, Kinchiro, O. Harcourt, E. McLoughlin, S Ota, H. Nevill, Endu, Funaki, Udiook, Seradu, Miyaraba, Marati, Matsumara Bieber, J. M. Riche, H. Julien. For Europe.—Messrs. R F ewen. E. Boatenoff, A. J. Steele, E. Dupuy de Lome, F. Otin, Dr Nissen, and Mrs. Young.

Per *Menzaleh* for Hongkong.—Mr. and Mrs. Clarke and two children, Messrs. Waddell, Noel Louis, Marquet, Jean Amédeé. Ger. Mathuren, Bessin, Jean Francois, Durand, Adolphe.

Per *Oxfordshire* from London via Hongkong.—Mrs. Divers and family.

Per *Nevada* from Shanghai and ports.—Gen. T. Van Buren and family, Geo. E. Rice, Mrs. Godewarth and child, Mr. and Mrs. Davenport, Dr. Hill, R.N., E. C. Kirby, W. C. Maughan, J. Leckie P. Moller, L Joseph, M. Ullmann and 16 Japanese, W. C. Newbigging, and 71 in the steerage. For America.—E. H. Nicholl.

Per *Golden Age* for Shanghai and ports.—Mr. and Mrs. Peterson, H. M. Blanchard, Col Fukubara, Mrs. Craven, Revd. Gargle and 3 daughter, Mr. and Mrs. Woodworth, J. Babut du Mares and 34 Japanese.

Per M. B. S. S. Co. *Tokio Maru*, for Shanghai, &c.:—Mrs. Bade Miss Oxlad, Mr. and Mrs. Knoop, Mr and Mrs. G. Albers, Prince Yoshimoto Wife and 2 Children, Messrs. Sato, Oyngi, Midrelsen, T. Hake, C. G. Wilson, Wyper, Mr. and Mrs Mo ono and 2 Children, Mrs. Burton and Child, Messrs. Nakayama, Takunobu, Nakazawa, Yonera, Dr. Goer z, Morita, Yoshimoto, Steinmetz, Locastro, Enowai, Famano, Matsumoto, Nakazawa, Tanaka Marty, Pignatel, Tsuzuki, Kido, Wainwright, Captain Roper, Dittmer, Cramer, Sotoyama, Motohara, Ichikawa Kajimaya, Nagano. E. De Sun, H. Scott Gill, A. Keis, Sakamato, Tsuchi'i, Kano, Kawazuma, Amano. Amano Jnr., Yokoyama Kano'a, Toturu, Shino, Sanji. Iohii Morishima Yoshi and child, Matsumura, Shimanaya, Kiyo-oka, Aso, Imazumi Kumon, Miyeshi and child, Inoye, Ono, Yasuda, 3 Europeans, 2 Chinese and 312 Japanese in the steerage.

CARGOES.

Per *Menzaleh*, for Hongkong.—Silk for Marseille 85 Bales.
Per *Nevada* from Shanghai and ports.—Treasure $30,000.
Per *Tokio Maru* for Shanghai and ports.—Treasure *yen* 10,000.

REPORTS.

The *Cheviot* reports: light easterly winds to Van Dieman Strait, thence fresh S.W. winds and much rain.

The *Thomas A. Goddard* reports pleasant weather up to Anjer, which was reached in 59 days from New York. Thence up the China Sea to Van Dieman Strait, experienced light wind generally, one heavy gale passing them off Formosa on the 29th ulto. Moderate weather along the Japan Coast.

The *Oxfordshire* reports heavy weather since the 13th; strong squalls from all quarters and much heavy rain. Barometer fell to 29.50 on Monday, the 14th.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 1872. 12m.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—

Camlets Asstd.	56—58 yds. 31 in	18 50 to 19.00	Pilots	54 in. to 56 in. 0.45 to 0.55
Lastings Japan	22—30 yds. 32 in.	13.00 to 14 50	Union	54 in. to 56 in. 0.70 to 0 85
Plain Mousseline de Laine	30 yds. 30 in.	0.18 to 0.19½	Blankets, scarlet & green 7 to 8 lbs.	per lb. 0.45 to 0.48

Nominal.

Sugar.—During the closing week sales have been 5,500 piculs *Formosa*, at $4.54 per bag. The market for *Formosa* descriptions is somewhat firmer. *Canton* Sugars are lower and stocks are accumulating.

Sugar:—Formosa in bag	per picul	4.60 to 4.75	China No 5 Kong-fun	per picul 5.60 to 5.60
in Basket	„	4.50 to 4.65	„ No. 6 E-pak	„ 4 40 to 4 80
China No. 1 Ping fah	„	8.10 to 8 30	Swatow	„ 3.40 to 3 50
„ No. 2 Ching-pak	„	7.30 to 7.80	Daitong	„ 3 40 to 3.70
„ No. 3 Ke-pak	„	6.50 to 7 00	Japan Rice	„ 3 25 to 3.30
„ No. 4 Kook-fah	„	5.70 to 6 20	Kerosine Oil	per case 3.00 sales.

EXPORTS.

Silk.—It is a common report among the Japanese that unfavorable weather during the past fortnight has checked the progress of the crop and that leaf is superabundant. We also hear that Inferior Cocoons are mostly to be reeled in a full-sized thread for the native market where low silks are likely to pay better than in the foreign.

Since the 10th instant, arrivals are 65 bales and deliveries 140 piculs.
